THE movement to establish the Central Land Association is but in its initial stages; yet it is a capital idea to seek to formulate the opinion of all connected with the land—the owner, the tenant, and the labourer; and to evolve out of those opinions a policy for future guidance. A great agricultural party is desirable. The difficulty in the way is the brushing aside, if possible, of "party" politics in the effort to consolidate the one class of interests; and this seems almost as impossible of accomplishment as an effective settlement of the religious difficulty—not *in* schools, but among rival bodies outside them.

A NOVEL prize was offered at Bridlington Agricultural Show, the premiums being for horses that were required to undergo an experience that would occur to them in actual hostilities. The animals and their owners had to show their fitness for military duty. The prize was given primarily with a view to demonstrating the sort of horse we want whenever another big war should require large drafts of remounts sending out. There is wanted more in the shape of practical lessons at our agricultural shows—lessons for the breeder and lessons for the public, something to cause people to think long before the time of panic. We want less of the sensational mover and more of the utility horse, an animal that will stand some harder treatment than that of getting round the showring several times. If there are points in the Hackney which do not altogether fit him for general utility purposes, then let the defects be remedied. Horse breeding has no doubt kept many a farmer on his legs; and it is said that a good horse always commands its price when it has arrived at a proper age, though we know farmers with good Hackneys who find a difficulty in realising anything like a respectable return.

THE President of the Sheffield Pork Butchers' Association informs me that the decreasing number of pigs in the kingdom is causing a great amount of anxiety among pork butchers, and he thinks they are likely to remain scarce "if the present regulations are not amended." Quite so. Everyone connected with the pig trade—breeder, feeder, and vendor, wholesale and retail—is at one on this subject; and it is grieving to think that we are spending millions of pounds in foreign bacon, lard, &c., the whole of which, or a very large portion of it, might be produced at home. Mr. President goes on: "I think the farmer should be encouraged instead of discouraged. If this state of things continues, home-cured bacon and hams and English-fed pork will soon be dainties of the past." The continuance of the existing policy in regard to swine fever restrictions seems to be utter folly, says everybody. The Board sticks tenaciously to it, and will not confess itself nonplussed. The official returns at markets last week show that at Hull, Leeds, Newcastle, and York not a single store pig was penned! The absence of this class of pigs at these important centres is eloquent testimony to the "stamping out" policy of the Board; but it is the stamping out of trade—not of disease.

FARMERS in the North have held back their wool too long, and now the market is flat. Those who have last year's clip still on hand are regretting they did not sell on the greatly improved prices of 1906. There is a drop between then and now of fully 3s. 6d. a stone. We do not appear locally to be in sight of a hardening trade. The ram sales are close at hand in Yorkshire. Foreign buyers will not be so numerous this year, though I hear they have left behind, prior to their departure for the great show at Buenos Ayres, a goodly number of commissions at set prices. I have heard already of several sheep purchased after the Royal Show privately at prices running into three figures.

SINCE the holiday the weather up North has been of a broken character. Thunderstorms and heavy rains have caused damage to the barley crops. Roots have benefited, and are growing at a prodigious rate. In Yorkshire are some splendid crops of all the three principal cereals. A farmer of medium height tells me that he cannot see over the tops of an oatfield he cultivates; and I have myself measured the straw and ears of oats 6 ft. high inclusive; barley and wheat over 5 ft. Yesterday at Nafferton, Yorkshire, Mr. Crompton began harvesting a fine crop of winter-sown barley.

August 9, 1907.

Nottinghamshire Notes.

FARMERS in overcoats to keep the cold out is surely unique for the last day in July, yet at five o'clock on July 31st I saw three well-known agriculturists walking along Nottingham's main streets thus garbed. On Wednesday week we had a very heavy thunderstorm, and between 12.25 and 12.40 p.m. the rain was the heaviest, when the fall reached the extraordinary figure of ·53 in. Thousands of acres of wheat, barley, and oats were flattened as though a steam roller had passed over the crops. With one exception the rainfall was the heaviest in the time stated that has been known in Nottinghamshire for the last twenty-seven years. To come to figures, the fall was equal to 2·32 in. per hour!

AT a meeting of the council of the Nottinghamshire Agricultural Society held on the 1st, Earl Manvers presiding, it was decided to hold the 1908 show in Colwick Park, Nottingham, on June 9 and 10 next. These dates, I might add, clash with the International Horse Show at Olympia, and though this fact was mentioned, the society decided to adhere to the dates named.

NEWARK Urban District Council have decided to issue certificates to milk sellers who comply with the requirements of the borough inspector of cowsheds and dairies. They are to be issued annually, and as Mr. Quibell remarked at the council meeting, there will be a good many people say to dairymen, "I won't buy your milk if you have not got a certificate." This surely is a step in the right direction, for of all perishable goods sold there is no question that with milk the greatest care ought to be taken with regards to purity, cleanliness, and healthy cows.

LAST week I received an interesting circular letter from the Pork Butchers' Association at Birmingham, bewailing the fact that pig rearing and feeding in the United Kingdom is declining. It says:—"We are very soon entering on the third year of scarce pigs. We have at certain times found the greatest difficulty in getting supplies to carry on our normal trade, and that at little or no profit. Sixteen million pounds a year is going out of the country for bacon and hams, three and a quarter millions for lard, and close on two millions for pork. In our opinion at least ten millions of this money might go into the British farmers' pockets." So far as our county is concerned, there are more pigs being bred at the present time than for twenty years, while we also claim to have some of the best—especially Large White Yorkshires—ever seen in a stye. Still there is ample food for reflection by farmers in the above extract.

MR. R. M. KNOWLES, of Colston Bassett Hall, Notts, who is chairman of the Diseases of Animals Committee of the Notts County Council, states that the serious outbreak of swine fever in the county arose in Worksop market. Altogether thirty-two pigs had died from the fell disease, and 117 had been slaughtered. Though the outbreak has practically been quelled, the markets in the northern portion of the county remain closed.

MR. A. W. HICKLING has been making some additions to his valuable stud at Adbolton, including Lady Shenston, a three-year-old mare by the dual champion McKinley out of that famous dam Surprise by Ritualist. She has already rendered a good account of herself in the show ring, having carried off two firsts at the London Hackney Show—as a yearling and then as a two-year-old. Another of Mr. Hickling's recent purchases is Lady Dunnaby, a mare bought at Mr. Batchelor's sale at Birmingham. She is the dam of such well-known horses in the Hackney world as Hopwood Admiral and Hopwood Leader, and at present has a smart and handsome-looking filly foal at foot. Zanzari is another mare bought for the Adbolton stud recently at Mr. Sykes's sale. This mare's progeny includes several well-known prizewinners such as Fylde Zanzara, while she has a colt foal at foot. These animals have cost a great deal of money, but given a little time they will soon repay Mr. Hickling for his outlay.

THE London champion Hackney mare, Hawkser Rosina, the property of Mr. A. W. Hickling, of Adbolton, has a fine colt foal by Adbolton St. Peter, who is full of Lord Derby blood. The foal, possessing champions as his sire and dam, should make a valuable addition to this notable Nottinghamshire stud of Hackneys.

HEARTY congratulations are this week due to Mr. Wilton Allsebrook, of Wollaton, and Mr. G. S. Laban, of Normanton Hill, Loughborough, two well-known farmers in the county, whose names have been added to the Commission of the Peace, while Mr. George Brown, of Bingham, a corn merchant, has received a similar honour. Mr. Allsebrook is the secretary and manager of the Midland Farmers' Co-operative Association, and also official valuer for the Nottingham Corporation's Stoke Bardolph Farm.

HITHERTO the Midland Agricultural College at Kingston, Notts, has lacked the name of a tenant farmer representing the county on its list of governors, but the Notts County Council, after a long discussion, have now elected Mr. J. C. Fisher to represent the tenant farming class. The annual meeting of the college was held last week, Mr. Thomas Cope (Leicester) being in the chair. The chief items in the Principal's (Mr. Blackshaw) report were relating to the need for extensions. Mr. Blackshaw says:—"The residential accommodation has been fully occupied throughout the year. Not only was it filled, but at one time as many as fourteen females were lodged at houses in the vicinity owing to no further bedrooms being available at the male students' hostel. Further provision in the shape of extension to the hostel is urgently needed, also to the chemical laboratory."

DURING the year 131 lectures on agriculture and its allied subjects were delivered in connection with the college, and thirty-six demonstrations given, the total of attendances being 4,388, or an average of twenty-six persons per meeting, which is extremely good.

THE news that the Royal Agricultural Society are to have brought before them the advisability of increasing the prize list for the show at Newcastle-on-Tyne by £5,000 will be read with interest by agriculturists in this district who contributed their share towards making both the Derby and Lincoln Shows so successful. It seems to point to the wisdom of the society in abandoning the Park Royal site for another tour in the provinces.

THE Carlton-on-Trent stud has this week been enriched by the addition of a capital colt foal by Linton Uniform, having Linton Presentab e

by Maxie as dam, which was also the dam of the late King Carlton. Mr. Forshaw purchased him from the Linton stud, Kent, and he has the making of a typical Shire.

SHOWS have been fairly numerous around here during the present week. On Monday we had the tenants' show at Clumber; on Tuesday a similar gathering at Welbeck; and on Wednesday Belper. At the latter show the entries showed a falling off, but they were of a very high class, some capital animals being exhibited.

SMALL holdings formed the theme for the Duke of Portland's after dinner speech at the Welbeck Show, and his Grace's experience has been far from successful. The Duke stated that some years ago he let a farm of 480 acres at a very low rental to six labourers. He provided them with a full complement of live and dead farming stock, for which they paid a small amount as interest on the capital thus invested. But the experiment proved disastrous both from the labourers' standpoint and also the landlord's, and after fifteen years the farms were given up as a failure. The men lost most of their savings, while the land, from an agricultural standpoint, was in a much worse condition than when it was in one holding. This shows clearly, then, that the small holdings' question requires most careful consideration on the part of our legislators before being allowed to be put to the test throughout the country.

THIS afternoon I was the only privileged Press representative present at an interesting and instructive demonstration on potato growing by Dr. Millburn, the well-known county council lecturer of the Kingston Agricultural College, Nottinghamshire. It was held on the farm of County Councillor H. Heath, J.P., at Bestwood Park, and several experimental plots of tubers were visited. These showed most conclusively that where the seed was purchased from Ireland the potatoes are much better crops than where Scottish and English seed has been planted. Another plot was visited where the potatoes were obtained from South Africa, but they looked only moderate, the climate apparently not having been conducive to their growth.

ON the same farm the party of farmers from the district, along with Dr. Millburn, visited a field where Proskowetz's original pedigree Hauna barley is being grown. It is of the Chevalier type, but much earlier and a better yielder, in addition being stiffer in the straw, while this variety rarely gets down, which is an important consideration in such seasons as the one we are now passing through. It is barley that germinates quickly, and Mr. Heath remarked that he drilled the field the same day as a neighbour put in some barley of the Chevalier species, but his could be seen in rows a fortnight before his neighbour's appeared above the ground. It ripens quickly, and is stated to be ready for cutting on an average ten days before the ordinary barleys. Malsters eagerly purchase the Hauna barley as it germinates more quickly and also more evenly. This is a cereal which farmers will do well to watch, especially those whose land is of a lightish character. I hope to refer to Hauna barley in future notes, giving the yields, price, &c., for the guidance of would-be growers.

IN a garden at Newark-on-Trent, belonging to Mr. McAslam, in Priory Road, there is a hollyhock which has reached the abnormal height of 11ft. 2in.

August 8, 1907. R. K.

West Country Notes.

GAME is often a sore point with farmers who suffer damage from the preserves in their neighbourhood; but it is rarely that an opportunity arises for them to test the opinions of a jury on the subject. A farmer living in the neighbourhood of Bristol has no reason for deploring that he took a case before a jury. He was a tenant under a very well-known lady landowner, and had been, as sub-tenant and as tenant-in-chief, paid sums annually under, it was alleged, the various heads of "rent for shooting," "game damage," "damage by birds," "damage from shooting," and "damage to crops." A couple of seasons ago the tenant objected that he did not get compensation enough for the extent of the injury to his crops, and said he would let the shooting.

WHATEVER the reason may be, he received notice to quit. He refused to accept the ordinary sum that had been paid, and increased his claim 150 per cent. The other side contended at the hearing that the claim was not increased till the farmer thought that he could let the shooting independently of the landlord, and for the amount of claim he set up. An interesting point in the case was the assertion that the pheasants had eaten fifty-six sacks of apples. It is probable that what was really meant by this statement was that they had damaged that amount.

THE result of the case was that the jury found for the farmer for the full amount of his claim. Judge Austin, however, remarked that the case showed the advantage of having a jury, as the farmer would have got nothing out of him.

WHERE there are no sporting rights reserved, it is not unusual to find a verbal letting; but it is certainly a matter for some surprise to find a person letting land adjacent to well-stocked covers without a written agreement.

THE circular of the bacon-curing firms on the decline of the English porker reached me at a time when it was a daily occurrence to see farmers loitering about waiting for the police-sergeant to return from his beat, to obtain a licence to move fat pigs off to the slaughterman's; and as he cooled his head in the shade of the porch at the locked-up office, the agriculturist might be found using forcible expletives against the tiresome regulations which took him away from his haymaking just when the best opportunity was afforded him of putting in a good turn.

WOE betide him if he sends his man! "I be come for a licence for measter to move his zow." "Where's a letter to say so?" "Ain't got one." "Then you'll have to go back again and get one, or tell your master to come himself." This was the conversation I listened to a few hours later. The man had come six or seven miles.

THE regulations are evidently drafted by office men, who have no idea of the circumstances of the country policeman, and the distance he covers on his beat. Why on earth cannot it be possible for every farmer to be supplied with forms of declaration, which he can send by post, and receive back the licence in the same way, without the great hindrance of time? Even the first would save a lot of time, for if he were able to send on overnight, the licence might be made out by the sergeant as soon as the post arrived, and it could be left with his wife or at his lodgings to be called for.

THE imposition of penalties for false declarations, or for concealment of disease, would be sufficient protection. At least, they would be equal to the present, for I note a number of cases within the last few days of persons evading the restrictions.

GENERALLY speaking, though there have been heavy local storms, the weather has been favourable for all kinds of crops. Fruit is promising and fulfilling well. One cottage gardener, at Golant, Cornwall, was reported to be spending most of the daylight picking fruit recently. Apples are very uneven. I was driving with a party through an orchard district lately, and in the midst of comments that not an apple had been seen we came across a beautiful lot.

AND thus the world wags! Replies to applications for the services of Miss E. W. Stubbs—a member of a well-known group of sisters who are to be found at many working dairies competing with success—are being sent out with an intimation that in a few days' time she will be leaving the service of the Somerset County Council, where so short a time ago she succeeded a sister as instructress of the travelling butter school. The happy man is, we understand, the gentleman who has charge of all the agricultural instruction work for the county.

A FEW days after the sale was effected of the cheese of the April make at the Somerset Cheese School the price at which it was sold was first intimated through this column. The managers had decided not to make public the information which has hitherto been given on the subject of the cheese made at the school. However, they appear to have thought better of their position, and they have now issued the customary slip confirming what was conveyed to your readers a month ago.

THERE is an old idea that the dairymaid who sings to her cows gets them in a better humour for giving the milk than others can do. Therefore there may have been some method in the madness of Henry Colson Salmon, whom the Plymouth bench have ordered away for observation because a constable found him singing to cows in a field by the roadside. As he also was indulging in wireless telephony by simply putting his fingers in his ears and shouting to Bristol they were perhaps right.

AN old West of England fixture has been revived in the Sherborne Horse Show, and with considerable success. It was at one time a most enjoyable meeting, and I am pleased to think it is likely again to take its place in the regular round, which has commenced, of local one-day shows.

POLITICS are being made the occasion of quite a large proportion of country gatherings in the West, and though it is probable that the farmer under present-day conditions has quite as much to lose as to gain by a tax on corn, most of the Unionist speakers are going for Tariff Reform.

Lincolnshire Notes.

THE profits of the Lincolnshire show are greatly in excess of the Derby exhibition. That fact we have on the assurance of Mr. Adeane, and it is the preparatory announcement to a still more satisfactory one in regard to the society's finances generally. When the final decision to abandon Park Royal was made, Lincolnshire never dreamed that it would be its happy lot to restore the Royal Show to credit again. But so it has been. Bravo, Lincolnshire!

GERMANY is coming to Lincolnshire for its horses. Last week a committee from the fatherland found its way into the country on the look-out for shires. They went, under the conductorship of Mr. J. H. B. Freshney, to the neighbourhood of Louth and the market, and, we are told, made several purchases. The commissioners are distinguished fighting men, and the object is to recruit the breeding grounds of Saxony

LORD HENEAGE is very severe in his letter to the *Times* on the subject of Earl Carrington's disposition of Crown lands of Lincolnshire. His lordship contends that the breaking up of the estate is operating very hardly upon present tenants, and that it is throwing many farmers and their labourers out of occupation. He gives several instances, and ends with a note of great alarm:—"Again I ask what will become of the tenant and his agricultural labourers if the proposal is to be carried out? I am strongly in favour of a sufficient supply of small holdings in every parish and on every estate, and I have no personal or political interest in this question beyond endeavouring to prevent the *bona fide* farmer and agricultural labourer being sacrificed to the cant and ignorance of political theorists without any knowledge of agriculture." I am afraid we always say that when we object to a political reform. But things are really not so bad. It is impossible to make readjustments in any walk in life without creating grievance somewhere. But they will restore themselves; and the firm establishment of the principle of the small holding is worth a little trouble.

THE prospects of sugar beet are improving. The price of beet sugar in England has risen since last year from 8s. 5d. to 9s. 8d. per cwt. It is still too low, we are told. There is not the slightest hope of a factory in Lincs. until a steady average on the right side of 10s. can be maintained. But hope is by no means abandoned, whilst we are waiting, impatient advocates are suggesting that we must have a change of Government to make things move. If that means another dose of sugar taxation, I am afraid it is "no go."

THE Gainsborough Agricultural Show made a great splash with its grand display of horses. In all classes the competition ran amongst animals win big reputations. And one or two flags were lowered. For instance, in the older foal class, Mr. Bowser, of Greetwell Hall, Lincoln, with his Birdsall Menestral filly, beat Mr. Glasier's Roxby Silver Bell bay filly, which had beaten the Royal winner at Normanby. The younger class was won by Sir Berkeley Sheffields's colt by Ragged Boy II., shown for the first time, which beat such a noted winner as Mr. Waterhouse's Dick Whittington filly, hitherto unbeaten.

AMONGST yearlings, Mr. Bonds, of Ludborough, Louth, was the successful competitor with a filly by Lockinge Forest King. Sir Berkley Sheffield's mare won the Shire Horse Society's medal. Quite a record was made by Mr. Robert Surfleet, of the Beckingham stud, Gainsborough. In the Hackney section he carried off the premier awards in the brood mare, foal, yearling, and two-year-old classes, besides taking the Hackney Society's gold medal. Mr. Swallow, of Royal fame, led the Hunter classes with his famous mare Tugela. But he found more than his match in the brood mare class where Mr. Gourley scored with a nice colt by Lincoln Mint.

THE luncheon was enlivened by a breezy speech from Major Renton. Having revolted from his Government and party, and quarrelled seriously with a considerable section of his constituents, the member for Gainsborough evidently feels that his lance is free from party obligations. He criticised Government Ministers freely. They are hopelessly ignorant on matters of agriculture—colossally and abysmally ignorant. He had been told of a certain Cabinet minister in charge of a most important measure dealing with land, which was now before the House of Commons, who, until the Bill went to the committee, was not aware that there was such a thing as rotation of crops. He knew another minister, who had had a lot to do, and would have a lot to do with land legislation, who had himself told him that it was as well he knew nothing about agriculture and farming, as he would thus be enabled to approach these questions of the land with an absolutely open mind. I should guess there is going to be more trouble out Gainsborough way. The great drawback to agricultural progress and reform, as it has always struck me, has been not the ignorance, but the tremendous, the overpowering, the unfathomable and unmanageable knowledge which everybody seems to have on the subject. It is all such different and such conflicting knowledge.

THERE must have been a considerable glut in the pea trade. A consignor in the Long Sutton district recently got his payment for 406 bags of peas, the cheque being £20 4s. 6d. This just paid the cost of pulling, and left nothing for carriage, commission, and the crop itself.

MR. THOMAS NEWTON, of Harrowby Hall, Grantham, one of the largest farmers in the district, died recently at his residence after a prolonged illness. Mr. Newton was a well-known exhibitor of horses.

THE prospects of beef for the autumn are said to promise very well. The markets in America are by no means over supplied, and if they were the consumption is considerably on the increase.

THE coldest July for ten years. And the harvest is put back later than ever.

I MENTIONED in this column last week the sale by auction of 152 acres, part of the Coldham Hall Estate, for £9,700, giving an average of £66 an acre. The land was owned by General Loyd, and was occupied by Mr. W. W. West, the well-known Isle of Ely J.P. Mr. West purchased several lots, varying from eleven to fourteen acres each in area, and has intimated that he intends to let them in small holdings. Already the intimation has received a practical welcome.

A FORTNIGHT ago I backed my opinion of the Moulton Parish Council, which has taken up 750 acres of Crown land for the purpose of small holdings. The little authority is taking to its work wonderfully well. It has persuaded the authorities to erect nine new houses and ten sets of new outbuildings. There will thus be fourteen holdings and on them thirteen buildings, and there are already applications for 1,000 acres.

Mr. S. Young, poultry, pigeon, and cage-bird dealer, and fanciers' appliance maker, of Misterton, Crewkerne, Somerset, has issued a revised catalogue of appliances, &c., which should prove of interest to all breeders of poultry, pigeons, and cage-birds.

The Scottish National Exhibition —The arrangements for the Scottish National Exhibition to be held in Edinburgh next year have made good progress. The plans, subject to any alterations which may be deemed advisable, have been accepted, and work on the grounds and buildings will commence either at the end of this month or the beginning of next month. In the accepted designs the industrial hall of 100,000 square feet and the machinery hall of 20,000 square feet are included in one magnificent building, and everything both in connection with the structures and the grounds has been framed with a view to charm the eye and at the same time facilitate the commercial requirements. The classification of the various sections includes fine arts, education and history, arts and crafts, mining, engineering and metallurgy, transportation and motive power, shipbuilding and waterways construction, chemistry and scientific appliances, lighting, heating and ventilation, manufactures and varied industries, agriculture, horticulture, and sylviculture, domestic, sports and pastimes, botany and zoology, artisans' work, women's section, urban and rural improvements. The charge for floor space in industrial hall and machinery section will be 3s. per square foot for spaces of 100 ft. or more in area; smaller areas, corner spaces, and special positions will be charged extra at the discretion of the Exhibition Committee. All information can be obtained on application to the manager, Mr. W. H. Knight, 45, York Place, Edinburgh.

LINCOLNSHIRE FARMERS' UNION.

CENTRAL COMMITTEE.

At the last meeting of the Central Committee of the Lincolnshire Farmers' Union Mr. Bullen, of Newark, appeared before the committee on the question of railway rates, and in the course of an address on the inequality of rating on different railway systems said Lincolnshire and Nottinghamshire were paying from 15 to 25 per cent. more on the carriage of their produce than in the district served by the North-Eastern Railway Company and the London and South-Western Railway Company.

After some discussion, a sub-committee, consisting of Messrs. Bullen, J. Todd, W. S. Fox, and J. D. Blanshard, was appointed to enter into the matter.

A letter was read from the secretary of the Education Committee at the Holland County Council stating that the communication of the Central Committee in reference to agricultural education had been under the consideration of the Education Committee, and he was instructed to reply that they were not less desirous of "increasing such instruction in all rural elementary schools as would tend to increase the inclination for agricultural pursuits from the earliest age possible" than were the Central Committee of the Farmers' Union. How this was best to be done was a matter occupying the serious study of the Education Committee, which they hoped would lead to some practical results.

The matter was not discussed.

The Canterbury Farmers' Club and the East Kent Chamber of Agriculture sent a resolution to the following effect:—"That this Chamber cordially endorses the resolution on the Small Holdings and Allotments Bill passed by the Central Chamber of Agriculture at its meeting on July 2, 1907, and further desires to express its approval generally of the recommendations embodied in the report of the Parliamentary delegates of the Lincolnshire Farmers' Union.

The resolution was received with approval, and laid on the table.

MARKET RASEN BRANCH.

A public meeting under the auspices of the Market Rasen branch of the Lincolnshire Farmers' Union was recently held at the Gordon Arms Hotel, Mr. Cook Holdershaw, J.P., the chairman of the branch, who presided, said that if they would improve their position they must join the Union, and stand forth as one man, and say this is our trade, our industry and our right and we will have our Union conducted as other unions are in the country. Would they submit to have one imposition after another placed upon them? Agriculture was the largest and most important industry in the country, and more people and more capital were employed in it than in any other industry. Would they submit to be dictated to, and crushed and ruined by those people who, provided they got cheap bread for themselves, did not care whether agriculture prospered or not.

At the present time the cry was for cheap food. Cheap food had no doubt been a blessing and a boon to millions of people in this country; but at the same time it had also been most disastrous to others in this country. Cheap food, or rather the low price of wheat and other agricultural produce, had impoverished the whole of the agricultural portion of this country. It had ruined thousands of farmers, and driven millions of acres of land out of cultivation. It had deprived hundreds of thousands of men of employment, and it had depopulated their rural districts. Hundreds of the starving poor in the slums of our great towns to-day would probably not have been there had they not been driven from the land. Many of them would probably have been living under comfortable conditions in the country villages from which they had been driven, but instead there was overcrowding, disease, and death.

They had every reason for thinking that this country would have been happier and more prosperous if the agricultural industry had not been destroyed. Agriculture had failed in this country because it had been both neglected and overtaxed, and because those people who were dependent upon the land for a livelihood had not combined for their own common protection. There was no doubt that agriculture paid more than a fair proportion of the rates and taxes of this country, and they did not get a corresponding return. Even the education given in their public elementary schools was devoted almost entirely to making young men clerks or artisans, and to giving them a dislike for agriculture.

They were often reminded of the prosperity of the Danish farmers, but it must be remembered that that State helped, and was always ready to help them to buy their own farms, with the result that nearly all the land was owned by those who cultivated it. That must be an ideal system, and one which the Government of this country would do well to adopt; it ought to do all it possibly can to help the small holder to buy his farm, and give him a stake and interest in the property of the country. He would very much like to see restored to the country those two classes of cultivators which used to exist, the yeoman farmer and the peasant proprietor, as to those two classes the greatness of England had been in the past due.

Mr. Howard complained that farmers were too slow; it was time they realised the position they were in and endeavoured to better their position. He deprecated farmers sitting on the fence, and urged them to come forward and join the Union, thereby strengthening the Union and help to further the interests of the farming community.

The Rev. T. Hamilton followed with an inspiriting speech, in which he urged farmers to be up and doing, to throw off their lethargy and combine for the purpose of getting their rights. He showed them that if they would organise—and that Union gave them the opportunity of so doing—they would soon make themselves heard in Parliament. It might be said that they could not hope to get more than one agricultural representative in Parliament, and that he would not be able to do much good. But the speaker pointed out that if farmers would only join together they would make their influence felt in all the agricultural constituencies, and members of Parliament, especially those who only held their seats by a few hundreds majority, would only be too pleased to attend to the needs of the farmers. Then not only would this Union help them in this direction; if they got into difficulties and a law suit was pending, and they had only themselves to depend upon, their opponents would strain every nerve to ruin them if possible. But if they had a Union like that at their back, determined by their great strength and powerful resources to support them, their opponents would show the white feather, and very likely legal proceedings would fall through altogether. He urged those of his hearers who were not members to join the Union, and put their shoulders together as one man, and when doing that they would be adding to the greatness of the Empire.

Harvest Prospects in Wilts, Hants, and Dorset.

A large number of reports from farmers in various parts of Wilts, Hants, and Dorset, concerning the harvest prospects of 1907, appeared in the *Salisbury and Winchester Journal* of the 3rd inst., and these show that the season in these counties is later than usual, and harvest is not likely to be general until well on into the present month. Of cereals, wheat promises to be equal to, or better than last year, and is likely to give a fair average yield. Barley is also a good crop, with an abundance of straw, but, as yet, it is early to speak with confidence of the quality of the grain, so much depending on the conditions under which barley ripens. Oats show a considerable improvement as compared with the last two years, the majority of our correspondents describing the yield as average or over average. A few cases of blight and rust are reported, but on the whole cereals generally are very free from disease.

There has been an abundant yield of hay, well up to or exceeding the average, but in some instances the quality is reported as indifferent owing to the bad conditions under which much of the crop was secured. This is more especially the case with the early crop, much of the later crop being got in good condition.

The reports with regard to roots are of a very promising character. Although backward during the early part of the season, the crop has made much progress during the past few weeks, and is likely to give a heavy yield. In a few instances the first sowings of mangolds were attacked by fly before they had secured a plant, and had to be resown; but, generally speaking, the crop is an excellent plant and free from disease.

Sheep and cattle are generally described as healthy and in good condition; sheep are about the average number, but in some cases correspondents reported the breed of lambs as small, owing to twins not being as numerous as usual. Prices of ewes and lambs, especially the former, are higher than those of last year, but to a large extent this is counteracted by the fall in the price of wool in the recent sales in this district.

Provided favourable weather is experienced for the ripening and ingathering of the crops, with increased prices for sheep and a prospect of plenty of keep, the farmer's outlook is, our contemporary concludes, by no means a discouraging one, and considerably better than was anticipated a few weeks ago.

The following gentlemen have recently been appointed on the staff of the Rothamsted Experimental Station:—Dr. E. J. Russell, lately of the South-Eastern Agricultural College, Wye, as the Goldsmiths' Company's Assistant for the Investigation of Soils, and Dr. H. B. Hutchinson, of the Midland Agricultural and Dairy College, Kingston, Derby, as bacteriologist.

Fertilisers and Feeding Stuffs.

The Most Essential Constituent for Hay.

The following results were obtained in an experiment made by the Aberdeen and North of Scotland College of Agriculture with the object of showing which manurial constituent produces most effect on the hay crop:—

Plot.	Approximate Quantity of Manures Applied per Acre.	Hay per Acre. Cwts.	Cost of Manures. s. d.	Profit or Loss. s. d.
1	No Manure	41·31	—	—
2	1¼ cwt. Nitrate of Soda .. 2½ cwt. Superphosphate. 1 cwt. Sulphate of Potash.	58·77	25 6	10 7
3	1¼ cwt. Nitrate of Soda 2½ cwt. Superphosphate. No Potash	54·98	19 10	5 2
4	1¼ cwt. Nitrate of Soda .. 1 cwt. Sulphate of Potash. No Phosphate.....	53·53	18 4	5 2
5	2½ cwt. Superphosphate . 1 cwt. Sulphate of Potash. No Nitrogen	44·26	12 10	12 9

From this table it is quite clear that the complete fertiliser, containing nitrogen, phosphate, and potash, produced the largest and most profitable crop, the gain being 10s. 7d. per acre more than the cost of the manures.

The profit, according to the report, is, however, much understated by the figures, as the foggage was always greatly superior where the manures had been used, and the effects of the manures on the subsequent crops was not estimated.

Therefore, if the hay consists largely of rye grass and quantity is desired, it is obvious that the manure must contain nitrogen.

Lime May Exhaust Soil.

Applications of lime will cause exhaustion of the soil if used alone and the land cropped every year; yet it proves highly beneficial when farmyard manure, green crops, or chemical fertilisers are also applied. Lime is not strictly what is termed a fertiliser, though it is a substance found in the structure of all plants, but it serves to hasten the chemical action of other organic and inorganic materials existing in soils, and thereby prepares the plant foods for bet er assimilation by plants, thus being a useful and indispensable assistant on nearly all farms.

Inoculation.

The expectations which seem to have existed in some circles of the revolution in agricultural methods which would be brought about by the discoveries connected with nitrogen-forming bacteria have gradually come down to a more mundane level. In this country of fertile and well-cultivated fields the results have been more or less of a negative character, but in some half-barren districts of America the application of inoculation has proved of great advantage. According to a bulletin issued by the United States Department of Agriculture, nearly every legume has its own particular strain of nodule bacteria. For example, that of the clover is different from that of lucerne, and that of the cow pea from that of the soy bean. In planting a leguminous crop for the first time, it will therefore often happen that no tubercles will form on the roots, because the proper kind of bacteria is not present in the soil. These may be supplied by scattering soil from a field where the crop in question has been recently grown, or by using an artificial culture of the proper bacteria. After the field is once thoroughly inoculated there is rarely any difficulty afterwards in getting an abundant supply of root tubercles.

The same strain of bacteria will often inoculate different closely related legumes. Thus lucerne, bur clover, and sweet clover are tubercled by the same strain; a different strain inoculates most kinds of vetches, as well as the field and garden peas; still another strain is apparently used by red clover, white clover, and alsike clover in common.

There is a marked variation among different legumes, both in the extent to which they are naturally tubercled and in the ease with which different ones may be artificially inoculated. Natural inoculation presupposes the existence of the proper germ in the soil, and this is nearly always present over areas where a particular legume has been generally grown. Thus red clover is practically always naturally inoculated in the north-eastern quarter of the United States, and cow peas in the south-eastern. Lucerne is naturally tubercled as a rule in the west, while in the east artificial inoculation is usually necessary.

Artificial inoculation is usually accomplished with ease as regards cow peas, red clover, vetches, field peas, and most other legumes. Soy beans, however, frequently give negative results. Sweet clover is much more readily inoculated than lucerne, though both use the same strain of bacteria.

In some cases the tubercle germs occur in sufficient abundance on the seeds to provide inoculation. This occurs more particularly on seeds that are tramped out by oxen or which otherwise become covered with dust from the field. An interesting illustration of this occurred in 1906 in the case of guar, an East Indian legume. Neither this plant nor any closely related species had previously been grown in this country. Nevertheless, at Chillicothe, Tex., the plants were abundantly tubercled.

Stable Manure—Loss in Value.

In an experiment, conducted with scientific accuracy, at the Cornell University, 4,000 lb. of ordinary manure from the horse stables, calculated to be worth 11s. per ton for the plant food it contained, were exposed in a pile out of doors from April 25 to September 22, a period of about five months; at the end of that time the total weight had decreased to 1,730 lb., and even this reduced quantity had suffered a loss in value of 1s. 6d. per ton. In other words, the value of the whole pile of manure was lessened by nearly 50 per cent. In another experiment, manure exposed for six months lost 56 per cent. of its dry matter and 43 per cent. of its plant food value. In this case the fresh manure was worth 9s. a ton, while the rotted manure was worth 12s. a ton, but the loss in total weight and in plant food was such that for each ton originally worth 9s. there remained only 5s. worth after six months' exposure.

THE STANDARD

FOR QUALITY—PURITY—ECONOMY.

It carries the Highest Guarantee.

Of Practice & Science.

The remarkable success of **Silcock's Fattening Cake** has brought it to the forefront as a **Standard Food** for rapid and economic fattening. Breeders and feeders speedily realised the benefit to be derived from using a cake compounded specially for one purpose, and the enormous demand has taxed their extensive mills and machinery to their utmost. It has done more, however; it has produced the inevitable crop of imitators. These camp-followers of every successful pioneer are remarkably alike in their methods.

We ask you to consider the following points:—

WHY do they claim that their cake is just as good as Silcock's?

WHY do they make their cake look like ours?

WHY do they sell at a slightly lower price than ours?

BECAUSE Silcock's Fattening Cake is recognised as a Standard Food for fattening Cattle and Sheep.

BECAUSE ours is a good-looking cake, and is as good as it looks.

BECAUSE they can well afford to do so, for their cake is not as good as ours, or anything like as good as it looks.

Purchasers of these foods are really buying a more expensive and much less valuable food. Remember that analysis and feeding value are not identical. You may get an analysis as high as ours, but the feeding value may be much lower, for it is possible to produce a cake, showing a good analysis and yet of poor feeding value, either from the use of unsuitable or unsound materials.

We make only one quality—the best.

We test the cake regularly in our Laboratory and at our experimental farm.

We guarantee to pay the cost of analysis and three times the value of any deficiency, should such be found.

We use only the best and purest materials.

We are among the largest buyers of raw materials in the market, buying for cash at the lowest price.

We have our mills equipped with the most modern labour-saving machinery.

THEREFORE we can and do sell at the lowest possible margin of profit.

No Firm can supply a similar quality at a lower price than we quote.

. . . . . Lower Rates simply mean Poorer Cakes. . . . . .

BUY SILCOCK'S FATTENING CAKE—THE STANDARD BRAND.

It is the best and cheapest on the market for quality and rapid fattening. Why buy imitations when you can secure the real article? You cannot lose, you will certainly gain, by using our brand, for we make one food do one thing well.

CAN WE SEND YOU A TRIAL LOT?

The Cow is a Good Chemist!

And it may be relied upon always to report, through the milk pail and in its own condition and health, whether its food is what it ought to be or not.

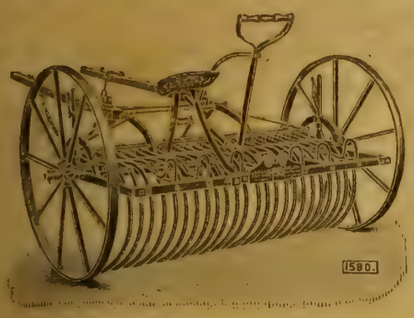
Being ourselves both practical farmers, and probably the largest buyers of feeding stuffs in the country, we have been, so to speak, compelled to study this particular subject.

Our experience has been that for the Dairy Cow the best quality of feed is none too good, and we have directed our efforts towards producing the very best dairy foods it is possible for human skill to produce.

We also happen to own a large and well-equipped Mill for the production of Feeding Cakes and Meals; we can, therefore, manufacture economically, and sell at a price which is very little in excess of that paid for ordinary feed.

In these facts will be found the simple reason why observant dairymen everywhere are beginning to recognise that in

BIBBY'S DAIRY MEAL, CAKE AND CAKETTES



they have feeds ready to their hands which yield a better economic result than is otherwise to be obtained.

UNION IS STRENGTH.

Lincoln has loomed large in the agricultural concerns of the country just lately, what with the Royal Show and its gratifying success, but there is another way in which the county of Lincolnshire is making a bid for fame.

Readers of this journal cannot fail to notice from the reports which appear in our pages from time to time that the spirit of unionism has got a firm hold on Lincolnshire farmers, and it is spreading. In our last issue we published a report of a meeting at Doncaster which led to the formation of a branch of the Lincolnshire Farmers' Union, and farmers representing some 9,000 acres of land were enrolled as members. We have watched with interest the progress of the Lincolnshire Farmers' Union, and see in it a businesslike attempt on the part of a community of agriculturists to combine for their mutual interests.

There is no need to give reasons here why farmers should combine as they are apparent to everybody, and in wishing the new branch of the Lincolnshire Union all success we venture to hope that the movement will spread, and that British farmers all over the country will see that in unity they will find their strength.

AMUSEMENTS AT AGRICULTURAL SHOWS.

Speaking generally of agricultural shows there seems to be little trouble in getting the competitive classes filled, but the difficulty societies are faced with is that of providing means of amusement for the people who attend the gatherings.

Of course, if agricultural societies could depend on farmers alone for the all-important gate there would not be the same difficulty, as they would probably find enough to interest them in the exhibits, but it is not so with the man in the street, who, not being particularly concerned with animals and implements, wants something to amuse him.

Happily, the love of horseflesh is firmly implanted in the breast of the average Briton, no matter what his calling may be, and though there is no longer any novelty about them, horse jumping and driving competitions lose none of their power of attraction.

Good music is another thing that never fails to draw, and a first-class band goes a long way with the show-going public.

On the other hand, this is a novelty-loving age, and considering the multitude of agricultural shows now held, the problem is to provide fresh items to attract the million.

Midland Agricultural and Dairy College.

The report presented by Principal Blackshaw at the annual meeting in connection with the Midland Agricultural and Dairy College, Kingston-on-Soar, stated that the year had been one of phenomenal progress, unprecedented in the annals of the college. During the greater portion of the year the classes had been packed, and the accommodation consequently taxed to its utmost. The lecturers and instructors had worked exceedingly hard and with a will to do all possible in their power. Good health, generally, had prevailed against the staff and students, and great as the previous record was, they had greatly surpassed it, both in the amount and value of the work done, and also in the extent to which the college had gained in the estimation, confidence, and appreciation of the farmers.

The aggregate of attendances at the courses greatly surpassed that of any previous year, there being 421 pupils, compared with 337 in 1905-6 and 302 in 1904-5. The college continued to be fortunate in drawing the bulk of its students from those engaged upon the land—young people bred to agriculture and who meant to stick to it. The great increase in applications for admittance which were received during the year from their own counties was most encouraging.

The accounts showed that the net result of the year's working was that the income had exceeded the expenditure by £306 2s. 5d., with the result that, for the first time since the addition of the agricultural department, the debit balance on revenue account had entirely disappeared, and there was instead a credit balance of £153 5s. 4d. The total receipts were £13,491 4s. 4d. The Leicestershire, Derbyshire, and Notts. County Councils each contributed £3,700, and the Lindsey County Council £1,000.

Mr. T. Cope, chairman of the governing body, in moving the adoption of the report, which was carried, said that it had never been his lot to bring before them a more encouraging report than the one now presented. Wherever they looked they found progress. The question of still further accommodation would before long have to be considered. They were constantly growing; they could not help themselves, and the only difficulty had been that as they grew they got a little more expensive.

Notes of the Week.

Barnsley is more renowned for its coal than for its agriculture, but it gave a splendid welcome to the Yorkshire Agricultural Society last week.

Seventy-five per cent. of Barnsley's interests lie under rather than on the ground, but its closeness to agricultural centres keeps alive a love for farming among its inhabitants.

The train service was very poor, and from Sheffield it was a long and weary journey. The length is about sixteen miles, it seemed sixty.

The show was nicely situated about 1½ miles out of Barnsley, and the ground was very suitable.

The ground was nicely laid out and kept wonderfully compact, although in this respect hardly comparable with the Royal Lancashire.

Entries at Barnesley were hardly so numerous as last year, and absentees were by far too many.

Horses were naturally the principal attraction, and they constituted a good show as regards quality.

The principal reversal of form was the putting down of Lively Beeswing, the Olympia champion, in favour of the Yorkshire Horse Cedar Camilla.

There was a great difference of opinion over this result.

The cattle classes were mostly Shorthorns, and they made a wonderfully good show and included many Yorkshire winners.

The sheep section was only sparsely filled, but pigs came from all over the county to compete for the prizes.

Barnsley began well as regards attendance. The weather was very threatening, but fortunately the rain held off.

The smoke and grime from the collieries, &c., made the sky dull, but it was nothing like Middlesbrough a year ago.

Another week of promiscuous weather has brought us nearer the appointed time for the cereal harvest, but the crops are sadly in need of a spell of real hot sunshine.

A herd of cows wearing spectacles must be a curious sight, yet it is to be seen in some parts of Russia during the long winter.

The cows become afflicted with snow blindness while foraging for the pasture under the snow, and to prevent the malady they are provided by careful owners with smoked glass spectacles.

The meeting of the British Association afforded that protagonist of three acres and a cow, Mr. Jesse Collins, an opportunity of delivering an effective address on small holdings.

The view that he advocates of the advantages of small occupying ownership rather than tenants occupying small holdings seems to be gaining ground.

The species known as "road-hogs" in motors could well be dispensed with, but according to the Butchers' Trade Association we could do with more of the ordinary pigs in the country.

According to a circular issued by the association, pigs have been getting scarcer the last few years. Pig breeding should certainly be encouraged.

The Russian export trade is increasing by leaps and bounds in two articles, aliens and eggs. Let us hope that the latter are fresher than the former.

A horticulturist in America has found a way of getting gold from cucumbers. From seven acres of cucumbers he realised £800.

He is a more practical man than the enthusiast of whom we have all heard, who formed a company to extract sunbeams from cucumbers.

Wanted, an appropriate name for milk-blended butter. During the discussion in Parliament on the Pure Butter Bill the following were proposed:—"Faked Butter," "Bastardine," "Cow Juice," "Aquatic Butter."

How would "Waterbut" sound? We shall be glad to have suggestions.

Shakspeare has some well-known lines that fit in on the subject:—

"But he that filches from me my good name
Robs me of that which not enriches him
And makes me poor indeed."

From the housetops it is proclaimed that Great Britain is and shall remain a "free-food" country.

To impose a tax on the people's food would be worse than pestilence, war and revolution combined.

And yet, according to a statement made in Parliament by the Chancellor of the Exchequer, the revenue derived last financial year from taxes on food was £64,839,260.

Queer, isn't it?

Much has lately been written and spoken about education. The seeds of education sown in the virgin soil of young children's minds in rural districts bear poor fruit.

Here are some extracts from easy essays on agricultural subjects for which prizes are given by the Royal Lancashire Agricultural Society.

"Sheep's legs are made into trotters, for which Bolton is famous. When there is an important football match, as when the Wanderers played Everton, the people shouted 'Play up, Trotters,' so we see the sheep is useful."

"Horses' skin is made into chewing gum, which boys like. Girls like chewing too, but it is not good for them."

"The fowl when alive is used for cock-fighting, and when dead for its beautiful feathers."

Farmers and horticulturists are engaged in an incessant struggle with plant disease and pest, and from time to time they have to contend with new species of these enemies.

It is, therefore, good news that a new and fully equipped laboratory and research station for the study of plant disease and cognate subjects have been established.

At a recent important agricultural show, awards were made to the labourers in husbandry who had brought up the greatest number of children. Husbandry seems the right word here.—*Punch.*

Earl Carrington is strongly recommending co-operation, especially among small farmers and people cultivating small holdings.

It is to be hoped that his recommendations will bear fruit. Co-operation and organisation will work wonders commercially and politically.

The County Farmers' Unions, affiliated and concentrated, will do more for agriculture in ten years than separate individual effort in a century.

The imported fox threatens to prove as great a nuisance in Australia as the imported rabbit. Lambs, poultry, and the native birds are having a bad time from the depredations of Renard.

A banana tree planted in Cornwall has borne fruit. This is striking testimony for the mild climate of the county.

AGRICULTURAL LAW.

*Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "*MARK LANE EXPRESS,*" 3, Wellington Street, Strand, London, W.C.*

The Law on Fences.

SIR,—A and B are owners and occupiers of adjoining land, and according to the parish award A is the owner of the hedge and ditch. A has allowed the hedge (although it was a quick set hedge planted by the Commissioners at the time of the enclosure) to run to ruin to such an extent that there are 190 gaps in it, and refuses to repair the same in any shape or way, although the award says "fences to be made and maintained by owner of allotment." A's refusal to repair the fence causes B a loss of £10 a year, as B cannot make the best of his land. Is there any legal remedy against A for B to claim compensation, and in what court? A. says every person must fence against their own cattle; if so, the award is a dead letter.—Yours, &c., F. Y. S.

[*** Since A is under an award bound to repair the fences, I think A could be made to repair the fences, but I do not think that B has any right to proceed against A, except in respect of special damages. It is a general rule that an occupier must fence against his own cattle, but I do not think that this applies where the duty is cast upon anyone to keep their fences in repair. It only applies to cases where there is no duty.—BARRISTER-AT-LAW.]

A Question of Notice.

SIR,—On November 30, 1906, I engaged a man as cowman to live in for £21, 5s. fasten penny, until November 24, 1907. The following is a copy of a notice received by post on August 7th:—"August 5, 1907.—Dear Sir,—I now give one month notice from the 6th August to the 6th September to *live* your *servace*.—From, &c., ——." Is the notice any use? Ought I not to have got it on the 6th instead of the 7th? September 6 means the beginning of harvest.—Yours, &c., FARMER.

[*** If the agreement is subject to the usual month's notice by usual custom, and a month's notice is given, I think the notice would be good. I do not appreciate your point as to the 6th instead of the 7th of September.—BARRISTER-AT-LAW.]

Recovery of Tithe Rent.

SIR,—I have been charged with tithe, and have paid the same for sixteen years, which should, according to the tithe award, have been charged to five other landowners. As this was money paid in mistake, can I legally claim repayment for the sixteen years from the rectors who received the money, or from the people who should have paid the money? The mistake was made through the neglect of the rector's agent or collector not giving himself the trouble to consult the tithe award.—Yours, &c., A SUBSCRIBER.

[*** The payment by you was evidently made under a mutual mistake of fact and not of law. I am therefore of an opinion that you could recover it except for the Statute of Limitations, which, if pleaded, would restrict your claim to the recovery of the amount paid to six years only.—BARRISTER-AT-LAW.]

THE FARMERS' DIARY.

TUESDAY, AUGUST 13.—Agricultural Shows at Llanelly, Keith, and Pickering—Penrith Show—Heanor Combined Agricultural and Horticultural Show—Fairs at Ashford, Horncastle, and Highworth—Maidstone Horse and Live Stock Sale—Exmouth and Clay Cross Horticultural Shows—Sending-in Day for the Kelso and Banbury Shows.

WEDNESDAY, AUGUST 14.—Agricultural Shows at Bakewell, Poulton-le-Fylde, and Hastings—Bath Cheese Fair—Oxford Great Annual Ram Fair and Sales—Fairs at Chester-le-Street, Newport, and Dunstable—Tavistock Horticultural Show—Newing Green Annual Lamb Sale—Sending-in Day for Newton St. Loe, Castle Cary, and Havant Shows.

THURSDAY, AUGUST 15.—Second Day of the Hastings Show—Durham County Show at Wynyard Park, Stockton—Agricultural Shows at Knighton, Ombersley-by, Droitwich, Penistone, Carmarthen, Llanrwst, Whitby, and Walton Park, near Warrington—Weston-super-Mare Horse Show—Ashbourne Horse and Cattle Fair.

FRIDAY, AUGUST 16.—Agricultural Show at Newby, for Scarborough District—Second Day of the Great Fair at Ashbourne—Live Stock Sale at Yeovil—Sending-in Day for Leominster Show.

SATURDAY, AUGUST 17.—Shows at Allendale, Chorlton, Holmfirth, Leyburn, and Holme-by-Burnley—Sale of Sussex Cattle at Ticehurst—Sending-in Day for the Bath Horse Show—Sending-in Day for Valley of Hope Show and for the Melton Mowbray Show.

MONDAY, AUGUST 19.—Show at Rochdale—Show for East Glamorgan at Nelson—Knighton Horse Fair—York Agricultural and Horticultural Gala Opens, and lasts three days—Sale of the Marquis of Winchester's Pedigree Rams, &c., at Amport—Sending-in Day for Airedale, Worsley, and Rhymney Shows.

At the Helmsley County Court on Thursday, Alfred Boyes, Layesthorpe, brought an action to recover £28 damages in respect of sheep alleged to have been chased and worried by dogs belonging to Mr. Russell and Robert Stockill, farmers, Sproxton. For the defence it was stated the damage was done by a stray dog which had been seen in the locality. After an hour's deliberation the jury found a verdict for plaintiff, and assessed the damages at £8.

The committee of the Newbury Horse Show has increased the prizes to be given for the open jumping classes at their show on August 21. Prizes of £20 and £15 are offered now, besides seconds and thirds. Entries for the open jumping classes can be received up to Friday next, the 16th inst., eight days later than originally fixed. Entry forms can be obtained from Mr. E. J. Forster, secretary, Newbury.

SHEEP.

THE WEEK'S SALES.

Ashford.

The first sale of the season at Ashford market attracted some 12,000 entries, and the lambs taken as a whole were a fine lot. Buyers were very strongly represented, and a capital clearance was effected at good prices, the average being from 4s. to 5s. higher than last year. The highest price for lambs made during the day was 37s., this figure being reached for some half-breds of Mr. J. Hobbs, while Kents went up to 34s. A few ewes were also included in the sale, and all the useful ones sold well.

Blandford.

The annual great August Sheep Fair at Blandford was held on Thursday, when between 4,000 and 5,000 were penned, which made, with some fine selections of ram lambs, one of the most attractive displays ever seen at Blandford. The general run of prices were registered draft Dorset Down ewes from 42s. to 45s. 6d.; other Dorset down ewes, 43s. to 47s.; registered draft Hampshire Down ewes, 40s. to 46s.; grazing ewes, 36s. to 42s.; Down wether lambs, 44s. to 51s. 6d. for best, and others 35s. 6d. to 42s. 6d.; Down chilver lambs, 35s. 6d. to 37s. 6d.; mixed lambs, 29s. to 33s. 6d. Hampshire Down ram lambs evoked keen competition at from 5 guineas to about 21 guineas for the greater portion; others of exceptional character realising still higher prices. South Down rams 4½ guineas to 5½ guineas.

Braintree.

At Braintree on Wednesday 2,000 head of sheep and lambs were offered and met a good demand, the lots being soon cleared. The top price for sheep was secured by a pen of shearling Suffolk ewes from Mr. John Ambrose, of Panfield, which made 68s. 6d. per head, whilst Mr. E. Fairhead, of Coggeshall, had the honour of taking the best price for lambs, a pen of ten making 54s. 6d. Other prices ranged up to 66s. for sheep and 50s. for lambs.

Carlisle.

The opening lamb sales of the season were held at the two Carlisle auction marts on the 3rd inst., and attracted a large number of buyers. The wet weather during Friday night had had a detrimental effect on the appearance of the lambs forward, but they nevertheless met a strong demand, and scarcely a lot passed unsold. Supplies being short of requirements, prices were very satisfactory to the vendors.

At Harrisons' Mart there were over 800 forward, and the quotations there were as follows:—Lambs: Half and three-quarter bred, 23s. 6d. to 30s.; cross Downs, 29s. 6d. to 32s. 6d; Leicester crosses, 25s. 3d.; Cheviots, 12s. to 14s. 9d. Feeding sheep: Crosses, to 32s. 9d.; Cheviots, to 27s. 3d.

Hetheringstons' Auction Company had between 200 and 300 forward, chiefly of a very good class, and the following were the prices realised:—Cheviot shearlings, 27s. 3d. to 28s. 3d.; Newbiggen cross shearlings, 27s. 3d.; black-faced hoggs, 20s. 9d.; Oxford cross lamb hoggs, 31s. 6d.; half-bred ditto, 28s.

Castle Douglas.

The first of the lamb sales at Castle Douglas this season took place on Monday, and that these fixtures are as popular as ever was proved by the large attendance of buyers. Close on 8,000 top lambs, principally half and three parts bred, were penned, and they formed a grand selection. An excellent trade was experienced from the start, and in some cases an increase of 1s. to 1s. 6d. on last year was made. Several lots, however, went at the old figures, while the average was fully 1s. down on the corresponding sale of 1905. Though the numbers were fewer, the lots were better drawn than last year, and were shown in good bloom, a total clearance being effected early in the afternoon.

Chester.

Messrs. Cunnah and Roberts, of Chester, held the annual sale of sheep which have been grazed on the Dee Marshes during the last twelve months on the 1st inst., when the catalogue comprised over 3,000 sheep, including from the executors of the late Mr. James Kemp 1,500 Cheviot wethers, 150 Black faced wethers, and 150 cross-bred wethers and gimmers; and from Mr. Charles Kemp 1,100 Cheviot wethers and 150 cross-bred wethers. The whole of the sheep were in stronger and better condition than they have ever been before. There was a splendid attendance of farmers, and the prices all round were fully equal to those made here last year, but rather more than usual of the sheep were bought locally. Mr. James Kemp's Cheviots made from 29s. 6d. to 32s. 6d., the cross-breds up to 41s. 6d., and the Black-faced up to 31s. 6d. Mr. Charles Kemp's Cheviots made from 27s. 6d. to 38s., and his cross-breds 39s. The bidding throughout was keen and spirited, and every sheep was sold.

Chichester.

The annual sale and show which took place on Wednesday last at Chichester, resulted in one of the most important shows and sales of Southdown sheep held during the present year. The number sold was over 4,000 head, and the attendance of buyers was a very large one, and we may say thoroughly representative.

Champion prizes were offered by Messrs. Stride and Son (the auctioneers), for the best ram, ram lamb, and regular draft ewes, and two of the three were carried off by the Duke of Richmond and Gordon, K.G. His Grace received the award for rams, and the Duke of Devonshire was placed reserve, Sir Julius Wernher, Bart., of Luton Hoo Park, Luton, being highly commended. The Duke of Richmond also secured the champion award for the best regular draft ewes in the sale, Mr. J. B. Tribe, of Earnley, being reserve. For ram lambs the honours went to Lieutenant-Colonel W. W. Hammond, of St. Alban's Court, Dover, with Mr. F. H. Jennings, of Cockford Hall, Bury St. Edmunds, reserve, and Sir Thomas Gooch, Bart., Benacre Hall, Wrentham, Suffolk, highly commended.

In addition to the usual consignments sent to the sale Mr. J. W. Baxendale consigned the whole of his registered flock, and the excellent prices which it realised and averages are such that would indicate the appreciation of purchasers of this centre as a source of dispersal, not only o regular draft sheep and rams, but of flocks also.

The 50 yearling ewes made from 104s. to 70 per head and averaged £4 8s. 6d., the principal buyers being Mr. Stewart at 104s., 100s. (twice); Sir J. Werner, 100s., &c. The 4 tooth ewes, 27 in number, made from 108s. (Mr. Stewart) to 78s., and averaged at £4 8s. 6d.; 14 six tooth ewes went to the Duke of Norfolk at 95s. and 80s., and averaged £4 7s. 2d; 19 full mouth ewes averaged £2 11s. 6d.; 23 draft ewes £2 10s. 6d.; and 42 ewe lambs £2 10s. 6d; the whole flock, 175 in number, averaging £3 11s. 2d.

The demand for the yearling ewes entered by the different consignors was remarkably keen and good; 100 from the Duke of Richmond averaged £4 7s., Earl Manvers paying 107s. for 10. Mr. C. J. Fletcher took 60 in pens of 5 at 100s., 93s., 84s. and 83s. twice. Lieut.-Colonel Hammond (171) averaged £2 19s. 5d., Mr. Thorpe paying 71s. and 70s. for 2 pens of 10. Mr. E. E. Speed's 50 averaged £2 16s. 4d., 58s. being the top price. Mr. J. Colman sold 20 at from 80s. to 70s., other consignments making up to 58s. The principal lots of four and six-tooth ewes were Sir E. Loder's 15, sold at 51s, Mr. W. M. Cazalet's 12, sold at 49s., and Mr. R. W. Brown's 50, sold at 47s.

The regular draft ewes sold remarkably well. The Duke of Richmond's 100, 50 of which won the challenge cup, made 65s. to the Exors. of Colonel McCalmont, and 52s.; Mr. J. B. Tribe's 100, 50 of which were reserve for the challenge cup, made 71s. to Mr. A. C. Hall, and the other 45s; Mr. A. M. Singer sold 260 at from 54s. to 32s, Mr. 50 at 54s., others making up to 48s.

One hundred and seventy-two yearling rams were disposed of for £1,667 10s, an average of £9 13s. 7d. Such a result proves without question how excellent a sale it was, the number sold being practically the whole of those entered, and it is

The Leicester Shearling Ram shown above is the animal with which Mr. George Harrison, of Gainford Hall, Darlington, won a First Prize at the Yorkshire Agricultural Society's Show at Barnsley last week.

seldom that so excellent an average has been realised for so large a number. The following were some of the chief sales:—Mr. E. Henty sold 8 for £8 18s. 6d. per head, top price 11 guineas; Sir W. Greenwell sold 8 at £7 17s. 6d., Sir E. Loder's agent paying 20 guineas, the top price; Lord Northbourne's consignment numbered 12, and averaged £6 9s. 6d.; Lieut.-Colonel W. W. Hammond's consignment of 16 averaging £6 8s. 7d.; Mr. F. E. Speed's consignment numbered 10, and averaged £13 8s. 9d., the top price ram of this lot realised 42 guineas to Earl Cadogan. Lord Northbourne's agent was the runner-up. This was the top price in the sale. The Duke of Richmond's 13 rams sold averaged £13 7s. 4d., 30 guineas, the top price, being paid by the Hon. W. F. D. Smith, Mr. J. Langmead paying 27 guineas for another, and Mr. Bailey 20 guineas for another, others realising up to 16 guineas; Mr. Tompkins realised an average of £14 0s. 6d. for 7, his top price being 25 guineas given by Mr. Stone; Mr. A. Heasman's 14 averaged £7 10s., Mr. Robertson taking two at 15 guineas and 13 guineas, whilst Sir Walpole Greenwell's agent hired one at 11½ guineas; 5 from Mr. Cazalet's averaged £15 4s. 6d., Mr. A. C. Hall paying 20 guineas, and Mr. G. Bailey 16½ guineas and 13½ guineas. Earl Cadogan sold for an average of 7, £8 5s. (top price 16½ guineas to Mr. Fi zwalter Plumptre) .

The Duke of Devonshire's 12 made the highest average of the sale, £16 0s. 3d. The top-priced ram was 25 guineas, at which the Duke of Richmond's agent hired a remarkably fine sheep. The Hon. W. F. D. Smith gave 24 guineas and the Earl of Bathurst 22 guineas, others making 17½ guineas, 16 guineas, and 14 guineas. Ten of Mr. J. Colman's averaged £13 2s. 6d., the top price being 24 guineas, paid by Colonel Hammond. Mr. Robinson gave 18 guineas, and Lord Northbourne 17 and 15 guineas for 2; the Exors. of Colonel McCalmont averaged £14 0s 10d. for 4 (17 guineas top price); Sir J. Werner's average was £13 19s. 3d. for 5, the Duke of Richmond taking the top-priced one at 15 guineas; whilst the Duke of Northumberland averaged £11 2s. 7d. for 5, Sir Walpole Greenwell and Sir A. Fletcher each paying 15 guineas.

The ram lamb sale emphatically showed the needless number of inferior rams sent to the sale. For the best the demand has never been better, but those of lower grade either sold at poor prices or were sent back home, 133 were disposed of at an average of £6 9s 7d. The top priced lot was 11 from Col. Hammond's, which averaged £15 12s. 1d, the Duke of Devonshire buying at 28 guineas, Earl Manvers at 26 guineas, the Duke of Northumberland at 20 guineas, Mr. Williams at 16½ guineas, Col. Colin Campbell at 16 guineas and at 13½ guineas.

The Duke of Devonshire's consignment averaged £11 6s. 9d. for 5, Mr. Robinson paying 17½ guineas and Mr. Locke 11 guineas. Sir T. V. S. Gooch's consignment was in great request, the 11 rams averaging £10 19s. 6d., 30 guineas to the Duke of Devonshire was the best price, Mr. Carter paying 16½ guineas, Mr. Reddaway 11½ guineas, and Mr. T. S. Monckton 10 guineas. Mr. H F. Jennings averaged £10 12s. 6d. for 8, Sir J. Werner paying 27 guineas and Mr. T. F. Halsey 13 guineas for the 2 best.

Mr. J. Tompkins averaged £10 7s. 10d. for 10, top price 15 guineas, the remainder of the consignors of ram lambs realising the following averages:—Mr. E. Henty (8), £3 12s. 10d.; Hon. E. W. B. Portman (6), £3 8s 3d.; Mr. Sawtell (7), £3 10s. 4d.; Mr. G. Locke (4), £3 10s. 10d.; Mr. J. Reddaway (5), £2 18s. 9d.; Mr. A. C. Harris (6), £3 1s. 3d.; Mr. E. R. Fisher Rowe (5), £2 16s. 1d.; Mr. T. Dare (14), £2 5s.; Mr. F. Stanford (22), £5 7s. 10d.; Mr. W. F. Monckton (7), £3 6s.; and Mr. G. Peel (4), £3 13s. 6d.

Cirencester.

Cirencester August sheep and ram fair was held on Tuesday in unfavourable weather, heavy rain somewhat interfering with the business. The several auctioneers had about their average consignments of Oxford Down and Cotswold rams and ram lambs and these sold at fairly satisfactory prices. The Oxfords met a good demand, there being several fresh breeders in the district, and some of the Cotswolds sold well, though for others there was no demand.

Mr. A. F. Hobbs submitted to auction sixty Oxford Down shearling rams from the well-known flock of Mr. J. T. Hobbs, of Maisey Hampton. The sheep were of the type and character for which the flock has long been noted, and were thought to be not only well up to the average of past years, but quite one of the best lots Mr. Hobbs has offered. The demand was good throughout, and although there was no sensational prices realised, or any purchases for export, the trade ruled consistent from start to finish, fifty-six out of the sixty were sold at the satisfactory average of £14 1s 7½d. as compared with £16 17s. 9d. last year, £13 7s. 9d in 1905, and £12 12s. 9d. in 1904. The chief prices and purchasers were 43 guineas, Mr. A. S. Elliott, Gabshells; 31 guineas, Messrs. R. W. Hobbs and Sons, Kelmscott; 30 guineas, Mr. H. Overman, Norfolk, and Mr. J. P. Case, Binham Abbey; 25 guineas, Mr. Overman; and 21 guineas, Mr. Smith, Scrubditch, and Mr. Oswald, Durham.

Mr. A. F. Hobbs also sold Oxfordshire Down rams for Mr. W. Arkell, of Kempsford, at an average of £5 12s., and also for Mr. W. T. Stevens, of Ranbury, Fairford, at a like figure. He likewise sold fifteen Oxford Down ram lambs for Viscount St. Aldwyn from the Williamstrip Home Farm, and these were readily cleared at an average of £8 11s., Mr. W. Barton, of Coln St. Aldwyns, buying at 20 guineas; Mr. Bruce Swanwick, of Coates, at 10 guineas; and others up to 9 guineas.

Mr. Taylor conducted a very successful sale of thirty Oxford Down shearling rams from Mr. James Horlick's Cowley Manor flock, which has this year added to its already rising reputation in the showyard. The sheep were of great size and substance, as well as of true Oxford Down character. One of the rams was sold to Mr. Smith, of Worcester, for South America, at 50 guineas. Another went at 27 guineas to Mr. W. T. Stevens, Banbury, one to Mr. Overman, Norfolk, at 25 guineas, whilst others realised up to 17 guineas, and the satisfactory average of £13 15s. 8d. was realised for twenty-six.

Mr. Taylor also had consignments of Cotswolds, these including some from Mr. W. Houlton, of Broadfield, who had had such a brisk private demand for his Cotswold shearling rams for export that he had only six to place under Mr. Taylor's hammer, but these were quite up to the old Broadfield standard, and averaged £16 5s. 6d. each, Mr. Russell Swanwick, R A. College Farm, Cirencester, paying 22 guineas, Mr. Wakefield, Signet Hill, 25 guineas, and others up to 9 guineas. Messrs. Maddy and Newman, of Cold Aston, brought out 10 good Cotswold shearlings, seven of these sold at an average of £9 4s. 6d., top price 17 guineas.

Diss.

At a sale of ewes, lambs, and rams held at Diss on Thursday the catalogue comprised 1,220 Black-faced and Suffolk ewes, 600 first-cross and half-bred ewes, 420 Black-faced and half-bred lambs, 73 Cotswold rams, 5 Lincoln rams, 16 Black-faced rams, 13 Oxford Down rams, and 53 first-cross rams. There was a large company present, and bidding throughout was spirited, the average for the rams being above 25s. per head higher than at the previous year's sale, while the prices for ewes maintained the high rates prevailing this season.

Dorchester.

Dorchester (Dorset) August Sheep Fair took place on Tuesday when a large number of Dorset horn and Dorset Down Sheep were brought under the hammer by the farm auctioneers. The company of buyers was very strong and trade brisk throughout, ruling fully 2s. per head beyond prices of the previous sale in July last, and even more in many instances. The following are the actual prices:—Draft Dorset horn ewes, 47s. to 57s. 6d.; Dorset horn wether sheep, 48s. to 52s. 6d.; Dorset horn ewe lambs, 32s. to 41s. 6d.; Dorset flock sheep, 63s.; Dorset wether lambs, 27s to 37s. 6d.; draft Dorset Down ewes, 42s 6d. to 51s.; wethers, 45s. to 47s.; wether lambs, 27s to 40s.; couples, 61s. to 73s. The general run of prices for rams and ram lambs was up to 10 guineas, but a shearling from Mr. H. Duke's Blandon flock made 20 guineas, and a ram lamb 13 guineas.

Ipswich

Some capital prices for rams were obtained at the sale of registered Suffolk sheep held at Ipswich on the 1st inst. The top price was 62 guineas (as against 41 guineas last year) paid by Mr. D. Abbott Green, for a ram lamb from the flock of Mr. Herbert Smith, who won the Gippeswyck Challenge Plate of 20 guineas, and a prize of £5, offered by Messrs. Robert Bond and Sons for the best group of five Suffolk ram lambs, bred by the exhibitor. The ram which sold at the price mentioned was by Grange Earl 14th, and was first prize at the Royal and Norfolk Shows, and third prize at the Suffolk Show. Another ram lamb of Mr. Herbert Smith's fetched 60 guineas. This was by Grange Persimmon, also a first prize winner at the Royal and Norfolk Shows; three others made 36 guineas, 29 guineas, and 26 guineas. Mr. S. R. Sherwood's consignment included, as usual, a choice lot, Mr. C. S. Wentworth Reeve taking one by Marksman at 51 guineas. Mr. J. W. Eagle, generally a large consignor to this sale, had thirty-nine ram lambs. One, by Walton Burton 2nd, was secured by Sir Walter Greene, Bart., at 30 guineas, and others fetched 28 guineas, 21 guineas, 19 guineas, 18 guineas, and 16 guineas. Mr. D Abbott Green had twenty-six, and they made the highest average, going at 40 guineas, and others 39 guineas, 37 guineas, 30 guineas, 27 guineas, and 26 guineas (two); the 40 guineas lot was by Grange Persimmon 9th. Amongst Mr. John R. Keeble's consignment was a ram lamb by Brantham Clarion, which fetched 31 guineas; Mr. Russell Walker, Marlesford, bought one by Bentley Standard at 25 guineas, and others went at 23 guineas and 21 guineas. Mr. Thomas Goodchild, Great Yeldham Hall, entered eleven ram lambs, one being secured for Scotland at 40 guineas, another by Fingringhoe Grange 1st made 30 guineas, and others went at 21 guineas, 18 guineas, and 16 guineas. Mr. Alfred J. Smith sent half a score untried shearling rams, and they made up to 17 guineas.

The averages and highest prices of the principal flocks were as follows:—

	Rams.	Average.	Highest Price.	Last Year's Average.
		£ s. d.	£	£ s. d.
D A. Green	21	22 7 0	40	18 8 8

A. H. Stanford	9	11 0 6	19	15 17 4

Messrs. Treadwell's Oxford Downs.

Messrs. J. and S. Treadwell's fiftieth annual sale of Oxford Down rams took place at Upper Winchendon on Wednesday in the presence of a large and representative company of Oxford Down breeders. Before the sale commenced Mr. John Treadwell was presented on behalf of the Oxford Down Breeders' Association with a handsome silver rose bowl, vases, and candlesticks as a token of their appreciation of his efforts in improving and popularising the Oxford Down breed during the past fifty years. The sale was most successful, the first twenty sheep offered making an average of £38 10s. 3d. each, whilst the average for the fifty-nine offered worked out at the good figure of £22 17s., a sum which has only been exceeded on two occasions at these sales. The highest price of the day was 150 guineas paid by Mr. J. T Hobbs of Maisey Hampton, the next highest being 75 guineas given by Mr. Moore, of Bourton-on-the Water. Mr. J. C. Eady, of Irchester, also purchased a ram for 60 guineas, the representative of Mr. A. J. Balfour bought one for 40 guineas, and Mr. Sims (for Miss Alice de Rothschild) one for 41 guineas.

Mr. Cole's Hampshire Downs.

As usual the annual sale and letting of ram lambs from Mr. Cary Coles' Winterbourne Stoke flock of Hampshire Downs attracted a large company of breeders, and some good prices were recorded. Business commenced with the letting of eight lambs, at an average of £30 4s., No. 8 falling to Mr. Notley at 66 guineas, No. 1 to Mr. Philippi at 28 guineas, No. 5 to Mr. W. C. Young at 28 guineas, No. 4 to Mr. J. Goldsmith at 24 guineas, No. 2 to Mr. C. Bugg at 22 guineas, No. 7 to Lord Rothschild at 22 guineas, Sir G. Judd and Mr. T. N. Coles also hiring at 20 guineas. The selling lambs ranged from 70 guineas to 5 guineas, Mr. Irons (for the Hon. D. P. Bouverie) paying the highest figure, whilst the other chief buyers were Mr. Goldsmith at 32 guineas, Mr. E. A. Edney at 32 guineas, Mr. Hitchings at 23 guineas, Mr. Scott Murray at 20 guineas, Lord Wolverton at 21 guineas, Mr. Molyneux (for Mr. W. H. Myers) at 20 guineas and 18 guineas, Mr. Crosland (for Sir A. Henderson) at 15 guineas, Mr. Brock (for Mr. Darling) at 16 guineas, and Mr. House at 17 guineas; others made up to 15 guineas, the average of 74 lambs let and sold being £14 15s.

South Devon Flock Book Association's Show and Sale.

The fourth annual show and sale of registered lambs under the South Devon Flock Book Association took place at Totnes on the 1st inst., when the rams penned were a distinct advance upon last year as regards quality. The following special summary of the whole of the consignments offered has been prepared, and from it we find that 169 rams realised the sum of £1,881 16s., giving an average of £11 2s. 8d., as against an average of £9 14s. 11d. for 216 head at the corresponding sale in the previous year:—

The Stratford Tony Hampshire Downs.

The first sale of ram lambs from the Stratford Tony flock, formerly that of the late Mr. J. J. C. Waters, West Harnham, took place at the Market House Yard, Salisbury, on Tuesday, when forty lambs of excellent breeding and great size were submitted, thirty-nine of which found purchasers at 5 guineas to 16 guineas, the average being £6 11s.

Notes and Jottings.

AMONGST the sale reports of sheep referred to in this issue is the result of two combination sales, one held by the South Devon Flock Book Association at Totnes, the other held by Messrs. C. Stride and Son, at Chichester, at both of which there were expressions of regret heard by some senders at the prices realised by their own sheep.

THIS is only natural, for one is very liable to consider his own sheep so much better than those of other people; but the test of the value of sheep cannot be better made than by the actual result secured at the sale.

FOR instance, if one refers to the detailed statement of the averages realised at the South Devon Flock Association's sale, there is abundant evidence to show that all the better rams were eagerly competed for.

A REFERENCE to the result of the same sale twelve months previously shows that the same result took place, and a similar remark is equally applicable to Messrs. Stride's sale, which, although held by this progressive firm of auctioneers, is to all intents and purposes of the same character as the combination sale held by the society mentioned above, because both at this sale and at Totnes sale the number of flocks represented was sufficiently large to enable those who were desirous to purchase rams to compare the consignments one with another.

IT is in this particular that breeders have so great advantage in purchasing at a combination sale as compared with sales held at home, or those held at which only a few flocks are represented. At these larger sales breeders are enabled to judge the value of the different flocks by the evenness and uniformity of the entries made by such flocks.

IT was one of the most striking features in connection with both of the sales to which reference is made to watch how keenly the purchasers discriminated between those consignments which were uniform and even in type and character and those that were not so. The true test of the value of any flock, no matter its breed, as a source from which to purchase rams for stud purposes, is that its produce should show uniform type and character.

A MATTER that deeply affects the welfare of registered flockmasters was discussed at the council meeting of the Smithfield Club. It was a resolution sent up by the National Sheep Breeders' Association asking that the club should make it a condition of entry that sheep competing for its prizes should be entered or eligible for entry in the Flock Book of the breed, the prizes for which they were competing.

THE discussion that took place was interesting, particularly because it disclosed that there were some members of the council who as yet failed to realise that the time was coming when every breed of cattle or sheep will claim that none other than those which are entered in the respective Flock and Herd Books, shall compete for prizes offered to the breeds represented by such Herd and Flock Books.

IT is all very well for the club to point out that up to the present no conditions of this kind have been made, but a reference to the records of Smithfield Club shows that since it was first instituted all manner of alterations have been made in respect to the conditions of competition, and it is further most singular that the only classes to which the club have yet placed restrictions as to breeding are those which are called cross-bred classes.

IF it be necessary and advisable, and we agree that it is advisable for the breeding of cross-bred animals to be made a condition of entry for such animals, it surely is equally necessary in the case of pure-bred animals.

IT may be an extreme view, but so far as we are advised there is at the present time no condition whatever to prevent any exhibitor, if he so desires, to enter a pen of sheep in any of the

AUCTION SALES.

KELSO, SEPTEMBER 13.
NORTHAMPTON, SEPTEMBER 19.

YEARLING EWES FOR SALE AT HOME.

R. W. HOBBS & SONS.
Kelmscott, Lechlade.

By Mr. ARTHUR SAUL.

THE LINCOLNSHIRE CURLY COATED PIG BREEDERS' ASSOCIATION
Will hold SALES at BOSTON
On WEDNESDAY, AUGUST 28, and WEDNESDAY, OCTOBER 9, 1907, at 11 o'clock.
For particulars apply
ARTHUR SAUL, Bourne, Auctioneer.
C. E. WILLIAMS, Sleaford, Hon. Sec.

By Messrs. WATERS & RAWLENCE.

MONDAY, AUGUST 19, 1907.

AMPORT, HANTS.
About two and a half miles from Grateley Station and four from Andover.

MESSRS WATERS AND RAWLENCE are instructed by the Most Hon. the MARQUIS OF WINCHESTER to SELL by AUCTION, on the Premises, at Fox Farm, on MONDAY, AUGUST 19, 1907, the highly-bred Registered
HAMPSHIRE DOWN RAM BREEDING FLOCK,
entered in the Flock Book, Vols. 9 to 18, consisting of about
1,100 EWES, EWE and RAM LAMBS, viz:—

280 Two-teeth Ewes	120 Full-mouth Ewes
250 Four-teeth Ewes	250 Ewe Lambs
140 Six-teeth Ewes	50 Ram Lambs

In consequence of its having been decided at very short notice that the Amport Flock should be dispersed, the ewes will be sold in stock condition only, but it is well known that during recent years no expense has been spared in procuring the best and most highly-bred sires from the leading flocks of Hampshire Downs; this important and extensive sale should therefore command world-wide recognition.

On July 26th last, at Weyhill Fair, the Ram Lambs from Amport made the excellent average of £19 7s., one lamb making 200 gs., one 100 gs., and another 95 gs.

Luncheon at 12 30 o'clock and Sale after.

Conveyances will meet the trains at Grateley and Andover Stations to convey persons to the Sale at a charge of 2s. and 4s. respectively for the return journey.

Catalogues of Mr. W. J. ALLISON, Estate Office, Amport, Andover; of Messrs. RAWLENCE and SQUAREY, Land Agents, Salisbury; and the AUCTIONEERS, Canal, Salisbury.

By Messrs. W. DEW & SON.

NORTH WALES.

NEAR BANGOR.

PENRHYN CASTLE STABLES
AND
PENRHYN HOME FARM.

MESSRS. WM. DEW & SON have received instructions from the Right Honourable Lord Penrhyn to OFFER FOR SALE BY PUBLIC AUCTION, as above, on TUESDAY and WEDNESDAY, the 27th and 28th days of AUGUST, 1907, commencing each day at 11.30 a.m., a few Lots of Harness Bridles and other Horse Tackle,
HIGH-CLASS CARRIAGES,
YOUNG COLTS and FILLIES, by "King's Beadsman" and "Lord President,"
Over 30 WELSH MOUNTAIN PONIES,
The SHIRE STALLION "BURY GENERAL WHITE" (18,595),
THE ENTIRE HERD
of nearly
ONE HUNDRED SHEET-CATTLE,
consisting of
MILCH COWS and IN-CALF HEIFERS,
YOUNG HEIFERS,
HEIFER and BULL CALVES and FIVE BULLS,

all selected with great care and judgment as to evenness, fine quality, uniformity of colour, and other qualifications that go to make up a high-class Herd, and the Cattle offered for Sale are of very fine merit.

At the same time will be offered 30 Pure Bred Yearling Ewes, a few Ram Lambs, Poultry, &c.

The order of Sale will be as follows:—

On Tuesday, August 27, the Sale will commence at the Stables, and will comprise Bridles, Horse Tackle, Harness, Carriages, and Horses.

On Wednesday, August 28, the Sale will be at the Home Farm, and will comprise the Herd of Sheet-Cattle, Sheep, Poultry, &c.

Catalogues may be obtained upon application to the AUCTIONEERS, at their Offices, at Bangor and Llandudno.

classes for distinct breeds by simply saying on his entry form that this particular pen he is entering is of a particular breed.

IT is to be hoped that the National Sheep Breeders' Association will press their point with energy, because it is of the utmost importance that no sheep other than those properly bred should be shown in classes which are reserved for distinct breeds of sheep. This is particularly needed at the present time, when it is generally considered that all the principal breeds of sheep are represented by registered Flock Book Societies, and consequently any visitor, and there are many of them, from abroad and the Colonies that attend Smithfield Show should not by any chance find entered in these breed classes sheep other than those that are pure bred.

DOUBTLESS there are many who will say, "None will think of entering any other than pure bred sheep." A recent experience at Tunbridge Wells shows that sheep obviously not typical of their breed can be entered in classes such as those are at Smithfield, and it is to prevent sheep not of pure breeding being entered in classes obviously meant for pure bred sheep that the National Sheep Breeders Association have taken up this important question.

ONE cannot help referring to a remark of one member of the council, who is reported to have said: "As one exhibitor since 1870, he had found that the rules worked well, and he hoped the council would let well alone." This expression of opinion means, if it means anything, that the Smithfield Club rules of entry and competition have remained unaltered during that period and are to remain unaltered for all time—a fact that we well know cannot be, and one that the author of the quotation must know has never been, because since the date mentioned, 1870, enormous alterations have been made in connection with the conditions of entry and exhibition of sheep. New classes have been formed, old classes have been taken out, new breeds have been admitted into separate classification, and even the slaughter test classes have been added, so that it is very clearly apparent that the statement is not in accord with facts, has not been adhered to, and that his hope will not be followed, except the Club's council entirely alters its mode of procedure.

ANOTHER notice of motion was considered at this same council meeting—*i.e*, to consider whether or not the wether classes should be omitted. The decision arrived at was that the time had not yet come to adopt this resolution.

PROBABLY it would be more in accord with the present-day requirements if the wether classes were omitted, for as they are at the present day exhibited, it is evident that they are not forwarding the true object for which the Club's exhibition is supposed to be—*i.e*, to encourage the production of the cheapest and best meat for Smithfield Market. It would be a very good thing indeed if some means could be devised by which the excessive over-feeding of these wethers could be prevented, and that those of this age which were exhibited should be more typical of the class and character of meat that the real object of Smithfield Club is to encourage.

Shropshire Sheep for New York.

Messrs. Alfred Mansell and Co., of Shrewsbury, have just sold to Mr. Walter Jauncey, for Mrs. G. H. Lewis, of Geneva, New York, twenty-five beautiful Shropshire shearling ewes bred by Mr. C. H. Blatherwick, of the Beam House, Shrewsbury, served by Beam House Star 11966, by Sir Alfred 11902, dam by the 200-guinea Shropshire President 7726; Shrawardine Colonel 12459, by the Royal winner, Saturn 11242; Beam House Laddie 12259 by Sir Alfred, dam by Shropshire President; and Fiscal Policy by Sherlowe Lad 11270, dam by Montford Dreamer 7622; also a grand shearling ram bred by Mr. Alfred Tanner, of Shrawardine, by Sensational 11884, bred by Mr. W. Coxon, by Irish Guardian 11108, dam by the Royal winner Saturn 11242.

We understand Mrs. Lewis will stock up with 500 imported Shropshire ewes, and will devote the whole of her fine farm to sheep ranging, which is quite one of the most profitable branches of farming.

Mr. Jauncey is also taking out 100 head of Guernseys for Mr. Alfred G. Lewis, this being the largest shipment that has left the island, and consisting of many noted animals, including the young cow that made the largest three days' milk record of any cow in the island.

An interesting catalogue of bulbs, &c., for 1907 has just been issued by Messrs. Lillo and Ballantyne, the King's seedsmen, of Carlisle. It is freely illustrated and is well got up.

HORSES.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

Saturday Shows.

THE great falling-off in the entries in the light horse sections at the Yorkshire Show, which is undoubtedly due in a great measure to the fact that the show does not close till six o'clock on Saturday night, calls attention to the question of Saturday shows altogether. Big shows like the Royal, the Yorkshire, the Bath and West of England, and many others that could be mentioned, undoubtedly disarrange the traffic on the railways to a considerable extent, and when shows of this magnitude close on a Saturday it means that many of the exhibits are on the rails for hours—often, if they have a cross journey to take, not arriving at their destination until late on Sunday evening. Now the length of time passed in a horse box is very injurious to light horses especially, which are more liable to go wrong than any other class of stock owing to the artificial way in which they are treated. The expense, discomfort, and extra risk caused by holding these big shows on a Saturday combine to keep entries away, and it is very questionable whether any compensating good arises from an increased attendance on the weekly holiday. My experience is that the working population are very much people of habit, and I have known when a good race meeting would not take them out of their beaten track. Much less likely, then, is a horse show. The local show is quite another matter. That is the annual holiday, and is always looked forward to. Saturdays, I think, might well be left for these local shows, and I am quite sure that the larger societies would find themselves benefited if they kept clear of Saturdays.

The Benefit of Rest.

AN important lesson was taught at Malton and at Barnsley, but I do not suppose the lesson will be seriously laid to heart. I allude to the wonderful improvement made by Mr. Buttle's Kirkburn Toreador, who has been "laid by" for nearly two years. Though Kirkburn Toreador won prizes when he was a young horse, there were some things about him which the critics talked about. Mr. Buttle, instead of forcing him, laid him by, with the result we have seen. At Bansley on Thursday he made a magnificent show, and he looks as if he had still more improvement to make. He goes straight enough now, though when he won in Islington he threw his feet about a little. But this has gone, and there can be little doubt that if some horses that could be named had been rested in time they would have been much better horses than they are. For the course of training which a Hackney has to go through in getting ready for a great show is arduous indeed, and it is impossible always to keep a horse up to concert pitch.

Harness Horses at Shows.

IT is a curious thing that in these days of motor cars, when all the world and his wife motors or talks motoring, the harness classes at shows were never more popular. Indeed, the popularity of them increases day by day. We saw that at Olympia; we saw it every day at country shows and county shows; we saw it at the Agricultural Hall, which was literally packed on the days when the harness classes formed the principal items on the programme. Under such circumstances one would naturally think that the councils and managers of shows would be keen to avail themselves of the public taste, and that they would work the harness classes as a source of income for all they knew. That they do not do so is apparent to anyone who looks closely into prize schedules and catalogues.

Harness Classes Spectacular.

HARNESS classes are spectacular. They belong to the "attractive" side of a show programme, just as the jumping classes do. In a measure perhaps they may be regarded as breeders' classes, but primarily they are "attractions." Such being the case, one cannot but wonder that there should be age restrictions at a show like the Yorkshire, where, by the way, there are only three classes of horses in harness—viz., one for those exceeding 15 hands, one for those not exceeding 15 hands, and one for ponies. And in both the classes for single harness horses the age is restricted to six. Now, when one comes to think how few horses there are that make a great mark as show harness horses before they are six or by the time they are six, and how many good horses are kept from exhibiting by the rule I have referred to, one cannot but wonder that such a rule should be continued. Practically a class on those lines is a novice class. But though novice classes are well enough in their way, and may well be retained, yet if the harness classes are to be one of the great attractions of a show, if the most possible is to be made out of them, the fewer restrictions the better.

Trade in Harness Horses.

THAT good harness horses are good to sell and command as good prices as ever they did has been very evident from the great prices made during the summer. At Olympia £2,000 was given for a pair, and only the other day I heard a young harness horse set in price at 600 guineas, and make no doubt that he will soon bring it. And at Mr. Whitworth's sale last Wednesday the harness horses realised excellent prices. Eight of them ran into three figures, and Lady Seaton made the handsome price of 600 guineas, and was worth it, too. A black gelding, Blackberry by Polonius, was withdrawn at 190 guineas, and a young chestnut gelding by Polonius made the same price. Altogether sixteen of these harness horses were sold, and they realised a total of 1,959 guineas, or an average of a fraction over £128 10s. each.

THE fact that harness horses sell like this in spite of the fashionableness of motor cars, and that harness classes are amongst the most attractive features of a show, should cause prize-list committees to do all they can to vary their programme in the driving section.

THE LOOKER-ON.

Sale of Clydesdales and Hackneys.

The sale of pedigree Clydesdales, Hackneys, and Hackney ponies, the property of Dr. Macgill, at Newton-Stewart, attracted a large company of buyers, for the Challoch stud is known far and wide, many of the animals having achieved great success in the Scottish showyards. The stud was founded about fifteen years ago by Dr. Macgill, and both Clydesdales and Hackneys were extremely well bred, having some of the best blood of the day in their veins. The sale opened with Clydesdales, of which there were twelve catalogued. There were no sensational prices, but the sale on the whole was a good one. The top price was 200 guineas, given by Mr. John M'Cammon, Barnhills, Kirkcolm, for Dowry, a mare by Airies Prince out of Evelina. She was champion at Stranraer, Wigtown, Newton-Stewart, and a winner at Ayr and other places. For Baron Eva, a mare by Baron's Pride, and served by the Cawdor Cup champion Hiawatha Godolphin, Mr. Henry M'Fadzean, Stranraer, acting for Mr. William Hunter, Gartland Mains, Stranraer, gave 127½ guineas; Evelina, the dam of the 200-guinea mare Dowry, went for 80 guineas to Mr. M'Dowall, Wcodside, Wigtown, whilst Mr. W. Montgomery, Bank, secured the two-year-old colt Bold Baron by Baron's Pride out of Evelina at 75 guineas. The others made up to 70 guineas, and the average for the twelve Clydesdales was £73 2s.

The top price for Hackney brood mares was 78 guineas, given by Mr. Livingston, Gargavel, for Hollin Flame by Norbury Lightning, and winner of several leading honours. Mr. M'Bean, Ardmohr, paid 56 guineas for Hollin Flashlight, also by Norbury Lightning, a notable winner. The well-known Ladybird, which is 29 years old, went to Mr. H. Crawford, Castle-Douglas, for 10½ guineas. The eleven mares averaged £33 5s. 3d., and eight foals an average of £22 14s.

There was a good lot of pony brood mares and foals. Mr. H. Caldwell, Culhorn Parks, Stranraer, paid 44 guineas for a filly, Hollin Last Rose, by Hollin Cæsar, and also 31 guineas for a chesnut filly foal by Hollin Flashlight. The harness horses, colts, and fillies made better prices. Eighty guineas was given by Mr. Gemmell, Ayr, for a promising gelding by Norbury Lightning, whilst Mr. M'Bean gave 60 guineas for Hollin Orchid, a filly by Lincoln Baronet. The total of the sale was £2,422 18s. 6d.

Sale of Walton Hall Hackneys.

The sale of Sir Gilbert Greenall's pedigree Hackneys and Hackney pony mares and foals, young stock, harness mares, &c., at Walton Hall, Warrington, on Wednesday, attracted a large company of buyers and breeders who came from all parts of the country, for the extraordinary success of the show has made it well-known everywhere.

The catalogue comprised a number of especially good brood mares, many of them winners at London and other principal shows whilst many had bred valuable stock, and others were from celebrated families that have done so. The progeny at foot were all well bred, and the young

mares equally valuable to break or put to the stud. With such good animals to bid for, trade was brisk, and an average of £45 13s. per head was obtained for fifty-two animals.

The best prize realised was 195 guineas, which sum Mr. Benson, of Upper Gatton Park, Surrey, gave for Rosarene, by Rosador—Elegance, the London champion in 1901 and 1902. Golden Ethel, by Goldfinder VI.—Lady Ethel, one of the best pony brood mares in England, realised 155 guineas, the purchaser being Mr. M'Meeken, Glasgow, whilst Tissington Golden Halo was run up to 105 guineas before being knocked down to Mr. Harrop, of Oldham. A list of the chief sales is appended:—

		gs.
Hackney Brood Mares and Foals.		
Rosarene	Mr Benson	195
Dorothy Burton	Mr McMeeken	95
Terrington Wilwa	Mr Makeague	44

Commodity by Ganymede	Mr Rycroft	100
Harden Solace by Christoper North	Mr Henrickson	72

Notes and Jottings.

THE season still continues very showery, with more or less severely cold nights, and the days are rapidly shortening. Where there is a large head of stock to be carried forward it will be wise to make arrangements for wintering the same. There is an abundance of hay in practically every part of the country, but the quality in the majority of instances will be more than inferior. Many thousands of tons will be worse than useless if used in the ordinary way in which hay is generally used. Preparation should therefore be made for chopping this up into chaff, and for seasoning it with some cheap ingredients, such as molasses, malt combs, &c.

THERE is every prospect of an abundant supply of swedes in many parts of the country upon the arable and mixed farms, and these, provided we escape mildew in September, ought to be of good quality. Where this is the case little more is needed, as the chaffed hay mixed with the pulped swede is relished by most cattle and enables them to keep in thriving condition throughout the winter. In the Midland and Southern Counties the comparatively dry seasons through which we have been passing of late years caused the swede to lose favour with many farmers, but in years like the present, when it is well grown and succulent, there are few other things to equal it.

THE present month is always somewhat plentiful of butter tests and milking trials, and last week the results of several important tests were recorded. Amongst these was that of the Tunbridge Wells Agricultural Society, where there are butter-test prizes open to any cows of any breed or cross, the awards being allocated according to the usual scale of points. Though all the chief honours were accorded to the Jersey breed, still Shorthorns gave an excellent account of themselves, Messrs. Green Bros.' Merry Girl produced 2 lb. 6¾ oz. of butter in twenty-four hours from 53 lb. 12 oz. of milk, giving an excellent ratio.

Our illustration above is of the Shorthorn Bull, Pride of Tees, winner of First Prize for Shorthorn Bulls over one and not exceeding two years old at the Yorkshire Show at Barnsley last week. It was exhibited by Mr. G. Harrison, Gainford Hall, Darlington, but was bred by Mr. C. H. Joliffe, Newbus Grange, Darlington, its sire being Primrose Pride and its dam Lady Augusta 2nd.

Mr. R. Whitworth's Hackneys.

There was a large and representative gathering of Hackney breeders at the sale of pedigree Yorkshire Hackneys belonging to Mr. R. Whitworth, at the Londesborough Stud, Market Weighton, on Tuesday, and some good prices were realised. Mr. Whitworth's stud is well known in all parts of the country for its high standard of excellence, and thus the opportunity to obtain some of his choice animals was eagerly taken by breeders in all parts. Fifty lots were disposed of, and included many animals either sired by or in foal to the champion Polonious, whose progeny won thirty-seven honours at the recent International Show at Olympia.

There was keen competition at the sale, and the good average of over £80 10s. was obtained for the fifty lots. The highest price was 600 guineas, given by Mr. David Carr, Wembley, for the four-year-old show mare Lady Seaton by Edemquay.

At a recent meeting of the Northumberland County Council a report was adopted relative to the question of bovine tuberculosis, asking the County Councils Association to apply to the Board of Agriculture for an order for the appointment of a veterinary inspector to inspect cows suspected of the disease. The report stated that the cost entailed would probably not be great, and the inspection would not only contribute to the maintenance of the public health, but would prevent the ruination of the trade in milk supply carried on in the county.

WAS DIPPED IN
COOPER'S DIP

This, however, was well beaten by Mr. C. R. W. Adeane's Babraham Buttercup, which from a milk yield of 48 lb. 10 oz. raised 2 lb. 9¼ oz. of butter giving a ratio of 1 lb. butter to 18·86 of milk.

RECORDS of this kind go a long way towards proving the value of the Shorthorn dairy cow, and unmistakably mark this breed as the coming dairy cow. To produce milk in such quantity and of such richness is seldom known, and when we add to this the value of these cows for the purposes of making beef and reproducing themselves for either beef or milk purposes, the breed is placed out of danger from any rival. The Jerseys that won the prizes in the above test gained more points for lactation, which is an excellent theory to work upon, always provided that the animal is in breeding condition. It is to be feared these animals that have been so long in milk are often hopeless breeders, and by having nothing else to support, are able to devote all their energies to the production of milk.

I HAVE before me the records of some American Jersey tests under the auspices of the American Jersey Cattle Club; performances recorded entitle the cows to entry in the register of merit. Up to May 1, 150 fat tests for one year had been reported, and eighteen confirmed butter tests for seven days are on record. The majority of the information is given in pounds of milk and pounds of butter fat, not butter actually churned. Cows two years and under two and a half years old average 6,517 lb. of milk, average age two years three months, and days in milk 353; this is running very nearly to the full year Only twelve days short, such records can scarcely be looked upon as of an average order, the average age being two years three months, and the average days in milk only twelve short of the year. These heifers must have begun their performance at an average of some fifteen months old, this is certainly early maturity with a vengeance.

COWS two and a half and under three years gave an average of 7,138 lb. of milk, with an average of 341 days in milk; cows three years and under three and a half years gave some 400 lb. more than the previous age, the period of lactation being four days more. Between three and a-half and under four years there was a slight decrease in the quantity of milk, though the period of lactation ran to 350 days. The lower average of this age substantiates the old theory that the four-year-old age is the worst for milking purposes. As the cows increased in years the average weight of milk increased, those four and a-half years old and under five averaging 8,390 lb., with a period of 338 days in-milk, whilst five years old and over the average weight of milk was 9,228 lb., and the number of days in-milk 355, the average age of the latter cows being six years and nine months.

THE extensive milking trials and butter tests at the Tring Show have been carried out, but the results were not to hand at the time of writing. The number of animals tested appears to have been greater than ever, thus proving how widely interest in the production of milk is extending. So far as present appearances go, this increased appreciation of milk production is likely to continue in spite of the many objections that our daily papers are raising against the sanitary conditions prevailing in many of our farmsteads, as well as against the health of the cattle from which the milk is produced. It is an indisputable fact that the health of our British cattle throughout the length and breadth of the land has not been so satisfactory at any period of their history.

AN American visitor to the Highland Show this year raises a well-called-for complaint against the present standard of the Ayrshire breed of cattle. After visiting the Highland Show a note was made in these columns to the effect that the character of the Ayrshire was vastly altered from what the general stock presented after the middle of the last century. The present day

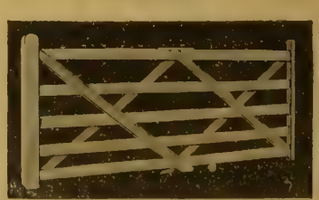
A SPICE THAT WILL SAVE YOUR DAMAGED HAY.

What in many parts of the country promised to be a record yield, has been endangered as to quality, if not also quantity, by the recent excessive rainfall.

That considerable damage has been done in many districts is already known by the orders which for several days past have been reaching the makers of "PHŒNIX" HAY SPICE, these being accompanied in most instances by an urgent appeal for quick despatch.



This Spice supplies the valuable aromatic flavouring principle of "prime" Hay, and when sown in the ricks imparts a much stronger fragrance, and a specially powerful, attractive, aromatic flavour. Besides this, it increases the value of all Hay, both for feeding and sale, quite 20s. per ton. It gives a pleasant aroma, and is unequalled as a condiment for damaged or inferior feeding stuff. It makes damaged Hay tempting and palatable, more digestible, and makes all animals eat it with a greater relish, and thrive faster on it. It also removes mustiness and all defects, and imparts a good tempting flavour and fragrant smell to "weathered" Hay (even when black and seemingly worthless), and makes cattle eat it as well as the best, and thrive on it admirably.

It is a really efficient Hay Spice, in which all waste is prevented, as it gives to the most inferior, coarse, or damaged Hay a fragrant, tempting smell, and an excellent and appetising taste. One cwt. will dress 20 tons of Hay at a cost of about 1s. per ton.

The "PHŒNIX" HAY SPICE is packed in bags of 112 lbs. each; the price being 20s. per cwt., carriage paid to buyer's station.

Contractors to some of the Principal Shows of the Country.

Ayrshire shows more quality and refinement, but that there is any increase in the milk yield there is great doubt, and the shape of the udder has been cultivated at the expense of the teats, which, from being of sufficient size to enable the milking to be done comfortably as was the case forty years ago, have now become so short and tiny that a great deal of language that is not pleasant to hear often evaporates from the milker. Surely it is not wise to continue producing udders upon such lines.

Sale of Dexter Cattle at Wyndthorpe, Doncaster.

Owing to Mr. G. J. B. Chetwynd giving up exhibiting Dexter cattle from his choice herd at Wyndthorpe, the entire stock, excepting this season's calves, were sold by auction on Wednesday last. The cattle were a good even lot, many of them having won prizes at the leading shows. Captain Laycock secured six of the best animals to start a herd at Wiseton, Nottinghamshire, among them being Don Gladiola, winner of third prize at the R.A.S.E. Show, Lincoln, this year. She went at 34 guineas. Another good purchase made by him was Globba at 29 guineas, a three-year old that had not been exhibited. Mr. G. H. Davy also made a good selection to take to Skellow, and obtained Don Godoya at 31 guineas. The Hon. Miss Rose Hubbard was fortunate in getting Don Galeandra at 26 guineas, this cow having been awarded third prize in the milking trials at Lincoln, her average daily yeild being 15·35 lb. per day. Among other purchasers might be mentioned Mr. B. de Bertadano, Mr. G. H. Peake, and Mr. C. E. Rhodes, who bought Garrya, a four-year-old, at 30 guineas. The bulls met a slow trade, the highest price being 18 guineas, paid by Mr. Davy for Don Galeopsis, winner of second prize at Maidenhead this year. An all-round average of £17 8s. 1d. was obtained for the forty-two head passed through the ring, which was considered satisfactory.

Shorthorn Society.

At the last meeting of the Shorthorn Society a letter was read from Lord Polwarth intimating that the state of his health did not permit of his accepting the seat on the council to which he had been recently elected by the members. The chairman expressed his regret, which he felt the council would share, in Lord Polwarth's resignation, and it was resolved to fill up the vacancy at the next meeting.

Lord Moreton reported that the Editing Committee had examined the list of pedigree exportation certificates issued by the secretary since the last meeting of the committee—viz., for Australia, 1; Canada, 3; New Zealand, 1; South Africa, 5; South America, 419; total, 429.

The committee recommended the registration of the following names:—

Registered Name.	Owner.
Bannister.	A. A. Gatty.
Brandsby.	J. M. Strickland.

A number of new and other pedigrees, with the evidence in support of their correctness, had been considered by the committee, some of which had been accepted for entry in the Herd Book, and others referred back for further information.

The committee recommended that for the ensuing year the Editing Committee consist of the following members:—Lord Moreton, chairman; Lord Brougham and Vaux, Mr. W. T. Garne, Colonel Sir Nigel Kingscote, the Earl of Northbrook, Lord Rathdonnell, Mr. E. W. Stanyforth, and Mr. C. H. G. Stirling.

This report was adopted.

In compliance with the articles of association, Lord Middleton was, on the motion of Sir Nigel Kingscote, seconded by Mr. R. Stratton, elected President of the Society for the ensuing year; and on the motion of Mr. R. Stratton, seconded by Sir Nigel Kingscote, Mr. Joseph Harris was elected Vice-President of the Society for the same period.

The suggestion made by Mr. John Thornton at the annual meeting of the society, viz:—"That at the Royal Agricultural Society's show next year the Group Class should be for a 'bull and his offspring,' instead of for 'bull and his male offspring,' as at present, with the view of increasing the interest in the competition," was referred to the General Purposes Committee for consideration when the prize scheme for 1908 is settled.

Lord Moreton gave notice that at the next meeting of the council he would call attention to the use by owners of their registered prefix and affix in the naming of animals purchased by them.

The council then adjourned over the autumn recess until November 5.

Sussex Herd Book Society.

The report of the council presented at the annual meeting of the Sussex Herd Book Society stated that a further sum had been devoted to the purchase of Consols, bringing the Society's investment in that security to a total of £184 12s. At the close of 1906 the surplus of assets over liabilities amounted to £249 17s. 2d., compared with £274 15s. 3d. at the end of the preceding year, the difference being mainly accounted for by the cost of providing dies for the society's silver medal. The society now consists of four life and 117 annual members, making a total of 121, in addition to whom several candidates awaited formal election.

The report was adopted, and thanks were accorded to Mr. W. A. Thornton for auditing the accounts, and he was re-elected as hon. auditor.

On the motion of the chairman (Lord Winterton), seconded by Sir A. P. Ashburnham-Clement, it was unanimously resolved that Sir L Lindsay-Hogg be elected president for the year 1907-8.

The report of the scrutineers of voting papers having been read, the chairman declared that the following four candidates, having received the highest number of votes were elected members of the council for the following three years: Mr. T. Bannister, Mr. J. E Budd, Mr. Gerald Warde, and Sir A. P. Ashburnham Clement, Bart.

On the motion of Earl Winterton, it was resolved "That the society's silver medal, hitherto given for the best female, be in future offered for the best female with calf or in-calf; also that all the society's medals be given for animals entered in the Herd Book."

Mr. Hulkes advocated the printing of the bull's pedigree in the Herd Book in full, instead of in the present condensed fashion. This was supported by Mr. Braby, and it was resolved to refer the question to the council.

Mr. Van Brabant, who stated his intention of offering prizes at the next year's show of the Essex Agricultural Society in a class for Sussex cattle expressed the hope that the council would favourably consider an application for a contribution to the prizes, either in the form of medals or otherwise. This question was also referred to the council.

Mr. Fladgate raised the question whether anything could be done to stamp out the practice of awarding prizes to Sussex cattle not possessing characteristic heads.

The chairman observed that there were other points to be considered by the judges.

Mr. Winch said the important thing to consider was the list of judges recommended by the society.

Mr. Crawford urged the importance of appointing only sufficiently qualified judges, which would do away with all the trouble.

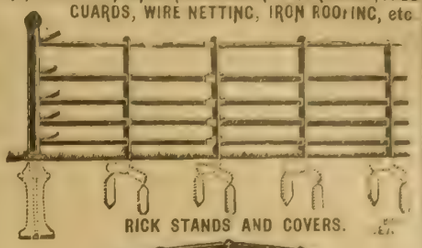
Mr. Bannister said the awarding of prizes to animals of different type at different shows was a matter to be greatly regretted, and he suggested that the opinion of the meeting should be elicited with regard to white marks.

The chairman remarked that whether white should or should not be a disqualification could not be settled at the general meeting without the matter being on the agenda. He suggested that a committee should formulate a statement of what a Sussex animal ought to be.

Mr. Winch thought there should be two judges, and that they should have a free hand.

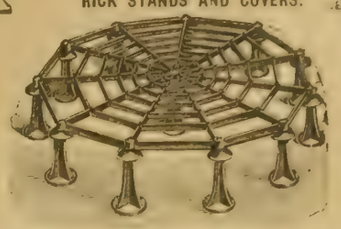
The subject then dropped.

Transactions in Store Stock.



(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Bandon Fair, co. Cork, held on August 7, there was a fair supply of cattle; demand good. Calves, 1st class, £4 12s 6d to £5 5s; 2nd class, £3 15s to £4 2s 6d; yearlings, 1st class, £8 5s to £9 15s; 2nd class, £6 7s 6d to £7 15s; 3rd class, £5 to £6; two-year-olds, 1st class, £10 12s 6d to £12; 2nd class, £8 5s to £10; 3rd class, £6 10s to £7 15s; springers, 1st class, £15 to £17; 2nd class, £12 to £14; 3rd class, £10 to £11. Average supply of sheep; demand fair. Lambs, 1st class, 26s to 32s; 2nd class, 22s 6d to 25s; one year-old and over, 1st class, 42s to 46s; 2nd class, 35s to 40s 6d.



Londonderry Fair, held on August 7, was an average sized fair; good demand for all classes of young cattle, but springers not selling so well. Calves, 2nd class, £3 10s. to £4 7s. 6d; yearlings, 1st class, £9 to £10 5s.; 2nd class, £6 5s. to £7 10s.; 3rd class, £3 15s. to £4 10s.; two-year-olds, 1st class, £11 5s. to £13 5s.; 2nd class, £8 15s. to £10 10s.; 3rd class, £6 5s. to £7; springers, 1st class, £15 17s. 6d. to £17 5s.; 2nd class, £11 15s. to £13 12s. 6d.; 3rd class, £8 10s. to £9 2s. 6d. Young pigs, eight to ten weeks old, averaged about 16s. each.

The second interim report of the Royal Commission appointed to inquire into the relations of human and animal tuberculosis has been issued as a Parliamentary Blue Book. The report consists of 800 pages, and relates to the experiments which have been conducted at Walpole and Blythwood Farms, Stanstead, lent to the Government by Lord Blyth, of Blythwood. The inoculation experiments showed that tubercle baccilli could be introduced into bovines, goats, pigs, monkeys, lemurs, &c., with fatal results, often within a week.

Wooden Tongue.

SIR,—I am writing to ask your advice about my beasts. I have a two-year-old bullock which froths at the mouth and is very much swollen under the jaws, from the root of the tongue. His tongue is very sore, and he cannot eat any long food, and is simply wasting away. My neighbour tells me it is what is known as "wooden tongue." Do you think so? and is it infectious? as I had a nine months old calf similarly affected last winter. I should be glad if you would suggest a remedy and advise as to treatment.—Yours, &c.,

WORRIED FARMER.

*** There is, unfortunately, very little room for doubt as to the correctness of your neighbour's diagnosis, and that you have to deal with a case of actinomycosis, or what is popularly known as "wooden tongue." Judging from the description of the symptoms we certainly think the diagnosis correct. Is it infectious? Undoubtedly. Actinomycosis is now recognised as an infectious disease of animals and man, due to a fungus growth. This may attack any structure, but is most commonly met with affecting the tongue and mouth of bovines. The affected animal should be carefully isolated while under treatment, and because it is infectious, and may affect the human subject, care should be taken in handling the animal, and attendants warned of the risk they run. As to the request that we "suggest a remedy and advise as to treatment," there is only one efficient remedy, and we advise that the treatment be carried out under the supervision of the local veterinary surgeon. At one time actinomycosis could not be treated with any prospect of success except in those cases where the fungus was at work in parts within easy reach of the knife and local dressings, but some years ago it was discovered that the persistent administration of large doses of iodide of potassium was a specific in even the worst cases, and this is now the remedy adopted. The administration of the drug is continued until the condition technically known as "iodism" is attained, and in this way the actinomyces, or ray fungus, is acted on through the circulation. This method of treatment, which is somewhat costly owing to the high price of the drug—which has to be used in large doses and for a long time—is best carried out under veterinary supervision, and this is why we do not recommend the owner to embark on the treatment for himself. The veterinary surgeon will also give specific instructions as to isolation and nursing with a view to the prevention of the extension of the disease to other cattle. In some districts, notably in Lincolnshire and the eastern counties generally, where barley is largely grown and much straw fed, the disease is very rife.—M.R.C.V.S.

OBITUARY.

The Marquis of Bristol.

With regret we have to announce the death of the Marquis of Bristol, who expired at Ickworth, near Bury St. Edmunds, at an early hour on Wednesday morning, after an illness which only became serious a week or two ago. He caught a chill last Easter, which developed into pneumonia, and, notwithstanding the best medical advice and the care and attention of his relatives, he never recovered strength, and passed away peacefully. In him there disappears a typical example of an English nobleman—stately in manner, learned himself and a patron of learning, taking an interest in everything that concerns the welfare of the community, a promoter of the most modern system of agriculture, and generous in promoting the advancement of the farmers in his neighbourhood. He was in his seventy-third year, had been Lord-Lieutenant of Suffolk for nearly a quarter of a century, and by all classes in that extensive district his loss will be sincerely mourned.

The Suffolk Sheep Society in particular have sustained an irreparable loss, for its success has been in no small measure due to the zeal shown and example set by the late Marquis, who not only permitted his name to be placed at the head of the organisation which was founded, but himself possessed a fine flock which later on came prominently to the front in many a keen conflict. Further, he gave the Bristol Champion Challenge Cup, which is a coveted trophy amongst Suffolk sheep exhibitors. When a few years ago the Marquis retired from the presidency of the Suffolk Sheep Society the members were not backward in manifesting their strong appreciation of the exceptional services of the nobleman who had the direction of affairs for so many years with so much benefit to all immediately concerned.

Mr. T. Newton.

Farmers in South Lincolnshire heard with regret on Saturday last of the death of Mr. Thomas Newton, of Harrowby Hall, near Grantham, one of the best known agriculturists in the district, who passed away at his residence the previous day. Born in the little village of Skillington, Lincs., deceased held a farm at Easton under the late Sir Hugh Cholmoley for nearly twenty years, when he removed to Harrowby Hall in 1874. For a number of years he was a prominent member of the Lincolnshire Agricultural Society, and was one of the chief movers in the establishing of the Grantham and District Agricultural Society. On the formation of the Grantham Branch of the Lincolnshire Farmers' Union he was nominated for the position of chairman, but owing to declining years he refused the honour. He was also connected with the Lincolnshire Chamber of Commerce and the Grantham Farmers' Benevolent Institution. He frequently was a prize-winner for his stock at local shows, and rarely missed attending the Grantham markets. In 1858 he married Miss S. Nixon, of Great Buton, and leaves one son and three daughters to mourn his loss, his wife having predeceased him.

Mr. P. M. Browne.

The death is announced of Mr. Philip Moon Browne, of Fornham All Saints, a well-known Suffolk farmer and breeder of cattle, whilst as a judge of horses his services were in frequent request at local agricultural shows. He was a prominent supporter of the Suffolk Agricultural Association, in which he took great interest, and was a regular attendant at the annual exhibitions, where he usually appeared in some official capacity. The Ixworth and West Suffolk Farmers' Club Show also had his warm support, and he was one of the principal promoters of the annual Colt and Foal Show, held in Bury during September.

An exciting scene was witnessed at the West Gloucestershire Farmers' Club's Show last week. A young lady was driving a dog-cart, in which were three other ladies, when the horse shied at a cyclist and bolted. It dashed into a trap while passing through the gateway from the show ground, and the horse in the trap was impaled by the shaft of the dog-cart. The runaway then ran into a number of people, and a youth was badly cut about the head. Three other people sustained minor injuries.

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

Our Foreign Business.

Despite the slackness of demand that has prevailed so long in the London market, the inflow of hops continues to an extent that is not only surprising but almost incredible. We are however compelled to accept the returns of the Board of Trade as being correct, and these reveal to us the following figures. During the month that has just closed we have received from the United States of America 14,621 cwt., and also 1,626 cwt. from other countries.

The heavy total of 16,247 cwt. is only discounted by our small exports, amounting to 368 cwt. of English and 113 cwt. of foreign hops, so that the balance against our market for July is 15,766 cwt. I understand that the bulk of the imports from America has been shipped in execution of previous contracts, and is not thrown upon the market for present sale. But we cannot lose sight of the fact that these hops are displacing a corresponding weight of English produce, and thus our home demand is curtailed and the value of our stocks proportionately reduced.

This consideration becomes all the more serious when we examine the returns of the past eleven months, from September 1 to July 31. We find that our imports from all sources have reached the astonishing figure of 220,546 cwt., and as our shipments to Colonial and other ports during this period only amount to 11,522 cwt., our market has been overweighted to the extent of 209,024 cwt., the whole of which we could have easily dispensed with. Our crop of last year was certainly small, but we had a heavy surplus in 1905, which would have carried consumers through without any foreign help. At all events, our imports might have been materially reduced with perfect safety if we had any means of checking them, and I think the experience of this season provides convincing argument in favour of such legislation as is necessary to accomplish this object.

Our Coming Crops.

England.

It is a current saying that we can never count on hops till they are in the pockets, therefore I may be accused of presumption when I venture to use the word "our" at the head of my remarks, as if we already had the crop in possession. But as "St. James's day has come and gone," I think we can confidently declare that "there may be hops," and that the main issue before us is the probable quantity. I have this week carefully examined about fifty reports from the plantations, and do not find a single grower speaking in other than satisfactory terms.

Of course, all are not equally optimistic in their anticipations, but the comparatively hopeless tone, which was more or less evident a few weeks ago, has now entirely disappeared, and more than half of the reports favour the harvesting of a full average, while the remainder come very near to this point. We still hear of the persistency of the aphis blight in places, but it appears to be gradually vanishing under the genial influence of the improved climate.

The fears concerning the spread of mould are also weakened, and as the bine is generally healthy and vigorous, and the laterals and the burr are rapidly developing, the crop prospects are certainly brighter, and I am inclined to abide by my estimate of July 22, which I hardly think will be materially altered when the final results are known.

In face of this personal opinion, it is somewhat difficult for me to refer calmly to a paragraph which has been published in many of the London papers to the effect that it had been ascertained, by inquiries at the Hop Exchange, that our crop will turn out a practical failure, not exceeding that of last year, and that picking will not commence before September 23, and will not last longer than three weeks. I have tried to ascertain where such a misleading statement originated, but no person in this building accepts the responsibility.

Indeed, we are all too well informed to be guilty of such an error. Of course, none of us can be absolutely certain, as unforeseen contingencies may even yet arise to upset all our anticipations, but as far as any person can judge from present appearances, it may safely be said that the majority of those whose opinions are worth acceptance are expecting a full average crop, round about the figure I have ventured to put forward. That the picking will be rather later than usual is most probable, the peculiarities of our climate this year will fully account for such delay, and it is true that a late picking is not usually a heavy one. But making all allowance for this disadvantage, I believe we shall see that the weight harvested will be sufficiently satisfactory.

America.

The latest intelligence from the other side of the Atlantic confirms earlier anticipations. The total crop of the U.S.A. is not estimated at less than 350,000 bales, or about 570,000 cwt. New York State will produce about 50,000, and Washington, Oregon and California combined about 300,000 bales. The weather on the Pacific Coast has been consistently favourable throughout the growing season, and is at present very promising for the flowering and fruiting. If these expectations are realised there will be a large surplus for export, and prices will be low.

Germany.

From all districts I have received confirmatory news of the excellent prospects of the crop. The plantations have passed through similar climatic vicissitudes to our own, but the progress of the growth has not been interfered with, and in all directions the plants are healthy and are freely putting forth flowers, with a promising outlook for fruit. There has been no practical trouble with vermin.

France.

The reports from Burgundy are not very promising, the plantations having suffered from storms and cold nights. The crop is not expected to exceed two-thirds of an average. In the North the prospects are fairly good, as recent rains have benefited the plantations, laterals and flowers being abundant.

Belgium.

Although vermin is still active in Belgium, the plantations in Alost, and increases in some places, the outlook is on the whole fairly satisfactory. The Poperinghe grounds appear to be in a similar condition, but it is not expected that the Belgian crop will be smaller than last year, and some reports predict a considerable increase.

The World's Markets.

If one asks any of our Borough traders if they are doing business, the answer is almost certain to be negative. The holidays, extended over four days, necessarily caused complete suspension of operations for this space; but since the reopening of our offices, no sign of activity is to be found. Here and there a few small transactions have taken place, but I regret to add that the recent slight advance in values has been completely lost, prices having receded to their previous low limits. This reduction does not appear to be caused by the anxiety of holders to sell. It is rather the result of the practical cessation of demand, consumers being doubtless influenced by the improved climatic conditions, and the consequent more favourable reports from the plantations, both at home and abroad. As we are now in the concluding month of the growing season, it is hardly probable that any market revival will take place, and we must be content to wait the arrival of the new crop.

The American markets are subject to similar influences, and remain in an absolutely stagnant condition. Quotations are merely nominal, with a tendency towards further reduction. Lower offers on the part of holders do not induce business, and this state of suspense is likely to continue.

The promising reports from all the German hop growing districts, combined with the reduced consumption of beer, are seriously affecting the Nuremberg market. Brewers are not buying, and holders are very anxious to clear their stocks before the arrival of the new supplies. Consequently prices are falling daily, and will probably decline further in the course of the present month. The local hop trade has sustained a serious loss in the death of Herr Johannes Barth, the head of the old established and highly respected firm of Johannes Barth and Sohn. I have a lively recollection of the kindly courtesy of this gentleman during the visit of English growers to Nuremberg four years ago, and most sincerely sympathise with his family in their sad bereavement. In Belgium the speculative market is supported in apparent firmness by exaggerated reports of the damage done to the growing crop by aphis blight and the want of rain. It is stated that should present weather conditions continue, the cones will not develop, and the weight of the crop must be diminished. Upon this possibility the market is upheld, but the basis is very insecure, and the slightest climatic improvement will speedily destroy it.

The importations of hops into Belgium during the six months ending June 30 were 16,140 cwt., of which the main bulk came from Germany, only about 240 cwt. being shipped from England. Belgian exports during this period were 7,140 cwt. Nearly one-half of this quantity was sent to France, and over 2,000 cwt. to England and Ireland.

Ships at the usual ports in England, Scotland, and Ireland, and for the supply of Oxen, Sheep, and Pigs to H.M. Victualling Establishments at Chatham, Portsmouth, Portland and Plymouth. Tenders will also be received for Vegetables at Chatham, Portsmouth, Portland and Plymouth for Standing Contracts for 3 years, commencing 1st April, 1908. Forms of Tender, containing Conditions of Contract and all particulars, may be obtained on personal application at this Office, or by letter addressed to "Director of Navy Contracts, Admiralty, London, S.W." Applicants should state for what place they desire to tender. Their Lordships do not bind themselves to accept the lowest or any Tender, and reserve to themselves the power to accept any part of a Tender.—F. W. BLACK, Director of Navy Contracts, Contract Department, Admiralty, London, S.W., Aug., 1907.

PROVISIONS.

TENDERS will be received until Noon on WEDNESDAY, the 28th AUGUST, for the Supply, for Twelve Months, from 1st October next, of :—

PORK for H.M. Training Ships at Chatham, Devonport, Harwich (including Shotley Barracks), and Portsmouth.

BREAD and MEAT for the Royal Marines, at Deal.

MEAT, VEGETABLES, FLOUR, CONES, MILK for the Royal Hospital School, Greenwich.

Forms of Tender, containing Conditions of Contract and all particulars, may be obtained on personal application at this Office, or by letter addressed "The Director of Navy Contracts, Admiralty, London, S.W.

Applicants should state for what place and article they desire to Tender.

Their Lordships do not bind themselves to accept the lowest or any Tender, and reserve to themselves the power of accepting any part of a Tender.

F. W. BLACK,
Director of Navy Contracts.
Contract Department,
Admiralty, London, S.W.
August, 1907.

PARISH OF LAMBETH.

SUPPLY OF FLOUR.

THE Guardians of the Poor of the Parish of Lambeth desire to receive TENDERS for the supply of :—

50 Sacks Whites and 50 Sacks Households, to the Guardians' samples, to their Workhouse, situate in Renfrew Road, Lower Kennington Lane, S.E. Samples of the flours to be supplied can be seen on application to the Master of the Workhouse.

Tenders, accompanied by samples, must be sent to me on or before WEDNESDAY, the 14th AUGUST instant, at 11 o'clock, marked "Tender for Flour." The Tenders will be opened and decided upon at a meeting to be held on the same day.

The Guardians do not pledge themselves to accept the lowest or any Tender.

By order,
W. THURNALL,
Clerk.
Board Room and Offices,
Brook Street,
Kennington Road, S.E.
2nd August, 1907.

JEE'S MILK (ACCOUNT) BOOK. For Farmers, for Dairymen, for Consumers. Price 2s., by post, 2s. 3d. Published by W. A. MAY, "Mark Lane Express" Office, 3, Wellington Street, Strand, London, W.C.

Mark Lane Express

SCALE OF ADVERTISEMENT CHARGES—ORDINARY POSITION.

PER INCH, SINGLE COLUMN :

1 insertion	8/-	
6 insertions at	7/-	each.
13 " "	6/-	"
26 " "	5/-	"
52 " "	4/-	"

☛ Small Advertisements in body type of Farms to Let, Miscellaneous, Seeds, Plants, Live Stock, Secondhand Implements, Machinery, and Agencies, &c. (under classified headings), are charged at the rate of Sixpence per line.

Society Announcements, Auction Sales, at the rate of 6/- per inch.

Paragraph Advertisements at foot of reading matter, One Shilling per line per insertion.

Publishing Offices: 3, WELLINGTON STREET, STRAND, LONDON.

PUBLICATIONS.

THE NEW ZEALAND FARMER. Stock and Station Journal. An illustrated monthly publication, containing practical and scientific information on Farming, Stock Breeding, Cattle, Horses, Sheep, Dairying, Fruit Growing, &c. The only paper entirely devoted to Farming matters and circulating throughout the Colony. Price 1s. 1d., by post 1s. 4d. Proprietors, The Brett Printing and Publishing Co., Ltd., Auckland. London Manager, R. B. BRETT, 134, Fleet Street (over "The Standard" Offices), London, E.C.

JUNIOR COUNTRY READERS. By H. B. M. Buchanan, B.A., and R. R. C. Gregory. Gl. 8vo. I. True Animal Stories, 128 pages, 25 illustrations, 1s.; II. More True Animal Stories, 172 pages, 29 illustrations. 1s. 2d.; III. Talks on Country Life. 190 pages, 67 illustrations, 1s. 4d SENIOR COUNTRY READERS. By H. B. M. Buchanan, B.A., Gl. 8vo, I. 256 pages, 65 illustrations, 1s. 6d.; II. 242 pages, 84 illustrations, 1s. 6d., III. 302 pages, 143 illustrations, 2s, LESSONS ON COUNTRY LIFE. 342 pages, 175 illustrations, Gl. 8vo, 3s. 6d. THE OBJECT OF THE READERS.—While the interest and simplicity of the reading matter fixes the attention of boys and girls unconsciously to themselves, they learn a great deal of accurate knowledge concerning life and work in the country, and at the same time there is aroused in their minds a desire to go outside and observe things for themselves.—London : MACMILLAN & Co., LTD., St. Martin's Street, W.C.

"LAW FOR THE HOUSEHOLDER,"
BY A BARRISTER-AT-LAW.
Price 1s. (by post, 1s. 2d.).

W. A. MAY,
3, WELLINGTON ST., STRAND, W.C.

MISCELLANEOUS.

BASIC SLAG, all grades.—Kainit, Supers., Boiled and Dissolved Bones, etc. State quantities required and station, when prices, analyses, etc., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

BASIC SLAG.—Percentages phosphates guaranteed. We sell thousands of tons, and hundreds of our customers testify to the marvellous results from its application. Write us to-day for special quotations autumn and spring delivery.—CANNOCK AGRICULTURAL CO., LTD., Cannock, Staffs.

POWDER for DESTROYING LICE in CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless, 1s. per lb., over 3 lbs. post free. E. RUMSEY & CO., Rhuddallt Fawr. Carnarvon.

LAITA.—The best Milk Substitute for Calves and best results. Popular prices, 12s. 6d. per cwt., carriage paid. Send 12s. 6d. for sample bag to—R. J. NELL & Co., LTD., Spiced Food Mills, Louth, Lincs.

BREWERS' GRAINS. — Dairy Farmers supplied by contract or otherwise.—Write for price to GEO. CRUTCHER, 195, Queen's Road, Peckham.

MEDICUS NON-BLISTERING OIL for Spavins, Splints, Sprains, Rheumatism, Swollen Joints, and all Lameness in horse and cattle. Use it and have a sound stud. Well recommended. Pint tins, post free, 4s. each.—WADDELL, Carnarvon Street, Glasgow.

COWS should be drenched with Horninhand Abortion Preventive when midway on in calf. 1/9 each, or 18/- per dozen tins, post free.—N. ELLIS, Larcombe, Blackawton, R.S.O., S. Devon.

RABBIT CATCHERS, Bird Catchers, Farmers' Sportsman Nets, Traps, Snares, Decoys. Every description Ropes, Tarpaulins, Rick Cloths. Illustrated Catalogue 1d.—YOUNG (M.L.E.), Net Trap Manufacturer, Crewkerne, Somerset.

DAIRY FARMERS.—Advertiser is open to pay cash for Railway Churns in good condition.—HOLLAND, 307, Gray's Inn Road, London.

RATS, MICE, SPARROWS KILLED LIKE MAGIC. No smell from dead carcases, 1s. free.—COMMON SENSE CO., 21, Lime Street, London)Government Contractors).

SHIPPING.

CANADIAN PACIFIC LINE.

FASTEST TO CANADA.

NEW "EMPRESS" MAIL STEAMERS (4 DAYS OPEN SEA). Weekly from Liverpool. Work and Wages Pamphlet free. Emigrants met at Liverpool by C.P. officials.

For Passages, apply C.P.Rly., 62, Charing Cross, S.W.; 67, King William Street, E.C., or Local Agents.

MISCELLANEOUS.

GALVANISED CORRUGATED SHEETS, all warranted sound: 3ft., 9d.; 4ft., 1s. ; 5ft., 1s. 3d.; 6ft , 1s. 6d. ; 7ft., 1s. 9d.; 8ft., 2s. ; 9ft., 2s. 5d. ; 10ft., 2s. 8d. each ; ridging, 3d. per foot ; spouting, 3½d. per foot. BARBED FENCING WIRE, in half cwt. reels, 224 yards, 7s. per reel ; plain galvanised wire, in 1 cwt. bundles, 700 yards, 12s. per cwt. ; wrought iron standards, 1s. 3d. each. "M" Dept.—BUTLER, Bell Works, Wolverhampton. Est. 1828

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines, Thrashing Machines, &c., second-hand, for Sale, cheap, or to be Let on Hire-purchase. Full list free. Inquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions. HENRY LEWIS & SONS Thames Bank Iron Works, Reading.

OIL ENGINES.—Simple and reliable. Prices from 10 guineas. No lamps after starting. Lists free; no fancy prices.—CLIFFE OIL ENGINE WORKS, Morton Bingley.

10,000 YARDS Strained Wire Fencing. Improved Steel Bulb Tee Standards. Low prices.—W. J. MULLINGS, St. Agnes Ironworks, Bristol.

GALVANISED WIRE NETTING of all descriptions at specially low prices. Galvanised Cisterns, 50 galls., 12s. 6d. ; 100 galls., 19s. 6d. ; 150 galls., 32s. 6d ; 240 galls., 46s. ; carriage paid. Special Line: Secondhand 3½ bushel sacks at 6d. each.—DAVID & CO., Taff Vale Iron Works, Cardiff.

PEDICURA, for Horses' Feet, produces a sound, healthy growth; also cures Thrush, Seedy, Brittle, Shelly Hoof, Corns, Cracked, Greasy Heels, Foul Smell of Feet, Itchy Mane, Tail, or Legs, Mangy Skin in all Animals.—Tins 2/6, of agents, or post free.—GREGORY & Co., Temple, Bristol.

POTATOES ! POTATOES ! ! Edward England, Cardiff, Ltd. Importers and Exporters of potatoes. Head Office, West Dock, Cardiff ; also Bath Street, Bristol, and North Dock, Swansea.

EDWARD ENGLAND, Cardiff, Limited.—Are always buyers of good English potatoes, for cash on rails.—Address, Head Office, West Dock, Cardiff.

SEEDS OF GILLIES' celebrated STOCKS, warranted first-class.—Early Large Yorks, Lates or Drumheads, Savoys, Curled Greens, Imperial Early M'Ewan, also selected Brussels Sprouts, 12s. per stone, £4 per cwt. ; Lates or Drumheads, £37 10s. per half ton ; £70 per ton. Prepayment or banker's reference from new customers. —GILLIES, Northfield, Prestonpans. Largest Cabbage plant grower in the world ; largest market gardener in Scotland

RATS ! RATS ! !—A Truro Farmer writes :—"After using a 1/- Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, Broad Street, Reading.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Wire Netting.—Best Galvanised. Cash prices per roll of 50 yds. 3 in. mesh, 2 ft., 3s. 5d. ; 3 ft., 6s. 1d. ; 4 ft., 8s. 1d. ; 2 in. mesh, 2 ft., 5s 8d. ; 3 ft., 7s. 9d. ; 4 ft., 10s. 8d. ; 1 in. mesh, 2 ft., 9s. 5d. ; 3 ft., 13s. 5d. ; 4 ft., 17s. 10d. BEST GALVANISED SHEEP NETTING.—50 yard rolls, 3 ft. wide, 4 in. mesh, and centre strand, strong, 10s. 4d. ; medium, 9s. 8d. per 50 yard roll. Strong Stakes, 6s. per dozen. Carriage paid on lots, nettingor stakes, 70s. value.

Iron and Steel Hurdles, Fences, Gates.—Excellent quality ; 6 ft. hurdles, 4 rails, 35s. 6d. per doz. ; 5 bars, 38s. 9d. Steel fencing wire, 11s. per cwt. ; galvanised wire strand, 17s. cwt. ; galvanised barbed wire, 15s. cwt., 590 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires and iron posts, 8½d. per yard.

Splendid Galvanised Roofing.—Perfect quality ; 5 ft., 1s. 6¾d. ; 6 ft., 1s. 10½d. ; 7 ft., 2s. 2½d. ; 8 ft., 2s. 6d. ; 9 ft., 2s. 10½d. ; 10 ft., 3s. 3½d. Ridging, 2½d. per ft. Best Wire Nails, 11s. cwt.

Galvanised Cisterns, corrugated steel, 80 gals., 9s ; 50 gals , 13s. 3d. ; 100 gals., 21s. Corn Bins ; Sheep, Pig, and Cattle Troughs at very low prices. Lists free.

Seasonable Topics.

In View of Hopping.

IN another part of this journal our expert deals with the general prospects of the hop harvest, but the time is approaching when it will have to be gathered in, be it good, bad, or indifferent. And with the approach of hop picking the usual preparations have to be made, for the hop grower must have all his machinery in order when the first bine is cut down from the pole. In a local Kentish paper before us we see advertisements for pickers, polepullers, bookers, measurers, and dryers, and during the season people who can perform these various operations have no difficulty in securing employment. Perhaps there is no harvest that requires more organising than that of the hops, particularly on farms where the area is extensive, and it may be also said that in no harvest field can one see such a variety of human nature. But it is not the business of the hop grower to consider personalities when the golden bine is ready for picking. He must have qualified hands for the all-important work of drying and reliable persons for booking, measuring and paying, while the chief qualification for picking is a pair of nimble hands. He must, however, have all things ready, both people and appliances, when the time arrives for commencement, hence the preparations that are now going forward.

Potato Disease.

WEARILY the days drag on, and we are still waiting for sunny skies and settled summer weather. They seems loth to come, and in the meantime we can see signs of trouble ahead. Looking over the potatoes in fields and gardens, we observe those tell-tale black patches on the leaves and stalks which indicate the presence of the dreaded blight (*Phytophthora infestans*). It is gradually spreading, and each day the disfigured appearance of the maincrop potatoes grows worse. How will the tubers turn out? It is yet too soon to say, but we have our anxieties, and recollections come back to us of wet seasons in the past when the digging of potatoes was a most depressing operation, for reasons already explained. We had hopes when the first signs of the disease appeared on the leaves that a change in the weather would check its progress, but unfortunately that change has not yet come, nor are there any signs to make one optimistic.

A COOL CORNER.

This is the season, by the way, to prove the utility value of spraying, but just when the operation should have been performed it was raining persistently, and consequently many people who had the mind to do it were prevented by climatic conditions. Nevertheless, we shall look with interest later on for reports on experiments in potato spraying.

Ensilage and the Contamination of Milk.

WE have no evidence before us to show how much ensilage is being made this season, but the matter has been talked about a good deal, and we know a good many people who have grown tired of attempts at making hay and have resorted to this means of dealing with the grass. The point which remains in doubt is about the contamination of milk if ensilage is used, and considering the extent of the milk-producing industry, there can be no doubt about the importance of this matter. In the early days of ensilage complaints were general about milk being contaminated, and proprietors of dairy factories prohibited its use amongst the cows on farms supplying milk to them. By the aid of experience and experiment, however, this difficulty has been overcome, and experts who have made a study of the whole thing assure doubtful persons by the contention that if ensilage is not allowed to lie about the cowshed or any other place where milk can be contaminated, and that if milch cows are not fed with ensilage for some hours before milking, there is nothing to fear about the milk being affected.

Motors and Show Rings.

IT is a good many years now since we attended our first agricultural show, and from then till now we have visited more of these gatherings than we should like to count. With us there is a familiarity about jumping and driving competitions that almost breeds contempt, and we remember when the big brakes and gaudily painted drags were drawn up at the ring side so that people who could afford these luxuries might obtain a good view of the sport. Fortunately for agricultural societies, the jumping and driving competitions have lost little of their charm for the public, but every visitor almost who can afford a motor car views the sport not from his carriage or his drag, but from his automobile. It is quite the thing now to draw your motor car up to the side of the jumping ring, and—tell it not in Gath—even at gatherings at which agriculturists most do congregate we hear not the points of horses being discussed so much as the merits of different makes of motor cars. Dear, dear, that such things should be! But still they are, and at a show quite recently we observed a member of the old school, attired in the tall hat and cravat of his own day, lean on his stick and take critical stock of a smart motor-car drawn up at the ring side. Then he walked away, and the look of intense disgust on his wrinkled face described his feelings far better than it could be done in words.

Sheep Dog Trials.

ONE of the features of the recent agricultural show at Tring was the sheep dog trials, and to any one who loves a good dog—and what farmer does not?—we can imagine nothing more interesting and fascinating. Of course, there is as much difference between the yelping curs that one frequently sees tearing about after sheep and a properly trained animal as there is between chalk and cheese, and an inspection of a trial of sheep dogs is the best means we know of realising how indispensable a good

dog is to a shepherd in those districts where dogs are trained to be of real service. The first sheep dog trial we ever saw was in Dovedale, amid that romantic bit of scenery which is watered by the river in which old Isaak Walton loved to fish, and we can hardly imagine surroundings more naturally in keeping with an entertainment of this kind. Many years have passed since we saw our first trial of sheep dogs, but some things imprint themselves on the memory more than others, and we have distinct recollections still of the wonderful instinct—or shall we say, reasoning power?—displayed by the dogs, their patience, and obedience to sign and call. We thought then, and still think, that to be the master of such a dog must be a source of considerable pleasure to the hardy shepherd who is responsible for the training of him.

In the Cider Tent. NOT the least interesting department at the various agricultural shows held in the West of England is the tent or shed in which the cider and perry are exhibited. The average Westcountryman, by the way, knows a thing or two about cider, and what he doesn't know he probably thinks he knows, so that his education is fairly complete. We have nothing here to do with the exclusive interior of the cider tent when a policeman stands at the entrance and with warning finger uplifted tells you that the judging is going on. It is later on when you hear things complimentary and otherwise about cider, cider makers, and cider judges, because by right of custom there are privileged members of the West-country public (sometimes a good many of them) who are allowed to taste of the exhibits, and it is surprising how many more people there are interested in cider if it happens to be a scorching hot day. You can easily pick out the authority on cider who tastes in quite a professional sort of way and upholds or criticises the decision of the judges as the case may be, but there are other people who taste that know nothing about the merits of cider and care less, except that they like a good drink of it, and the look of wisdom which comes on their faces when they have had a good swig from one or two of the best casks is positively amusing. The steward in the cider tent, by the-way, has a position that is not altogether enviable, because he knows the customs and does not wish to appear ill-natured, but the difficulty he has is to detect the genuine taster from the man who is actually thirsty.

Agricultural Politics.

BY A LOBBYIST.

An Unfair Description.

No politician who knows the true inwardness of the Butter Bill can resent Sir Edward Strachey's strong resentment of the description of the measure as being intended to legalise "the sale of adulterated butter." As a fact, the milk-blended butter cannot be, under the Bill, described as "butter." Certain journals have waxed themselves into a fury of wrath over the prospect of this milk-blended butter being described as "lactine" or "waterine," and they have accused this Government of insincerity in the business, and even besought the Lords to reject the Bill rather than permit the milk-blended butter to have other than the quantity of water permitted in ordinary butter. This is mere partisanism and nothing else—and callous partisanism too. These journals and their embodied Parliamentary reflections in both Houses never raised a wail when the last Government refused opportunity to Mr. Ailwyn Fellowes to pass this Bill. Mr. Balfour was assured of the Lords, he had a hundred majority in the Commons—and this long-promised Bill, like the Dogs Bill, was shunted and shunted, and finally given to the whales without even the prospect of a Jonah-like resurrection. Every one of us will ask that milk-blended butter be given no water-preference; but this is very different to accusing the measure "of legalising the sale of adulterated butter." If this accusation were true the House of Lords would be dishonest if it did not reject the Bill in its entirety.

* * *

Mr. Chaplin and His Supporters.

I am a great admirer of the sonorous manner in which Mr. Chaplin has led the Opposition-cohorts against the Government over the English Small Holdings Bill. But has the right hon. gentleman been fairly supported? On crucial issues—on issues which he himself, in his fine resounding phraseology, declared to be vital to the Bill—he was supported by from forty to fifty Conservative members of Parliament. On great issues like the threatened terrorisation of the county councils by the Commissioners, and the sum to be expended on these officials, he was left almost derelict—a statesman abandoned by the men who can be beautifully profuse in their oratory. On an even greater issue from my point of view—that is, the character and authority to be given these State-endowed officials—the right hon. gentleman was again left bereft. Sixty was about his highest vote on the day on which he sought to review the purpose and intention of the Committee. I state the fact, and permit my readers to make the deduction. All I will permit myself to say is that heroics in oratory is a poor thing when it is not backed up by heroism in action. The English Small Holdings Bill will not seriously differ from the character it had when it was presented to the House of Commons—excepting that it will be less suspicious of the county councils—on its birth-night. This is because of the friendlessness of the Opposition.

Fair Play for the Dispossessed Farmer.

Now every farmer who knows a peer ought to utilise that acquaintance. In my view the English Land Bill will not, unless there be an alert activity, make a sufficient allowance for the dispossessed farmer. The labourer who loses his employment as a result of the establishment of a small holding is to be adequately compensated, but the farmer—why will certain politicians think that the farmer is less flesh-and-blood than the labourer?—is by no means possessed of the same surety. Frankly, I believe that if the peers introduced this as a first condition of the Bill receiving their assent, they would not find the House of Commons in a belligerent mood. There has been such an admirable temper exhibited in connection with this Bill—a fact which is attributable chiefly to Mr. Harcourt and Mr. Chaplin—that the desire for fairness towards all affected by it is really the predominant sentiment. We don't all like what I am bound to describe as the rather banal antagonism exhibited towards the county councils by certain politicians; but these men have been revealed to be only a section of the House of Commons—a section to whom Mr. Harcourt has not offered a too-complaisant countenance.

* * *

The Government's Rival Land Policies.

Of course, every man who reviews the agrarian situation must be impressed by the distinctive methods adopted by the Government in connection with the Scottish and English land problems. It was the source and inspiration of Lord Rosebery's jocund and not unbarbed raillery. But is there not something to be said on the other side? Is Scotland England? Is the Scottish temperament the same as the English temperament? Does not Scotland possess in her crofter system a basis on which to rear a fabric, whilst England possesses nothing of the kind? By this I mean that the English land system is at this moment more or less of an individualistic land system — it acknowledges the landlord in a degree that the Scottish crofter system does not. I see that certain of the critics of the Government—of which body I am no defender—say that Ministers have "brought in a Bill for Scotland and a Bill for England dealing with exactly the same economic problem, but proposing the application of totally different methods." Well, is this maladroit statesmanship? In the first place, however, let us remember that "the Government has not to deal with the same economic problem"—it can never be the same with two peoples so constitutionally and temperamentally divergent as the Scottish and the English. The fact is that Scotland has a foundation for a land system in her Crofters Act. Wherein the Government has made a mistake is in giving that land policy too inelastic a character. The Lowlands are not the Highlands—in the Lowlands the land has had the double blessing of centuries of toil and centuries of capital. The landlord there deserves a greater consideration than his Highland brother. Statecraft is not so unfertile of brains that it could not have made this distinction. Still the Lowlands did not want the same Morisson's pill as England. If it were consulted it would prefer the same Morisson pill applied to the Highlands. Casteism is not more potent in India than the Scottish sentiment in Scotland.

* * *

The Wiser Plan.

We may, of course, take it that the Scottish Land Bill is dead. It has been over-laid. No Government retaining even a semblance of self-respect could accept the Lords' amendment. The Bill has been metamorphosised. It is like the Irishman's pair of trousers—"bedad, sorr," said he, "my wife put on a new pair of legs, and it's just the same old trousers." The House of Lords has eliminated from it every pretence to the Irish system—though, for the life of me, I could not see where dual ownership came in with the holder being forbidden to sell his tenant-right. But have the Lords been altogether wise in being so thorough-going? Does the progress of the education question convey no lesson to them? Who would have thought that one of the prime purposes of Mr. Birrell's Bill would be achieved by administration? And, frankly, I fear, if the House of Lords pursues this plan of rigorous transformation, what may be accompanied by means of the Budget. Let me put a point to Lord Rosebery. Has he ever conceived the taxation of land values being accomplished by his erstwhile *fidus Achates*, Mr. Asquith, in the *rôle* of Finance Minister? Has he ever thought of a Government deliberately taxing land insufficiently cultivated, or used only for sport? Both purposes are within the ken of this Government. If this can be done, how much of the purpose of this Scottish Bill can be achieved in the same way. Frankly, I fear this legislation-by-Budget method. It is too remorselessly scientific. It has too little of the spirit of conciliation. It only reflects the anxiety of one party. The peers were wise, in all sooth, to render it unnecessary.

* * *

Mr. Balfour's Curious Reflections.

I doubt whether Mr. Balfour, in his speech on the third-reading debate of the English Land Bill—the carrying of the third reading of so momentous a measure without a division is without parallel in modern politics—really meant to appear so distinctively a pro-urbanite as he did. If his speech reflected his intention, or if he is possessed by the conviction that "if Great Britain is to increase in population, wealth, and prosperity that increase must be urban, and not rural," then we have at once presented to us the fount of that apathy towards agricultural and agrarian reform which evoked so caustic a criticism from men like Mr. James Long on the eve of the General Election. It is easy to exaggerate the influence of this new legislation—which, we learn from the Premier is but one stone in a triple mosaic, the other two stones being the Land Tenure Act and the forthcoming Valuation Bill; it is easy to be dithyrambric in anticipation of the effect of this Small Holdings Bill and paint the Arcadian picture in impossible tones. Mr. Balfour, however, did more than rebuke Radical ecstacy and perfervour—he simply associated himself with the pro-urbanites. True, the policy of 1846 did mean that in the future the national development would be industrial rather than urban; but it did not mean that the national Legislature should not seek to quicken the urban development and to call into existence counterbalancing influences in order to arrest the inevitable burst of the Cobdenite policy. It may be that Mr. Balfour's musing—the speech was rather of the nature of a soliloquy than an oration—was simply one of his characteristic essays in philosophic speculation. Be this as it may, it can scarcely have been as balm of Gilead to all his following. What must Mr. Chaplin, for instance, have thought of it?

* * *

What of the Lords?

And now what of the Lords? Will they insist upon making the Bill a means of establishing a peasant proprietary—will they insist on rearing the new legislation on an ownership basis? Well, if they do the measure will be wrecked. The Premier has made it clear that the Bill would be relinquished rather than so vital a point be conceded. There is no doubt whatever about this. Perhaps, with the third reading of the Bill unchallenged by its critics, the Peers will scarcely be so greatly daring.

The New Potato Crop.

The usual method of disposing of the new potato crops is for the buyer to inspect the fields and purchase the potatoes outright. The above illustration shows a buyer inspecting roots at various parts of the field, in order to determine the quality and quantity of the crop before making an offer.

Harvesting the new potato crop. The pickers follow the diggers, sorting the crop as they go, and putting them into baskets containing tubers of different sizes.

Trucking train loads of new potatoes from St. Neots (Hunts) Station.

Lincolnshire Notes.

THE swine fever interdict upon the markets of Lincoln is scarcely removed when another is issued, putting the ban upon practically the whole of Holland. It is very unwelcome news, for though there have been several cases of the disease, nobody regarded it as serious enough to necessitate the closing of the markets. The step, needless to say, is being a good deal criticised, and there are loud complaints that the pig trade and the pig-breeding industry are being seriously dislocated by these restrictions. But it is little use grumbling. The best that the pig-owners and butchers can do is to exercise every precaution, and see to it that the disease is exterminated as quickly as possible.

THE late Marquis of Exeter was a well-known Lincolnshire landowner, where he owned a good many thousand acres. He was a popular landlord and a personal acquaintance of most of his tenants. At one time he was a familiar figure in the Sleaford district, where some years ago he disposed of a quantity of land.

HARVEST has not yet commenced. Here and there a crop of winter oats has been cut, but the hum of the self-binder will not be in the air for a couple of weeks yet. All accounts promise a good and heavy harvest, in spite of everything.

HEARTIEST congratulations to Mr. Christopher Turnor on his marriage. Mr. Turnor will have the best wishes of every Lincolnshire agriculturist to start him on his matrimonial way, and he will have a great welcome back to Wragby.

THE Farmers' Union has had a very busy week. It commenced with a very enthusiastic meeting at Peterborough, where a branch has been formed, the necessary elections to take place after harvest. At Melton Mowbray, on Tuesday, the branch already formed was put into ship-shape, Mr. R. C. Cooper being elected chairman. In order that the committee shall be thoroughly representative, it was left to the village meetings to bring forward nominations. At Waltham and at Croxton useful work has been done, and the interests of the union have been consolidated at Epworth, in the "Isle."

THE Union now covers six counties. It has spread its net over a range of country stretching well beyond fifty miles of Lincoln, and its membership increases daily. As the MARK LANE expressed it last week, the movement is flourishing beyond wildest expectations.

LORD HENEAGE'S hard case of the Cambridge Crown tenant has been answered. Mr. F. Webster, chairman of Moulton Parish Council, who has undertaken responsibility in connection with the Crown lands, has taken up the cudgels against him. Mr. Webster is a Unionist, but unlike Lord Heneage, is a convert to Small Holdings. He puts another face on his lordship's grievance.

ACCORDING to his statement, the tenant has surrendered the land voluntarily under the weight of advancing years. He retains 350 acres of the best land in the middle of the farm, on which he will concentrate and employ more labour. At present 377 acres are under grass. The conversion of 120 acres of grass to tillage will provide labour equal to the regular employment of four labourers, as against part of the time of a single shepherd.

AS to the threatened dire effects of the conversion, this is Mr. Webster's view:—It is proposed to create fourteen holdings, and convert thirty acres into large allotments. These holdings will be tenanted by men who have been brought up on the land—labourers with money saved, very small holders who want somewhat larger holdings, sons of small farmers desirous of starting on their own account, &c. The net result will be eighteen or twenty men getting a living out of the land, and as most of them are doing the work of agricultural labourers on farms in the neighbourhood, there will be so many vacancies created. Twice the manual labour will be expended on the land that is done at present, many more horses will be at work upon it, and local blacksmiths, wheelwrights, and shopkeepers, as well as the market town, will benefit.

TIME was when Horncastle's great horse fair came scarcely second to that of Lincoln. But it has declined in even greater proportion than most fairs, and the business which at one time took a fortnight to transact is now practically got through in a day. It has been a good fair this week with a good supply of horses of good quality, although buyers were not quite so numerous as usual. The best trade was in cart horses, for which good prices were obtained. As to

the official quotations, hunters sold at all prices up to £100, cart horses up to £65, second class animals from £35 to £45, van horses from £40 to £45, match horses £55 to £70, harness horses £25 to £40, two-year-old colts and fillies £25 to £30, and three-year-olds up to £40, Welsh ponies from £8 to £12.

LINCOLNSHIRE FARMERS' UNION.

MEETING AT PETERBOROUGH.

There was a large company of farmers present at the meeting held at Peterborough on the 20th inst. with the object of forming a local branch of the Lincolnshire Farmers' Union.

In the absence of Mr. T. H. Vergette, who was to have been the chairman, Mr. G. Moore was elected to preside. He pointed out the objects of the Union in working for the abolition of preferential railway rates in favour of foreign producers, the regulation of the sale of foreign meat, that beer should be brewed from malt and hops, to safeguard the purity of butter, &c.

Mr. John Thurlby, the chairman of the Stamford Branch of the Union, spoke upon the great increase in the membership of the Union, and hoped that a branch might be successfully started at Peterborough. He urged that the interests of agriculturists were served by union now that other interests were organised. Union was strength. He complained that farmers were not receiving the consideration they deserved in the Agricultural Rating Act, and spoke strongly against the preferential railway rates now in existence for foreign produce. Against all these difficulties, he said, farmers would fight more effectively when organised.

Mr. H. W. Palmer, secretary to the Union, also made a vigorous speech upon the objects and benefits of the Union. He urged that they would have to keep free from party politics, and keep it a Farmers' Union and a Farmers' Union only.

The Rev. T. Hamilton, of Lincoln, supported the suggestion to establish a Union at Peterborough. That Union, which had been started only a short time ago, was a little mustard seed that was growing, and it would grow into a mighty tree beneath which all farmers in the country would want to take shelter. Every trade under heaven seemed to him to be protected except agriculturists. He had lost hopes of the farmers combining until a little while ago this Union was started. No other trade deserved more to be protected, and they could understand how it would be to their advantage to have a strong central body to look after their interests, to advise them, to watch the markets, and advise them when to sell and buy, and to tell them anything they wanted to know upon the receipt of just a post card. The Union was not a combination of farmers to do any injury to landlords. He might tell them as an Irishman he did not hold any brief for the landlords, but he understood in this district landlords and tenants were on very amicable terms. They were generally well able to look after themselves, and they recognised that an empty house was better than a bad tenant. No great political party had done anything in the interest of a trade except that which the trade had by its own strength compelled them to do. The farmers must combine and do something for themselves.

Mr. Griffin (Boro' Fen) in the course of his remarks said under the proposed Small Holdings Bill labourers on such farms were to be compensated, but the tenants of the farms appropriated for small holdings were to receive no compensation at all. The Union would be bound to be political to some extent, but it would be bound to protect its own interests whichever political party happened to be in power. The education given in county elementary schools at the present time was awful rubbish. Those in authority in these matters were not practical, they were merely theorists. They had now hardly a member in Parliament representing agricultural interests, but just as the labourers and Home Rulers—and he admired the Home Rulers—had succeeded in being represented, so ought agriculture.

On the proposition of Mr. Egar, who said the Government in its Small Holdings' Bill ought to encourage occupying instead of tenancies, and maintained that labourers worthy as they were ought to be allowed membership of the Union, seconded by Mr. G. Vergette, it was decided that a branch of the Union should be formed at Peterborough.

Those present signed on, and a membership representing 70,000 acres of local land was secured.

MELTON MOWBRAY BRANCH.

A meeting of the Melton Mowbray Branch of the Lincolnshire Farmers' Union was held at the White Lion Hotel on Tuesday, Mr. R. C. Cooper presiding.

Mr. W. Fowler, of Grantham, spoke on the aims and objects of the Union, which, he said, were to help each other. If they had any grievance or dispute which they did not care to fight single-handed, the Union would take the matter up for them free of any personal cost. Then if they only stuck together they would have considerable weight with any Government which might be in power, for they were entirely non-political and were not going to toady to either Liberal or Unionist, but would take what they could get from either party.

Mr. Roberts, of Croxton Kerrial (secretary of the Melton Branch), also spoke, after which Mr F. Shouler was appointed assistant secretary.

A committee was chosen, consisting of Messrs. R. C. Cooper (chairman), W. T. Kirk, J. H. Freestone, T. Carter, and Richmond.

[Reports of other meetings of the Union are unavoidably held over until our next issue.]

THE WEEK'S SHOWS.

Sussex County.

The Sussex County Agricultural Association held their twenty-first annual show at Hastings on Wednesday and Thursday last. It was a successful show in respect to attendance, and the excellent manner in which it was arranged. Compared with some of the former shows the number of entries was somewhat less, but as in the case of all migratory shows, these vary in accordance with the district wherein the show is held, and when comparison is made with the previous shows held at Hastings, the average total entries are fairly up to an average.

HORSES.

The agricultural horse section had seven classes. Mr. A. H. Clarke judged them. The winning stallion was King of Tandridge, owned by Mr. M. Michaelis, Mr. A. Luckin was second with Orfold Prince; a very fine brood mare, Rolleston Waif, won first in the class for the Marquis Camden; the Shire Horse Society's silver medal went to this mare, and her colt foal won in the foal class. Miss E. D. Coats, with Radmanthwaite Lily, was second for brood mares, and i's foal took third in the foal class. The second winner in this latter class was owned by Mr. G. Duke, the dam of which was reserve number in the brood mare class. Mr. Luckin won in the yearling class, followed by the Marquis Camden. In the two-year old class Mr. John Pearman had a pair of capital entries, his gelding by Hendre Champion was first, and his filly by Blythwood King Maker second. The three-year-olds had for their winners in the first and second places, two fine mares, Palterton Monica, owned by Mr. W. G. Fladgate, who was first, and Redlynch Saxifrage that took second for Miss Coates. The geldings secured preference in the four-year-old class, and three very fine ones, owned by Messrs. E. Duck, H. P. Ratcliff, and R. J. Howard occupied the first three places.

The Hunter brood mare class was a very good one, Victory won first and the gold medal for Sir M. R. Burrell. Mr. J. A. Joyce came second with Beatrice, leaving third honours for Black Agnes, owned by Mr. E. C. Gardner, a fine mare that took also the rn for the gold medal. Mr. J. A. Joyce had a fine colt by Wales, that won first in the foal class; Post Haste by Out Post took second honours for Mr. W. A. Thornton. Sir M. R. Burrell, with a beautiful colt, Prince of Orange, won first in the yearling class, taking also the Hayman Joyce Challenge Cup for the best yearling, Mr. Hornung taking second honours in the class with a gelding by Royal Mask, who was also made reserve number for the above challenge cup. The three winners in the two-year-old class were good ones of fine quality. The'r respective owners were Messrs. W. Dawtrey, S. H. Weston, and Sir M. R. Burrell. The three-year-olds were headed by Mr. Fladgate's Jennie and the Thoroughbred stallions by Rightful, owned by Mr. W. Wilson, whose second entry, Bramante, was reserve.

The special prizes for Hunters were awarded as follows:—Gold medal for brood mares to Sir Merrick Burrell's Victory; silver medal for fillies and the ladies' challenge cup for three-year-olds to Mr. W. Dawtrey's Petworth Lassie; and the Hayman-Joyce challenge cup for yearlings to Sir M. R. Burrell's Prince of Orange.

The driving and jumping classes and also the riding classes, together with the various competitors in the large ring, formed a very attractive feature, which was very much enjoyed by an excellent attendance.

CATTLE.

The cattle section of the show is an important one, particularly in respect to the breed most generally found in Sussex. An excellent class for milking cows opened this part of the schedule. Messrs. T. Watson and Green Bros. were first and second, and third and reserve went to Mrs. McIntosh for a couple of excellent Jerseys. In the dairy cattle class Mr. T. Watson and Green Bros. were the leading winners; Mr. G. Duck was the only competitor in the heifer class, and took first and reserve. The older bull class had for its winner Dunglass Conqueror, owned by Messrs. Green Brothers, and the Duke of Richmond with Polmaise Ivanhoe, won first in the yearling class. This was a very capital and well-bred Shorthorn bull. Bayham Armiger took third for Marquis Camden, leaving the second place for Mr. C. Duck's Lees Romancer.

The Sussex cattle made a particularly good entry, Sunlight 7th, owned by Earl Winterton, was made champion female. She won easily in her class, followed by the entries owned by the Earl of Derby and Mr. W. F. Winch. In the heifer classes the principal winners were Messrs. W. F. Winch, who won in the two-year-old class limited to the county; Mr. J. Aungier, who was first and second in that open to England; and the Earl of Winterton, who was first in a grand class of yearlings, followed by Mr. Saillard's entry. The champion bull was Mr. E. E. Braby's Lord of Drungewick 5th, first in the old bull class, Messrs. C. J. Lucas and H. Bell taking second and third. Mr. E. E. Braby with Alfred of Drungewick won in the two-year-olds, whilst in that excellent class of yearlings Mr. Saillard's Bewbush Duke was first.

The Aberdeen-Angus made a small but particularly good entry. Mr. G. Drummond won first for cows and old bulls, the latter was Eboniser to which the medal for the best animal in its section was given Black Forever of Ballindalloch, Sir G. Cooper's young bull, was first in its class and rn for the medal. First and second honours for heifers was won by Mr. J. H. Bridges.

The Jersey cattle made a notably good and fine entry. The champion prize for the best female went to Mr. A. Miller-Hallett for Goddington Pipkin, the Blythwood Bowl also going to this entry. Lord Rothschild's Palm Sunday, the winner in the two-year-old heifer class, took reserve number for these honours. Amongst the other leading winners were Mrs. McIntosh, Mr. F. Thomas, Lady de Rothschild, Admiral Brand, Mr. A. Pocock, &c. The champion prize for bulls was won by Lady de Rothschild's Gallant, first prize in the older bull class, Lord Rothschild's Oxford Wrangler, second in this class, taking the reserve number. Sir E. Stern won with Cupid, first in the young bull class, and Lady Blassey, first in the local class, with Lord Bathurst.

The Guernseys made a small but choice entry. Messrs. F. Hargreaves and E. A. Hambro were the principal winners. The Duchess of Devonshire and Mr. B. de Bertodano were the principal winners for Dexters.

SHEEP.

It is a matter of regret that the entries for the Southdown breed, particularly for the Hill flocks, showed a falling off in respect to number. In the class for flock ewes the Duke of Richmond won with a capital pen, followed by a very typical pen from Mr. A. Cooper. Third and reserve number were won by Messrs. A. M. Singer and Admiral Brand. The Duke of Richmond won the Challenge Cup for the best pen of Southdown Hill sheep; Mr. J. T. Strong, who was winner of first prize in the ewe lamb class with a very fine pen from the Hill flock, took reserve number for the cup. Messrs. Allan Cooper and A. M. Singer were the other winners in this class. Mr. J. Tompkins was first and second in the classes for Underhill ewes and ewe lambs, with specimens of the highest merit and quality. In the class for three yearling ewes, Mr. J. Colman and the Duke of Devonshire divided the honours, the former taking the Southdown Society's medal. The Duke of Richmond won first for two-shear rams, and the Duke of Devonshire r.n. In a good class of yearling rams, first honours and the champion medal for the best male Southdown went to Mr. J. Colman, the Duke of Richmond being r.n. for the latter honour with his two shear. The Exors. of Colonel McCalmont was second, third, and commended, for three particularly handsome yearling rams, and in the notably good class of ram lambs this flock won second, third, and fourth, leaving the first place for a particularly handsome lamb owned by the Duke of Devonshire, and the reserve number to one owned by Mr. J. Colman.

The Kent or Romney Marsh breed was not represented so largely as it should have been; Mr. J. B. Palmer won for yearling rams first and second, Mr. Quested for old rams, and Mr. Arthur Finn for flock ewes. The whole of the above were thoroughly typical and representative of their breed.

Warrington.

The eighteenth annual show of the Warrington and District Agricultural Society, like others held on Thursday, suffered from inclement weather, which was all the more to be regretted from the fact that the show was an excellent one in other respects, and bore eloquent testimony to the excellent work Sir Gilbert and Lady Greenall are doing for agriculture in the wide area of the society, which now embraces on the Cheshire side a distance of sixteen miles from Warrington, and on the Lancashire side twelve miles.

The Shire mares and foals made one of the best displays ever seen at this show. In the open class of Shire mares with foal at foot, Mr. James Gould's Lymm Blossom, a noted winner, beat Mr. Victor Cavendish's mare without much difficulty, and subsequently took the Shire Horse Society's gold medal. The district class of brood mares was well filled also, and the barren mare class was headed by a sturdy mare of Mr. Gould's. It was good to see well filled classes of local colt and filly foals.

In two and three-year-olds it might, perhaps, be better to separate geldings and fillies. At any rate, it is hard lines for any gelding to meet such a capital three-year-old mare as Mr. Sam Raingill's Locking Forest Blossom, by Lockinge Forester, one of the most promising young mares in England, and she had no difficulty in winning Sir Gilbert's champion cup for the best district mare or filly, and Mr. Stapleton Bretherton's special for the best Shire filly. Mr. Victor Cavendish's colt foal took Sir Gilbert's cup as the best Shire foal in the show. He is Lancashire bred, and his dam by Stalmine Premier, and he should do much to uphold the record of the Holker Stud. Sir Gilbert's cup for the best Shire shown by one of his tenants went to Mr. Alfred Broome, of Preston Brook, for a mare that was third in the barren class.

There was a capital show of Hunters, among the exhibitors being those well-known breeders Mr. J. Drage and Mr. Stokes. In heavy-weight novices Mr. Drage won with a brown, about which the catalogue vouchsafed no details, whilst a beautiful chesnut Hunter won the first prize in the open class for Mr. Drage. It was one of the best to ride on the field. The second was bred by Mr. Bulgall in Cumberland, and Mr. J. H. Stokes could only get third with Lyon's Mail. These were middle-weights. In heavy-weights Mr. Stokes's Whiskey won. The silver medal for the best filly went to Mr. Needham's first prize yearling. There has not been a better all round display of Hackneys in the breeding classes for many years. Mares were perhaps not quite so numerous, but there were more animals in the section than usual. The prizes were shared by Mr. A. Smith, St. Helen's; Messrs. Bentley and Sons, Knutsford; Sir Lees Knowles, Mr. Pimlott, Altrincham; and Mr. Enoch Sankey, Warrington.

The cattle also showed a marked improvement, thanks chiefly to the extension of the society's radius, for this allowed Mr. Raingrel to exhibit some of his well known dairy cows, and with animals which had won at Bolton and Barnsley he had things pretty much his own way, his winnings including the vice president's cup for the best cow or heifer in the tenant farmers' classes. Pigs were not particularly numerous, but of good quality, whilst cheese and butter were highly creditable.

Poulton-le-Fylde.

The sixth annual show of the Poulton-le-Fylde and District Agricultural Society since its resuscitation was held at Poulton on Wednesday in weather of the most wretched description. Rain fell in torrents throughout the day, with disastrous results to the society from a financial point of view; but, happily, the society is not likely to suffer, for at luncheon it was suggested that a subscription list should be opened to cover the probable deficit, and Mr. C. V. Haworth, of Poulton, generously offered £20 if £100 were raised. The entries numbered 1,094, a decrease compared with the 1,300 of last year, but this was accounted for by the fact that the classes for dogs were this year dropped out, and the horticultural section was considerably curtailed. The sheep dog trials, which proved a feature of the show at Blackpool last year, were also abandoned, so that the entries in the chief sections were quite equal to last year as regards numbers, whilst the quality, particularly in Shire and Hackney horses and poultry, was a big advance on previous years. The cattle classes were also very fine, while the poultry section was the best ever seen at the Poulton Show.

The August fair for cattle, sheep, and horses was held at Ashbourne on Friday, when calving cows made up to £20 for the best, secondary £10 to £18, useful heifers £15 to £16, and stirks £8 to £13. A number of bulls were shown, yearlings making £8 to £10, two-year-olds £12 to £14. Sheep were in fair supply, and met a sharp trade. Wethers 45s. to 55s., lambs 26s. to 35s. each.

Durham County.

The Durham County Agricultural Society were extremely unfortunate in having their first show in the Marquis of Londonderry's picturesque Wynyard Park spoilt by rain on Thursday last, for this marred the financial side of what otherwise proved a most successful show. In point of the number of exhibits, the entry was in excess of last year, the aggregate being 1,297, against 1,267. The increase was general in all the more important sections, particularly in cattle and sheep.

The Shorthorns are always a strong feature at the Durham Show, and when, as this year, it was held at Wynyard, the original home of the "pure Durham" breed, as the Shorthorns were formerly known, they formed the most notable section in point of merit. The promoters this year were fortunate in securing, through the good offices of the president, several exhibits from the Royal herds at the Home Farm, Windsor, and it was a matter of great satisfaction that his Majesty obtained several important prizes. Royal Windsor, a typical roan, headed the two-year-old class for bulls, and also obtained the challenge cup for the best Shorthorn breeding animal, while the King was equally successful in the class for bulls two years old, where his dark roan, Evander, was awarded the winning ticket in a strong class, which included Mr. George Harrison's Pride of Tees, and winner at other shows this season, whilst on the present occasion it won the Shorthorn Society's District prize. Mr. R. Booth, of Warlaby, won with Count Carlos in a class of fifteen novices, in which Mr. A. F. Nichol, of Belford, showed Village Monarch, which was given Lord Londonderry's special prize for bulls calved since January 1. The females were a very praiseworthy lot, Lord Londonderry heading the class for cows which have produced a calf in the last twelve months, and Mr. George Harrison taking the president's special prize with Montrave Wondrous. The King was also successful in the heifer section with a very promising roan heifer, Marjorie, of the famous Royal Chieftain strain.

The Polled Angus cattle were only a small show, and were notable for the success of Mr. T. H. Bainbridge, of Felton, who took seven out of the ten prizes, he securing the champion challenge cup, the silver medal, four firsts and one second. The dairy cattle classes hardly came up to expectations, but grazing cattle were better than usual.

The sheep were a capital lot, Border Leicesters were a creditable lot, and Black-faced sheep were better both in numbers and in excellence than has been the case in recent years. In the latter class Mr. John Robson, Newton, Bellingham, was as usual at these shows a conspicuous winner, he taking no fewer than seven awards in five classes — viz., four firsts, one second, and two thirds. The Oxford Down sheep classes obtained over 20 entries, and though shown last year at Durham for the first time, are evidently making headway in the county. The chief prize winners were Messrs. T. Oswald, J. Knox Lyal, F. Atkinson, and T. S. Clensby.

Agricultural horses made quite the feature of the show, and were the best lot seen at Durham Show for many years. In order that the terms of competition might be more even, special prizes were awarded in most of the sections for tenant farmers' entries, but it was encouraging to note that in several instances the tenant farmers took both the open award and that for farmers. Brood mares were only a small entry, but the youngsters were very numerous, and some extremely promising stock was exhibited. The Seaham Harbour Stud, Limited, again secured several of the premier awards with well-grown, upstanding juveniles, full of muscle and good flat joints, sharing with Mr. H. B. Marshall and other North Country breeders first honours in the older sections. Kitty Everard, a famous brood mare owned by the Seaham Harbour Stud, added to her former successes in the ring by winning the two championships for the best breeding animals in the heavy horse section. She is a beautifully built mare, with capital joints, feet, and quality, and thoroughly deserved her victory.

The Hunters were, for the most part, representative of the district, but some horses from the Yorkshire district tended to raise the quality, several notable horses which have won distinction in the Yorkshire rings being entered.

The best class was that for two-year-old geldings, where Mr. J. Walton's Glaisdale, a fine upstanding animal with good limbs and all the characteristics of a useful hunter, secured first place and the championship. The two-year-old fillies were only a moderate lot; three-year-olds reached a higher standard, a bay mare belonging to Mr. J. Beach worthily heading the class. Sir Lancelot, Mr. J. S. Rigg's sturdy chesnut gelding, better known as Sligo, the winner at the Cumberland and other shows this year, headed the weight carriers; while Mr. Edward Harrison added to his other honours by taking first in the light weights with a very nice bay gelding. The Hackneys were rather a mixed lot. Mr. Stephen Cliff, of Crayke, carried all before him in the brood mare, the foal and yearling class, and in the last-mentioned won with Crayke Sunshine, the filly which secured him premier awards at both the Bolton and the Yorkshire Shows. Ponies were quite an ordinary lot, and the entries for Dales ponies were poor.

Speaking as president at the luncheon held in connection with the show, the Marquis of Londonderry said he had been a lifelong advocate of the great cause of improving their breeds of farm stock. Now, more than ever before, they had to look to their live stock for their profits in farming. In these later times of rural depopulation and high-priced labour they were often told that if agriculturists would only provide good dwellings for their farm labourers and pay them good wages they would get plenty of farm labourers. At Wynyard he had model cottages for his labourers which would compare very favourably with any others; whilst in the county of Durham the rate of wages for farm labourers was about the highest in the kingdom, the average rate, including the value of the perquisites, coming out at 28s. per week. Yet, notwithstanding these cottages, he could not get a young labourer to stay on the land, for they went away to some of the great centres of the iron, steel, and coal industries, where 50s. and 60s. per week could be earned. The iron and steel trades and other great industries were booming in a wonderful way just now, and they were all glad to see it was so, for that meant a prosperous state leading to a large demand for their beef and mutton; but so long as such high wages could be realised in these industries, it was ridiculous to say they could keep labourers on the land and prevent rural depopulation by small holdings at the public expense which the Government proposed to give them.

Aspatria.

The twenty-eighth annual show of the Aspatria (Cumberland) Agricultural Society was held on the 10th inst., and though the weather was not altogether favourable, there was a record attendance of visitors, whilst seldom has the all-round excellence of the stock exhibited been exceeded. The Shorthorn cattle, which were an increase of twenty, included many promising young animals; cart horses were quite a feature of the show, there being much good Clydesdale blood in the district; whilst many of the light horses would have done well at many county shows. There was an excellent show of Border Leicester sheep, although the tup lambs were, owing to the season, somewhat backward in condition. There was a small but good show of butter.

Bakewell.

The entries at the show of the Bakewell Farmers' Club, held on Wednesday, were not quite so numerous as last year, and as regards numbers the show was somewhat disappointing, but the quality was well maintained. Shire horses were undoubtedly the feature of the show, the chief exhibitors being Mr J. W. Whitehurst, of Markheaton, Mr R Whitehead, Mr. A. Nicholson, of Leek, and Mr. S. S. Brittain, of Buxton. The silver challenge cup for the best Shire mare and foal went to Mr. Whitehurst, the Shire foal cup to Mr. Nicholson, and Mr. F. Whitehead, Ashbourne, secured the Shire Horse Society's medal. A useful lot of Hackney and harness horses were on view, and Messrs. Cockayne Bros, Sheffield, who captured the Hackney Society's medal, shared with Mr. W. E. Inman, of Huddersfield; Mr. John H. C. Marsden, of Rotherham; Messrs. W. and A. Holder, of Belper, and Mr. William Foster, of Moseley, the principal honours. Hunters were a disappointing show of only fourteen entries, among which Mr. F. B. Wilkinson, of Edwinstowe, was an outstanding winner.

There were excellent Shorthorn cattle on view, the chief successes falling to Mr. T. Atkinson, who headed a class of heavy bulls with his celebrated bull Moonlight, was first with his famous cow Jenny 19th, and also won in heifers with Lily of the Valley. There was a small show of sheep, and an interesting section was that for Derbyshire Gritstone sheep, a newly-named hill sheep of the Peak country.

The Duke of Rutland presided at the luncheon in connection with the show, and referring to the proposed changes in the system of land tenure, said that he trusted legislators would bear in mind that while it was very easy to upset a system which had existed for many centuries, it was not so easy to invent off hand a new system which would produce such good results. He felt that the Small Holdings Bill was brought in, not so much with any great desire to institute an immense number of small holdings throughout the country as to satisfy the political ambitions of certain persons who thought that by upsetting any old system they must of necessity benefit the community at large. The agitation with regard to small holdings was

very largely "faked." If they could get good small holders it would be for the advantage of everyone concerned, but he dreaded lest facilities should be given to those who knew nothing about farming or poultry rearing to take charge of thirty or forty acres of land from which it was expected that they could make a living which could only be done by a skilled agriculturist. Anything approaching a comfortable competence or other benefit that the Bill might confer on the community he would heartily welcome; but if the passing of the Bill involved the upsetting and the harming of agricultural interests it should be strenuously opposed.

Bishop's Castle.

The seventeenth annual show of the Bishop's Castle and District Agricultural and Horticultural Society was very successful, in fact, it is always an attractive event, for Bishop's Castle is situated in the centre of an important and flourishing agricultural district, and the society has done much to encourage local breeders of stock and also horticulturists. That the efforts have not been in vain was proved by the display of stock, &c. The entries numbered over 300, and comprised a good show of horses and Clun and Kerry sheep, for which the district is famous, whilst there were choice displays of cattle, poultry, eggs, and butter. The horticultural section was a highly creditable one, whilst other features of an interesting and varied show included turnouts, costume and Victoria Cross races, and sheep dog trials.

Blagdon Tenants.

Following the excellent example set in other directions, the Blagdon tenants of Lord Ridley have started an agricultural show confined to the Blagdon tenants, and that it will eventually prove as successful as other estate shows is to be sincerely hoped, for these shows are a most pleasing feature. The first show was held on Wednesday, and comprised over 200 entries, so that the start was quite an auspicious one. There were highly creditable displays of horses, cattle, and sheep, and these, with the other sections, made up an interesting show. Speaking at the luncheon, Lord Ridley said their agricultural show did not pretend to be ambitious of doing very much more than doing thoroughly what it was trying to do. He hoped it would be only the first of a long series of agricultural shows in connection with the estate. They were all aware of the advantages which such a show could produce in the way of increasing their knowledge of each other and of increasing the value of the stock upon their farms and in the way of promoting—if indeed that could be—the good fellowship that should exist between landlord and tenant.

Heanor.

The Heanor Agricultural and Horticultural Society have of late years experienced most unfavourable weather for their shows, and the natural result has been financial losses; and in view of this fact, it was deemed advisable to drop the classes for cattle, sheep, and pigs this year, so that at the show held on Tuesday the exhibits were confined to horses, poultry, pigeons, rabbits, mice, cage-birds, and the horticultural section. These afforded sufficient variety for the majority of visitors, but we should have liked to have seen sheep, cattle, and pig sections. The weather was not altogether favourable, but better than in recent years, and a more satisfactory financial result should be recorded later. As to the entries, they were up to the average of previous years. There were about the same number of draught horses, but a slight decrease in Hackneys and Shires, while Harness horses showed an increase. There was an increase in poultry, the exhibits numbering 166, and there were sixty-eight pigeons and 135 rabbits. Quality, too, was well maintained, whilst, if anything, the horses were better than usual.

Penistone.

The ill-luck of the Penistone Agricultural Society as regards weather for their show continued at last week's fixture, for frequent and heavy showers fell during the day, thus affecting the attendance, which, all things considered, was a good one.

Compared with last year, the aggregate of entries indicated a substantial drop, but the decline did not affect the leading sections, the main decrease being in the fanciers' classes. Horses numbered 140, against 130, being only six below record, and cattle made a better entry than ever before, forty-six, as against thirty, but sheep and pigs showed a slight decrease.

The agricultural horses were again the feature of the show, and in some respects the judges considered the collection, considering the size of the show, quite up to the display at the Yorkshire Show. The class for pairs of Shire horses for the president's cup brought out capital competition, though only four pairs were shown, and the best were judged to be the Duchess of Newcastle's well-known mares Carol and Clumber Buttercup, which won at the Notts County Show. The three-year-olds were a particularly strong class—the best of the section—and here Mr. Kay got premier honours with one of his pair over Clumber Buttercup, which had to go third. The light horses were rather disappointing, but some good Hackneys turned up, notably Mr. W. J. Tennant's Pontefract filly, a Royal and Yorkshire winner, which now conferred distinction on the three-year-olds, and Mr. G. C. Waud's Ferniehurst Fortuna, which again came to the front.

The cattle section, which was largely confined to local competition, was far ahead of recent years for quality, but the sheep section was not a strong one; there was, however, a good show of dogs, which proved attractive to many visitors.

Penrith.

The sixty-fourth annual show of the Penrith Agricultural Society, held on Tuesday, was one of the most successful of recent years, despite the fact that the weather was none too favourable. Entries of stock exceeded 500, the chief increase being in Shorthorns, these being principally among the younger stock. There was also a large addition to the sheep section, partly accounted for by Wensleydales being again brought in, and this proved to be one of the best features of the sheep classes. Many of the Shorthorns and horses which came together at the County Show were again in competition, and provided considerable interest to the many visitors.

Weston-super-Mare.

The tenth exhibition under the auspices of the Banwell and Weston-super-Mare Horse and Agricultural Association was held at the Recreation Ground, Weston-super-Mare. The association visit the two places in turn, and comparing the entries with those at the Weston Show in 1905, there was a satisfactory increase of forty, thus showing proof that the fixture is growing in popularity. By the public it has always been regarded with favour, and they flock to it in large numbers if the weather is fine. Fortunately this was the case last week, for although the morning opened stormy, and the earlier events had to be judged in the rain, this stopped about midday, and during the afternoon the sun shone brilliantly and attracted a large gate, exceeding that of Banwell twelve months ago.

The horse classes filled well, and in the open events there were some notable exhibits. Mr. G. F. Tilley, with a first class animal named Fashion, took the silver medal offered by the Hunters' Improvement Society for the largest hunter filly, while the silver medal offered by the Hackney Horse Society went to the celebrated Mignon, belonging to Dr. Fuller. Lord Winterstoke was well represented in the Shire section, and he won the silver medal for the best Shire mare or filly, first prizes for cart mare, Shire gelding, yearling cart filly, and sucking cart foal. Cattle made a good display for a local show; sheep were not numerous, but of good quality, whilst the cheese exhibits were on the whole satisfactory, and there was plenty of competition, but butter was only moderate.

Amongst the many sales from the famous Chilmark flock of Hampshire Downs during the season to home and foreign buyers, one of the best probably of the year, consisting of eight choice shearling and two-shear rams, has recently been shipped to Buenos Aires for Gilbert H. H. Kennedy, Esq.

Twenty Lincoln Long Wool shearling rams from Mr. George Hoyles' Skidby Manor flock were shipped on the 10th inst. on board the ss. *Voltaire* for the Argentine, and a further consignment of twenty has been selected and will follow in due course.

SOCIETY ANNOUNCEMENTS.

WARWICKSHIRE AGRICULTURAL SOCIETY (in conjunction with the Rugby and Dunchurch Agricultural Association).

THE ANNUAL EXHIBITION will be held at RUGBY on WEDNESDAY AND THURSDAY, AUGUST 28 and 29 next.

Admission—1st Day, 2s. 6d.; 2nd Day, 1s.

JUDGING IN ALL DEPARTMENTS ON WEDNESDAY.

Special JUMPING CONTESTS each AFTERNOON, with DRIVING CLASSES on THURSDAY.

Band of 2nd Vol. Batt. Royal Warwickshire Regiment, Wednesday. — Rugby Steam Shed Silver Prize Band, Thursday.

The FIELD COMPETITIONS will take place on THURSDAY, on Mr. G. C. Allan's Farm, Clifton, Rugby.

POULTRY AND BEE DRIVING DEMONSTRATIONS by Warwickshire County Council's Experts.

First-class Luncheon, 2s. 6d.; Second Class, 1s.

CHEAP RAILWAY FARES, see COMPANIES' BILL.

FREDERICK H. MOORE, Secretary.

Warwick.

CHILTERN HILLS AND SOUTH-BERN BUCKS AGRICULTURAL ASSOCIATION SHOW, at HIGH WYCOMBE, on WEDNESDAY, SEPTEMBER 11, 1907.

OPEN CLASSES for SHIRES, HACKNEYS, HUNTERS, JUMPING and DRIVING, JERSEYS, SHORTHORNS, BUTTER, and HONEY.

For Schedule and Entry Forms apply to

JOSEPH BIRD, Secretary, 26, High Street, High Wycombe.

DAIRY SHOW, LONDON, OCT. 8, 9, 10 & 11.—Great Exhibition of DAIRY CATTLE, PRODUCE, APPLIANCES, &c. Entries close SEPT. 9.

Particulars of Wm. C. YOUNG, Secretary, 12, Hanover Square, London, W.

THE EAST BERKS HORSE SHOW SOCIETY will hold its ELEVENTH ANNUAL HORSE SHOW

At Hawthorn Hill Racecourse (between Maidenhead and Bracknell), on

THURSDAY, AUGUST 22, 1907.

Entrance One Shilling all day.

Judging commences at 9 o'clock punctually.

Motor omnibuses will run from Maidenhead Station to the Show Ground, leaving Maidenhead at 12 o'clock noon, 2 p.m., and 2.30 p.m., returning at 5.15 p.m., 6 p.m., and 6.30 p.m.—C. H. W. DIXON, Hon. Sec., 4, Henrietta Street, Covent Garden, W.C.

SOUTHDOWN FLOCK BOOK.

NOTICE is hereby given that the Southdown Flock Book will be definitely closed to unregistered flocks on December 31 next, after which date no sheep from unregistered flocks will be accepted under any conditions whatever.

Owners who have not yet registered their flocks are earnestly requested to write for full information respecting the Southdown Sheep Society to

W. J. WICKHAM, Secretary.

12, Hanover Square, London, W.

THE ABERGAVENNY HORSE SHOW AND AGRICULTURAL ASSOCIATION.

ANNUAL EXHIBITION of HORSES and AGRICULTURAL STOCK, TOTAL PRIZES, £400, will be held in Bailey Park, Abergavenny, on THURSDAY, SEPTEMBER 5, 1907.

Entries close August 20. Double Fees Sept. 1.

Secretaries — MESSRS. JAMES STRAKER & SON, Auctioneers and Valuers, Abergavenny.

KINGTON HORSE SHOW, SEPTEMBER 19, 1907.

Competition Open to the United Kingdom. £350 in PRIZES and FOUR SILVER MEDALS.

Heavy Weight Hunter—
1st Prize, £20; 2nd, £10; 3rd, £5.
Light Weight Hunter—
1st Prize, £10; 2nd, £5.

Entries close Sept. 3, or with Double Fee, Sept. 7. Prize Schedules and Entry Forms from the Secretary, T. H. VAUGHAN MORRIS, Byford House, near Hereford.

LEIGHTON BUZZARD & LINSLADE FOAL SHOW SOCIETY, held on SEPTEMBER 17 (TUESDAY).

Entries close September 3. Post entries (double fees) September 10.

WALTER C. PRUDAMES. } Hon.
W. GRAVELY W. WILLIS } Secretaries.

OKEHAMPTON AND DISTRICT AGRICULTURAL ASSOCIATION.

The 17th ANNUAL EXHIBITION of Horses, Cattle, Sheep, Dairy and Garden Produce, Poultry, and Pigeons, will be held at Okehampton, on SEPTEMBER 12.

Prizes about £300.

OPEN PRIZES for HUNTERS and HACKS. JUMPING, DRIVING, SHEEP, &c.

Schedules and Entry Forms of CHAS. J. FUTCHER, Hon. Sec. Okehampton.

Entries close August 31. Separate Schedules for "General," "Poultry and Pigeons" Section. Please state which required.

HAY HORSE SHOW, FRIDAY, SEPTEMBER 20, 1907.

Entries close on September 5th; double fees, September 12th.

REECE MORRIS, Secretary, Broad Street, Hay, Hereford.

CLYDESDALE HORSE SOCIETY.

STUD BOOK VOL. XXX.

ENTRIES at ORDINARY FEES CLOSE on 31st inst. Forms and all information from—

ARCHD. MACNEILAGE, Secretary, 93, Hope Street, Glasgow.

ASHBY-DE-LA-ZOUCH AND DISTRICT AGRICULTURAL SOCIETY.—THE FOURTH ANNUAL SHOW will be held in the BATH GROUNDS, ASHBY-DE-LA-ZOUCH, on WEDNESDAY, SEPT. 4, 1907. Prizes amounting to over £340 will be offered. Open classes for HUNTERS, JUMPING, FOALS by Messrs. EVERARD'S, W. BARR'S, and H. EARP'S HORSES, and for POULTRY. ENTRIES for all CLASSES (except Jumping) CLOSE on AUGUST 28th certain. By kind permission of Col. A. C. Cantrell Hubbersty and the officers of the regiment, the full MILITARY BAND of the ROBIN HOOD RIFLES will play during the day, and in the evening a GRAND DISPLAY OF FIREWORKS will be given by Messrs. Wilder, Birmingham. Particulars from the Secretary, H. GERMAN, Market Street, Ashby-de-la-Zouch.

Nottinghamshire Notes.

DISASTROUS! This one word sums up the weather we have been having in this part of the country during the past week. On Wednesday evening rain commenced to fall about eight o'clock and continued without a break until after four o'clock this morning. It was not an ordinary rainfall, but at times appeared to descend in sheets. Between one and half-past this morning nearly one-third of an inch fell, while the total fall recorded in the city of Nottingham yesterday was 880 in.

NATURALLY the crops have suffered considerably from this latest deluge, and Mr. R. Allsebrook, a large farmer residing at Prestwold, on the borders of Notts and Leicestershire, writes to me this evening, stating: "Last night's rain laid all oats and barley flat. I do not think the binder will work in it."

MOTORING from Nottingham to Newark this evening, the extent of the damage done to the rapidly ripening crops was apparent on all sides. Oats, almost without exception, are all laid; the barleys are in a similar predicament, while scarcely a single field was to be seen where more than half of the crop stood straight up.

IRISH harvesters are arriving in the district in larger numbers than last year, and farmers are engaging them as fast as they come. It is very certain that a large acreage of the corn crops will this year have to be cut by hand, as they are "raffled" in all directions. Labour, too, owing to briskness at the collieries, is scarce.

HARVEST operations have already commenced in this district, several fields of winter oats having been cut. Writing to me from Cropwell Butler, Mr. Henry Smith, jun., says: "I never remember hay and corn harvest over-lapping, but at the time of writing (August 13) I am carting hay and cutting winter oats. Spring oats are about ready, and peas will be ready next week. There may be some barley ready the following week, but wheat looks like standing till September."

THE condition of the crops in the lace county is admirably summed up in a letter I have received from Mr. G. H. Elliot, agent for Mr. R. Millington Knowles, at Colston Bassett. Mr. Elliot says: "Beans are over an average crop; wheat about an average; barley, under average; oats, average."

REFERRING to other branches, Mr. Elliot says: "Mangolds look well, thin plant in places, and they need warmth. Hay crops have been heavy, very badly weathered, and stacked in an unsatisfactory condition. There is plenty of keep in the pastures, yet the stock are not doing as well as desired. The total absence of genial weather and the low temperature have undoubtedly had a marked effect on all classes of stock. Ewes look well, but lambs are doing very badly, lung worm being very troublesome. Everything on the farms in this district would benefit by bright, warm weather."

PROFESSOR BLACKSHAW, head of the Agricultural College, Kingston, sends me a letter relating to that part of the district which comprises a portion of Nottinghamshire, Derbyshire, and Leicester. Mr. Blackshaw says:—"Had the weather taken up a month ago, I should have been able to report very favourably. As it is, anything that gave promise of being a good crop has been so knocked about by the rough weather that harvesting will be exceedingly difficult, and both the quantity and quality of the yield must suffer considerably."

SPEAKING to Mr. Wilton Allsebrook, J.P., of the Apsley Hall Farm, yesterday, he informed me that he had just returned from a motoring tour through the greater part of the Midlands, and also Lincolnshire and Norfolk, and he considered that the damage done by the heavy rains of the past fortnight amounted almost to a national calamity, thousands of acres of oats in the Fens being irretrievably ruined. They had got down, many of them being rotten and grown through. The barleys, too, have suffered considerably.

MR. ARTHUR A. AVIS, the manager of the Nottingham Corporation Farm at Stoke Bardolph, was married to-day at the pretty little village church of Shelford, on the banks of the Trent. His bride was Mrs. Sutherland, widow of the late Dr. Sutherland, of Netherland, and I am sure the many friends of Mr. Avis who are readers of the MARK LANE EXPRESS will join with me in wishing him and his wife long life and happiness. Mr. Avis has not previously been married.

SMALL holdings were dealt with by the Duke of Rutland in his after dinner speech at the Bakewell Farmers' Show yesterday. He pointed out that the Small Holdings Bill was brought in by the Government with no great desire to institute an immense number of small holdings throughout the land, but to satisfy certain political ambitions. The agitation which had been got up in favour of small holdings was largely faked. Anything approaching a comfortable competence or any benefit to the community he would personally welcome most heartily. But only skilled agriculturists could produce this, and if the proposals were going to harm agricultural interests, they should be strenuously opposed.

THE Duke, who presided, evidently meant what he said, and his speech was well received. Among those present were the Marquis of Granby (who attains his twenty-first birthday next month) and Mr. Payne Gallivey (the Duke's agent). The show was a great success, so far as the exhibition of stock was concerned, but the wet afternoon militated against a large attendance of visitors. There were 320 entries, which is thirty-three less than a year ago.

MEMBERS of the Nottinghamshire Agricultural Society paid a visit to the Agricultural College at Kingston on Tuesday and inspected the dairy, piggeries, poultry-pens, experimental plots, &c., from which several of those present acknowledged they had gained valuable hints. The party was conducted round the farm by the principal of the college (Mr. J. F. Blackshaw), and just prior to the party leaving for home, Councillor H. Heath, J.P., moved a resolution, to be recorded on the minutes, expressing their satisfaction at what they had seen, and recording the opinion that the County Councils should not in any way diminish the grant to the college, but rather increase it. Mr. Harry Wyles, of Cropwell, seconded, and it was carried with unanimity.

SEVERAL farmers in the county have this week sold their wool in view of harvest time, when all available ready cash is necessary; but from what I hear they would have done better had they effected a sale as soon as the sheep had been clipped. At that time all hogg wool was making from 30s. to 32s. per tod. The prices made during the past few days appear to have been as follows: All hogg wool, 26s. to 28s. per tod of 28 lb.; half hogg and half ewe, 25s. 6d. to 27s.; and all ewe, 24s. to 26s.

R. K.

August 15, 1907.

West Country Notes.

HEAT from overhead is still being ardently—hitherto almost hopelessly—desired. From the other direction heat of a kind not desired is sometimes manifesting itself. I am not referring to the natural consequences of the farmer's desire to make hay as rapidly as possible whilst the sun shines, but to that sort of mischief which those whom the weather renders short of employment fall into.

IN this respect a curious point has arisen which shows that the effects of the new Workmen's Compensation Act are very far reaching, and cause unexpected troubles. To tackle a fire which had broken out in a rick the fire brigade from the neighbouring town were summoned by a farmer. The captain was too much of a man to let the summons go unheeded, but he was also too shrewd to incur any liability under the Act by calling upon men to aid him.

NATURALLY there was considerable feeling upon the subject, and the opinions of eminent legal gentlemen were very much in favour of the captain's position being a sound one. They admitted, however, that they could not possibly decide such a point until a case had been taken to the courts.

THE question at issue is one that affects the agricultural community far more than the dweller in the town. In the town, though the firemen run considerable risks, they have not the labour of using a manual engine, and there due insurance is fairly and properly attended to by the corporation or urban council. The policies, however, apply to town conditions.

OUT in the country, the men of the Brigade having to attend to many duties of salvage, have to rely on casual helpers for working the pump. Now, though these are casuals, for the same reason that I pointed out once before in connection with hay-makers, it is quite possible it may be held that the business of a fire brigade being to extinguish fires, any help they employ may bring them within the exceptional clause.

THE parish councils and parish meetings have a means of securing themselves against such a catastrophe as may arise from not being able to obtain the services of a brigade, by subsidising the nearest available firemen's corps, and enabling them to effect the insurance, which will do away with the difficulty.

THE National Fruit and Cider Institute has, I learn, met with a serious loss, the whole of their supply of bottled fruits having been stolen after they were packed for despatch from a recent show, where they had been exhibited. As there was no reserve of these, the samples being done on an experimental scale only at present, it follows that for practically another year the information which might have been available to the interested student of the Institute's exhibits will be impossible to impart.

THIS is a most irritating thing, and it is hoped that due punishment will be meted out to the culprits, some trace of whom has, I gather, been discovered. Apparently it was the cider exhibits which stood first in the estimation of the culprits. Our friends at Long Ashton would prefer a testimonial of a less dubious character.

STANLEY is a name great in the West, as in some other parts, and the introduction of a bearer of the cognomen to the Devon and Somerset Stag Hunt as master of the famous pack that hunts the wild red deer, was the great event of the opening meet at Cloutsham lately.

MR. E. A. V. STANLEY succeeds Mr. S. A. Sanders, after a reign of the latter of twelve years, during which the traditions of the pack were most fully maintained, and the experience of the new master should still further enhance the splendid record.

THE Cornwall and Somerset Brigade of Volunteers had an opportunity very few indeed of them have had before of witnessing an exciting and characteristic termination of a run before they left their camp at Minehead. The hunted deer took to the sea, and swam about three miles, being hunted in a boat when the pack and huntsmen could no longer follow, turned back to shore, and there received the happy despatch.

THE Yeovil Rural Council have been inquiring systematically into the demand for small holdings in their neighbourhood. They have come to the conclusion that it does not exist. In twenty-eight parishes small holdings already exist, and no more are wanted. Only in the remaining nine was there any suggestion of a demand.

August 16, 1907.

DAIRY.

Gloucestershire and Somerset Farmers and the Butter Bill.

In a reply to a copy of a resolution passed by the Gloucestershire and Somerset Dairy Farmers' Society, Sir Edward Strachey has written:—"This resolution is a misstatement like many others made about the Butter and Margarine Bill. The Government have not legalised the sale of adulterated butter by their Bill. They have provided by the Bill that no milk-blended butter shall in the future be sold or described as butter. The farmer's trade mark 'butter' will not be allowed to be infringed as the Bill provides against its illegal use in future."

Chester Cheese Fair.

At Chester Cheese Fair on Wednesday there was a pitch of 70 tons of cheese, and a good attendance of buyers. Quotations were as follows:—Best lots, 57s. to 62s. per cwt.; medium, 52s. to 55s.; lower grades, down to 48s. per cwt.

For once in a while weather favoured the August Fair on Cow Hill, Newcastle, which took place on Wednesday. There was a good average show of horses, but the number of cattle was rather lower than usual. Amongst the horses those for heavy town work were best represented, and they realised good prices. There were also a few harness horses. It was estimated that there were about 1,000 cattle on offer. Most of these were Irish feeding cattle, which realised from £13 to £18 each, there being some nice beasts amongst them. Wintering cattle were rather scarce, and there was a strong enquiry for them, which could not be satisfactorily met. They were selling at from £8 to £13. Only a few dairy cows were on offer, and no bullocks were to be seen.

SPIMO

SURE KILL for MOULD AS WELL AS APHIS on HOPS.

Costs 2/6 per 100 Gallons of DILUTED WASH, Ready for Use.

The Proximate Harvest.

England.

Having arrived at the middle of August we should be able to forecast with comparative certainty the yield of our plantations. About a month ago the prospect then presented, founded upon the reports of that time, induced me to venture upon an estimate that appeared to be justified by the conditions then prevailing. During the interval that has elapsed I have found no reason for changing my views until this week. It is now impossible to ignore the fact that we are in a very critical position. The bine has completed its growth, and is engaged in finishing its work.

Flowering is everywhere evident, and the earlier sorts are changing the burr into hops. It is clear that the process of development is slow and dragging, and when we look for the cause we find it in the unkindly character of the weather, which is not assisting the plant as it usually does at this season. Otherwise, the reports recently to hand are quite as favourable as they were, but the absence of sunshine, with gusty cool winds, and especially the low temperature at night, is arousing anxiety and creating doubts as to the final issue.

Without warmer weather, and in some places, further genial rains, it is most probable that the cones will not grow out, and if this is the result of the climate, the condition of the fruit must be deteriorated, and the weight materially reduced.

I am, therefore, compelled to moderate my optimism, and to lower my expectation concerning the coming crop by about 20 per cent. I am not sorry to make this change, as I cannot see that any advantage can accrue to English planters from a large output. There is a better opening for remunerative prices if the crop is comparatively light, and I trust that however it may turn out, the financial results will be satisfactory to all concerned.

An examination of the various opinions expressed both by growers and traders shows that they travel round about the somewhat indefinite quantity called the "average." Being desirous to arrive at some reliable basis of calculation, I sought for information in the Government returns. I am aware that these are questioned, but as we have no other authority to appeal to we are compelled to accept them for the nonce. Taking the figures furnished for the past ten years, which include the exceptionally heavy crops of the years 1899, 1901, and 1905, the average yield per acre comes out at 9 81 cwt.

Assuming, as it seems to be generally assumed, that the climatic conditions during the next four weeks will hardly allow us to harvest a full average, we may be allowed to accept 8½ to 9 cwt. as being near to the average for this season. We are not certain of our present acreage, but if we take it at 45,000 acres, we arrive at a possible crop of 380,000 to 400,000 cwt. Putting together the various ideas that I have heard during the last week, I am inclined to think that such a figure as the above will be accepted by most people who have studied the question, therefore I will leave this debatable point and wait the real result, which we shall soon be able to settle.

America.

A correspondent in California informs me that the picking on the Horst plantations was to commence August 1, this date being fixed in consequence of the early maturing of the hops and the prospective shortage of pickers. The crop on these grounds is reported as being unusually heavy. Durst Brothers were also advertising for pickers to commence work on August 8, and were offering as wages 90 cents (3s. 9d.) per 100 lb., with a bonus of 10 cents per 100 lb. to all who stay until picking is finished.

It is estimated that the crop of California will be about one-fourth less than last year, but whatever deficiency there may be in this State will be amply made up by the heavy crops that are promised in Oregon and Washington. The reports from New York State continue to be favourable, although stormy weather has rather interfered with previous expectations. Some estimates put the Oregon crop at 175,000 bales, but I am inclined to think this is an extreme figure.

Germany.

A friend writing me from Alsace says that the present conditions in that province are satisfactory on the whole. The plantations are generally well grown, and the crop prospects are very promising. Some cold weather has been experienced in Bavaria, but being succeeded recently by genial warmth, the development of the growth is now distinctly marked. There is also a remarkable absence of vermin, and altogether the position is as satisfactory as it can be. The harvest of the early sorts commences this week, and some bales have arrived from Styria, and have been sold at 100s.

Belgium.

Recent rains have benefited the plantations in Alost Fly and lice are cleared off, and sound health is the rule. In the Asseke district there is notable improvement, the laterals are growing rapidly, and although a little blight remains, it is gradually disappearing. There are complaints from Poperinghe of the want of rain and the consequent presence of vermin. But these disadvantages do not hinder the progress of the plant, which is in full flower, and in many grounds is developing healthy cones. The general prospects are favourable for a full average crop.

Concerning the Markets.

London.

The Borough is waiting further news from the country, and many and varied are the opinions expressed as to the crop prospects. There are some whose views on this subject are limited to an average of 7 cwt. an acre, but the majority support the expectation of a yield round about 400,000 cwt. The actual tone of the market seems to confirm the optimists, as demand is non-existent, and values are consequently nominal, with a tendency towards further reduction. It is generally accepted that no recovery is possible until the arrival of the early pickings, and as the harvest is not likely to commence before the second week in September, trade will probably remain in abeyance till that date.

Nuremberg.

Business in 1906 hops is at present practically closed. A few bales have changed hands at reduced prices, holders being nervously anxious to sell, and buyers only operating to suit actual necessities. All the dealers are talking of very low rates in the early future, some of them predicting a currency of 20s. or thereabouts. This is hardly possible, although the present quotations, ranging from 20s to 60s., would appear to indicate that still lower figures will be heard of when new supplies arrive.

Brussels.

Alost 1906 hops are being pressed for sale at 43 francs, and Pops at 32 francs, equal to about 35s. 6d. and 30s. 6d. English money. But buyers cannot be interested, and trade is very dull. Speculators are offering new crop hops at 40s. to 46s.

America.

Both in the New York and the Pacific Coast markets stagnation prevails. We hear occasionally of a grower, tired of waiting, forcing a sale at some ridiculous figure. But there is no legitimate business, nor is any revival possible until the new crop is brought forward.

The King, who is patron of the Royal South Bucks Agricultural Association, has given a handsome silver cup, of the value of 20 guineas, for competition at the association's exhibition in October. The trophy is for "the tenant farmer renting not less than 50 acres of arable land, who shall show the best cultivated root crops generally." There is a ploughing match in connection with the exhibition, and his Majesty also offers a prize of 5 guineas for the best ploughman in the field.

The 1907 edition of "Bibby's Annual" has made its appearance a month or two before its time, and this will be welcomed by all who have had the pleasure of reading the previous issues. Its illustrations, in both colour and black and-white, have deservedly earned it a widespread reputation, whilst the variety of the reading matter and the subjects dealt with have made it a welcome visitor wherever it has gone; in fact, for a shilling's-worth of reading and pictures "Bibby's Annual" would be hard to equal. The present number fully maintains the high standard of the publication; it is regretted by many that it has become an annual instead of a quarterly. At one time it used to be really a big advertisement for the well-known manufactures of Messrs. Bibby and Co., Liverpool, but now, beyond advertisements on the cover—and these are in themselves artistic—the Annual has no advertisements either in picture or prose of Bibby's cakes, &c.; therefore, those who have not yet made the acquaintance of the Annual should do so, and can rest content that they are not paying a shilling for an advertisement, but for honest value. We are informed that the Annual costs more to produce than the sum charged for it, and this we can readily believe.

CORRESPONDENCE.

Sunday Harvesting in a Catchy Season.

SIR,—Sunday is the most sacredly blessed institution we have in this country, and to turn it into either a day of labour or one of exciting pleasure would be disastrous to the nation. The exacting demands of this age are responsible for a great strain on the minds and bodies of men, and without the weekly rest day when the machinery of business stands still for a spell, I question if human nature could hold out long at the pace it is going.

The influence of Sunday is felt everywhere, and happily for us it is an influence of rest and peace. Even on a farm where life is never very exciting, and where certain operations have to be performed on the Sabbath there is an air of quietude about Sunday which is absent on every other day. But the point I wish to arrive at is whether there are circumstances in which a farmer is justified in turning Sunday into a day of labour.

This is a matter that has disturbed more than one mind during the past month, and I am prompted to write this letter by an instance which recently came before my notice. It is needless to say what a trying season this has been for haymaking, and at the moment of writing there is a good deal to be got in.

Two farmers on adjoining holdings had got hay ready for carrying, and Sunday was a fine day. One of them—a thoroughly upright and conscientious man—felt justified, under the circumstances, in bringing his wagons into the field on Sunday and picking up the hay. The religious principles of the other prevented him doing the same, rain came the following day and for some days after, and when the hay could eventually be carried it was of little value. In the action he took did the first farmer violate the sacred laws of the Sabbath?

I respect the opinions of everyone in a matter of this kind, but in my opinion he did not. I would go to extreme measures in preventing Sunday ever becoming a day of unnecessary labour; but there is work of necessity that must be done on the farm on Sundays as well as weekdays, and in a season like this when things have got really serious owing to the unfavourable weather, it has been a work of real necessity to miss no opportunity of carrying hay.

In short, it has been a case of emergency, and emergencies have to be met by courses of action that would not be justified in other circumstances. We are certainly very illogical in many of our views. The public mind pretends to be shocked if a farmer, driven to distraction almost by a catchy hay season, takes his wagons into the field and pursues harvesting operations on Sunday; yet some folk play golf on Sunday, and others rush about the country on pleasure bent in motors, and the people who profess to be scandalised at the poor farmer who picks up a bit of hay on the Sabbath, look on unmoved, simply, I suppose, because they have got used to it.

Finally, we do not want Sunday to be a time of work or pleasure. It should be a day of rest, but in a season like this there are circumstances which justify a farmer from departing from the latter rule.—Yours, &c.,

LUX.

August 14, 1907.

Cost of Road Maintenance.

SIR,—I am not surprised that the figures I quoted lately with regard to the cost of Warwickshire main roads should seem incredible to some readers. An increase in the annual cost of upkeep, amounting to nearly £10,000 per annum, is assuredly remarkable. But the figures given were correctly extracted from a recent official report of the County Council.

Perhaps a note of explanation may be advisable. In the first place, the wear and tear of road surfaces in the manufacturing and mining districts is considerable, and farmers, like others, have to contribute towards making it good. In the second, the County Council of Warwickshire has taken over a good many miles of road during the last ten years. Sometimes the smaller local authorities would much prefer to keep these thoroughfares in their own hands, imagining (no doubt correctly) that they could keep them better, or more cheaply. But in the present circumstances they are not permitted to try the experiment.—Yours, &c.,

YOUR MIDLAND CORRESPONDENT.

What Shall We Eat?

SIR,—The above question is just now much under consideration, and the advocates of vegetarianism profusely ventilate their views. They seem to trace much of the evil in life to the consumption of meat. But I have not observed that any of them point out that our first parents incurred penalty for partaking of the "fruit of the garden," rather than from fancy for viand. Nor if the produce of the ground is so preferable to animal supply why the order of the former, and denial of the latter was a punishment to Nebuchadnezzar?

Rejoicing for the return of the prodigal was celebrated by "killing the fatted calf," but to what extent the hilarity would have been increased by the feast consisting of potatoes or onions is quite a matter of conjecture.

It is rumoured that should the vegetarians agitate for separate political representation that candidates of that ilk for Parliament will appear, who, though not indisposed for some attention to national affairs, will strive for legislation chiefly on greengrocery principles.—Yours, &c.,

August 14, 1907. RUN ALONE.

The Crops in Derbyshire.

SIR,—The main topic with farmers in this district is the hay harvest. There was just one week of warm weather, but since then it has been little else but wet. There is still a large quantity to be gathered in yet; in fact, many farmers have still a fair amount to cut. Those fields that were cleared in good time have a nice amount of aftermath on, but pastures generally are rather bare.

Wheat and oats seem nice crops, but badly laid, and will be late, as they were very backward at shooting. I think apples will be rather a poor crop, but there is a large amount of plums. Mangolds and swedes seem to be doing fairly well, but potatoes are poor.

Cows are milking fairly well, and new-calved ones are selling at a good price. Beef also sells well, and the same can be said of mutton.—Yours, &c.,

August 15, 1907. BELPER.

The Agricultural Outlook in Berks.

SIR,—The crops in this district, taken all round, are very bulky, favoured by a mild winter, showery spring, and one week's very hot weather in July; until lain and twisted by recent heavy rains, I had never seen better promise. Now the harvesting must be very expensive, whether cut by hand or machine; if by latter, a little patience will be required, especially should this stormy weather continue, and will prove the more costly of the two.

Wheat cutting commenced on August 12; the straw is very long, and the yield will be variable, quality inferior, quantity under the average, owing to a bad blooming time and lack of sunshine generally all the summer. Webb's Red Standard variety has stood the storms well, and should prove one of the best yielders. According to your paper of last week I notice an opinion, Should farmers thrash steady, and not glut as last year the market at starting, prices are not only likely to keep up, but to advance.

Barley, where standing up, is ripening kindly; with favourable weather, good quality and satisfactory prices may be expected. Secondary sorts will find a market owing to the high price of foreign.

Oats good. Plenty of straw, although badly lain; should think would yield above the average. The cutting of winters now in full swing.

Beans in this neighbourhood are a crop of a lifetime, both winters and spring far above the average.

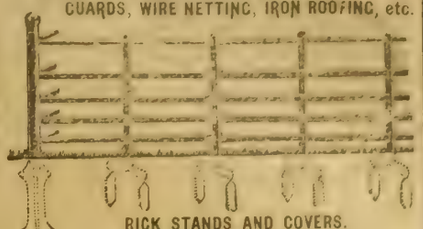
Clovers, sainfoins, and grasses were all good crops, but hay good, bad, and indifferent, has been made; the greater portion will have to be fed at home to advantage. The haymaking season of 1907 will long be remembered by farmers as a vexatious time.

Roots. — Mangolds, as a plant, are good. Turnips and swedes, owing to the showery weather, are very foul, many fields not even singled out yet, and harvest commenced.

Potatoes a good crop, but disease has already shown itself on the heavy soils.

Beef continues to sell fairly well, and store cattle are enhancing in value.

Sheep.—Mutton has been very dear all the summer, and lamb maintained its price. Ewe tegs and store lambs have sold well at our Ilsley markets. No doubt the cheques from this source have again proved to the farmer that sheep are their best financial friend. It is pleasing to note the high honours obtained by a tenant farmer (Mr. G. Adams, of Faringdon) at the Royal and other shows with his Oxfordshire Downs.



Pigs.—Bacon still commands its price owing to shortage from America. Hogs are 10s. per score. Stores sold very well until the Board of Agriculture intervened with the licence movement, now but few pigs are being marketed. It is quite time these restrictions were removed, and I am asking the chairman of the Berks County Council Executive Committee to petition the Board of Agriculture to that effect, or what waste there will be in the fields if we cannot send our pigs stubbling.—Yours, &c.,

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

ALL SCOTCH.

By this we mean that this BOOT is made in SCOTLAND on a SCOTCH LAST, and is of a special SCOTCH Tanned Leather.

14/6

Per Pair, Carriage paid.

Being thoroughly waterproof, it is admirably suited for THE FARMER. It is a stylish Boot with outside counter, best hammered toe caps, sole and inside waterproofed, and is made with that care necessary to insure comfort and durability.

For work or pleasure we can recommend this Boot, and remember our experience of Farming Footwear extends over seventy years.

Send us a Postal Order for 14/6, stating size wanted, and by return of post you will receive a pair of our "ALL SCOTCH" Farmer's Boots.

E. BROWN & SON,

Fertilisers and Feeding Stuffs.

Manurial Value of Cake on Meadow Land.

The Yorkshire Council for Agricultural Education report in their recently issued pamphlet, No. 67, an interesting experiment to test the relative manurial value of dung from fattening bullocks receiving

(1) Decorticated cottonseed cake
(2) Undecorticated cotton cake,

and to also ascertain the relative advantages of the application of fresh dung against rotten dung.

There were six plots of each. Three plots were manured in January, 1900, with fresh manure at the rate of 10 tons per acre, and three in March, 1900, with rotten manure, the residue of a quantity equal to 10 tons of fresh manure per acre. In the springs of 1901, 1902, 1903, and 1904 all the plots received nitrate of soda at the rate of 1½ cwt. per acre.

	Decorticated Cotton Seed Meal. 100 tons per acre. Fresh Manure applied Jan., 1900. cwts. qr.	8 tons 1 cwt. 2 qr. per acre Rotten Manure applied March, 1900. cwt. qr.
Average of plots, 1900	45 0	37 2
Average of 3 plots per annum for 4 years 1901-1904	46 0	41 2
Balance per acre in favour of Fresh Manure, 1900	7 2	—
Balance per acre per annum, showing the greater residual value of manure applied *fresh* in 1900..	4 2	—

	Undecorticated Cotton Cake. 10 tons per acre Fresh Manure, applied Jan., 1900. cwt. qr.	7 tons 6cwt 2 qr. per acre Rotten Manure applied March, 1900. cwt. qr.
Average, 3 plots, 1900	44 0	38 0

Balance per acre in favour of fresh manure, 1900	6 0	—
Balance per acre per annum showing the greater residual value of manure applied fresh in 1900	2 3	—

Imports of Fertilisers During the Month of July.

	1906. Quantities. tons.	1907. Quantities. tons.	1906. Value. £	1907. Value. £
Bones, whether burnt or not	1,780	4,147	7,451	19,421
Guano	271	285	1,444	1,607
Nitrate of soda (cubic nitre)	5,540	9,465	76,385	102,455
Phosphate of lime, and rock phosphate	46,504	43,494	89,997	69,348

Manuring of Cabbages.

As the result of some trials made by the Cockle Park Experimental Station to ascertain the best system of applying dung and fertilisers for the cultivation of cabbages, it is shown that the best results are produced by a combination of dung and a complete fertiliser. In the composition of the complete fertiliser it would appear that nitrogen in the form of nitrate of soda is better than as sulphate of ammonia; that slag does not answer for this crop quite as well as superphosphate; that muriate of potash is better than sulphate of potash, and that when dung is used nitrogen or potash can be omitted with less advantage than phosphates.

The experiments have not been carried on long enough to yield results which can be regarded as conclusive, and they are therefore being continued this year. In the meantime, it is suggested that a good dressing per acre would consist of 10 to 12 tons of dung, supplemented by 1 cwt. sulphate of ammonia, 3 cwt. slag, 2 cwt. superphosphate (26 per cent.), and 1 cwt. muriate of potash, all applied in the drills, with the addition of 1½ cwt. nitrate of soda applied in two top-dressings. On the heavier classes of soils the muriate of potash might be omitted.

Correspondence dealing with Fertilisers and Feeding Stuff appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in the first issue of each month.

Improvement Gained by Plant Breeding.

What can be done by a careful choice of seed and plant selection is shown clearly in the last report of the Canadian Experimental Union.

The Agricultural College of Ontario has introduced into the variety tests on its experimental farm about 2,000 varieties of field crops. This testing has been followed by the persistent improvement by seed selection of those varieties proving best, and by the yearly distribution through the Experimental Union of the latest and best improved stocks. The following table shows how these improved stocks have compared under the condition of these experiment station tests with some of the leading standard varieties used in the Province. Here no factors entered to give differences in yields save the hereditary powers of the respective varieties. The experimenter's skill introduced, discerned, and improved those which through a long series of years proved to yield the largest value per acre.

Comparative Results in Plots at Ontario Agricultural College of some New and Old Varieties.

Varieties.	Years tested.	Per Acre bushels.	Increase per cent.
Siberian oats	16	88·2	23
Black Tartarian	16	71·5	—
Mandscheuri barley	16	69·8	19
Mensury barley	16	58·7	—
Dawson Golden Chaff W.W.	10	57·3	11
Early red Clawson	10	51·6	—
Empire State potatoes	16	231 0	13
White Elephant	16	203·7	—

The practical result of these improvements is demonstrated by the average increase in bushels per acre in Ontario, calculated for periods of ten years, thus:—

The yields per acre of Ontario's entire area of winter wheat, barley, and oats for the first ten years of this work, before these varieties had been much improved, and for the second ten-year period, just closed:—

Average Yields in Bushels Per Acre for Ontario.

	10 Years 1887-1896.	10 Years 1897-1906.	Per cent. of Increase.
Winter wheat	19 2	21·7	13
Barley	24·8	30·6	24
Oats	32 2	33 3	19

It will be easily understood what this increase means in the agricultural prosperity of the country, and nothing could demonstrate more clearly the wisdom of liberal expenditure on scientific research and experimental stations.

Fertilisers from Vesuvius.

Vesuvius proves to be a fertiliser factory of a strenuous kind. Dr. Stoklasa, of Prague, calculates that in one recent eruption the crater threw out upon the surrounding ground about 50,000,000 tons of mud, sand, ashes, lava, &c., containing an average of 1 per cent. of nitrogen. This product of 50,000 tons of nitrogenous fertiliser is more than is used in the whole of England. In addition, the mountain has made enormous deposits of potassium phosphate and other fertilising salts, and the vapours constantly rising from the crater are laden with plant food.

Fertilisers and Feeding Stuffs Act, 1906.

Notice is hereby given, that the Board of Agriculture and Fisheries propose, at the expiration of forty days from the date of this notice, to make under the above-mentioned Act the following rule:—

Regulation as to the Analyst to whom Samples are to be sent.

Where under the Fertilisers and Feeding Stuffs Act, 1906, any person desires that a sample shall be analysed by the agricultural analyst, the sample, or parts of the sample, as the case may be, shall be sent to such agricultural analyst as is hereby prescribed, that is to say:—

1. If the sample is taken in a county, or in a county borough or a burgh of which the council have appointed or concurred in appointing an agricultural analyst, then to the analyst appointed for the county or borough or burgh;

2. If the sample is taken in a county borough of which the council have not appointed or concurred in appointing an agricultural analyst, then to the analyst appointed for the county in which for the purposes of the Local Government Act, 1888, the borough is deemed to be situate; and

3. If the sample is taken in a burgh of which the council have not appointed or concurred in appointing an agricultural analyst, then to the analyst appointed for the county within which the burgh is situated or with which it has the longest common boundary.

Copies of this draft rule may be obtained, on payment of 1d. a copy, upon application to the Board of Agriculture and Fisheries, 4, Whitehall Place, London, S.W.

Board of Agriculture and Fisheries,
4, Whitehall Place, S.W.

Trials of Wheat, 1905 and 1906.—Results per Acre.

These were grown, as reported in Bulletin No. 10 of the County of Northumberland Education Committee, in East Tower Hill (S) in 1905 (¼ acre plots) on light soil after potatoes; and in the middle of Tower Hill Field in 1906 on a stiff clay soil after summer fallow. The seed rate was two and a half bushels per acre in 1905 and three bushels in 1906:—

	Good grain, bushel of 63 lb.	Tail grain, stones.	Natural weight per bush.	Straw, cwt.
1. Squarehead Master—				
1905	60⅜	2½	62	49¼
1906	38¼	—	64	42¾
Average of 1905-6	50	1¼	63	46
2. Carter's Royal Prize—				
1905	45⅜	3	61	37¾
1906	25¼	2¼	65	35¼
Average of 1905-6	35¼	2⅝	63	36¾
3. Scholey's Squarehead—				
1905	56⅝	3	59½	44¼
1906	28	3	63	31½
Average of 1905-6	42½	3	61¼	38
4. Hunter's White—				
1905	48⅜	2	61	38¾
1906	21⅝	3	63	30¼
Average of 1905-6	36¼	2½	62	34½

Squarehead Master, Carter's Royal Prize, and Scholey's Squarehead are all red and short berried wheats, while Hunter's is a white wheat. Squarehead Master has given in both years the largest produce both of grain and of straw, while on the average Scholey's Squarehead comes next.

Fertilisers in Northern Spain.

A French Consular report calls attention to the demand for artificial fertilisers in the northern Spanish provinces of Galicia and Asturias. Generally speaking, the ground in Galicia is poor in phosphates; in consequence of this, other artificial manure containing the latter is much in request. As the land is also deficient in lime, the Thomas phosphates have given excellent results. The favourable action of almost any artificial fertiliser in Galicia and Asturias is increased by the frequent rain bursts, which hasten the solubility of these articles.

Prices of Fertilisers.

The demand for fertilisers is now practically over, but prices remain firm all round. The demand has been bigger than usual, and the stocks of most manufacturers have been cleared.

	£ s. d.
Nitrate of soda	11 5 0
Sulphate of ammonia	11 17 6
Peruvian guano	without change
Superphosphate, 26 per cent.	2 10 0
,, 35 ,,	3 6 3
Pure dissolved bones	5 7 6
Bone compound, ordinary	3 8 9
Bone Meal	5 10 0
Ground hoofs, 15 per cent.	9 10 0
Fish guano, first quality, scarce & dear	6 12 6
Ditto, second quality	5 7 6
Kainit	2 7 6
Sulphate of potash	10 0 0
Muriate of potash	9 0 0
Basic slag, 30 per cent. (ex works, Midlands)	1 13 0

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

Nitric Acid from the Atmosphere.

Referring again to this important subject, the *Daily Chronicle* reports that patents for the new process have now been taken out or applied for in all the chief countries of the world, and it is expected that a considerable industry will shortly be established for the production of nitric acid from the air.

Professors Kowalski and Moscicki, the inventors of the new process, have had the co-operation and advice of Sir William Crookes throughout. In England, France, Switzerland, and various other European countries, the patents have already been granted; and for Germany, the United States, Canada, the Commonwealth, of Australia, and various other foreign countries, and British colonies, they have already been applied for, and are stated by the patent agents to be assured.

For the scientific and electrical details of the system the patents must be left to speak for themselves. These patents show that the system essentially differs from the various other attempts to solve the difficulties attendant upon utilising the atmosphere for commercial purposes.

Shortly stated, the process consists of a series of electrical furnaces, into which the atmosphere is forced by electrical energy and at great speed and pressure, and from which is thence to be extracted the nitrogen to be converted by supervening process into nitric acid.

An Enormous Heat.

The air passes over a horizontal electric flame in each furnace co-extensive with the circumference of the furnace chamber, and, therefore, complete combustion and subsequent oxidation takes place. The heat is enormous and said to be about three times greater than would melt pig iron.

The electrical furnaces are comparatively small for the nitrogen in the atmosphere to become "fixed," and when fixed to nitric oxide, and, ultimately, by chemical processes, nitric acid. From this product nitrates and their by-products are also obtained.

With greater rapidity than it takes to utter the word, the oxidised atmosphere is instantly cooled, and thus prevented resolving itself back into its original constituents, thus "fixing the nitrogen" as indicated by Sir William Crookes as the prime essential to the object, in his address to the British Association in 1898. This was one of the great difficulties to be got over, namely, the lightning speed by which the cooling must necessarily take place.

As necessary adjuncts to the whole system, there are absorption, distilling, and various other chambers as part of the general installation.

The whole system is reduced to the utmost simplicity, and in working is practically automatic, all the installations requiring little more than supervision when started, and working continuously day and night throughout the year.

The great essential for success of any system intended for utilising a method of converting the atmosphere into a commercial commodity, is cheap water power for the production of the electrical energy. Wherever this is obtainable in volume and power, this system, according to the calculations of the engineers, is capable of producing very large profits. In Norway, for instance, constant water power has been obtained at a very small cost per horse-power per year. Other parts of the world offer equal or greater facilities in this respect.

Unlimited Market.

The markets for the products of the atmosphere are practically unlimited, and may be summarised as follows. Nitric acid in addition to its use for fertilising purposes is largely used in various chemical industries, for explosives such as nitroglycerine, dynamite, cordite, and various smokeless powders; also for the manufacture of celluloid and artificial ivory; for artificial indigo, and coal tar, and in photography for nitrate of silver, and electro plating, and, also as a recent development, in lace manufacture.

But by far the greatest industry is that of the manufacture and sale of nitrate of soda (Chili saltpetre) and its sub product nitrate of lime for fertilisation. These are both producible by nitric acid.

At present, and for nearly twenty-five years past, nitrate of soda, under the commercial term of "nitrate" has been imported into England and various other countries from Chili, South America. Hence the name Chili saltpetre.

But the nitrate fields of Chili, even if they were not inexhaustible, are wholly inadequate, not only to the world's requirements, but to the growing demands of Great Britain and the European Continent

As a fertiliser of almost all, if not entirely all, soils, nitrate of soda stands pre-eminent, and wherever nitric acid is producible in quantity and commercially, the production of nitrates follows as a consequence.

Nitrate of lime, though an excellent fertiliser, is of less value commercially than nitrate of soda, for nitrate of lime is not quite suitable to all soils, and is manifestly unsuitable to chalk soils containing lime already.

Nitrate of Soda for Second Crop of Grass.

Is it profitable to apply a small dressing of nitrate of soda after the first cutting of hay in order to stimulate the growth of a second crop? Here are the results of some experiments made with the view of getting information on that point:—

Plots.	Fertilisers used (rate per acre).	Yield (cwt.)	Increase (cwt.)
1	Slag meal, 400 lbs.	1,[illegible]	... —
2	Slag meal, 400 lbs.; nitrate of soda, 150 lbs.	2,500	... 1,074
3	Slag meal, 400 lbs.	1,[illegible]	..
4	Slag meal, 400 lbs.; nitrate of soda 150 lbs.	2,[illegible]	.. [illegible]
5	Slag meal, 400 lbs.	1,615	... —
6	Slag meal, 400 lbs.; nitrate of soda, 200 lbs.	2,648	... 1,027
7	Slag meal, 400 lbs.	1,[illegible]	.. ..
8	Slag meal, 400 lbs; nitrate of soda, 250 lbs.	3,614	.. 1,987

The nitrate of soda was mixed with the basic slag in order that it might be more uniformly spread, and the slag was also applied to the no-nitrate plots to equalise conditions.

It will be seen that the nitrate has given in every instance a considerable increase—more than enough to cover the cost of the nitrate applied.

Compared with similar trials made in previous seasons, it is found, as might be expected, that the result varies widely with the season. When such an application is followed by a sufficient and well-distributed rainfall, it gives a very profitable increase in the crop; but when the weather succeeding the application is dry, the nitrate is relatively non-effective. It is, of course, impossible to foresee the nature of the weather which will follow the use of nitrate. It would appear, however, that there is at least an equal chance that a moderate application will give a good margin of profit. Close observation in the field in which this experiment has been tried indicates that where, owing to succeeding relatively dry weather, the nitrate proves ineffective for the immediately succeeding crop, it will nevertheless, on fairly compact loam, be retained by the soil in sufficient quantity to favourably influence the hay crop of the following season.

IRISH CATTLE BREEDING.

We read that in Ireland in 1906 there were 829 Premium bulls used of various breeds, which should do a good deal towards the improvement of Irish cattle generally, especially when we mention that the whole of these are purely bred stock.

On the other hand it is well known that a good proportion of these are not of the very best possible descriptions of cattle, and when it is remembered that these 829 only represent some very modest proportion of the bulls used throughout the country, it will be seen that there is still room there for more bulls of a good class, whether for the getting of dairy stock or simply for the siring of general market cattle, usually for feeding purposes.

It is, however, worth mentioning that a great many of the largest farmers are using bulls much superior to many of the selected Premium ones.

In common with Great Britain and many other countries over the seas the number of shows being held in Ireland has increased to almost an incredible extent.

It would seem but practically the other day that Ireland could only count upon some half-dozen or so societies whose show fixtures drew together a respectable entry of live stock, whilst to-day such occasions are quite legion.

In quite a majority of these fixtures, particularly the smaller ones, horses appear to have greater attention paid to them than is the case with cattle. The latter, however, there is little fear, will work their way up and share in the improvement that these smaller shows stimulat so thoroughly and practically. There is nothing like them for encouraging improved stock breeding.

BUYING RAMS.

It is always pleasing to find that correspondents read and take note of what appears in our columns. The letter in last week's paper, signed "Observer," under the heading, "Why do Ram-breeders return again and again?" emphasises that valuable point which we desired to make clear—*i.e.*, that when once a breeder discovered a source from which he could purchase sires that suited his flock, it should be his object to continue to secure such sires time after time, taking, of course, full note of the breeding in order to secure when required the necessary change of blood.

It is a fashion, nowadays, to make a great deal of talk about the top-priced rams at the different sales. These rams are undoubtedly amongst the best in such sales, but those who carefully study the breeding of sheep, and know a good sheep when they see it, will ofttimes find far away down in the list of those being offered rams of the same breeding with perhaps equally good points, but younger lambs or twins. These should be carefully looked out and secured.

The writer has observed many times at sales how the old hands go through very carefully the younger sheep, particularly in the case of lambs, and many are the good sheep that are picked up by these careful selectors at very cheap prices.

A PHASE OF FOREIGN COMPETITION.

No, we are not going to open up another discussion on the question of Tariff reform, and our object in writing this paragraph is merely to point to one perhaps small, but still important, item of foreign competition. A familiar figure just now in the towns and villages adjoining the south and west coast is the individual attired in a blue jersey and round cap, who marches along with a stout staff over his shoulder from which hangs a number of strings of onions all neatly tied up ready for sale.

We all know the Breton onion seller, who comes every August as regularly as the members of the smart set go to Scotland for the grouse shooting, but with less ostentation, and when he has sold his onions he goes back to his native Brittany with English money jingling in his pocket, and we see him no more.

It is true we have only pictured one Breton onion seller, but hundreds of them cross the channel every season, and their cargoes of onions must run into hundreds of tons. We do not blame the Breton onion seller; on the other hand we admire their energy and enterprise, but is it not rather a reflection on British growers that there should be room for these foreign wares? Perhaps the Breton peasant doesn't pay much rent, probably his soil is well adapted to onion growing, but he sells his bulbs cheap, and though he does not come over as a saloon passenger nor put up at first-class hotels, his expenses must be considerable, and it is not likely that he would hawk his onions about the streets unless it paid him to do it.

Yet there is evidence in every garden to prove that English soil will grow good onions. Advocates for small holdings will please note this.

For the first time in the history of the Scorton Floral and Horticultural Society, which has been in existence now for seventeen years, agricultural classes were introduced at the show held on Wednesday, and the venture was a very good one and promises to develop very largely in the future. Out of 140 entries in the agricultural classes, 125 were horses, and all round the exhibits were very good.

Mr. Luke White, M.P., had an interview last week with Earl Carrington, the Minister of Agriculture, on the subject of swine fever restrictions, and urged upon his lordship the desirability of their removal in the interests of pig breeders and dealers. Lord Carrington, after hearing Mr. White's arguments, said he would fully consider them and give a reply shortly, but that he would have to be guided by his expert advisers.

Agriculture of Two Nations. — Earl Carrington's work as President of the Board of Agriculture has been characterised by a desire to assist, personally or officially, every movement that promises to be of service to agriculture, and recently he has again shown his readiness to collaborate with others by becoming honorary president of the Agriculture, Horticulture, Aboriculture, Forestry and Fisheries Section which is being arranged for the Franco-British Exhibition at Shepherd's Bush next year. In this there will be provided an opportunity of contrasting the work on the land of Great Britain and France in its many aspects. Every article that is produced in the farm, in the dairy, and in the garden, or that is taken from the river, will be traced from its source to its final form; and special attention will be given to the subject of afforestation, which is nowadays competing with the idea of garden cities in densely populated districts. All types of machinery will be included, and the theory of agriculture will be dealt with as completely as the practice.

Midland Notes.

TO travel any considerable distance just now is to see on every side the effects of the continued lack of sunshine and true summer weather. The writer of these notes journeyed not long ago from North Warwickshire to Portsmouth. Right down to South Oxfordshire newly-cut hay was lying in the fields, and not until the Thames Valley was reached was any corn observed which betrayed more than the least suspicion of yellow in its colour.

THE first really golden crop of wheat was found just north of Winchester. It is to be feared the blossoming period this year came in many Midland districts during the very roughest of the rough weather we have lately endured—a circumstance which cannot be without adverse effect upon the yield. Generally speaking, the Midland corn harvest may be called three weeks later than last year. In Staffordshire there will be little wheat cut before September, and many districts in Warwickshire and Worcestershire will now be equally late. The oats are sadly knocked about, but there are some wonderful crops of winter beans.

A STAFFORDSHIRE correspondent sends me a dismal account of the hay harvest in that important dairying district. From July 21 to the end of the month not one fine day for hay-making was experienced. A few heavy crops were carried in good condition before that time; but to-day hundreds of acres are lying on the land blackened and worthless. Not a few fields are to be seen which have never been cut at all this season.

THE new Department of Economic Zoology at Birmingham University, of which Mr. Walter E. Collinge is in command, is evidently getting into close touch with the farmers and fruit growers of the Midlands, and giving proof of its capacity for usefulness. The Department is now carrying forward the work in relation to insect pests which was begun by the late Miss Ormerod, and supplementing the somewhat inadequate efforts of the Board of Agriculture. Under the present arrangement every agriculturist in the seven Midland counties whose name is given to the Department receives gratis all the circulars and reports relating to the crops in which he is specially interested. It is understood that "already most of the Worcester, Warwick, and Hereford agriculturists are entered," as well as a large proportion from Shropshire, Stafford, Derby, and Leicester. It is good hearing, because it means that Midland farmers are alive to the good work the university is doing, and ready to avail themselves of it.

MR. COLLINGE'S fourth annual report, which is just to hand, describes 1906 as a year in which insects of all kinds were exceedingly abundant. Specially destructive were the apple ermine and lackey moths, the wheat midge, cabbage root fly, and the plum sawfly. The pear midge, apple sucker and mussel scale seem to be increasing in prevalence, and the stem eelworm infestation of the Midlands amounts to a serious epidemic.

ONE point in Mr. Collinge's report deserves the most serious consideration—the proved inefficiency of certain favourite spraying preparations. An emulsion of caustic soda 2 lb., paraffin one pint, soft soap ½ lb., water ten gallons, was tried, for instance, upon twigs infected by the plum aphis, and failed signally to kill the eggs. "There were sixty-one eggs on the two twigs" which were dipped in this solution, "and forty-two hatched out." When the paraffin was increased to four pints (the other ingredients remaining the same) 70 per cent. of the eggs were killed; and with five pints of paraffin 85 per cent. were destroyed. Some time and money may be saved by fruit-growers who note that the results so far obtained by the different lime and sulphur, and lime, sulphur and salt spray fluids used in the winter have been "most disappointing."

THE letter which has been addressed to the Press by the Birmingham and District Butchers' and Pork Butchers' Association, and the Pork Butchers' Associations of other great cities, has a special interest for the Midlands, since week after week Birmingham returns larger sales of pigs than any other centre. Their complaints of inadequate profits indicate that the pork butchers want to see pigs more numerous in order that they may also see them cheaper. To that extent their interests and those of the breeders are antagonistic. But can it be doubted that the butchers are right when they add that Board of Agriculture restrictions "have greatly tended to the decrease," and have "induced neglect and apathy on the part of farmers"? The Board would probably be surprised if they would realise how thoroughly their present swine fever policy is disliked in the country, and how many farmers have dropped pig-keeping almost altogether because

in present circumstances it does not seem to be worth the trouble.

THE items of good news bearing on the live-stock industry are many. The Oxford Down breeders will have a capital sale season to look back upon, especially the veteran Mr. John Treadwell, whose sale the other day was his fiftieth consecutive annual auction. His average of £22 17s. over fifty-nine head is one which he has only twice surpassed, and assuredly an excellent one for a breed which does not often command fancy prices.

THE pedigree Shropshire sales in the Midlands begin in earnest with the Whiston Hall auction on Tuesday (August 20), and go on the next day with the Dunsmore sale. The announcement that Mrs. G. H. Lewis, of Geneva, New York, intends to stock the whole of her fine farm with imported Shropshires, and that she needs 500 ewes, points to many profitable sales to be effected in the West Midlands in the near future.

THE strange sight of overcoated farmers in August has not been confined to Nottingham. It is, however, from that county (from Stoke-on-Trent) that the most remarkable temperature record of the season has reached me. At the beginning of the month the night temperature in the garden of Mr. Frederick Cresswell sank to 32 degs. Fahr., or just to freezing point. Is any other case of frost in the first week of August recorded? I cannot trace any.

August 16, 1907.

Notes of the Week.

The approach of a heat wave is prognosticated. It will be welcome if not accompanied by too many thunder storms.

In some parts of the country it has been really sultry during the last few days for this exceptional season. In Belfast people say they have been having a regular hot time; the crop developed by the heat has not been corn, but broken heads.

Mr. Armour's famous team of greys has sailed for America after a most successful tour in this country.

A pleasant journey to them, and *au revoir!*

Legislation connected with the land has been much in evidence during the past week, the English and Scotch Land Bills and the Irish Evicted Tenants Bill having occupied much time in both Houses of Parliament.

There is a good prospect that the measure relating to England will be entered on the Statute Book before Parliament takes its holiday. The fate of the other two Bills is uncertain.

It was a wise old philosopher who wrote: "When a parcel of land is deeded to you and you walk over it and call it your own, it seems as if you had come into partnership with the original proprietor of the earth."

Another memo for small holder advocates. A pea-grower at Long Sutton, in Lincolnshire, who sent a consignment of 406 bags of peas to London, has found they realised £20 4s. 6d., which just meets the cost of pulling, and leaves nothing for carriage, commission, or for the grower for his crop.

This memo is inserted to point the moral that small holdings at present will not yield a living profit, except in favoured districts.

Co-operation, reduced railway and other charges, and security in our own markets are essential to success.

"Rubbish may be shot here." Shoddy surplus manufactured goods, rotten tinned foods, poisonous Java beans—cheap free imports!

The latest example of free food imports is poisonous nuts. They come from China, where they are known as Kaloo, pronounced, it is said, something like "kill-you" nuts, a very appropriate name.

Planted far enough apart! A gentleman bought a new variety of potatoes, and told his gardener to be sure and plant them far enough apart. "Well, Sam, did you plant the potatoes far apart, as I told you?" Sam: "I did, sir. I planted some in your garden and some in mine, so they are four miles apart."

At the meeting of the British Medical Association several doctors spoke of the dangers of disease-transmission by insects both to man and beast.

Flies, especially bluebottles, gnats, fleas, and other insects are regarded as possible distributors of diseases.

The best precaution is plenty of whitewash in stables and outhouses, and no stagnant pools of water should be allowed quite near the house.

Hosts of sparrows are now leaving the towns for surrounding country districts. At this time of the year they develop healthy appetites for the farmers' ripening grain crops.

An unconscious bit of irony! One of our correspondents found inside one of his hens a growth which he could not understand, so he sent it to us for inspection in a box, on the cover of which was printed in large type "——'s powder, a complete substitute for eggs."

Will the price of cereals rise? is a question being eagerly discussed in every corn market of the country.

Experts incline to the opinion that farmers should not be in a hurry to sell.

Professor Collinge has just issued his fourth annual report on injurious insects. He has forty pests specially under observation.

Injurious insect, fly!
Your day is over.
When Collinge draweth nigh,
Get off that clover!
Depart, or you will get
A very stern nip;
Nor does he let you settle on the turnip!

A politician who was making a house-to-house canvass some years ago came to a prosperous-looking farmhouse at a cross-road when he observed a comely young woman standing at the gate. Pulling up his horse, the candidate for the people's favour gracefully lifted his hat in salute to the young woman, and politely asked, "No doubt, madam, your estimable husband is at home?"

"Yes," responded the woman.

"Might I have the pleasure of seeing him?" suavely inquired the politician.

"He's down in the pasture a-buryin' the dog," came from the individual at the gate.

"I am very sorry, indeed, to learn of the death of your dog," came in sympathising tone from the candidate. "What killed him?"

"He wore hisself out a-barking at candidates," said the woman.

THE FARMERS' DIARY.

TUESDAY, AUGUST 20.—Great Horse Sale, Ipswich—Sale of Mills and Meadows at Tonbridge — Ulverston Show — Live Stock Sales at Maidstone and Lynn — Sale of Shropshires at Albrighton—Fairs at Chorley, Carmarthen, Kington, Hungerford, and Lynn — Live Stock Sale at Rochester—Sending-in Day for the Moor Green, Abergavenny, and Airedale Shows.

WEDNESDAY, AUGUST 21.—Royal Jersey Show, first day: St. Heliers Horticultural Show included — Lancaster Show — Uttoxeter Show—Newbury Horse Show, Jumping Classes — Fairs at Hereford, Malmesbury, Shipton-on-Stour, Appleby, and St. Lawrence—Sending-in Day for the Worsley, Doddington, and High Wycombe Shows.

THURSDAY, AUGUST 22.—Royal Jersey Show, second day—Castleton Show (Yorkshire) — Special Sale of Shropshires at Birmingham—East Berks Show at Hawthorn Hill, near Maidenhead (Motors from Station)—Carmarthen Horse Show — Great Sale of Southdown Flocks at Goodnestone, Dover — Fairs at Ipswich, Bracknell, Marlborough, and Fakenham — Crewe Horse Sale — Special Sale of Rams at Ipswich—Special Sale of Rams at Marlborough—Sale of the Buchar Hill Herd of Pedigree Sussex Cattle—Maidstone Lamb Sale.

FRIDAY, AUGUST 23.—Fairs at Ashford, Skipton, and Yeovil — Special Sale of Lambs at Yeovil—Sending-in Day for the Cardiff Horse Show.

SATURDAY, AUGUST 24.—Buxton Horse Show (President, the Duke of Rutland) — Fairs at Alford, Wainfleet, and Witney—Cheadle Cheese Fair—Sending-in Day for the Weardale, Hawkshead, and Grayrigg Shows.

MONDAY, AUGUST 26.—Fairs at Bakewell, Bampton, Hinckley, Bingley, Carlisle, Romney, Northampton, and Preston.

SHOW GOSSIP.

A special meeting of the committee of the Waveney Valley Agricultural Association was held at Harleston on Wednesday evening to consider whether, in consequence of the lateness of the harvest, it was desirable to alter the date of the show, which had been advertised for September 12. The meeting was practically unanimous that it was desirable to postpone the show till a later date, and a resolution to that effect was passed, and the show fixed for Tuesday, September 24.

At a meeting of the local committee of the Royal Counties Agricultural Society's Show, recently held at Maidenhead, it was reported that after meeting all charges there was a balance of nearly £300. Some discussion took place as to what should be done with the money, and it was finally decided to dispose of it by making a grant of £200 to the Royal Agricultural Benevolent Fund, to contribute £20 to the Royal East Berkshire Agricultural Association, a like sum to the Maidenhead Cottage Hospital, and smaller sums to various agricultural associations in the Royal counties.

A public meeting convened by the Mayor of Southampton (Ald. R. Andrews, J.P.) to discuss the projected visit of the Royal Counties Agricultural Society to the town next year was recently held at the Guildhall, Southampton, and was largely attended. The Mayor stated that the Borough Council had unanimously passed a resolution inviting the society to hold their show in the town next year, and they now wanted this meeting to back that up. They wanted to allow the society to use a portion of the common, about thirty-five acres, for the show, and he was sure the society would do all they could to meet the convenience of the ratepayers in every possible way. He understood the society would only enclose that portion for about one week, so that the public inconvenience would be very little indeed, while the benefits that would be derived from the show would be of the greatest possible character. His Worship proposed the following resolution, which was carried unanimously:—"That this meeting approves of the invitation of the Corporation to the Royal Counties Agricultural Society to hold its annual meeting in Southampton in 1908, and, further, this meeting guarantees the sum of £400 towards the expenses of the society's meeting." The Mayor added that although they had to take that responsibility, Mr. Henry King had guaranteed that they would not be responsible in any way for the money.

Mr. Franklin Simmons, secretary of the Royal Counties Agricultural Society, in the absence of the President, Lord Northbrook, who greatly regretted his inability to be present, expressed the deepest thanks of the society to the town of Southampton for the very hearty and unanimous invitation, and said there was not the slightest doubt whatever that the council of the society would very gladly accept the invitation so gracefully made. No town gave them greater pleasure to visit than the ancient Borough of Southampton. That would make the fourth occasion on which the show had been held at Southampton since he had been connected with it (a period of over twenty-five years), and he was sure that no town gave them a more cordial reception, and at no town did they get more satisfactory results than they did at Southampton. There was a record attendance at the Southampton show in 1903, when the attendance on one day exceeded 25,000 people. He believed that was absolutely a record, and had only been exceeded at Southampton on a previous occasion. He thanked them on behalf of the council of the society very much indeed for their most kind and unanimous invitation, and he need hardly assure them that it would be received by his council with the heartiest possible acceptance. A large and influential committee was subsequently appointed to make the necessary arrangements, &c.

The council of the Royal Counties Agricultural Society met on the 7th inst., when it was unanimously decided to accept Southampton's invitation; and it was also resolved that the show should be held on June 4, 5, 6, and 8 (Whit-Monday), a strong representation having been received from the local authorities in favour of those dates.

At a meeting of the council of the Wirral and Birkenhead Agricultural Society held on Tuesday, it was unanimously resolved that the society's next show be held on Wednesday and Thursday, July 15 and 16, 1908.

What is the Best Flooring for Pig-Styes?

What kind of floors would you recommend for pens for breeding pigs?

Would old railway sleepers sawn across and laid on the ground be suitable? Or would they be liable to get wet and cause injury to the pig?

———

These are questions propounded by "Beginner" on page 192 of the issue for August 5, and they are of great interest and importance to pig-breeders and feeders.

There are various opinions as to the best manner of making the floor of the piggery, and these are, of course, influenced by cost and local convenience as to the obtaining of materials. Stone, and wood under certain circumstances, are universally condemned, along with asphalte, and opinion is mainly divided between the advantages of concrete and bricks. Our personal recommendation is brick for outside courts and a wooden platform for the sleeping place, but where expense has to be considered, concrete is preferable.

For breeding pigs an outside court is necessary, and under no circumstances should this be of wood—not even of old railway sleepers, which are, when hard, sound, and well creosoted, about the least absorbent timber obtainable for the purpose. Many people are under the impression that it is necessary to have an outside court in which to feed the pigs, and to which the latter can adjourn, but for fatting pigs courts are not necessary. For breeding pens outside courts are most desirable, and the flooring of these should be of some impervious material.

The Board of Agriculture has issued a leaflet (No. 121) on the "Construction of Pigstyes," which emphasises the waste and risk of bringing up pigs in cold, damp, and dirty surroundings, and, among points to be observed, it says:—The most important part of every sty is the floor, and every effort should be made to see that this is in all respects satisfactory, even if the rest of the building has to suffer a little. Swine can keep healthy and grow fat in a poor house if the floor is well made, but there is great danger of their pining and falling sick on a cold, damp floor, even if they have a magnificent roof over their heads.

A broken floor in which puddles of rain or urine can lie is a breeding place for sickness and parasites of all sorts; moreover, it gives the pig an opportunity of rooting, which he will generally be prompt to do, often not stopping till nearly the whole of the floor is upturned.

The floor, therefore, must be made of some hard substance which is not brittle and does not too readily break up.

The best material for this purpose is concrete or Portland cement, though a useful flooring may also be made with a mixture of tar and gravel, stamped and rammed into a solid block. Care must, however, be taken in this case not to let it be too long exposed to the sun's rays lest the tar melt and make the whole surface soft. Bricks cannot be recommended unless they are new and unbroken and are laid in cement at least 6 in. deep, and even then they are liable to chip and crack. Stone flags are bad, as the manure sinks in between the joints and makes the soil beneath impure, while wooden floors, unless moveable, are wholly to be condemned as dangerous and mischievous to the last degree. Concrete should therefore be used wherever possible.

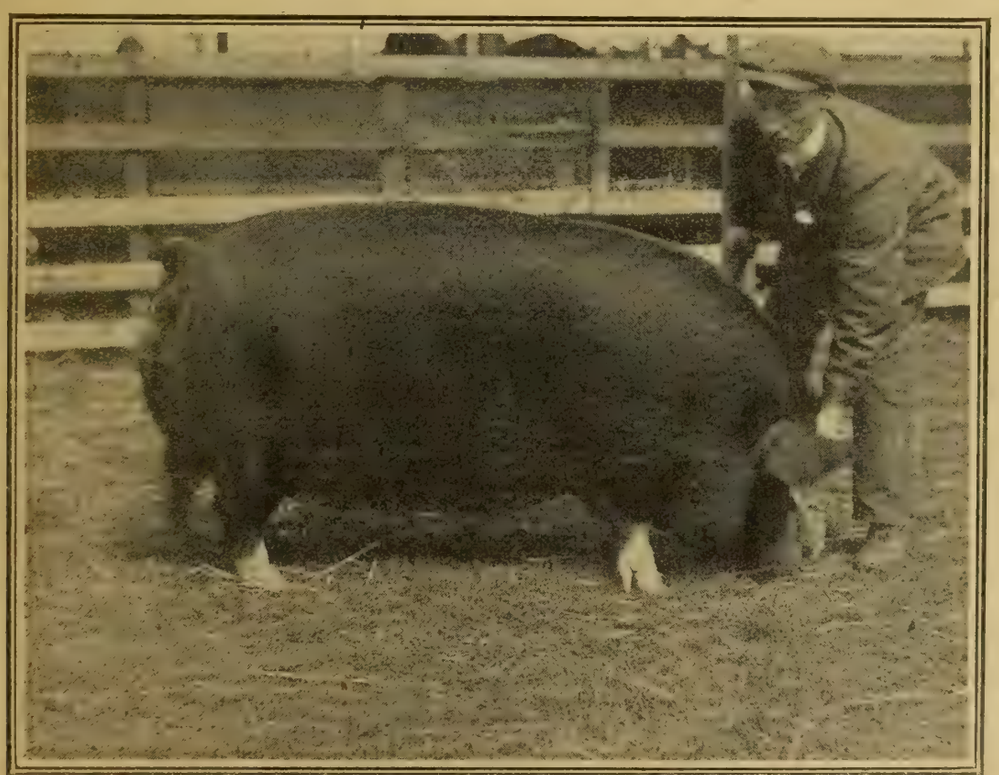
The preparation of a concrete or cement floor is well within the means of every man who can afford to buy a pig, and it is not difficult to make. It should be laid on a gentle slope towards the front of the sty, and it is advisable to make the top of the outer court lower than the bottom of the inner court by about 2 in. There will thus be a small step between the two courts, which will enable drainage water to run away more rapidly. The object is to secure dryness under foot, for, as has already been said, this is not only more healthy for the pig, but it helps to keep the floor from splitting or breaking away. Small channels should also be made in the cement before it has hardened, and these should run diagonally, in parallel lines, and not cutting across each other in the way that is termed cross-hatching. These diagonal or sloping lines should run from right to left on the inner court, and from left to right in the outer court. The slope of the floor should not be so great as to make it slippery, lest the pigs on running out to their food should hurt themselves, and for the same reason the surface of the cement between the channels should be left slightly rough.

Concrete is undoubtedly a first-class material, and can scarcely be improved upon when well laid and properly grooved, for in such a case it is not only impervious to wet, but it conducts the drainage and affords a firm foothold for the pig, which is an objection to the ordinary smoothly laid floor. Great care must, however, be taken to ram the foundation of the pavement hard, for when this sinks in places the cement breaks up and goes into holes. The importance of diagonal lines instead of cross-hatching will be appreciated by anyone who has tried to sweep out a pavement so constructed. With reference to bricks, for which we have expressed a preference, this does not mean soft bricks, but Staffordshire paving bricks well grouted in cement. Many of the chief breeders have experienced similar preference; indeed, out of eight well known breeders canvassed by Professor Long for the purposes of his "Book of the Pig," six expressed preference for brick floors, with plenty of bedding on wooden frames or benches for the pigs to sleep on.

Asphalte is terribly slippery in a damp, greasy state. Wood is bad in any form, except for the sleeping place when there is an outer court, and then railway sleepers are useful. Rheumatism, to which pigs are terribly prone, is favoured by cold, damp floors, as well as an exposed aspect.—M R C.V.S.

The Movement of Swine in Norfolk and Somerset.

The *London Gazette* of Tuesday last contains an Order of the Board of Agriculture temporarily modifying the provisions of the Swine Fever (Infected Areas) Order of 1902 in the counties of Norfolk and Somerset. The new Order, which will cease to operate on December 5, is as follows:



Swine may, between August 15 and November 30 next (including both those days), be moved between different parts of a farm in the same occupation for the purpose of stubbling or of feeding acorns, mast, or other like food, along, over, or across any highway or thoroughfare in the infected area in which the farm is situate, subject to the following conditions:—

1. Swine affected with or suspected of swine-fever may not be moved under this Order.

2. Swine may not be moved under this Order into or out of a swine-fever infected place, or if the movement of the swine is prohibited by notice given by an inspector of a local authority or of the Board of Agriculture and Fisheries given under any Order of that Board.

3. A licence authorising movement under this Order must be obtained from the clerk of the local authority of the district, or of any committee of the local authority, or from any person appointed by the local authority to act as chief inspector for the purposes of the above-mentioned Acts, and any such licence shall state the period for which the licence is available and shall be in the form set forth in the second schedule hereto, or to the like effect, and may be determined at any time by a notice given or sent by post to such occupier by any person authorised by this Order to issue licences.

4. The swine must be moved by the nearest available route and without unnecessary delay and must be accompanied by the licence authorising the movement.

The Berkshire Sow shown above is Polegate Dorcas 2nd, with which the Duchess of Devonshire won a First Prize and Championship at the Royal Show at Lincoln this year. Polegate Dorcas 2nd was born June 18, 1905, sire Supreme's Boy, dam Compton Rosebud, and was bred by Mr. R. B. Vincent, Compton Valence, Dorchester.

The date of the next annual show of the Doncaster Agricultural Society is fixed for Wednesday and Thursday, June 24 and 25, 1908.

Notes and Jottings.

THE course of the trade for sheep all over the country at the present time is a remarkable one. Both store sheep and lambs are selling at excellent prices, and the lot of the flockowner must be a happy one.

A TRAVELLER from Scotland the other day remarked to the writer that he was astonished, considering the favourable reports of sheep sales he had been reading, and the marked difference between the top price of the British mutton as compared with that of the imported article, that there were not more sheep kept in the country. "Is it the case," said he, "that we have room for no more than at the present time?" The answer must be that there is room, and plenty of room, for many more sheep, but the reason why more sheep are not kept is difficult to find out. We know that there is profit to the keeper and to the breeder, and also to the feeder. We know that the public, despite the attractions of cheaper imported mutton, continue to show a marked preference for the English-bred and fed article, and therefore the only reason one can find to explain the want of increase in the number of breeding sheep kept in this country is that the demand for British mutton is so keen that it practically snaps up the whole of the supply that is bred.

HOWEVER, in one way there might be more sheep kept, and that is if those who do not own sheep were to be satisfied to start small flocks with the over-aged ewes.

SOME say, "What is the use of such sheep? They are drafted out because they have gone beyond their prime" Perhaps this is so in some cases, but generally speaking, these ewes are drafted out because it is the regular system of those who own standing flocks to do so. If these ewes are a bit on the wrong side in respect to age, all of them, or the large majority of them, would make good flock ewes for anyone who would give them a wee bit of attention. They would want a bit of nursing, but at the current prices of their produce, it is quite certain that this would be well repaid.

THE export demand for the past month has been fully satisfactory. It is true that the number of sheep shipped during that period, 1,183 head, is somewhat less than during the same period of the previous year. But the declared value of these sheep had been such that it works out at an average of £17 16s. 6d.

THIS declared value is the highest on record for the month of July during the past thirteen years, and it shows how keen our foreign and Colonial mutton producers are to secure the best and choicest of our stud sheep. They have no doubt—if one may judge from the prices they are paying—as to the future of the sheep industry, for if it were so we should not find such an average recorded for so large a number of sheep.

THE writer well remembers the gratification expressed by many a ram breeder when he read that during July, 1898, 600 odd sheep had been exported at £9 11s., and in 1897, when 776 had been exported at £10 per head. These were prices that were looked upon as extraordinary, and yet in ten years we find that the same source of demand had paid for practically double the number of sheep, the high average mentioned above.

NO facts stronger than this could be quoted to indicate the enormous development, and one might say the permanency of this export demand.

ON the other hand, we note that our mutton supplies during the past month have been very large indeed, 437,634 cwt. having been imported during that period; an enormous quantity when one thinks of it, and yet, despite the whole of this large importation of mutton, and also that produced by 60,074 imported sheep, the average price of British mutton stands higher to day than it did in years gone by.

THESE facts show the soundness of the flockmaster's industry, and ought to be strong enough to induce him to increase his breeding flock, and also to bring in any others who have suitable land for this purpose, because there is not much doubt but that the present demand will continue to increase in the future as it has done in the past.

IT is interesting to note that the amount expended for imported sheep and mutton during the past month was £843,960, as against £730,116 for the same month in the year 1897.

THESE figures show a steady increase in the amount expended, but it may be pointed out that the total for last month was not the highest recorded during the past thirteen years for that month; this record was made in July, 1906, when the total was £855,816.

THE WEEK'S SALES AND FAIRS.

Britford.

About 26,000 sheep were penned at Britford Fair on Monday, for which there was a good demand, especially for young store lambs, at an advance of 3s. to 4s. a head on Salisbury rates, whilst the price of ewes was quite up to Salisbury rates. Messrs. Waters and Rawlence held their usual sale of Hampshire Down ewes and lambs, the entry comprising 12,419 head, and with an exceptionally good trade every lot was quickly disposed of. Regular draft ewes made from 49s 6d. to 60s.; draft ewes, 41s. 6d. to 52s. 6d.: grazing ewes, 36s. 6d. to 45s.; two-teeth ewes, 50s. to 64s; other young ewes, 41s. 6d. to 60s.; best wether lambs, 45s. to 54s. 6d.; working ditto, 33s. to 44s.; best ewe lambs, 44s. to 50s.; smaller ditto, 34s. to 43s. 6d.; mixed lambs, 28s. 6d. to 43s. As usual, a large number of rams and ram lambs were offered for sale by auction, and particulars of these are appended:—

From Mr. James Flower's well-known Chilmark flock 100 splendid lambs were submitted, and ninety-eight of them were either let or sold at the good average of £18 7s. per head. Nine were first let at an average of £57 12s., Mr. Drake hiring at 140 guineas, Sir G. Judd at 84 guineas, Lord Rothschild at 80 guineas, Mr. Bishop (for Mr. J. G. Williams) at 44 guineas, Mr. C. Coles at 46 guineas, Mr. H. Lambert at 42 guineas, Mr. J. Joyce at 22 guineas, Mr. S. H. Allen at 20 guineas, and Mr. Falconer at 16 guineas. The sale lambs ranged from 6 guineas to 42 guineas, Mr. Lambert buying at the higher figure, Mr. Falconer at 36 guineas and 21 guineas, Mr. H. H. Green at 36, 34, and 17 guineas, Mr. Harding (for Sir W. G. Pearce) at 38 guineas and 28 guineas, Mr. Notley (for Mr. A. F. Holman) at 40 guineas, Mr. Bishop at 42 guineas, Mr. Baigent at 21 guineas and 20 guineas. Mr. Brown at 20 guineas and 16 guineas, Mr. C. Bugg at 22 guineas, Mr. Edney at 19 guineas, Mr. Joyce at 21 guineas, Mr. Lavington at 20 guineas and 12 guineas, and others at prices ranging up to 17 guineas.

The annual letting and sale of ram lambs from Mr. A. F. T. Drake's Dogdean Flock also proved satisfactory. Six lambs were first let at an average of £36 15s., Mr. J. Flower hiring at 100 guineas, Mr. C. Coles at 60 guineas and 12 guineas, Mr. J. Pain at 13 guineas, Mr. Blackwell at 15 guineas, and Mr. Harding at 10 guineas. The sale lambs made from 5 guineas to 48 guineas, Mr. Nicoll and Mr. J. B. Harding both paying 42 guineas, Mr. Woodroffe 32 guineas, Mr. G. L. Dean 22 guineas, Mr. Richards 30 guineas, Mr. C. Bugg 22 guineas, Captain Glen Kidston 44, 20, and 18 guineas, Mr. Blackwell 17 guineas, Mr. Burdass at 19 guineas, and Mr. Nicholson at 19, 17, 16, 15 guineas. Other prices ranged up to 12 guineas, the average of 88 lambs let and sold being £13 15s. each.

A selection of ram lambs from Mr. W. C. Young's Stratford-Sub Castle flock made from 4 to 14 guineas, with an average per head of £6 14s. for 31; 36 ram lambs from Mr. G. C. Waters's Burcombe flock averaged £6 10s., top price 11 guineas; 35 from Mr. B. J. Waters's Stratford Tony flock realised £4 14s. 6d. apiece, top price 6 guineas, whilst nine ram lambs from Mr. W. C. Pocock, of Gomeldon, were sold at from 3 to 4 guineas each.

Mr. Thomas Lavington, of Marlborough, offered for sale and letting a choice selection of 75 ram lambs and 100 two-teeth ewes from Mr. H. C. Stephen's registered Hampshire Down flock at Cholderton. A business-like company assembled round the ring, and 58 out of the 75 ram lambs were disposed of. Six ram lambs to be let for the season were first offered, and five changed hands, Mr. Waters hiring No. 1 at 12 guineas, Mr. W. Main No. 2 at the same figure, Captain Morrison No. 3 at 26 guineas (the highest price realised), Mr. H. Richards No. 5 at 15 guineas, and No. 6 was secured for Lady Octavia Shaw Stewart's Fonthill flock for 15 guineas. The highest price of those sold was 18 guineas, given by Mr. Main, and other figures were 15 guineas, 13 guineas (twice), 12 guineas (twice), 11 guineas, 10 guineas, 9 guineas, 8 guineas, and 7 guineas. The average of fifty-eight let and sold was just over £9 15s. After the rams had been disposed of 100 matching two-teeth ewes were offered, and all sold, Mr. Bostock buying at 80s. and 70s., Mr. Webb at 94s. (twice) and 72s. (three times), Mr. Pocock at 86s. and 80s., Mr. A. Butler at 88s., and Mr. Waters at 72s., the average being 70s.

Chichester.

At Messrs. Hobgen's annual sale (the eighteenth), held at Chichester, the demand for first-class Southdown rams was much better than we have seen it for several years past, the best rams being keenly competed for. The three from Sir J. Wherner averaged £37, Lord Northbourne buying at 40½ guineas, Colonel W. W. Hammond at 35 guineas, and Mr. E. Heuty at 30½ guineas. Four from Colonel McCalmont's flock averaged £18 7s. 6d., sold to Lord Northbourne at 21 guineas, Mr. E. Hobgen at 18 and 16 guineas, and Mr. C. H. Berners at 15 guineas. Mr. E. Hobgen's nine averaged £12 8s. 6d.; best prices, 22 guineas to Mr. C. Stride, and 20 guineas to Mr. A. Hobgen. The Duke of Richmond's four averaged £12 6s. 9d., Messrs. Seward paying 22 guineas. The Duke of Devonshire's six averaged £12 3s. 3d.; best prices were 25 guineas to Colonel W. W. Hammond, and 20 guineas to Messrs. Seward. Mr. H. Cosmo Bonsor averaged £10 3s. for six; 18½ guineas was top price. Earl Cadogan, whose four averaged quite £9 1s. 1d., sold at from 18 guineas. Earl Bathurst sold five at from 15 guineas, average £8 16s. 4d. Lord Northbourne's five, with 12½ guineas for top price, averaged £7 4s. 10d. And Mr. A. Hammond for six averaged £6 0s. 9d.; 6½ guineas was the top price. The ram lambs were not in request. Nine of these sold at an average of £4 5s. 2d. The general average of the fifty-six yearling rams was £11 1s 4d.; and the average of the whole sale of sixty-five head worked out at £10 2s. 5d.

Dispersal of Mr. Lavington's Flock.

The dispersal of this well-known and highly-bred flock attracted a large company of Hampshire Down breeders to Collingbourne. Sale commenced with 246 two-teeth ewes, which made from 112s. to 65s., the average of them being 79s.; Mr. J. Matthews bought at 112s, Mr. J. Pain at 110s., Mr. B. J. Waters at 100s., 88s., and 84s., Mr. G. C. Waters at 88s., Mr. Arnold at 82s., &c., and Mr. Cleverley at 80s., &c. 190 four-teeth ewes made from 96s to 64s, the average being 75s. 6d.; Mr. Hickman bought at 96s., 80s., &c., Mr. B. J. Waters at 90s, and Mr. G. C. Waters at 84s. 177 six-teeth ewes made from 120s. to 60s., the average being 70s.; Mr. J. Flower purchased at 120s., Mr. G. C. Waters at 86s., Mr. Matthews at 86s., Mr. Eyles at 80s., Mr. J. Stevens at 84s., and Mr. Hunt at 72s. 154 full mouthed ewes made from 76s. to 54s., the average being 60s. 6d.; Mr. J. Matthews purchased at 76s, Mr. Pickard at 70s., Mr. Hiscock at 64s., and Mr. Wilson at 64s, &c. 300 ewe lambs made from 90s. to 45s.; Mr. J. Flower bought at 90s., Mr. Kerr at 60s., and Mr. Bennett at 58s., 56s., &c. Several shearling rams made from 5½ to 12 guineas, and these concluded the sale, the average for 1,067 ewes and lambs being the good one of 66s.

Driffield.

About 500 breeding sheep—ewes and gimmer shearlings — were offered for sale by public auction at Driffield on Wednesday, and some fair prices were realised. One hundred Leicester gimmer shearlings, belonging to Mr. J. Byass, Cowlam, realised 50s. 6d. to 55s. 6d., the average price being 52s. each. Mrs. Hopper, Kellythorpe, sold eighty long-wool ewes and twenty-five long-wool gimmer shearlings at from 44s. 6d. to 53s., averaging 48s. per head; 100 long-wool ewes (pure Leicesters) were all purchased (except one pen) by Mr. T. Holtby, Dowthorpe Hall, at 46s. 6d. to 54s., averaging 50s. 6d. each; thirty-eight long-wool ewes, belonging to Mr. C. A. Goodlass, North Dalton, made 43s. to 55s., the average being 48s. 9d. each; Mr. J. Callon's fifteen averaged 60s. per head; Mr. Longbottom's (Nafferton) Lincolns realised 58s. to 64s.; and forty-nine Lincolns, consigned by Mr. R. B. Appleby, made up to 63s., or an average of 60s. 9d. each.

Hailsham.

The annual lamb and sheep fair at Hailsham was held on Monday, when there were about 3,900 lambs for sales, as against 1,460 last year, and 407 sheep as against 778 at last year's fair. Prices were fairly good, and in one instance a sum of 39s. was asked for lambs, while a pen of 100 lambs were sold at 36s. each. The lowest price was about 25s.

Horncastle.

An Horncastle August Lamb Fair on Thursday about 3,000 sheep and lambs, mainly the latter, were shown, or an increase of 1,000 on last year. Trade was good, lambs making up to 40s., and drape ewes realising 57s. each.

Liskeard.

The annual sale of registered rams, under the auspices of the South Devon Flock Book Society, took place at Liskeard on Monday, when entries totalled 101, and competition for the best animals was the keenest yet experienced, with the result that satisfactory prices were obtained by the auctioneers. Highest prices were obtained for rams belonging to Mr. E. H. Hoskin, C.C., Cartuther Barton, Liskeard—namely, 24½ guineas and 20½ guineas; Mr. W. F. Sobey, Trenant, Menheniot, 20 guineas; Mr. E. W. Body, Dobwalls, 14½ guineas. The highest average price for the sale also fell to Mr. Hoskin's fine sheep, amounting to £13 5s. each for his draft of nine rams; Mr. E W. Body came next with £12 apiece; J. P. Matthews and Sons, £11 8s. 6d.; Mr. W. F. Sobey, £11 5s.; Messrs. H. Sobey, £10 7s. 6d.; Mr. W. Maddiver, Linkinhorne, £8 13s. 3d.; Mr. Mr. P. G. Brown, £8 5s. 6d; and Mr. R. L. Hambly, Menheniot, £7 7s.

Mr. Gale's Lincoln Long-wools.

On Thursday, after an interval of about three years, Mr. G. M. Gale, Atwick, near Hornsea, held a sale at his home farm of his noted pure-bred long-wool rams and shearling gimmers. The afternoon was very wet, which affected the appearance of the sheep, and the result of the sale was somewhat disappointing. The principal buyers for shearling rams were Mr. H. Casswell, Tuddring, Lincolnshire, 20 guineas and 12 guineas; Mr. J. B. Bainton, Beverley Parks, £15 15s.; Mr. G. England, Rise, £11 11s.; and Mr. Elvidge, Lissett, £9 19s. 6d. The total price paid for the 44 rams sold was £329 14s., or an average of £7 9s. 10d. Gimmer yearlings, of which 100 were offered, ranged from 85s. to 63s, the highest price being paid by Mr. Foster, Filey, and the lowest by Mr. Broumpton, Riston Whins.

tory returns, and the average of £13 0s. 10d. was obtained. The top price was 30 guineas, paid by the Stretton Farming Company, Lutterworth, for a shearling ram by Oxo. Another by this sire made 26 guineas (Mr. G. Russell, Hatton), whilst a get of Rosefort Dreamer realised 25 guineas, Mr. Goodall, Market Drayton, being the purchaser. Mr. Sinclair bought several for the Argentine, his chief prices being 23 guineas, 20 guineas, and 16 guineas. Mr. Sidey, another buyer for the Argentine, bought no fewer than a dozen shearling rams, and he undoubtedly got several bargains, for the top price he paid was but 11 guineas.

Newingreen.

Messrs. W. and B. Hobbs' annual lamb sale at Newingreen, Kent, proved very successful. Somewhere about 9,000 sheep and lambs were entered, and practically the whole of them were cleared at prices which were very satisfactory. The highest price of the day for lambs was 33s. 6d, a splendid pen of fifty half-breds belonging to Mrs. Richardson reaching this figure, while a second pen of twenty made 28s.

Newton St. Boswells.

The annual sale of half-bred ewe lambs and gimmers held at Newton St. Boswells took place in the South Central Mart on the 10th inst., when the catalogue comprised 9,850 lambs, which was an increase on the show last year, but owing to the backward season in many cases the quality was greatly deficient, some lots not being so good by 4s. or 5s. from last year. There was a very large attendance of customers, and for the best class of lambs a good trade was experienced, but secondary sorts met a disappointing trade. The top price of the sale was obtained by the Deuchrie lot, which were about the best consignment seen at these sales in recent years, and made to 47s. Luidlawstiel were much improved in quality from sale in July, the rise on the whole being about 2s. 6d. per head.

Messrs. John Swan and Sons, Ltd presented 21,800 cross Oxford, cross Suffolk, three-quarter bred, and half-bred lambs, this number being fully 1,000 head over the total entry for the corresponding sale of last year. The top price of the day was 45s 6d. per head, which figure was paid for an exceptionally choice consignment of cross Oxfords from Wester Ulston, and a second lot from the same place sold at 39s. apice. The Purveshaugh lot, also cross Oxfords, realised 39s., while the Smailholm Mains consignment realised 39s. 3d. Half-bred lambs made up to 36s. 9d. in the case of the Thirlstane consignment. Throughout the sale was a very level one, and satisfactory prices were made.

At Messrs. Davidson's sale the highest price was 40s., obtained for a specially good lot of three-quarter breds from Friarshaw, and another lot of the same kind from Shielfield made 37s. 9d. Cross Oxfords brought up to 38s. 3d., this price being realised for the Spotsmains consignments. For half-breds the top price was 33s. 3d., made by the Greenfield consignment.

Oxford.

There was a large number of shearling and ram lambs and stock ewes of the Oxfordshire and Hampshire Down breeds penned at Oxford Ram Fair on Wednesday, and a very numerous attendance of breeders and others. The Oxford Downs formed the greater part of the animals penned, and the highest prices were realised for them, two ram lambs from flocks of Mr. George Adams, Faringdon, and Mr. Wilsdon, Woodstock, being sold for 50 guineas each. Several averages were higher than usual; the best was £16 6s. 9d. for sixteen Oxford Downs sold by Mr. H.

KENT OR ROMNEY MARSH TWO-SHEAR RAM, ELHAM NO. 70 OF 1905.

The subject of our illustration is the Kent or Romney Marsh Two-Shear Ram, Elham No. 70 of 1905, which was First in the Class for Kent or Romney Marsh Two-Shear Ram at the Royal Show, Lincoln, where it was exhibited by Mr. Charles File, Elham, Canterbury.

Mr. T. A. Buttar's Shropshires.

The annual sale of pure-bred Shropshire shearling rams from the famous flocks of Mr. Thomas A. Buttar, Corston, Coupar-Angus, took place at the homestead on Thursday in dull weather, but this did not affect the attendance of buyers, for the opportunity to obtain animals from such a popular flock was not to be missed. Mr. Buttar's catalogue for this year contained only fifty rams of characteristic Corston breed, the private demand for gimmers and rams for commercial purposes having been so great that he was unable to put more through the ring. The rams exposed were a good, useful lot, and in some instances showed grand points for exhibition purposes. Although no high figure was touched, the sale throughout brought in satisfac-

last year, and obtained a rise of about 6s. in price. Dundas Castle were also a very choice lot, and made 50s. apiece.

Newton St. Boswells.

The great annual Lammas lamb sales, which have superceded the old Lammas Fair, formerly held on the slapes of the Eldon Hills, were held at the marts of Messrs. John Swan and Sons, Ltd., and Messrs. A. Davidson and Sons, Newton St. Boswells, recently. In the aggregate there were presented 29,700 head, being considerably more than last year, and with good weather prevailing the stock was penned in good bloom. There was a very large attendance of buyers from a wide area, and trade showed a considerable improvement compared with the last St. Boswells

W. Stilgoe, whose top price was 41 guineas, given by the well-known Argentine exporter, Mr. Casares. The next best average for the same breed was got by Messrs. R. Hobbs and Sons, who obtained £13 4s. 4d. per head for thirty lambs, whilst of the Hampshire consignments, the Hon. D. P. Bouverie made an average of £6 14s. 2d. for forty, the highest price being 27 guineas, given by Mr. Jno. Thomson, who sold fifty strong lambs at an average of £6 1s., the second best average.

As usual numerous consignments were sold by the various auctioneers, and details are appended of the chief sales.

Messrs. Franklin and Gale as usual had a large entry of Hampshire Down ram lambs and rams, the consignments including nearly 300 rams from well-known flocks. Their entry of stock ewes

and store lambs was far in advance of previous years, numbering 1,450.

There was a good attendance of buyers, and trade for the best specimens of the ram lambs was brisk. The smaller ones, although not being in such good demand owing to the absence of foreign buyers, made fair prices. Details are appended:

The sales opened with 30 rams and ram lambs from the flock of R. L. Ovey, Esq., Hernes, Henley-on-Thames, the greater part of which changed hands at prices ranging up to five guineas, with an an average of £4 1s. 7d. The selection of 25 rams lambs from Mr. Basil Hanbury's flock, were nearly all sold; the top price was ten guineas, Mr. R. L. Ovey being the purchaser, while the average was £4 7s. 8d. Mr. John Thomson's selection of 50 ram lambs and three shearlings made up to 11 guineas, given by Mr. Bevan, agent for J. D. Blount, Esq., two others making 10 and 10½ guineas with the satisfactory average of £6 1s. A selection of forty ram lambs and one shearling from the flock of Sir Alexander Henderson, Buscot Park, Faringdon, were nearly all disposed of at prices ranging up to 7½ guineas, with an average of £4 11s. 9d. Thirty ram lambs from the flock of Mr. A. C. Hall, Great Rollright, created some competition, one making 12 guineas, Mr. Basil Hanbury being the purchaser, whilst Mr. Hawkins secured another at 11 guineas, and the average price was £5 19s.

Thirty-seven lambs and three rams from the flock of the Hon. D. P. Bouverie, Highworth, Wilts, were next offered, and lot one made top price of the day—viz, 27 guineas, Mr. John Thomson being the purchaser. Two others made 11 guineas each for Sir A. Henderson, and Mr. J. Allin, Brackley, whilst another was sold to Mr. H. Parsons at 10 guineas, and the top average of the sale—viz, £6 14s. 2d., was made by these lambs. Sixteen rams and ram lambs from the flock of Sir W. Pearce, Chilton, Hungerford, were all sold, several lots making 5½ and 6 guineas, the average price being £4 12s. 6d. Twenty ram lambs from the flock of Mr. A. Dore were next submitted, and the majority sold at prices ranging up to 6 guineas, with an average of 4 guineas. Twenty-five ram lambs from the flock of Mr. S. Darling, Beckhampstead, were much admired; two made 11 guineas each, at which price Mr. P. J. D. Wykeham and the Oxford Corporation became the purchasers, another was knocked down at 10 guineas, while others made up to 6½ and 7½ guineas, the average price being £6.

The sale of stock ewes and store lambs was well attended, and every lot was keenly competed for, and made very satisfactory prices. The ruling prices were:—Full-mouth ewes 44s. to 69s.; four-tooth ewes, 56s. to 60s.; two-tooth ewes, 59s. to 64s.; wether lambs, 38s. to 47s. 6d.; ewe lambs, 39s. 6d. to 43s. 6d.

Messrs. Franklin and Jones had a large consignment of Oxford Down shearlings and lambs and about 2,000 store sheep. Their best average was £12 12s., obtained for Mr. A. H. Wilsdon's lambs, one selling at 50 guineas to Mr. Moore, Bourton-on-the-Water, and another at 35 guineas to Mr. John Treadwell, Winchendon. Mr. Edward Castle, Brize Norton, made an average of £9 9s. for nineteen shearlings (highest price 15½ guineas), and £7 17s. 6d. for eighteen lambs (highest price 16 guineas), whilst Mr. Henry Akers' lot of thirty-three made an average of £9 9s., the best price being 16 guineas. Ewes and store lambs met a brisk trade, draft ewes making from 36s. to 60s., theaves up to 63s. 6d., and lambs to 46s. each.

Mr. A. F. Hobbs' consignment of Oxford Downs included thirty lambs from Messrs. Robert Hobbs and Sons, which sold at an average of £13 4s. 4d., the second best of the day. Mr. Casares gave 41 guineas, Dr. Harley 32 guineas, and Mr. H. W. Stilgoe 30 guineas. Mr. J. P. Reading's lot of twenty-six rams made up to 26 guineas (given by Mr. R. W. Hobbs), and averaged £7 18s. 9d. Mr. J. N. White's lot made £7 5s. each, whilst Lord St. Aldwyn's consignment realised similar a figure.

Messrs. Holiday and Sons sold fifty for Mr. Geo. Adams, Wadley Park, at an average of £10, the highest price being 50 guineas, which sum Mr. Samuel Whitbread, Southill Park, Beds, gave for a ram lamb, which has had a most successful career in the showyards. Mr. H. W. Stilgoe, Adderbury, sold sixteen shearlings at an average of £16 16s. 9d., the best prices being 41 guineas (Mr. Casares), 30 guineas (Mr. Horlick), and 25 guineas (Mr. James). Mr. A. Brassey's consignment of forty one sold readily at good prices, Mr. Casares buying one at 20 guineas. Messrs. J. Bryan and Son sold forty-five, at prices up to 36 guineas (given by Mr. Brassey); and Messrs. Jeffries' lot of forty made up to 30½ guineas.

The Cocum Flock.

At the annual sale and letting of lambs from the well known Cocum flock of Sir George Judd, six lambs to be let for one month did not change hands, but 92 lambs were sold at an average of £9 10s. 11d. Mr. G. W. Palmer bought at 31 guineas, 17 guineas, 16 guineas, 15 guineas, 14½ guineas, 12 guineas, 11½ guineas, and 10 guineas (twice); Mr. A. Arnold at 25 guineas and 19 guineas; Mr. J. Molden at 20 guineas, 17½ guineas, and 14 guineas; Mr. Edney at 11 guineas and 10 guineas; Mr. Todd at 12 guineas, 10½ guineas (twice), and 10 guineas (twice); Mr. Stidston at 10 guineas; and Mr. W. Drake at 10 guineas. The remaining ram lambs made up to 10 guineas.

The Leconfield Lincoln Longwools.

The annual sale at Leconfield of Mr. Robert Fisher's well-known Lincoln Longwool rams took place on Wednesday and attracted a large company of breeders. About ninety first-class rams were brought under the hammer and met a brisk trade at prices which made the average the best ever obtained by Mr. Fisher. The total amount realised by the sale was 2,258 guineas, which works out at an average of £28 3s. 3d. per ram, or £4 more than last year, and, as before stated, the best on record for this sale. No. 1, a grand shearling, whose sire, Leconfield No. 4, possesses strains of the flocks of Mr. Henry Dudding, Messrs. Clarke and Son, and Mr. Kirkham, fetched 155 guineas, that sum being given by Mr. R. Richardson, of Arnold Grange. Mr. Crook, of Liverpool, bought largely for transportation to Argentina, his purchases numbering 23, at prices varying from 41 guineas downwards. Mr. Campbell, who was also buying for Buenos Ayres, had eight knocked down to him, giving 105 guineas, 60 guineas, and 41 guineas for three of them. Amongst the higher prices obtained were 100 guineas given by Mr. T. Caswell, of Pointon; 70 guineas by Mr. Nelson, of Lincolnshire; 60 guineas by Messrs. Spink and Campion, of East Heslerton; 60 guineas by Mr. Dudding, of Riby Grove; 50 guineas by Mr. Strickland; 50 guineas and 30 guineas by Mr. Wright, of Nocton; 51 guineas by Mr. Hoyles, of Skidby; 80 guineas by Mr. Caswell, of Loughton; 35 guineas by Mr. Anderson, of Barrow.

Forthcoming Sales.

Messrs. Stride and Sons have received instructions from his Grace the Duke of Richmond and Gordon to sell at the Manor Farm, Singleton, Chichester, Sussex, on Thursday, September 5, the whole of his pure bred Southdown flocks of sheep. These pure bred Southdown Hill flocks were established by the late Duke of Richmond and Gordon. Great care and attention has been used in their breeding, and all the flocks are fully eligible for registration. The flocks may be inspected by appointment with Mr. J. Mackenzie, Manor Farm, Singleton, Chichester.

Seventy head of Lincoln Red Shorthorns from the Brandon herd, the property of Mr. J. Langham, Brandon Grange, Grantham, will be sold on October 10, including prize-winners, yearlings, and two-year-old heifers.

The Earl of Chichester has instructed Messrs. W. F. Ingram and Son to sell his pure-bred Southdown flock at Hoddern Farm, Newhaven, Sussex, on Thursday, September 19. The flock was established in 1888, and the ewes were purchased from the most prominent breeders, and only picked rams have been used. The catalogues may be obtained in due course from Messrs. Ingram and Son, 2, St. Andrew's Place, Lewes.

Messrs. Jackson and McCartney will hold their annual ewe sale on Thursday, August 29, at Craven Arms, Shropshire, when 16,000 Shropshire Down, Clun Forest, Kerry Hill, Radnor Forest, and Longmynd stock ewes will be offered for sale. The ewes are drawn from the leading flocks in Shropshire, Radnorshire, Herefordshire, and Montgomeryshire. The sale will commence at ten o'clock prompt. Catalogues may be obtained from the auctioneers, Craven Arms, Shropshire.

The Bath and West Society.

At the last meeting of the council of the above society, the president, Lord Digby, in the chair, Mr. Edwards, on behalf of the stewards, reported that they had accepted the site offered by the local committee for the 1908 exhibition. The site was the same as that occupied by the society the last time it visited Dorchester in 1887, with some additional land adjoining it, the use of which was rendered necessary owing to the increased extent of the show in recent years. The local committee had also undertaken to comply with the society's other requirements, and the usual form embodying the conditions had been signed.

On the motion of Mr. Edwards, seconded by Lord Wynford, the report was adopted.

Mr. Edwards, as chairman of the Works Committee, submitted the plan proposed for the laying out of the show ground at Dorchester, so far as concerned its main features, and moved its adoption, which was seconded by Captain W. Best and agreed to.

Mr. Edwards, on behalf of the Show Dates Committee, reported that the Committee recommended that the 1908 meeting at Dorchester be opened on Wednesday, June 3, and closed on Whit Monday, June 8, these dates being considered by the representatives of the town and district embraced by the exhibition as the most suitable that could be selected. The adoption of the report was moved by Mr. Edwards, seconded by Mr. Latham, and agreed to.

The late Captain Best.

Mr. Gibbs, on behalf of a Special Committee appointed by the council to consider a suggestion from Sir C. T. D. Acland that there should be some permanent embodiment of the society's feelings with respect to the death of Captain the Hon. J. C. Best, reported that the committee recommended that a copy of the following resolution, passed at the last meeting of the society's council, be suitably engrossed and framed, and be sent to Mrs. Best for her acceptance. The terms of the resolution, moved by the Earl of Radnor, and seconded by Mr. C. L. F. Edwards, are as follows:—"That the council of the Bath and West and Southern Counties Society, at this their first meeting held after the lamented decease of their old friend and colleague, Captain the Hon. J. C. Best, a vice president of the society, and for many years one of its stewards, desire to convey to Mrs. Best their unanimous expression of heartfelt sympathy with her and the other members of her family in the great sorrow which has overtaken them. They also desire to record their grateful sense of the invaluable services rendered to the society over a long series of years by the late Captain Best, for they believe no one could have served it in a spirit of greater devotion or with a higher regard for its best interests. His untiring energy, his mental vigour, his practical experience and his varied knowledge were ever at the society's disposal, which owed more than it is possible to express to his counsel and guidance. Whilst the members generally will long remember his unswerving attachment to the cause he had so much at heart, those who had the advantage of being more closely associated with him in the council room and the showyard will hold him in constant remembrance as the truest of friends and the most loyal of colleagues."

The adoption of the report was moved by Mr. Gibbs, seconded by Mr. Edwards, and agreed to.

Provision for Stockmen.

A letter was read from the president of the Newport branch of the Young Men's Christian Association thanking the council for their kind expressions of appreciation relative to the work carried out by the association in connection with a reading and writing tent provided for the stockmen and others engaged in the Newport showyard.

Colonel the Hon. C. Byng, as one of the stock stewards, testified to the convenience this was to those for whom it was intended. It was largely taken advantage of and thoroughly appreciated. He hoped that a similar arrangement might be made at future shows, and that the society would do what it could to further this. On the motion of Colonel Byng, seconded by Major Sherston, the matter was referred to the works committee to report upon.

Insect Pests.

A letter was read from the Board of Economic Biology, University College, Bristol, stating that the board had been organised with a view to assisting farmers and others in dealing with insect and other pests which affect agriculture, horticulture, &c. It was intended that the work of the board should comprise the whole of the counties of Somerset, Gloucester, Wilts, Devon, and Cornwall, and that the work should be upon similar lines to that which had been accomplished for the Midland Counties by a Department of Economic Zoology at Birmingham. The assistance of the Society was asked in bringing the Board into touch with those interested in the subject, and an offer was made to put farmers and others in communication with some member of the Board, who would investigate the nature of any insect or other pest and report upon it free of charge.

On the motion of the Hon. J. R. de C. Boscawen, seconded by Mr. Somerville, it was resolved to thank the Board for their communication and to afford any assistance possible.

Cider.

A letter was received from the National Fruit and Cider Institute, enclosing copy of a resolution passed at the last annual meeting of members and associates of the institute, cordially thanking the Society "for the use of its council room and for its kind assistance at all times."

A movement has been inaugurated for promoting a Bill in Parliament for granting further powers to the council of the Royal College of Veterinary Surgeons, the governing body of the medical veterinary profession. The proposals include the imposition of an annual registration fee of one guinea upon each member, and the exemption of veterinary surgeons, as medical practitioners, from service on juries. The principal reason for seeking power to enforce the payment of a yearly registration fee is to strengthen the financial position of the council, thereby enabling that body to carry out what members look upon as great and necessary reforms. A paper on the subject, by Mr. F. W. Garnett, was last week considered by the Yorkshire Veterinary Medical Society, and the meeting unanimously declared its agreement with the objects aimed at.

By Messrs. STRIDE & SON.

SINGLETON, CHARLTON, EAST DEAN, DROKE AND NEW HOUSE FARMS,
ON THE GOODWOOD ESTATE,
CHICHESTER, SUSSEX.
(About ¾ mile from Singleton and 5 miles from Chichester Stations, L.B. and S.C. Railway).

HIGHLY IMPORTANT SALE OF HIS GRACE THE DUKE OF RICHMOND AND GORDON'S PURE-BRED SOUTHDOWN HILL FLOCKS.

MESSRS. STRIDE AND SON beg to announce that they are in receipt of instructions from His Grace the Duke of Richmond and Gordon, K.G. (the farms being let), to Sell by Auction, at the MANOR FARM, SINGLETON, on
THURSDAY, SEPTEMBER 5 next,
THE WHOLE OF THE PURE-BRED SOUTHDOWN HILL FLOCKS, comprising about:
2,200 SOUTHDOWN SHEEP, in regular flock ages, as follows:—
274 SHEARLING EWES,
532 FULL-MOUTHED EWES,
474 FOUR-TEETH EWES,
89 DRAFT EWES,
365 SIX-TEETH EWES,
500 LAMBS.

These pure-bred Southdown Hill Flocks were established many years back, chiefly by drafts of ewes from the Goodwood Home Farm Flock, by the late Duke of Richmond and Gordon as the various farms—which are situated amongst the hills North of the Goodwood Racecourse—came into hand.

Of late years much care and attention has been devoted to their breeding and selection. In 1903 rams used were from the flocks of Earl Bathurst, Mr. J. Colman, Mr. E. Henty, and Goodwood. In 1904 from Earl Cadogan, Lord Northbourne, Mr. F. N. Hobgen and Messrs. Waters and Son. In 1905 and 1906 from the Duke of Devonshire, Mr. J. Colman, Mr. Allan Cooper and Mr. Edwin Ellis.

The ewes are of good size and scale, with the hardiest of constitutions, and possess the quality, type and character which distinguishes the famous flocks from which they are descended.

The capital wether lambs which have been annually sold in Chichester Market furnish the best evidence of the mutton-producing capabilities of these flocks, while last year their wool made the highest price at the Chichester Wool sale.

All the flocks are fully eligible for registration.

Purchasers may leave their sheep on the farms free of charge, at their own risk, until September 29th.

The Flocks may be inspected by appointment with Mr. James Mackenzie, Manor Farm, Singleton, Chichester.

Buyers arriving at Chichester night prior to sale will find the "Dolphin" or "Anchor" comfortable hotels to stay at.

Sale immediately after 12 o'clock luncheon.

Commissions carefully executed.

Catalogues of the AUCTIONEERS, Auction and Estate Agency Offices, 63, East Street, Chichester, Sussex.

By Mr. ARTHUR SAUL.

THE LINCOLNSHIRE CURLY-COATED PIG BREEDERS' ASSOCIATION
Will hold SALES at BOSTON
On WEDNESDAY, AUGUST 28, and WEDNESDAY, OCTOBER 9, 1907, at 11 o'clock.

C. E. WILLIAMS, Sleaford, Hon. Sec.

By Messrs. W. F. INGRAM & SON.

HODDERN FARM, NEWHAVEN, SUSSEX.
About 2 miles from Newhaven Station and 5½ miles from Lewes.
In the Home of the Southdowns.

By instructions from the Earl of Chichester, the Farm being let.

MESSRS. W. F. INGRAM & SON will SELL by AUCTION,
On THURSDAY, SEPTEMBER 19, 1907.
THE PURE-BRED SOUTHDOWN FLOCK,
Registered No. 284.
About 480 Ewes in the three ages, 170 Full-mouth Ewes, 260 Ewe and Wether Lams, 20 Rams and Ram Lambs.

The Flock was started in 1888 from Ewes purchased from the Executors of the Outgoing Tenant and from the late Duke of Richmond, the late Viscount Hampden, Viscount Gage, and others. Picked Rams from well-known Flocks have been used.

Catalogues may be obtained in due course from MESSRS. INGRAM & SON, 2, St. Andrew's Place, Lewes.

By Messrs. W. DEW & SON.

NORTH WALES.

NEAR BANGOR.

PENRHYN CASTLE STABLES
AND
PENRHYN HOME FARM.

GEORGE HOYLES,

SKIDBY MANOR, HULL.

Breeder of Pure Lincoln Long Wool Sheep. Lustrous Fleeces. Good Constitutions.

SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

HORSES.

Clydesdales in Canada.

A special meeting of council of the Clydesdale Horse Society was recently held to consider the Canadian Clydesdale Association's regulation, and how far the council may be able to meet the Canadian requirements. Mr. J. Ernest Kerr, Harviestoun Castle, vice-president, occupied the chair, and there were present by invitation Messrs. J. Bright, Myrtle, Ontario, vice president of the Canadian Association; William Smith, Columbus, Ontario; and John A. Boag, Ravenshoe, Ontario, members of the Canadian Board, with Mr. William Graham, Claremont, Ontario.

The secretary having read the notice calling the meeting, Mr. Martin reported that the editing committee had been considering the question for about an hour, and would be prepared to make a recommendation at a later stage. Meantime he suggested that they should hear their Canadian friends, whom they were pleased to see present, and whom they could assure of a hearty welcome. Mr. Martin's proposal was agreed to. The secretary first read the salient points in the correspondence which had passed between him and Mr. Sangster, the secretary of the Canadian Association.

The council was then addressed at length by Mr. Smith, who had moved the resolution which was carried at the June meeting of the Canadian Association. He explained the difficulty with which they had to contend, and how hard it was to convince men who were only beginning the breeding of Clydesdales that everything was right when the fillies they offered for sale had no numbers. The difficulty was greater because the rival breeds which were seeking to establish a footing in Canada had numbers for all the stock offered for sale. The Clydesdale held the Canadian market with a long lead in advance of other breeds, and they asked the home society to help them to maintain that lead.

Mr. Bright followed in similar strain, and Mr. Graham and Mr. Boag, in a word, concurred.

The chairman having thanked the gentlemen for their addresses and presence, and various questions having been asked and answered; the deputation withdrew.

Mr. Martin intimated that the recommendation of the Editing Committee was that the request of the Canadian Association should be granted, provided the council were satisfied that the members of the deputation represented the views of the Canadian Association, but that the committee would much prefer not to disturb the existing arrangement of the volume, or system of registration.

A general discussion ensued, the opinion being unanimously in favour of facilitating trade, but several members of council indicated a doubt as to the competency of proceeding on a verbal representation, seeing a formal communication had been addressed by the council to the Canadian Association.

Ultimately it was agreed, on the motion of Mr. Taylor, seconded by Mr. Montgomery, to number all animals for export when issuing the export certificate, the fees for stallions and brood mares to be as at present, and to charge animals without produce at the rate of 2s. 6d. each entry to members, and 5s. each entry to non-members.

It was explained, on behalf of the editing committee, that they would not re-enter fillies without produce already entered for the first time as produce of their dams in Volume XXX., but would number such animals in the produce columns beneath their dams, indexing them alphabetically when compiling the volume, and in re-entering for a number of fillies without produce already entered in preceding volumes that the re-entry would be shortened, giving only the name, description, date of foaling, ownership, and sire and dam, with reference to the preceding entry as produce, for the extended pedigree. In this way the committee hoped to meet the requirements of the Canadians without unduly swelling the bulk of the book by needless repetition of pedigrees.

The Editing Committee further reported that they had examined and recommended for acceptance the pedigrees of the dams and granddams of Mr. Park's Marmion (11429) and Mr. Fergusson's Allandale (12418), so that these mares would now be numbered.

Next Year's International Horse Show.

The English and foreign directors of the International Horse Show recently held at Olympia have been earnestly considering the most suitable locality for their next year's exhibition, but notwithstanding pressing invitations from abroad, it has been decided to hold the second one in London during 1908. The exact place of meeting has not yet been finally fixed, as it is felt that, unless additional outside accommodation can be obtained, Olympia will be too restricted for a show of such magnitude.

The date of opening will be June 4, and the exhibition will remain in progress until June 13, thus comprising the week between Epsom and Ascot, the period corresponding with this year's *concours*. There will be performances each afternoon and evening, twice daily for nine days, in place of three times daily for six days. The building will be open each morning to enable visitors to view the exhibits, decorated stabling, transact business, &c., but the performances in the arena will not commence until 2 p.m. daily.

Many departments in which improvements can be made are now being carefully overhauled by the directors, and the schemes of floral decoration will be most elaborate and novel. Arrangements are already in hand to obtain attractive and popular exhibits, and the committee have sent representatives to Spain, Holland, Belgium, and other Continental horse-loving countries to secure the attendance of their best military riders. Negotiations have been opened with the Russian authorities for competitions of troikas and an equestrian exhibition by a troupe of Cossacks.

Thousands of visitors for whom accommodation could not be provided at Olympia last June will be glad to know that they will be able to book their boxes and seats in February next, and as the classification and arrangement will be entirely new, it is probable that a great success will be the result. Intimations have already been received that other American millionaires, pleased at the success achieved by their countrymen, are already making arrangements to send animals over from their stables. Profiting by the experience gained this year, it is proposed that there shall be spacious promenades, and the outlay on decorations, flowers, and electric light will be on a very large scale.

The 1907 Show.

We have just received a bound copy of the official catalogue of the great International Horse Show at Olympia in June last, and it is on a scale in keeping with that of the show. It is of quarto size, nicely printed in bold type, is illustrated, and is bound in a most attractive cover, the colour of which is the same as the second prize rosette, viz., Royal red, whilst the lettering is in gold. Had the prize awards been filled in on the space left at head of each class, the catalogue would have been a complete record of the most successful of horse shows. This is the only fault we have to find with the catalogue, and as a full list of the awards is given in a pamphlet supplied with the catalogue, the deficiency is, to a great extent, made good, and we now have an interesting record in a handy form of what it is hoped will be the first of a long series of successful international horse shows. The price of the catalogue is 2s.

CATTLE.

Notes and Jottings.

IT is now many years since the "three acres and a cow" theory first began to be discussed amongst politicians and the general public, agricultural and otherwise, in England, and perhaps it will not be exaggerating to say that more disappointments and losses to both landlords, tenants, and labourers have accrued where attempts have been made to commence the carrying out of that theory than have obtained from any like attempt to interfere with pre-existing arrangements in regard to the letting of land in allotments, or in any way for the benefit of the working classes. The old saying is a very true one, that it is a "hard battle where all the combatants are slain," and so there are a few instances, perhaps, to be found where good has followed a system of allotments.

THE question of small holdings is to-day exercising many minds and many men in this country and affects agriculture in a very vital form, or at least will do so should any attempt be made to pass such a Bill has has been talked of; and perhaps there is scarcely a branch of farming that would be more deeply affected by the breaking up of medium to large farms into what are generally understood as small holdings than the business of cattle breeding. We do not recollect of having yet seen definitely what is meant by a small holding—that is, to what extent of land it would refer—but if we take it in the general sense in which it is understood, it would mean anything from three up to say thirty acres, or perhaps a little more.

TO those who have had long experience of land in its varied phases of occupation and usage it is quite clear that nothing could be so disastrous to the general well-being and profit of the cattle-breeding business, which is certainly one of the most profitable branches of farming and stock breeding to-day, than would be, say, the dividing up of a good 250-acre holding of mixed land into eight to fifteen holdings not exceeding 30 acres in extent. What an odious comparison would be raised between the numbers and quality of the cattle that would have to occupy the small holdings as compared with the herd that the farmer, if a man of any means and intelligence, would possess who was farming the 250 acres of good mixed land.

THE Duke of Portland surely must have struck a note that will, or ought to, vibrate in the hearts and minds of all who are taking or likely to take any interest in the carrying out of a small holdings scheme, when he made that remarkable after-dinner speech at the Welbeck gathering the other day, when his Grace stated that some years ago he let a farm of 480 acres at a very low rental to six labourers, whom he provided with a full complement of live and dead farming stock, for which they paid a small amount as interest on the capital thus invested. But the experiment proved disastrous both from the labourers' standpoint and also the landlord's, and after fifteen years the farms were given up as a failure. The men had lost most of their savings, and the land had deteriorated in condition.

THE quantity of land in the above instance ran to an average of 80 acres for each tenant, which is considerably more than would be taken as an average of small holdings, and yet under such favourable conditions as stated the scheme proved a disastrous failure. It is perhaps a little difficult to understand why holdings of that extent, and occupied under the conditions existing, should have proved so disastrous. The most likely reason would probably be that the labourers were not of a class that took pride or interest in their work of managing their holdings, or otherwise were lacking in intelligence in the management of their cattle, which ought to be the main source of money making upon such holdings. We know to-day of many occupations of 80 or 100 acres that are doing splendid work in cattle breeding.

TO return or direct our attention, however, from holdings of the above description to those of three to thirty or forty acres, and look at these on principle from a cattle keeper's and breeder's point of view, how could they possibly be managed with advantage to anyone? There would not be scope enough to bring up young stock, or a sufficient number of cows kept to render it profitable to buy and use a good bull; there would not be milk made in sufficient quantity to pay for sending to the railway or for manipulating properly in any marketable form, whilst as regards the production of beef that would be out of the question altogether. The only profitable source, as things are to-day, likely to follow upon a small holding, would be the keeping of more pigs.

IF forming small holdings were to become to any extent fashionable for a time (it would only be a short time for a certainty), it would spell ruin to hundreds of the magnificent herds of pedigree cattle we possess in this country, and would, with this, be the means of preventing an enormous amount of money coming into this country from the land of "dollars," and would encourage a general retrogade movement in farming and stock breeding altogether. All classes of live stock except, perhaps, pigs, would suffer in proportion. It is one thing for a fairly wealthy man to farm as a pleasure farm one of these small holdings where he can afford to assist the productive powers of the farm by the purchase of an unlimited quantity of extraneous food, but it is entirely different where stern necessity demands the most economical expenditure of every penny, and a closeness of living that is not at all in accordance with the present views of the labouring classes.

THEN, assuming that the labourer on one of these small holdings has sufficient tact and industry about him to make ends meet and to hold himself together, what is his position? Can he improve his own prospects, or those of his family? Not a bit of it; day in, day out he must be toiling at it, and his family with him. He neither knows holiday nor leisure week day or Sunday, and is on the whole far worse off than his brother labourer under a good master on a large holding, where a sufficiency of labour is kept to do things decently and in order, and a comfortable wage paid.

ALL Englishmen may well hope that the Duke of Portland's experience will prove a lesson to others who may be inclined to break up their better holdings into small tenements. I may add that, in an adjoining village, this same thing was put in practice some thirty years ago, and upon that estate very similar results have obtained. Prior to the breaking up arrangements several fine herds of dairy cattle existed, as well as flocks of sheep; since the breaking up these dairy herds have given place to a few cottagers' cows, while sheep have disappeared entirely, and the question of finding tenants to succeed others that are leaving year after year has been little less than maddening to the owner, whose expenses are much heavier and income lighter than under the old dispensation.

THE cultivation of sugar beet appears to be likely to increase in England according to reports, if these are to be believed. This upon farms with a fair proportion of tillage land should add to the opportunities of milk producing. Any roots that are not good enough for the manufacture of sugar would be very useful in the mangers of the cattle, and the same may be said of the refuse generally. The cultivation of any plant that may be said to have several successful ways of being utilised profitably should, in the long run, prove a good investment. The present is quite a phenomenal season for milk, the immense amount of really succulent grass keeping up supplies and quality of milk as well as the condition of the cattle, and in very few cases is outside green food needed.

"Faking" in the Argentine.

For some time past various hints have been given of something far wrong at the Buenos Ayres Quarantine Station for purebred cattle sent from this country. "Faking" for the purpose of defeating the tuberculin test has been a source of trouble ever since prices began to take a great upward course. Its more recent developments are put in strong terms by the *Buenos Ayres Standard*. The charge is a double one.

On the one hand it is stated that tuberculous animals have been "salted" or inoculated over and over again with tuberculin in order to make them fit to pass the official test in the quarantine sheds; on the other hand, it is asserted that sound animals have been "doctored" in such a way as to make them fail to pass, the object here being to secure the insurance. The "salting" for the purpose of making animals pass the test has probably been the commoner course. In the case of the alleged frauds on insurance companies the animals tampered with must have been cheap ones on this side, which had been insured at fanciful values.

Bribery and corruption are pointedly referred to by the *Standard*. Even the sums dealt out to the resident "fakers" are noted. The discoveries made by the Argentine authorities will mean, according to the native journal, "the death-blow to the sale of British stock for years to come." That comment was no doubt made during a period of excitement. The conclusion arrived at, however, is worth noting:—

"If the Argentine market be cleaned of dishonest merchants, greater security in dealing will result ultimately to the benefit of all. The regulations on both sides are not severe enough, and the "Embarcadero" itself is not completely under Government supervision. The sheds are worked by a private firm, but the veterinary officers are appointed by the Ministry of Agriculture. When it is known in England that 15 per cent. of the cattle slaughtered here for exportation is tuberculous, the frozen meat trade of this country will be killed. Government officials at both ends have been duped by the animals being 'faked.' If a strong Preferential Tariff Government were in power in England, they would probably take strong measures against the importation of Argentine meat."

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Cavan Fair, held on August 14, there was a small fair of store cattle; good demand for nice heifers, but thin and inferior animals hard to sell. Large supply of springers, which met a dull sale. Calves, 3rd class, £2 12s 6d to £2 15s; yearlings, 1st class, £8 15s; 2nd class, £6 to £7 10s; 3rd class, £3 15s to £5 10s; two-year-olds, 1st class, £12 to £13 10s; 2nd class, £7 16s 8d to £10 10s; 3rd class, £6 10s to £7 5s; springers, 1st class, £15 15s to £19; 2nd class, £11 10s to £14; 3rd class, £8 10s to £10 10s; young pigs, eight to ten weeks old, 14s 6d to 22s 6d each.

At Drogheda Fair, co. Louth, held on August 14, there was a small supply of cattle; demand was slow, but nearly all sold. Nice young cattle were scarce and dear. Yearlings, 1st class, £8 5s. to £9; 2nd class, £6 17s. 6d. to £7 5s.; two years old, 1st class, £12 10s. to £13 10s; 2nd class, £9 to £11; three years old, 1st class, £14 5s. to £16; 2nd class, £12 to £13; springers, 1st class, £16 5s. to £17 10s.; 2nd class, £13 10s. to £14; young pigs, 8 to 10 weeks old, 18s. to 26s. each.

At Tipperary Fair, held on August 13, there was a small fair; demand good. Yearlings, 1st class, £8 5s. to £8 15s.; 2nd class, £6 to £8; two years old, 1st class, £11 10s. to £12 15s; 2nd class, £9 to £11 5s.; springers, 1st class, £16 to £19 10s.; 2nd class, £12 to £15 5s. Moderate supply of lambs, for which there was good demand. Lambs, 1st class, 32s. to 37s.; 2nd class, 25s. to 30s. Small supply of young pigs, eight to ten weeks old, which sold at from 23s. to 27s. each.

The Smithfield Club.

Matters connected with this year's show were the chief topics at the 1st meeting of the Smithfield Club. Earl Winterton reported that the Stock Prize Committee had selected judges for the forthcoming show, with reserve judges in case any of the gentlemen selected were unable to act, such list to be published when all the judges had signified their acceptance.

Mr. G. Barford reported that the Implement Committee had deferred the consideration of the regulations and application forms for the implement department at the coming show owing to the possibility of the enlargement of the Minor Hall being completed in time for occupation by the Club this year. Notices will, however, be forwarded to the implement exhibitors informing them that these forms will be issued about September 20, giving them particulars of the extra space if available for the use of the Club.

The committee reported the receipt of a letter from the Railway Clearing House intimating that the collection of goods in future from the Royal Agricultural Hall will cease on Saturdays at 2 p.m. The committee were of opinion that this curtailment of the hours in which the railway companies will collect their goods after the show will greatly inconvenience and add to the expenses of the exhibitors, and they therefore recommended that the secretary write to the Railway Clearing House calling attention to this matter.

This report was adopted.

Mr. Sanders Spencer reported the arrangements which had been made for the work of the carcase competition for the forthcoming show, which was agreed to.

The Sheep Exhibits.

A communication was read from the National Sheep Breeders' Association asking the Club to adopt the following resolution passed by that association, viz.:—

"Where a flock book is issued, all sheep competing for any prizes shall be entered or eligible for entry in the flock book belonging to that breed."

Mr. Latham failed to see how the Club could entertain this request, as in no department of the show was the entry in, or eligibility for, herd or flock books required.

Mr. S. Kidner thought that as the breeds had progressed so should the Club.

Mr. J. J. Cridlan said he had submitted a

motion similar to this, but applying to cattle, last year, and if the principle was accepted in this case it must apply throughout the show.

Mr. R. Stratton said that as he moved the rejection of the previous resolution embodying the principle now brought forward, he begged to move—"That the request of the National Sheep Breeders' Association be not entertained." They had always refused to adopt this principle, which they all knew would curtail competition. We had quite enough of pedigree and breed influence in other shows, and whether an animal had a pedigree or not it should be judged at the Club's show absolutely on its merits. Judges were appointed to say whether the points of these animals were true or not, and the Club need not trouble itself as to pedigree, and he felt that at the shows of the Smithfield Club they should not introduce any vexatious regulations.

Mr. W. Reid, as the seconder of the previous resolution for the rejection of this principle, seconded Mr. Stratton's motion. He always understood that this club was formed to encourage the breeding of animals most useful for the food of the people.

Mr. S. Kidner moved that the question be referred to the Stock Prize Committee. The judges were placed in a difficulty if the animal had all the merits of a butcher's beast, and yet had not the points of the breed.

Lord Moreton suggested that if the principle was adopted it should be required that the flock books should have been in existence some considerable period.

Mr. Sanders Spencer seconded Mr. Kidner's amendment. He thought that they should take steps to see that the animals exhibited corresponded with the various points of the breed.

Mr. Garrett Taylor said, as an exhibitor since 1870, he had found that the rules had worked well, and he hoped the council would leave well alone.

Mr. Kidner's amendment, on being put to the meeting, was lost, and Mr. Stratton's motion was then put and carried.

Mr. S. Kidner, in pursuance of notice, moved:—"That the time has come for the council to consider the advisability of cutting out the old wether classes in all the early maturity breeds, as these classes are not in accord with the practical usages of the country."

He said that the keeping of wether sheep to the age exhibited at the Club's show was an absolute waste, and in many cases was only done for show purposes. The Club had adopted the principle in the cattle and pig sections, and it was time, he thought, that it should be considered in regard to sheep, but at the same time he did not wish to rush the matter.

Mr. R. Stratton said it was perfectly true that sheep were brought out much younger than formerly, but lambs were not sufficiently developed at Christmas to give foreigners any idea of their characteristics.

Mr. J. Bowen-Jones thought it was not quite time yet to adopt such a resolution.

No one seconding Mr. Kidner's proposition the matter dropped.

Four new members were elected, and the council then adjourned until November 6.

Messrs. Hy. Duke and Son recently offered for sale by auction, at their Dorchester Property Sale Room, the freehold landed estate comprising Thornicombe and Sparrow Bush farms, in the parish of Charlton Marshall, adjoining the high road from Dorchester to Blandford, and two miles from the latter town. The property consists of about 364 acres of healthy pasture and arable land, with a suitable farmhouse, two cottages, and outbuildings, and is let at the low rent of £120 per annum, the sporting rights being reserved. The sale brought together a representative gathering of landowners and agriculturists, especially from the Blandford district of the county, and an opening bid of £1,800 was soon obtained. This was followed by bids of £50 each up to £2,550, at which sum it was purchased by Mr. Fred John Bugg, of Tarrant Keynston.

A Word About Foreign Produce.

WE are frequently obliged to listen to stories of distress about the agricultural commodities that are shipped to this country duty free, and keep down the saleable price of home-raised produce. Just so; but it must be remembered that there are two sides to every story, and the choice of the purchaser has some bearing on the case. To illustrate a point, we recently bought cheese, made in the locality, from one of the shops of a provision merchant whose name is a household word. A week or two later we went to the shop for more cheese of the same sort, but were unable to get it. We could be supplied with foreign cheese in abundance, but were informed by the shopman that they had such a poor sale for the home-made article that they had given up keeping it. Perhaps this does not say much for the taste of the British public, but we are merely stating a fact, and it must be said that with various commodities besides cheese the foreigner has not only captured our markets but also the palates of the people. Speaking for ourselves, we are old-fashioned enough to prefer home-made dairy produce to anything that is imported; but probably we are prejudiced, whereas the man in the street shows his appreciation of foreign productions by his preference for them.

The Partridge Season.

OUR business is to deal with farming rather than sport, but the two are somewhat closely connected, and before our next issue appears in print the law will have lifted its protecting arm from Dame Partridge and her children, and the sound of the sportsman's gun will be heard in the fields. Last year when the first was ushered in the corn was mostly carried, and complaints were general about the scarcity of covert, but this season the boot is on the other leg and the conditions for shooting will be far from ideal when the season opens. It is doubtful, too, whether sport will be very good, for the season throughout has been unfavourable for partridges, many birds have died, and most of the coveys we have seen are small and the birds likewise. Partridge shooting is an old-time sport which always has an interest for farmers. The man who farms his own land necessarily shoots over it if he wishes to, and there are few of this class who do not welcome the advent of September. Happily, too, a good spirit of friendliness prevails between perhaps the majority of tenant farmers and their landlords, and in these cases nothing gives the farmer more pleasure than to know that there are birds on his holding, and that the gentry will be sure to find sport when they walk over the land in his occupation.

CUTTING THE GRASS.

Farmers and Gamekeepers.

REFERENCE to sport in the foregoing paragraph reminds us that the gamekeeper has often more than a little to do with the feelings of friendliness or otherwise which prevail between landlords and tenants over matters of sport. The man of velvet has to hold the balance level, so to speak, between the two parties, and while his master's interests are necessarily his first consideration, he can look after them, and at the same time act fairly towards the tenant farmer. It is all a matter of tact, which some men possess and others do not, but the gamekeeper who goes out of his way to upset the farmers on his beat is a fool in his own interests. We have known keepers who, forgetting they were servants, carried such a high hand amongst the tenants and were guilty of such acts of tyranny, that the farmers rose in a body in revolt, and a well-deserved month's notice was the result. On the other hand, when a gamekeeper is tactful and understands the law of give and take, he generally receives help and co-operation from the farmers on his beat, who have ample opportunities of being of assistance to the keeper. So far as the proprietor of the shoot is concerned, be he resident or only a tenant, it is to his interests that the relationship between himself and the farmers, through his keeper, should be of a friendly and amicable character.

The Harvest of Honey.

THOUGH beekeeping is not a leading industry in this country it is one of some importance, and beekeepers are complaining about the bad season and its effect on the harvest of honey. Back in the early part of the summer we heard agriculturists complaining that they had never had any swarms, and the grumble now is about the shortage of honey and wax. From Cornwall, which is described as the bee garden of England, we hear accounts about the poor returns obtained from the bees, and the season is said to have been the most disastrous in the memory of the oldest beekeeper in the county. There is not much likelihood of any improvement now, and those good people who depend on bees as a source of income must necessarily suffer. After all, however, this unsatisfactory state of affairs is not surprising, as the weather conditions were too depressing for even the busy bee at the time when the blossoms from which most of the nectar is obtained were open. Dear, dear, what a lot the clerk of the weather has to answer for in this season of 1907.

The Apple Crop.

IN the Western counties more than in any other part of the country fruit orchards are important adjuncts to farmsteads, and taking one season with another, it is questionable whether any other department on a West country farm pays better than the orchard. This season, however, orchards in all districts will not return a big share of profit, for apples are a thin crop. Here and there may be seen trees well laden, but there are many with little or no fruit on them, and there will be nothing like the quantity of table apples to sell and vintage fruit to make into

cider as there was last year. And the reason of it? Well, some people attribute it to the fact that 1906 was a good apple year, and we could only expect a shortage this season, but our own opinion is that insect pests have more to do with it than anything. The bloom was fairly plentiful; in fact there was quite sufficient for a good crop, but that little pest, the apple sucker, played such havoc that the fruit never developed, and to this agent may largely be attributed the scantiness of the harvest.

The Confidence of Farmers.

IT is not the easiest thing in the world to gain the confidence of farmers, particularly when anything fresh is introduced, and in the history of technical education no persons have had a more difficult task in gaining the confidence of the people they would instruct, than teachers in agriculture. Possibly the start was not made on quite the right lines, and doubtless there was a good deal to be undone before a proper beginning could be made. But are we on the right track now, and is the confidence of the farmer gained? There will probably be diverse opinions on this point, but the report of the Midland Agricultural and Dairy College, recently published, presents some encouraging details. In the first place the financial items show a credit balance in favour of the institution, which is good, and secondly the report says that the college has gained in the estimation, confidence, and appreciation of the farmers. As we said before, it is not an easy matter to get the confidence of farmers, but when once they are won over they are steadfast, and the success of agricultural collegiate establishments after all depends more on the confidence of farmers than anything.

Agricultural Politics.

BY A LOBBYIST.

Tacticianism in Politics.

It is tacticianism—if I may coign an ugly word—which is responsible for the present unfortunate situation in connection with the Scottish and English land legislation. This is the anxiety of the one side to have a heavy flail with which to belabour the House of Lords, and the desire on the part of the other side to frustrate this purpose and to represent the peers as the saviours of agrarian society. In the dust which these rivalries have created the original objection, the animating anxiety of the proposed legislation, is obscured, distorted, and half forgotten. It is half neglected in the wonder whether "the cup of the Lords has been filled to overflowing," or whether the assailants of the Privilege-Chamber have overreached themselves, and, instead of having wrought a new weapon of offence, have fashioned only a scourge for their own backs. For my part, I was persuaded a week since that the Scottish Land Bill would be abandoned. Still, apart from the national sentiment which prefers that Scottish legislation should be made applicable to the whole of Scotland, and that the Lowlands should not be regarded as requiring a separate and an Anglicised treatment—and I fear me that we shall never eradicate this sentiment from the Caledonian breast—there is a good deal to be said for dealing with the Lowlands on the lines of the English Land Bill. All the same, I am not certain that the policy of the titled politicians was not inspired by a subtle purpose of partisan strategy—by, in a word, the anxiety to inspire resentment in the Highland bosom at the Government's own refusal to extend the boon it had designed, the boon of absolute security of tenure, absolute freedom in the holding, and a fair rent, to be established, to use the Radical phraseology, "not by the caprice of the landlord, but by an impartial landlord."

* * *

Is Parliament Losing its Native Character?

Why do I say this? Though the outstanding incident of the later phases of the career of the abandoned Scottish measure is undoubtedly their lordships' willingness to apply the measure to the Highlands, it must not be forgotten that the measure was flagellated with something like vindictiveness when first introduced to the peers. One of the statesmen who would not apply it to the Highlands declared that the Bill was "born in ignorance, nurtured in obstinacy, and supported by class hatred and political spite." Even Lord Rosebery declared the Bill to be an "insult," and that it would apply "the poisonous bacillus of the Irish agrarian system" to Scotland. Mr. Balfour—whose advice, it must not be forgotten, the peers diligently followed—declared the Bill to possess "the unique peculiarity of offending every canon of legislation any human being may hold from the extreme of doctrinaire individualism to the extreme of revolutionary Socialism." If the measure—"this wild and infantile experiment," in another of Mr. Balfour's own phrases—possess all these sins, vices, infirmities, and weakness, why afflict the unfortunate highlanders with it? I repeat that the dominant influence in Parliamentary life nowadays is tacticianism—everything is apparently subordinated to the one supreme desire of securing a better 'vantage ground for the attack on the House of Lords, or for frustating the efforts of the men who would occupy that 'vantage ground. 'Tis rather a humiliating spectacle this to the dispassionate observer who is still unable to banish his conviction that Parliament is a machine for the evolution of the nation's weal, and that government is the science of patriotism rather than a termagant game of checkmate.

* * *

A Point for the Prime Minister.

Now let me put a point to Sir Henry Campbell-Bannerman. Why should he not have consented to proceed by instalments? Even if the Lords restricted the Scottish Bill to the Highlands he would not of necessity have pledged himself to apply the English Bill to the Lowlands. It would not, of course, have been the first time that the crofter counties had been selected for distinctive treatment—as a fact, this has been rather the rule in Scottish agrarian legislation. With the example of the success of the policy in the Highlands before the Parliamentary eye, the Premier would have found it easier to subsequently apply the system to the Lowlands. Of course, it might be urged that the Lords would not have permitted the English Land Bill to pass without being assured of its application to the Lowlands. It might be so—it might be that this attitude would have lost the English Bill. Even so it could only be lost for a time; and to the Radical the Scottish measure is infinitely the more valuable of the two. For him the establishment of fair rent courts, and the removal from the landlord of the power to select tenants, or, rather, giving to the tenant absolute security in his tenure and complete freedom, have a peculiar fascination. No; 'tis tacticianism which is responsible, this subordination of everything to the Lords' campaign. The temper of the Parliamentary arena is antipodean to the spirit of compromise — it is so fierce in its rivalries that it will scarcely allow it life. Meanwhile, what of the economic evolution, what of the long-heralded reforms?

* * *

The Radicals and the Peers' Amendments.

Now it is as well that the critics of the English Land Bill, more particularly those of the titled House, should comprehend the character which the Liberal retort to their efforts is assuming. I am speaking now not so much of the attitude adopted in set speeches as of the expressions used in lobby conversation. A series of the amendments carried in the Lords are selected for the purpose of showing—I am now quoting the very phraseology of a particularly vivacious Liberal M.P.—that "the aim of the Landlord-House is that landowners shall be able to sell, at considerably more than present market prices, those portions of their property which they have no desire to keep." Of course, I need not go out of my way and say that this charge of cupidity and avarice is extravagant and unjustifiable; but the deft argument which this clever Parliamentarian used, the subtlety of his selection from the peers' amendments, will no doubt have some effect on the mind of the audiences which listen to them. The substitution of "purchase" for hiring, or, rather, the option of purchase—a substitution which, if insisted upon by the Lords may wreck the Bill, the endeavour to cut down the parish council allotments from five acres to one acre and to limit its powers, the reservation to the landlord of the sporting and fishing rights over the land taken under the measure, and the refusal to permit the arbitrator to take into consideration in assessing compensation the rent at which it was last let and the sum at which it was rated—all these amendments are heralded as indications not merely of this ineradicable vice of cupidity and selfishness, but as providing a definite assurance that the landowners are either seeking to thwart the solution of the small holding problem, or else wish to render inevitable the failure of the present legislation. Of course, it may be rejoined that the public are not so credulous as to accept these assertions. Well, we shall see. The public in the individual is suspicious of hurtling charges of this character; the public in the lump is open-mouthed and believing. At all events, 'tis well to comprehend the position of the defenders of the Bill.

* * *

Mr. Burns and our Food Supply.

Has the agricultural community shown itself sufficiently alive to the moment of Mr. John Burns' Foods Regulations Bill? Perhaps the language in which that right hon. gentleman has avowed its purpose may quicken our appreciation of its value. "The Local Government Board," quothed he, "proposes by means of the Bill to take power to make regulations for the prevention of danger to public health arising from the importation, preparation, storage, and distribution of food or drink intended for human consumption." In other words, the Bill means to devise a method for checkmating and defeating that unhallowed trade in imported putrescent foods, the revelations concerning which raised the nation's gorge twelve months since. The foreigner is to be restrained in an unholy and unhealthy competition, the first-fruits of which must be a jeopardised public health and the second fruits the unfair penalisation of the healthy home food-producing industries. The foreign competitor who is careless of our public health and is anxious only for profit is not to be allowed, by means of his tinned packages, to go on defying the law which rightly compels the home food producer to conform to the first principles of hygiene and sanitation. The Bill will, in the first place, rescue the people of the great towns where most of these cheap imported foods are sold and consumed from the menace that means a stunted, diseased body, and in the second place, put the honourable home food producer on an equality with a foreign rival not hitherto obeying the same standard of trading honour that he willingly recognises. The Bill, if it be not conceived in the specific interest of the agrarian classes, directly concerns them. It may be, indeed, more important to those classes than the Butter Act itself. And it is another illustration of the fact that Mr. Burns, once held to be the most distinctive of pro-urban politicians, is placing the rural areas under a debt of remarkable obligation. As an administrator he has been admirably sensitive to the anxieties and necessities of rural areas—he has refused to regard them as having only the character of Providentially-designed refuges for the wastreldom and scumdom of the towns. As a legislator he has revealed a practical sympathy of infinite value.

The death has occurred at Moortown, near Torrington, of Mr. Alderman Thomas Copp, a well-known and much-respected farmer throughout North Devon. Deceased, who had attained the age of eighty-three years, had been unwell since Easter last. Mr. Copp was one of the most popular farmers in the Torrington district, and in all agricultural matters he was deeply interested, especially in horses and cattle, of which he was considered an excellent judge. He took a keen interest in the Torrington Agricultural Society's show, which he attended every year since he was sixteen years old.

A thunderstorm raged in some parts of North Devon late on the 17th inst., and proved the worst experienced for some years. Besides killing cattle on several farms—the most serious loss being that of five bullocks at Burrington—the lightning is supposed to have been the cause of a fire which broke out at the Home Farm, Kingsnympton, which is occupied by Mr. H. S. Hill. The farm was practically totally destroyed, and only a little of the furniture could be saved. Fortunately none of the occupants were hurt. The storm was accompanied by torrential rain, which did considerable damage to standing corn.

SHOWS OF THE WEEK.

Lancaster.

Among the visitors to the Lancaster Agricultural Society's forty-third show on Wednesday was the Prince of Wales, who was staying with the Earl of Sefton (president of the society) for grouse shooting. The visit of His Royal Highness was on condition that there should be no public formality, and the wish was respected, but the visit naturally attracted a larger concourse of visitors than usual, so that the society was fortunate. The Prince remained at the show about an hour and a-half; he saw some of the horses judged in the large ring, and had pointed out to him other features of the exhibition, which was on a smaller scale than usual, but the quality was as good as if not better than the average. In most of the live stock sections there was a marked falling off in the entries. This is accounted for owing to the lateness of the season. Farmers have been too much concerned about the crops to pay that attention to their horses, cattle, and sheep that is necessary to bring them up to proper showing condition, consequently many names that ordinarily appear in the Lancaster show catalogue were this year missing.

Cattle were mostly of the dairy type, with a sprinkling of pedigree bulls and heifers. The feature of this section was the defeat of Mr. R. R. Rothwell's Strowan Marquis, a well-known winner this year, by Mr. W. Atkinson's big white bull Wallace, a very lengthy three-year-old. In the young class Mr. Rothwell's Lord Bullivant won easily, and in bull calves Mr. Atkinson was first with a very stylish roan. Mr. Beaumont, of Hulton, was also a successful exhibitor. There was a large class of Shorthorn cows. Save in the dairy cow class, the tenant farmers' ten mile radius class was not as well filled as it should have been. Lord Sefton's special for three tenant farmers' dairy cows went to Mr. Hall, of Morecambe.

Sheep, which came next in the catalogue, made as usual a nice display; in fact, the Lancaster Show is always distinguished for the excellence of its sheep, which include both the Lowland varities and those of the hill type.

Thanks chiefly to the excellent example set by Mr. Victor Cavendish, M.P., the breeding of Shire horses has of late years made great strides in the district, and the result is an improved show nearly every succeeding year. Last week's display might have been larger, but the quality left little to be desired. One of the features of the section was the presence of four immense mares by Blythwood Kingmaker, a horse rented by Mr. Victor Cavendish from Lord Rothschild, and one of the best investments in this line ever made in this part of the country. The winning colt foal, by Holker Menestrel II.—from the Holker Hall stables—is declared by many good judges to be one of the best seen in the district for years—a sturdy colt, with plenty of size, that looks like developing into a capital sire. Fillies, too, were well grown and balanced, with plenty of flat bone.

The first prize yearling filly from Holker was Holker Kismet by Holker Menestrel II. The first prize two-year old filly, Holker Belle, was also from Holker, and was first at Poulton last week. Mr. Yerburgh, however, won in the class for three-year-olds with an excellent young mare by Lockinge Forest King; but Mr. Victor Cavendish came again to the front in brood mares with Holwell Spot, and also in the two-year-old breeding class with Holker Belle, who was awarded Colonel Foster's medal as the best two or three-year-old filly bred within twenty-five miles of Lancaster.

Hunters came next in merit, and though not particularly numerous, were a choice lot, including some first-class brood mares; whilst amongst the stallions was Mr. J. S. Rigg's well-known winner, Sir Launcelot, who had no difficulty in maintaining his good record. Mr. Brown, of the Park Hotel, Lancaster, showed his Bolton winners by Mr. Storey's horse Underbred, and several of the winning youngsters were by King's premium horses that have stood up in Cumberland and Westmorland. Many had plenty of quality, though save for the yearling classes the young entry was small. There were only ten foals in the two classes, and the best were by Beckenham, Underbred, and Palaver. Hackneys were somewhat weak both in number and quality, though there were a few animals of outstanding merit.

Other sections included a good display of dogs and a nice show of cheese and butter.

East Berks.

The eleventh annual show of the East Berks Horse Show Society was held at Hawthorn Hill Racecourse, midway between Bracknell and Maidenhead, on Thursday, and was one of the best ever held by the society. The entries numbered 342, which constituted a record, whilst the quality of the animals entered was excellent all round, and there is no doubt the show bids fair to become one of the most popular in the South of England. The only drawback is the distance of the showyard from the nearest railway station—Maidenhead—but this is practically obliterated by the enterprise of the Great Western Company, who arrange an admirable service of motor-omnibuses to convey visitors to and from the ground. On Thursday these were well patronised. The judging occupied nearly all day, and Mr. R. G. Carden expressed the opinion that he had never seen such a grand lot of Hunter brood mares and young stock, the latter being extraordinarily good. The Hackney stallions and Shires were also a very fine lot, and drew forth general admiration. The foal futurity classes instituted two years ago by this society, one of the few horse societies to do so, attracted a large number of Shire and Hunter mares with their produce. In the Hunter produce groups there was an entry of 84, whilst the Shire horse competitions closed last September with an entry only four short of that number.

The Shire classes were well filled. The two champion foals were Mr. Ernest Robinson's filly by Riverstown and Sir Alexander Henderson's brown filly by Buscot Harold; while the two classes for colts were headed by Mr. J. A. Mullens's Lincoln and Lord Rothschild's unnamed bay colt by Birdsall Menestrel.

The Hunters were undoubtedly the feature of the show. Mr. J. A. Mullens's Everlasting headed the brood mare class, whilst Mr. J. L. Nickisson's Meteor and Ensign, Mr. Ernest Robinson's Savoy, and Mr. John Stokes's Whisky and Radiance all followed up their Newbury wins in the same section. The best of the Hackneys were Mr. Richard Evans's Gartonius and Miss Dora Schintz's Knowle Belinda, whilst in hacks Mrs. O. T. Price's Adonis, a five-year-old bay gelding by Hartstown, showed to better advantage than last year's winner, Mrs. Chapman's well-known Miss Trix, and the former therefore won the premier award. Considerable interest was taken in the driving competitions, in which the well-known harness horses of Mr. John Kerr, Mrs. Edwin Goad, Mr. W. S. Cunard, and M. Gerard Jurgens were among the leaders.

The various breed societies offered specials, and they were awarded as follows:—The Hunters' Improvement Society's gold medal for the best Hunter brood mare was won by Mr. Mark Burns Lindow, of Eversley, Hants, the silver medal for the best Hunter filly being awarded to Mr. J. L. Nickisson, of Hinton Manor, Swindon. Mr. Ernest W. Robinson (Esher) secured the champion prize of a silver cup presented by Mr. J. A. Mullens for the best hunter colt or filly foal. Mrs. Hartley Batt, of London, won the silver medal offered by the Hackney Horse Society for the best mare or gelding exhibited in single harness, and Mr. R. De Mancha (St. Albans) the silver medal offered by the same society for the best hackney or pony mare, filly, or filly foal. Mr. W. S. Cunard's silver challenge cup, value 20 guineas, for single-harness horses went to M. Gerard Jurgens, of North Cray, Kent, and the challenge cup, value 30 guineas, for the best-turned-out private pair-horse carriage to General Sir Charles Brownlow, G.C.B. Mr. R. W. Hudson, Danesfield, Marlow, won the Shire Horse Society's silver medals for the best Shire stallion and Shire mare, Sir Alex. Henderson, of Buscot Park, being awarded the champion prize of a silver cup for the best Shire colt or filly foal.

Newbury.

The seventeenth annual show of the Newbury Horse Show Society was held on Wednesday, and proved successful from all points of view, a result due to the enterprise of the society. In the first place they changed their venue, the showyard this time being on Newbury Racecourse, which made a much more accessible and convenient showyard. Secondly they increased the prize schedule, with the result that there were more entries than for several years past, the total being 208, as against 153 last year, while in the jumping classes (where the value of the prizes had been chiefly enlarged), there were twenty-six animals entered as against fourteen. The weather was fortunately fine, although somewhat chilly, and there was a very large attendance.

In the Hunter classes the brood mares were of general excellence. The best in the opinion of the judges was Sister Anne, a chestnut mare, with brown filly foal, which obtained the Hunter Improvement Society's gold medal for Mr. Nickisson. The yearling class was poor, but a misfortune befell one of the exhibitors, Messrs. Doble, of Calne, who would have been first with Gladys, being disqualified owing to the filly being lame. This enabled Mr. Nickisson to win a further success. The three-year-olds were an average lot, and in this class an accident deprived Mr. Nickisson of premier honours. His gelding Crafty met with a mishap in the horsebox while travelling to the show, and had to be taken out of the ring. This left a harness horse rather than a Hunter to secure first place, it being the best left in. In the open hack class there were some splendid animals paraded, and the awarding of the prizes was a protracted affair. Eventually first and second places were allotted to the exhibits of two ladies. Mrs. Chapman's mare, which was placed first, has only been out once before, and bids fair to vie with her other good horse, which has won many honours. Mrs. Price's gelding presented the best appearance when still, but did not move so well as the winner. The light-weight open Hunter class was notable for the appearance of the property of Mr J. H. Stokes, a beautiful brown mare, which was an easy winner, as was also the same exhibitor's noted Whisky in the heavy-weight Hunter class.

Agricultural horses did not show any increase in numbers, but quality was, if anything, better than usual. The brood mares were headed by a very weighty grey from Lockinge, and a new exhibitor, at Newbury, in the person of Lord Winterstoke, was placed second, being a lengthy mare and good for breeding purposes. The two-year-old fillies made one of the best classes in the show, the quality all

SNAPSHOTS AT THE EAST BERKS HORSE SHOW.

JUDGING THE HUNTERS. SHIRES IN THE JUDGING RING.

through being even. First place was given to the bay entered by the Hon. Louis Greville, of Woodford, Salisbury, who showed here for the first time, and took the Shire Horse Society's silver medal. The mares of three years old and upwards formed a very good class, the animal placed first being a really good weighty Shire mare, being solid and well balanced, and of the right type. She afterwards made one in the winning pair. Generally speaking, the agricultural classes were better than in recent years. The jumping and driving competitions were as popular as ever with the visitors.

North-East Somerset.

Mr. H. Martin Gibbs, who is president of the North-East Somerset Agricultural Society this year, kindly placed his beautiful grounds at Barrow Court at the disposal of the society for their show on Wednesday last. The site was an extremely picturesque one, and this fact, together with the kindness of the president in opening the gardens to the visitors, made the attraction of the place still more potent. The weather, unfortunately, was rather cold and dull, and no doubt kept away a good many would-be visitors, but the attendance was a good one, as was the show itself, for the entries in every section were quite up to the average, whilst it was generally agreed that the quality all round was better than usual.

In the cattle classes were some exceptionally good animals. There was only one entry in the class for bulls above two years, but there were a number of first class yearling bulls and calves, whilst dairy cows were so even in merit that all were commended. Sheep were numerous, and some capital ones were penned. Horses were meritorious all round, some of outstanding quality being met with among the cart horses, the two-year-olds, and the suckers. The chief awards in the classes for cart horses were secured by ladies —Mrs. Amy Davies and Mrs. Ann Thatcher—who are to be congratulated on their success in such good classes. Light horses were not particularly numerous, but included some good specimens of hacks and Hunters.

Temple Sowerby.

The fortieth annual show of the Temple Sowerby Agricultural Society, held on Thursday, was not favoured as regards the weather, but the attendance of visitors was, nevertheless, a good one. The society's area includes all North Westmorland and Mid-Cumberland, and thus there are very varied classes of farms from which to draw, as both the East and West Fells contribute stock, besides the fertile inland. The entries were fully an average, and exceeded those of last year, although some classes for dogs had been taken away. There were 70 cattle and 136 horses forward, the former comparing with 45 last year. Many of these were seen out at Penrith, and some of the winners there had no difficulty in taking honours at the smaller exhibition. The Eden Valley district has long been noted for the excellence of its dairy stock, and though the entries were not particularly numerous, that made up for this with quality, the competition being unusually keen. Not being a hunting country, horse breeding is chiefly of heavy animals, useful for farm work and town purposes, most of the seasoned horses being usually bought up at or soon after the show by dealers from Lancashire and Yorkshire towns.

Uttoxeter.

The ninth annual exhibition of the Uttoxeter Agricultural Society was held on Thursday, and proved a great success, the entries being larger than in previous years, and the quality above the average. The Shire Horse Society's silver medal for the best Shire in the show was won by Mr. J. Tunnicliffe, sen., of Bramshall, with an attractive bay mare, whilst the President's cup for the best beast in the local classes was won by Mr. R. Mynors, of Cornbridge, Rocester; and Mr. J. W. Philips's cup for Shire foals went to Mr. J. H. Thorley, of Birchwood Park, Snelstone, for a fine, upstanding colt foal, which carried off the premier prize in the open and local foal classes. Thanks to the fact that the Society's area is covered by the North Stafford and Meynell Hunts, the show of Hunters was excellent. Mr. S. Walker of Tutbury, was the winner with Alsintha, a blood animal, just the right sort for breeding purposes.

As was only to be expected in the essentially farming district of Uttoxeter, there was a grand show of dairy cows, and sheep and pigs constituted numerous and capital company. The dog and puppy show broke all previous records for quantity and quality of exhibits, and included in the latter were many notable prize-winners.

North Lonsdale.

The show of the North Lonsdale Agricultural Society, held on Tuesday in Croftlands Park, Ulverston, was one of the best of the series, for the entries (614) were the best for several years as regards both number and quality; the weather was favourable, and there was a large attendance. The range of competition with cattle, sheep, and heavy horses is restricted to that part of Lonsdale which is north of the Sands; light horses may come from all over the United Kingdom; and the radius for dogs is now limited to 25 miles. The entries in the cattle (66), sheep (57), and heavy horse (63) classes were about normal, but an entry of 153 light horses was quite a record, being 50 per cent. above recent averages. The riding and driving classes of horses were probably the best the society ever had, and the same might be said of dogs, whilst the roots and vegetables, allowance being made for the season, were first-rate.

Wensleydale.

The Wensleydale Agricultural Society were fortunate enough to have favourable weather for their sixteenth annual show, held on the 17th inst. at Leyburn, and with a good entry and large attendance the show proved a success. The entries numbered 535, including the poultry and produce classes, the total being rather above the average figure of the past half-dozen years. Cattle numbered 126, sheep 102, horses 121, pigs 6, and dogs 8. Several of the cattle classes were filled with remarkably good animals. Shorthorn cows for breeding purposes made up an entry of nearly twenty of the best beasts to be found in the district, whilst the dairy stock made a highly creditable show. In a strong section for Wensleydale sheep the names of some of the best known breeders figured among the prize-takers, but farmers not so well known also came well to the fore. Heavy horses made up an excellent collection. Lord Bolton showed the best of the brood mares, and Mr. W. R. Allison, of Constable Burton, took both first and second for two-year-old agricultural geldings. Pairs shown in plough harness attracted a good deal of attention, the chief award going to Mr. F. Wion, of Middleham, for a pair of big, weighty horses, bred by the exhibitor. Foals

SOCIETY ANNOUNCEMENTS.

WARWICKSHIRE AGRICULTURAL SOCIETY (in conjunction with the Rugby and Dunchurch Agricultural Association).

THE ANNUAL EXHIBITION will be held at RUGBY on WEDNESDAY AND THURSDAY, AUGUST 28 and 29 next.

Admission—1st Day, 2s. 6d.; 2nd Day, 1s.

JUDGING IN ALL DEPARTMENTS ON WEDNESDAY.

Special JUMPING CONTESTS each AFTERNOON, with DRIVING CLASSES on THURSDAY.

... of 2nd Vol. Batt. Royal Warwickshire Regiment, Wednesday. — Rugby Steam Shed Silver Prize Band, Thursday.

The FIELD COMPETITIONS will take place on THURSDAY, on Mr. G. C. Allan's Farm, Clifton, Rugby.

POULTRY AND BEE DRIVING DEMONSTRATIONS by Warwickshire County Council's Experts.

First-class Luncheon, 2s. 6d.; Second Class, 1s.

CHEAP RAILWAY FARES, see COMPANIES' BILL.

FREDERICK H. MOORE, Secretary.

Warwick.

ALTRINCHAM SHOW. WEDNESDAY, SEPT. 25. £1,850 IN PRIZES, besides Silver Cups and Medals, for Horses, Cattle, Sheep, Pigs, Goats, Turn-outs, Hunters, Jumpers, Roots and Grain, Butter, Cheese, Honey, Implements, Dogs, Poultry, Pigeons, Rabbits, Cats, and Cavies. Prize list may be had from the Secretary.

J. HERBERT HALL, 2, Dunham Road, Altrincham.

Entries close.—All Classes except Implements, Space and Dogs, Saturday, September 7, with double fees up to September 11; Implements and Space, August 31; Dogs, September 13.

FROME SHOW.—WEDNESDAY, SEPTEMBER 25, 1907.

Schedules of the Secretary,

T. C. HARDING, Auctioneer, Frome.

DAIRY SHOW, LONDON, OCT. 8, 9, 10 & 11.—Great Exhibition of DAIRY CATTLE, PRODUCE, APPLIANCES, &c. Entries close SEPT. 9.

Particulars of Wm. C. YOUNG, Secretary, 12, Hanover Square, London, W.

WOLSINGHAM AND WEAR VALLEY AGRICULTURAL SOCIETY'S 144TH ANNUAL SHOW will be held at Wolsingham, WEDNESDAY, SEPTEMBER 11, 1907 (on same site as Durham County Shows held in 1892 and 1906).

Cattle, Sheep, Horses, Ponies, 8 Classes Riding and Driving, Leaping, Pony Scamper, Goats, Dogs (K.C.L.), Honey, Dairy Produce, Field Produce, Open and Local Classes, Sheep-Dog Trials, Poultry, Pigeons, Rabbits, Cats, Cavies, Cage Birds (C.B.U.), &c.

Entries close August 31.

Schedules from—

T. C. HUME, Leazes Lodge, Wolsingham, Co. Durham.

SOUTHDOWN FLOCK BOOK.

NOTICE is hereby given that the Southdown Flock Book will be definitely closed to unregistered flocks on December 31 next, after which date no sheep from unregistered flocks will be accepted under any conditions whatever.

Owners who have not yet registered their flocks are earnestly requested to write for full information respecting the Southdown Sheep Society to

W. J. WICKHAM, Secretary.

12, Hanover Square, London, W.

CHILTERN HILLS AND SOUTHERN BUCKS AGRICULTURAL ASSOCIATION SHOW, at HIGH WYCOMBE, on WEDNESDAY, SEPTEMBER 11, 1907.

OPEN CLASSES for SHIRES, HACKNEYS, HUNTERS, JUMPING and DRIVING, JERSEYS, SHORTHORNS, BUTTER, and HONEY.

For Schedules and Entry Forms apply to

JOSEPH BLISS, Secretary, 20, High Street, High Wycombe.

WOODSTOCK AGRICULTURAL ASSOCIATION.

President: His Grace the Duke of Marlborough, K. C.

The Jubilee of above great Show will take place in Blenheim Park on Tuesday, Sept. 10th. 1907. Shires and Jumping. Entries close Sept. 7th. Grand Brass Band contest.

T. D. HUGHES, Sec.

KINGTON HORSE SHOW, SEPTEMBER 19, 1907.

Competition Open to the United Kingdom. £350 in PRIZES and FOUR SILVER MEDALS.

Heavy Weight Hunter—
1st Prize, £20; 2nd, £10; 3rd, £5.
Light Weight Hunter—
1st Prize, £10; 2nd, £5.

Entries close Sept. 3, or with Double Fee, Sept. 7. Prize Schedules and Entry Forms from the Secretary, T. H. VAUGHAN MORRIS, Byford House, near Hereford.

LEIGHTON BUZZARD & LINSLADE FOAL SHOW SOCIETY held on SEPTEMBER 17 (TUESDAY).

Entries close September 3. Post entries (double fees) September 10.

WALTER C. PRUDAMES. } Hon.
W. GRAVELY W. WILLIS } Secretaries.

OKEHAMPTON AND DISTRICT AGRICULTURAL ASSOCIATION.

The 17th ANNUAL EXHIBITION of Horses, Cattle, Sheep, Dairy and Garden Produce, Poultry, and Pigeons, will be held at Okehampton, on SEPTEMBER 12.

Prizes about £300.

OPEN PRIZES for HUNTERS and HACKS. JUMPING, DRIVING, SHEEP, &c.

Schedules and Entry Forms of CHAS. J. FUTCHER, Okehampton. Hon. Sec.

Entries close August 31. Separate Schedules for "General," "Poultry and Pigeons" Section Please state which required.

CLYDESDALE HORSE SOCIETY.

STUD BOOK VOL. XXX.

ENTRIES at ORDINARY FEES CLOSE on 31st inst. Forms and all information from—

ARCHD. MACNEILAGE, Secretary, 93, Hope Street, Glasgow.

HAY HORSE SHOW, FRIDAY, SEPTEMBER 20, 1907.

Entries close on September 5th; double fees, September 12th.

REECE MORRIS, Secretary, Broad Street, Hay, Hereford.

WARWICKSHIRE HUNT HORSE SHOW at KINETON, SEPTEMBER 20, 1907. Entries close September 3. — LORD WILLOUGHBY DE BROKE, Hon. Secretary, Kineton, Warwickshire.

ASHBY-DE-LA-ZOUCH AND DISTRICT AGRICULTURAL SOCIETY.—THE FOURTH ANNUAL SHOW will be held in the BATH GROUNDS, ASHBY-DE-LA-ZOUCH, on WEDNESDAY, SEPT. 4, 1907. Prizes amounting to over £340 will be offered. Open classes for HUNTERS, JUMPING, FOALS by Messrs. EVERARD'S, W. BARR'S, and H. EARP'S HORSES, and for POULTRY. ENTRIES for all CLASSES (except Jumping) CLOSE on AUGUST 28th certain. By kind permission of Col. A. C. Cantrell Hubbersty and the officers of the regiment, the full MILITARY BAND of the ROBIN HOOD RIFLES will play during the day, and in the evening a GRAND DISPLAY OF FIREWORKS will be given by Messrs. Wilder, Birmingham. Particulars from the Secretary, H. GERMAN, Market Street, Ashby-de-la-Zouch.

THAME AGRICULTURAL ASSOCIATION.—Show will be held on THURSDAY, SEPT. 12, 1907. Entries close as follows:—Dry Sheep, Class 8, March 5; Wet Sheep, Class 5, 6 and 7, April 16; Hedging, Classes 9 and 10, March 26; Servitude and Ploughing Classes, Aug. 31; Horses, Cattle, and Sheep, Roots, Honey, Poultry, Butter and Eggs, Aug. 31; Rick Building and Thatching, Sept. 16.—I. BUSH, Secretary.

made a smaller entry than usual, but the quality was as good as ever.

Rochdale.

The ninth annual show of the Rochdale Agricultural Society was held on the 17th inst., and was, both in number and quality of the entries, much the best the society has yet held. Light horses were an excellent lot, and formed the feature of the show. Four London winners were on view. Fylde Sabrenetta was first in her class. Morning Glory, which won at London and Bolton in saddle, only came second on Saturday in the mare or gelding class, though she won among brood mares; whilst Mr. Makeague's tandem team, the Yorkshire winners, was placed first among turnouts. The heavy horses comprised some good serviceable animals, foremost among them being Mr. Martland's mare, Bonny Lass, which won in both her classes. The cattle classes were well filled, and included some of the leading Lancashire and Yorkshire winners.

SHOW GOSSIP.

The seventeenth annual show of the Richmond (Surrey) Horse Show Society, Ltd., will be held on Friday and Saturday, June 19 and 20, 1908, at Richmond, Surrey.

The 1908 exhibition of the Lincolnshire Agricultural Society has been fixed to take place at Sleaford on Wednesday, Thursday, and Friday, July 15, 16, and 17.

The Gloucestershire Agricultural Society have decided to hold their 1908 show at Cirencester on May 27 and 28.

The Chiltern Hills Agricultural Association's fifty-fifth annual show takes place on Thursday next at Halton Park, under the presidency of Mr. Alfred de Rothschild, and given fine weather, should prove a most successful event, the show being a very attractive one.

The Royal Cornwall Agricultural Association have had an invitation from both Helston and St. Ives for their 1908 show, and after due consideration of the sites offered, &c., have decided to go to Helston, which town they last visited in 1839, whereas St. Ives was honoured in 1896.

His Royal Highness Prince Arthur of Connaught, K.G., has consented to accept the office of President of the Royal Counties Agricultural Society for 1908, when the annual show will be held at Southampton on June 4, 5, 6, and 8 (Whit Monday). His Royal Highness's father, the Duke of Connaught, has already held the office of President on two separate occasions, and visited the show at Maidenhead during the present year.

For the fifty-fifth show of the Mid-Somerset Agricultural Society at Shepton Mallet on Tuesday, September 3, there is a schedule which has been extended beyond previous ones, and this popular West of England fixture gives no indication of receding from its high position amongst local shows. Horse exhibitors going to neighbouring shows will find a convenient service of trains at night.

The Royal Dublin Society's annual horse and sheep show at Ball's Bridge, which opens tomorrow (Tuesday) and extends over Wednesday, Thursday, and Friday, promises to be as big a success as any of its predecessors, for it has lost none of its importance as an agricultural and also social event, and with the good entries received and attractive programme that has been drawn up, the 1907 show, given favourable weather, should maintain its reputation of being one of Ireland's chief events of the year.

The twenty-seventh annual show of the Kington Horse Show Society will take place at Kington, Herefordshire, on Thursday, September 19, and prize schedules are now ready. Over forty classes have been provided, and include agricultural horses, Hunters, and Hackneys, together with jumping and driving trials. Good class prizes are offered, while there are some specials, so that a large entry should be received by the secretary, Mr. T. H. Vaughan-Morris, Byford House, Staunton-on-Wye, Hereford. Entries close on Tuesday, September 3, or with double fees on September 7.

The show of the Gransden and District Agricultural Society will be held at Great Gransden on Tuesday, September 24, when prizes amounting to nearly £200 will be offered for competition, the classes providing for horses, cattle, sheep, roots, corn, potatoes, butter, cream cheese, eggs, allotment produce, draining and labourers in husbandry, and also driving and jumping competitions. It will thus be seen that the show will be a varied and interesting one, and good entries should be received. They must be sent not later than Tuesday, September 10. The secretary is Mr. R. J. Kisby, Great Gransden, Sandy, Beds.

The annual show of the Altrincham Agricultural Society has for some years had the reputation of the largest one-day agricultural show in England and still the entries continue to increase, so that it has become a show that beats many a county fixture. For instance, last year the record number of 5,496 entries were secured as compared with but 2,808 ten years previously, and as the prize schedule for this year's event is on similar lines to that of last year we should not be surprised if another record was set up. Every conceivable branch of agriculture and horticulture are catered for and there are considerably over 600 classes, so that the magnitude and variety of the show may be easily imagined. The total sum offered in prizes for the show, to be held on Wednesday, September 5, is £1,850, exclusive of silver cups and medals which are very numerous, so that it is not to be wondered at that the show attracts so many entries. Entries this year close as follows:—Space and dogs, September 7; with double fees up to September 11; implements and space, August 31; dogs, September 13. The Secretary is Mr. J. H. Hall, F.S.I., 2, Dunham Road, Altrincham.

After an interval of twelve years, the Warwickshire Agricultural Society once again holds their show at Rugby, the days being Wednesday and Thursday of this week. The Rugby and Dun-

SHOW SECRETARIES.

Mr. T. BACKHOUSE,
City of Liverpool and District Cowkeepers' Association.

church Agricultural Association have amalgamated with the county society for this year, the town and district have given a hearty welcome to the society, as well as providing a handsome contribution to the prize-list and an excellent site, whilst there is a capital entry, so that everything augurs well for a successful show. The entries of live stock, not including jumping horses, are 725, against 524 at Nuneaton last year and 565 at Coventry in 1905, with generally increased entries in other departments of the show.

As regards other departments of the above show, there are sixty-eight exhibitors of implements, eighty-three entries in the dairy section, and sixty-five competitors in the field competitions, which take place on the second morning of the show. There will be special jumping contests each afternoon, with driving classes on Thursday; poultry and bee demonstrations by the Warwickshire County Council's experts, and numerous other attractions. The railway companies are giving facilities for conveyance of visitors at cheap fares with excursions, and if the weather be propitious a successful meeting may be anticipated.

The secretary of the Smithfield Club informs us that a very considerable enlargement of the Minor Hall is being carried out at the Royal Agricultural Hall, Islington, which it is hoped will be completed in time for use by the club at the forthcoming show for the exhibition of implements, &c., and as this may cause a re-arrangement of stands in the other departments of the show, the implement committee have decided to postpone the issue of the form of application for space until about September 21, by which time the committee hope to be able to state definitely if the increased space will be available.

The Board of Agriculture and the Crop Prospects.

The Board of Agriculture on Friday issued their second report on the crop prospects, and they summarise them as follows:—

A spell of warm dry weather in the latter half of July had a favourable effect upon the crops, and the ungenial weather during August does not appear to have prevented some general improvement as compared with the previous report relating to mid July. The boisterous weather of the present month has knocked the crops about a good deal, and its further continuance is viewed by all the Board's crop estimators with great anxiety, particularly in upland districts, where the want of sun threatens to prevent the crops from ripening. The prospect has not been improved since the date of these reports.

All three cereals show some improvement during the month. Wheat, at the date of the reports, promised practically an average yield in Great Britain as a whole; it is most promising in the east of Scotland. Barley is not quite so good as wheat. Oats are the best of the cereals, being particularly promising in the west and south-west. Reports as to beans vary, but some localities anticipate good crops. All the corn crops have abundance of straw, and they have everywhere been more or less laid by the windy rains in August, and the harvest is in consequence likely to be tedious and troublesome. The date of the corn harvest will be generally much later than usual.

Potatoes are quite the worst crop of the year, and have further deteriorated during the month, owing to the widespread appearance of disease. The crop in Scotland appears to be healthier than in England, but the yield will be poor in both cases.

Roots have improved considerably during the month; they are better in England than in Scotland. Reports of the difficulty of cleaning the root land are numerous, but there has been comparatively little turnip-fly or finger-and-toe.

Hay, as regards bulk, is the crop of the year, but the quality is generally very poor. That which was secured during the ten days' hot spell of July is nearly all in good condition, the south-west being particularly fortunate in this respect. Reports as to quality from Scotland are mostly better than in England, but the quantity there is not so satisfactory. Much hay is still out and uncut, which is deteriorating through wet.

Apples and pears are everywhere a short crop; plums are very abundant in England; and bush fruits have generally done well.

Reports from the hop counties are variable, and the prospects seem somewhat uncertain. On the whole the south-eastern districts appear to promise little short of an average yield, and the outlook in the western districts is favourable.

The supply of labour seems, with a few exceptions, to be sufficient or plentiful.

Summarising the reports, and representing the prospect of an average yield in each case by 100, the appearance of the crops in mid-August may be represented, for Great Britain as a whole, by the following percentages:—Wheat, 100; barley, 99; oats, 103; potatoes, 96; roots, 103; hay, 107.

Lincolnshire Curly Coated Pig Breeders' Association.

A council meeting of the above association was held at Boston on Wednesday, when letters were read, acknowledging with thanks the receipt of Herd Book, Vol. I., from the Department of Agriculture, Richmond, New South Wales, Perth, Western Australia, and Adelaide, South Australia.

The report of the auction sale committee was read and confirmed. Mr. Arthur Saul reported the difficulty that had arisen with regard to the Swine Fever Order which came into operation on August 14, 1907. It was decided to hold the sale outside the infected area in Mr. Richardson's paddock, Skirbeck, Boston, at 11 a.m., on Wednesday, the 28th inst. The council approved of Mr. Saul's action in not entering pigs for the sale from the infected division of Holland.

The report of the prize committee was read and confirmed, also the correspondence with Mr. McRow, secretary of the Royal Agricultural Society, and Mr. W. Frankish, secretary of the Lincolnshire Agricultural Society. The list of judges for the Royal and Lincolnshire Shows, 1908, were prepared. The following were elected members of the Association:—Messrs. E. and T. P. Key, South Kyme, Lincoln; J. P. L. Hodgson, Wainfleet; H. Dudding, Riby Grove, Great Grimsby; Wm. Thompson, Alvingham, Louth; H. Munks, South Kyme, Lincoln; F. S. Bett, Hall Weir, Kirton, Boston; R. Horsewood, Benington Hall, Boston; A. Goodrich, Stickney, Boston; and Mr. Edmund Royds, of Caythorpe, the prospective Unionist candidate for the Sleaford Division. Mr. Royds has been interested for some time in the Kerry breed of cattle. We understand he will establish a herd of the Lincolnshire breed of pigs, and that he will use the same prefix, "Caythorpe," as used by him for his Kerry cattle.

Nottinghamshire Notes.

BEFORE these lines appear in print one of our most popular landowners in the county will have celebrated his sixty-third birthday. I refer to Lord Middleton, who is one of England's most prominent live-stock breeders at the present time. In this part of England we take more than a passing interest in his successes in the show-yard, for within three miles of Nottingham market-place is situate Wollaton Hall, one of his lordship's seats, where until a few days ago he was in residence.

LORD MIDDLETON owns estates not only near Nottingham, but also at Birdsall, Yorkshire, Middleton in Warwickshire, and Applecross in Ross-shire, it being computed that they cover nearly 100,000 acres. It is at Birdsall, near Malton, in Yorkshire, that Lord Middleton chiefly resides, and it is there that he has his noted stud of Shires, at the head of which must certainly be placed Menestrel, the sire of this year's London champion. He also keeps a stud of Thoroughbreds at Birdsall, for the noble lord is a keen rider to hounds, and his mounts are usually of the best. There is in addition a fine herd of Berkshire pigs, and also Shorthorn cattle.

ON the occasion of Earl Manvers' sale of Shorthorns at Holme Pierrepont, near Nottingham, Lord Middleton took a great interest in the animals, and spoke eulogistically of the efforts put forth by Earl Manvers in endeavouring to improve the breed. I might add that Lord Middleton is president of the Leicester Sheep Breeders' Association, and keeps a flock of this breed at Birdsall. He is also master of the Middleton Hounds, was a member of the Royal Commission on Horse Breeding, and is a past President of the Royal Agricultural Society—he held the office in 1905. I am sure that all readers of the MARK LANE EXPRESS will join with me in wishing his lordship many happy returns of the day. He was born on August 24, 1844, and is thus sixty-three years of age.

REAPERS are now busy on all sides, though they are not running very well, the ground being so soft from the recent rains allowing the wheels to sink in to such an extent that extra horseflesh is required to work them. The majority of the self-binders, where they are able to work, demand three good horses to draw them, against two necessary last year.

OATS are cutting up well, the number of stooks being enormous. During the week I have examined about twenty crops of barley in different parts of the county, and I must say I have been very much surprised at the number of the heads that have not set, and the deaf corns to be found in them. This surely will make a great difference in the yield. Not a single piece of wheat has so far been cut in this locality, though I believe one or two fields will be ready near Newark on or about the 30th inst.

THERE is a general outcry among potato growers as to the tubers already showing signs of disease, which is noticeable more particularly among the later varieties on the heavy soils. If the weather would change, turning warmer and with more sun, the crop might possibly be saved, otherwise I am afraid it is a poor outlook for the coming winter.

AS I predicted in these columns a few weeks back, there is a glut of plums, and to-day in Nottingham market I noticed several people retailing them out at 4 lb. for 2½d. Surely they can hardly pay for pulling and cartage at that price. Apples, too, are cheap, plenty being available at 1s. per stone.

FOREIGN horse buyers are constantly in this district, and Messrs. James Forshaw and Sons have just sold a fine three-year-old stallion named Thomas by Stroxton Tom, the animal that won the gold cup in London two successive years. The same breeders have disposed of the excellent three-year-old filly Prospect Gloaming by Nailstone Cœur de Lion, She has only been seen out on three occasions—London, where she was highly commended; Newark, second; and Notts County Show, first. Both animals have gone to America.

AT Newark market to-day a farmer from Flintham had the good fortune to sell a sample of wheat for 36s. per qr. He had 43 qr., and was offered 29s. 6d. for it a few weeks back, so that for once in a while it has paid him to hold the corn back.

THOUGH the Duke of Portland does not approve of the Government's Small Holdings Bill he has at the present a number of such holdings on his Notts estates. At Hucknall Torkard, I am told, there are one or two tenants on the Duke's estate who occupy about 30 acres of land, good buildings and capital houses, and yet pay less than £30 a year rent! Needless to say it is very seldom one of these farms are to let.

PREVIOUS reference has been made by me of the great height of some of the corn crops in the county this year. A Nottingham gentleman has this week been spending a few days in the country, and returned with several specimens of oats 6ft. 9in. long in the straw, and some barley actually 6ft. 6in.; while rye eclipsed all and was exactly 7ft. in length. R. K.

August 22, 1907.

Lincolnshire Notes.

HARVEST has really begun, but it is much too soon to make calculations. There is no doubt that in many places the crops are storm-broken, and in some are mildewed. For many years wheat has not been known to ripen so slowly, whilst in some places the straw is so badly laid that it might have been rolled.

THE *Tribune's* forecast promises us a harvest well above the average; but all calculations must still be a matter of the purest conjecture. We do hear of a few samples of winter oats and barley which have thrashed out only moderately well. Of one thing, however, we may be very certain. It is going to be an expensive ingathering. The storms, together with scarcity of labour, have thoroughly well assured that event.

THE late Mr. Alfred Faulding Tomlinson, of Rauceby, who died at the ripe old age of seventy-seven, was an agriculturist on a large scale, one of the best known in the district. He lived an active life, and was never too old for a ride with the Belvoir or Blankney hunts, and up to the last he was a fine cross-country rider.

LINCOLNSHIRE sheep have made another record. Mr. Robert Fisher, J.P., of Leaconfield, near Beverley, disposed of a number of rams on Wednesday. Ninety shearlings produced £2,414, which is an average of £28 3s. 3d., and a record for Leaconfield; 155 guineas was the highest price, which was paid by Mr. R. Richardson, of Arnold Grange, for a fine ram descended from Mr. Dudding's famous flock.

THERE are some interesting figures in the agricultural statistics issued by the Board of Agriculture, and giving the prices per imperial quarter of quantities of British corn returned as sold in various markets in England during 1906. Relating to Lincolnshire are the following:—

Average Prices, 1906.

Market.	Wheat.	Barley.	Oats.
	s. d.	s. d.	s. d.
Spalding	27 2	23 0	17 7
Stamford	27 1	25 4	18 0
Grantham	27 6	24 3	17 9
Sleaford	27 2	23 10	17 7
Boston	27 7	23 2	17 4
Louth	27 4	23 5	17 8
Lincoln	27 8	24 1	17 9
Gainsborough	27 11	23 5	17 10
Brigg	27 7	23 9	17 3
Wisbech	27 4	22 11	17 6

Quantities Returned.

	Wheat.	Barley.	Oats.
	Qrs.	Qrs.	Qrs.
Spalding	44,108	16,257	40,181
Stamford	10,558	22,394	1,939
Grantham	19,113	63,305	3,409
Sleaford	25,712	44,693	15,071
Boston	63,731	25,794	20,268
Louth	16,229	40,039	6,839
Lincoln	88,361	225,174	31,365
Gainsborough	15,950	11,230	3,450
Brigg	14,538	70,949	5,271
Wisbech	27,633	13,536	33,271

THERE is another danger of the unpropitious season which has yet to be faced. A South Lincolnshire farmer writes to a local journal:—"There will be more hay and seed stacks burnt this season than for many years back. Farmers were so anxious to get their hay and clover into the stack that they led it before it was ready, and smoke can be seen coming from some of the stacks like that from a house chimney. Wait till a bit later on and you'll see there'll be dozens of hay-stacks burned down." It need only be added that insurance companies do not pay on fires from overheating.

THE next sale of the Lincolnshire Curly Coated Pig Breeders' Association will be held on Wednesday next. Owing to the operation of the Swine Fever Order, the sale will be held outside the infected area in Mr. Richardson's paddock at Skirbeck, Boston.

Northern Notes.

IN a recent issue mention was made of the wretched conditions in which a poor agricultural labourer and his large family lived at a place called Wetwang, in Yorkshire. The cottage was in a street called Teapot Row. Lest any of your readers should have come to the conclusion that this cottage was owned by any of the great landlords of the North, I may say that the cottage belongs to a non-resident small copyholder, and that it has been vacated since the rural council served notice upon the tenants. They have removed to two cottages, a councillor tells me, "worse than the former," only that the overcrowding conditions do not prevail.

IT is astonishing that in the villages of Yorkshire there are so many small properties, cottages, and shops that are owned privately, while at the same time the whole village practically is included in some great estate. This sort of property is frequently allowed to fall into wretched repair for lack of paint and pointing and renewal of roof, and many a cottage could be bought in the villages for £50 or much less. Some are unsaleable. It is this sort of property that brings discredit upon villages and affords examples to agitators as to "how the poor live."

THE landowners are taunted for their alleged thoughtlessness, whereas they are in no way to blame for the wretched state of the hovels in which some labourers and their families are housed. The origin of these private ownerships in villages is interesting when traced. It is more than probable that quite a large number of them have been acquired by tenants living rent free for many years, through the clemency of the landed proprietor, who has claimed no quit-rent.

ONE can recall several instances of such-like cases in one's own time. A labourer I know occupies a triangular piece of land comprising grass and a good orchard, at the entrance to an agricultural town. A cottage stands upon it, and the whole is fenced with a quick-wood hedge. This has come to his hands without money and without price. Readers of this journal may possibly know other like cases.

THE Yorkshire Council for Agricultural Education are offering county major scholarships of the estimated value of £60 to £65 per annum, for agricultural study at the Leeds University, or other institution approved by the council, giving suitable higher courses of instruction. Special exhibitions are also offered to enable farmers' sons to take a winter course at the University of Leeds and the Manor House Farm, Garforth. These exhibitions provide free education at the 'Varsity and the farm, and, in addition, a contribution of 15s. per week towards the maintenance of the student. These offers are greatly to be commended to young men desirous of laying a foundation of knowledge that will at any rate make the pursuit of agriculture to them a business of more absorbing interest. There ought to be a great scramble for such privileges.

A PERSON in the agricultural world with practical as well as scientific knowledge at his fingers' end, has a much better chance in this competitive age to secure a good appointment than the man merely with technical knowledge. The motto of the Royal Agricultural Society of England—"Practice with Science"—is one that every young farmer should bear in mind. We would not say that practice without a knowledge of science has not proved a road to success. It has, indeed. For instance, we recently, quite casually, met a person farming a good-sized holding who can neither read nor write, and he has been so enriched by his own industry, and as a result of his dogged perseverance, as to be able to place several sons on farms of considerable acreage. Such men are exceptional; what might they not have accomplished if they had possessed a scientific knowledge of the principles of agriculture?

ARE the young farmers of the present day as self-reliant as were their forbears? It is to be feared they are not. Many have their path already cut out for them, and have therefore no necessity for "putting their shoulders to the wheel" as some have; and life by such is regarded as one huge holiday.

AN ex-High Sheriff recently uttered some very correct words of nicely-veiled sarcasm. He said, "The peculiarity of the modern grammar school seems to me to be that it is essentially a ladder, or stepping-stone by which a boy is enabled to leave the sphere in which he is born, and enter a totally different sphere for his life's work." This is what many people have been thinking. The boys of elementary and secondary schools are

acquiring "accomplishments" which in no sense fit them for an agricultural calling.

"YORKSHIRE hams and bacon cured on the premises." Such notices as these are rare in provision shop windows. The curing of bacon is, in fact, becoming an almost lost and unknown art. In Cumberland, which has long had a reputation for its bacon, pig breeding and pig rearing seem to be going out of fashion. Empty pigstyes on the farmsteads are all too common. The falling off in the number of pigs kept is nearly 40 per cent. Returns issued by the Board of Agriculture and Fisheries show that in 1887 there were 26,029 pigs in the county. Ten years later the number was 20,513, and two years it was further reduced to 16,364. Last year the low-water mark of 15,623 was reached.

THE falling off is hard to be understood, for with pork up to 7s. 9d. per stone last winter, and at present reaching 7s., and prime Cumberland bacon making 10s. a stone wholesale, pig-rearing should undoubtedly be remunerative. Any amount of hams could be disposed of at about 1s. per lb. London butchers will pay this price.

THERE is a great variety of opinion northwards as to the crop results, and every farmer has a different story. Three or four days this week the temperature has imparted a "back-end" sort of feeling; and it is weather quite the reverse of what is wanted. We are all agreed that ours is the best climate in the world; but how much better would it be if we could have a 10-degree higher temperature and an hour's more sunshine every day! That would be the acme of perfection. There is a tremendous length and weight of straw this year—barley and oats being abnormally high. Oats, we think, will be the leading crop for yield, as this cereal has corned well, and hangs very heavily. Wheat revels in sunshine; and in its absence it is feared the ears have not filled. A poor yield is spoken of generally; and as to barley, the malting samples will not be up to a high standard. Roots are making progress; mangolds are promising.

August 23, 1907.

The harvest prospects in Scotland, published by the *Dundee Courier* on Tuesdays, indicate that the cutting of crops cannot be undertaken before the middle of September, and in many cases well into October, owing to the wet weather in the spring and recent meteorological conditions. A good hay crop has been secured, but turnips are irregular and not bulbing well. Potatoes are deficient. Wheat is a good average, but barley is much laid, and along with other cereals will be difficult to harverst Pastures are in fair condition. Farmers state that harvesting generally will be tedious and expensive.

After having personally examined the farms of the flockmasters who claimed compensation from the War Office for depreciation in the value of their sheep consequent upon last year's military manœuvres, the arbitrator, Mr. George Langridge, of Tunbridge Wells, has awarded the following amounts:—Mr. J. Hodson, Kingston, £40 17s.; Mr. F. Baker, Piddinghoe, £40; Mr. E. J. Gorringe, J.P., Sleaford, £21 5s.; Mr. R. R. Verrall, Falmer, £45; Mr. J. Stacey, sen., Firle, £60 11s.; Mr. H. Stacey, Firle, £75 17s.; Mr. J. M. Moubray, Iford, £13 15s.; Mr. J. C. Robinson, Iford, £40 5s.; and Mr. J. Stacey, jun., Northease, £59 15s. All claimed 1s. per head, except Mr. Verrall, who claimed 2s. on his ewes and 1s. on the lambs. The awards are considered highly satisfactory.

CORN FLIES.

(*Concluded from p. 55.*)

The sowing of winter wheat should be delayed till the end of October, or even November, when the autumn swarm of flies will be dead.

Screenings from the mill should be either burnt or boiled. It is risky to give them uncooked to stock, or merely tread it in cattle courts.

Where attacks are feared, grow plants having stout stems, when the prevention of elbowing and consequent malnutrition of the ear may not occur.

In mild attacks artificials will stimulate the corn sufficiently to grow away from too bad an effect.

A couple of Gout Flies magnified. Common grasses, wheat, barley, oats, rye, &c, are attacked by these flies just prior to the escape of the spike from its sheath, when the ear is greatly injured. The actual size of the flies is 1-6th inch to 1-8th inch.

Farmers who would like to add to their knowledge of insect life might profitably collect as many of the "flax seeds" as possible, keep them in glass-topped boxes, and await results. Parasitic flies, sharp moving and fragile, with brilliantly coloured wings, will frequently hatch from the chrysalises instead of the true specimens, having entirely consumed their host. These are friends, and in America, where they are especially bred for service, it is computed that quite nine-tenths of the Hessian flies are destroyed by these parasites, to the ultimate good of the farmer through the prevention of further egg laying.

The flies which attack the flowers of wheat in June and July — midges they are called—are very similar in structure to the Hessian fly, though only half its length and lemon-yellow in colour. Their life forms and changes also are similar. After injuring the grain to varying degrees during three weeks, the maggots enter the soil to hibernate until the following spring. Similar remedies to that suggested on behalf of the Hessian fly should be adopted. Either burn or bury deeply chaff and screenings.

Immense harm is often occasioned to wheat and barley on account of gout-flies, of which there are more than one kind, though the attacks are mostly confined to a species called Chlorops teneopus. But "what's in a name" in these important matters? Let farmers learn about their minute enemies and not worry about what we like to christen them. These flies range in length from one-sixth to one-eighth of an inch, are yellowish in colour and prettily striped. The forms and wing-veining of all are fairly approximate to each other. The Board of Agriculture described the eyes as green, while the experienced agricultural entomologist, Mr. William Somerville, says they are black. I could cite other descriptive differences. Thus variations exist; and I have found many with red eyes mostly attacking grasses, but capable of transferring themselves to cultivated cereals if their supplies of food become limited. They are by no means active, and I have frequently picked them up easily with the fingers.

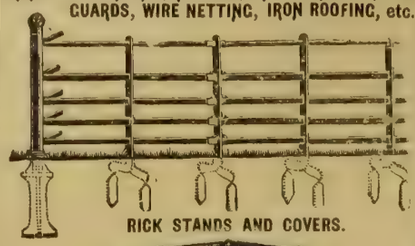
These insects lay tiny greenish-white eggs some time during May, on the blades that enwrap the young ears, and these eggs give rise to white maggots, which later on turn yellowish, about one-fifth of an inch in length when full grown. There is usually only one maggot to a stem, and this bites its way down to the first or topmost joint, making meantime a well-defined burrow or groove from 2 in. to 4 in. long, at the bottom of which the maggot becomes a pupa, or chrysalis. The ear is severely mauled at its base, and the nourishment being hindered from rising to co-operate with the atmosphere, it is often entirely prevented from emerging from the sheath. In any case severe injury is inflicted, as is evidenced by the grotesque shape and comparatively enormous size to which the ear-enclosed portion swells, earning the description of gouty. In very fair weather the ears may succeed in getting out to the sunlight, but this gives very little satisfaction and cannot be depended on.

Farmers should bear in mind that badly-drained portions of a field, especially alongside ditches and streams, afford the most relished area for the flies. This fact suggests its own remedy.

The pupa, or chrysalis, which is of the usual brown tint and rather flat, is evolved from the maggot within the injured portions, and changes after two weeks' duration into the fly, generally in July or August, when they sometimes hibernate. There may be two broods in a year; indeed, when it is thought that the flies are hibernating it is quite possible that they are increasing their families on various grasses or on winter barley. There is insufficient system in entomology for the full truth to be obtained.

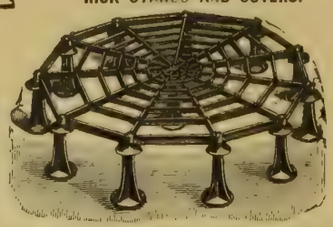
This is a case where, if the flies have given evidence of their presence, early spring sowing is advisable in order that the grain may be maturing before the flies are active. It seems a strange fact that if once the spikes are completely clear of their sheaths they are rendered of no use to the flies. Just the reason for this would take too long to explain.

Stimulate growth with abundance of the useful nitrate of soda or sulphate of ammonia, the former chiefly if the season is very wet, because then the latter would be washed out of the soil.



With regard to winter wheat, this should be delayed in sowing so that the second brood, if any, may be deprived of their opportunity, or else content themselves with utilising grasses. Mention of this frustration should remind readers that land ought preferably to be kept clear of such harbouring growths as couch grass and anything of the kind likely to be favoured, because although the flies might be induced to use them instead of wheat, &c., they would entirely die out if no food were securable, whereas wild grasses would only allow them to increase in preparation for some following season.

These insects, also, are subject to the attacks of useful parasites, breeding of which would help to exterminate them. They can be found by keeping the chrysalises as already suggested with the other pest. Regarding these useful parasites, I have bred from chrysalises of various gout flies several of the species pictured in the position of egg-laying, belonging to the Chalcididæ. These creatures have a body length of only 1-20th in., and are therefore scarcely visible, yet magnification discloses four hairy, veinless wings, jointed feelers (for discovering in some mysterious way whether a chrysalis is already occupied), and other well-formed organs. The chrysalis of a gout-fly, though itself quite small (about one fifth of an inch long), is nevertheless a gigantic object compared with one of these fairy parasites. One is in the act of laying an egg inside a chrysalis in the illustration. The maggot hatched therefrom feeds upon the substance of its host while the latter is alive—occasionally the gout-fly maggot is attacked—and prevents it reaching the maturity of flyhood. It should be remembered that this species is only one of many which live exclusively in this beneficial manner. J. SCOTT.



One of the smallest Parasitic Flies in existence (1-20th of an inch long), laying its eggs within the chrysalis of one of the Gout Flies, on which it feeds. The chrysalis, though itself small (1-5th inch long), is a gigantic storehouse of food for the fly's maggot. One of the Parasite's antennæ is shown magnified to a greater extent in the inset.

HILL & SMITH, BRIERLEY HILL IRONWORKS, STAFFS.
MANUFACTURERS OF
IRON & WIRE FENCING, HURDLES, GATES, RAILINGS, TREE GUARDS, WIRE NETTING, IRON ROOFING, etc.

ALL SCOTCH.

By this we mean that this BOOT is made in SCOTLAND on a SCOTCH LAST, and is of a special SCOTCH Tanned Leather.

14/6

Per Pair, Carriage paid.

Being thoroughly waterproof, it is admirably suited for THE FARMER. It is a Stitched Boot with outside counter, best hammered tackets, sole and inside waterproofed, and is made with that care necessary to ensure comfort and durability.
For work or pleasure we can recommend this Boot, and remember our experience of Farming Footwear extends over seventy years.
Send us a Postal Order for 14/6, stating size wanted, and by return of post you will receive a pair of our "ALL SCOTCH" Farmer's Boots.

E. BROWN & SON,
Farming Footwear Specialists,
313, ARGYLE STREET, GLASGOW.

West Country Notes.

MANY a time I have heard of and seen people racing from a swarm of bees, and the honours of the champion sprinter might have been in danger had a starter, time-keeper, and surveyor been at hand at the moment. My experiences have been added to by seeing a race for a swarm of bees at a country *fête*. A Victoria Cross race on donkeys with dummy policemen which followed was significant of Irish affairs. Who shall say that the country side is lacking in wit and humour?

THEY certainly cannot assert that country men are devoid of brain, for a lad starting from a village school on the borders of Somerset and Dorset a few years ago has climbed the scholastic ladder at such a rate that whilst scarcely out of his teens he has gained the title, with honours, of Doctor of Philosophy. The villages of Sparkford, Podymore, and Chedzoy can each claim a little interest in Dr. John Read, who won a scholarship from Sparkford elementary school, proceeded to Sexey's School, Bruton, then to Finsbury, and with a L.C.C. scholarship to Zurich.

HIS old secondary school tops the distinctions lists of the recent Oxford examinations in botany, both senior and junior, as well as in three other subjects. The West is not going to be left behind; and good old Blundell's is at the head of all in this examination.

A THING that is little understood by the townsmen is country manners. I was therefore delighted to read a little appreciation of the charming way in which strangers are received amongst the rural dwellers of the West. A writer in "Books of To-Day" says:—

"BY far the worst type of manners to be found anywhere is that displayed by a Scotch railway porter, and by far the finest courtesy in England is found in Western Somerset. The more countryfied the neighbourhood the better the manners. In Western Somerset there are no large towns, and therefore the stranger is welcomed with a courtesy and urbanity which would do credit to an ambassador."

WHEN the town dweller ventures into a country lane, and is greeted by a perspiring drover with a hasty "Hi! turn thic bullock, 'ool ye, mister," he is too often guilty of drawing himself up in disgust, and allowing the animal to go by him. He brings out from the man a volley of what cannot be regarded as a blessing, and goes on his way with an air of offended dignity.

HOW different when the request is complied with, as it would be by squire or peasant who live in the country. Then notice the pleasant "Thank ye, kindly, measter," the lifting of the hand or flourish of the cudgel in salute; probably, still the old-fashioned pulling of the forelock if the drover be an aged man. "He be a praper gen'lman, he be," is the private comment of the man, who never forgets a little service of the sort once rendered, and the doer of the kindness is remembered if met again for years to come.

THERE is a world of meaning to the initiated in the simple change of pronunciation from "mister" to "measter." There is a story of gratitude and respect; and also, be it noted, of good qualities from those in authority which has secured through generations the honour to the "measter," and the ready obedience to him, which the "mister" could never acquire.

IT is charming to those who know the West Country to feel that no matter whether he be known or a stranger he can be sure of kindly response to any request for aid, whether he go to cottage or farm. A request of a respectable wayfarer for a cup of tea is a thing which the country housewife considers as an honour conferred upon her. The homely attempts at conversation, which take the form of a question, "Where do you come from, then?" is not to be resented. It is not mere curiosity which prompts it. It is a desire to secure some sort of an introduction such as a common knowledge of places or people will give.

IF by any chance such a common ground can be hit upon, the warm-hearted earnestness of the host or hostess is a thing to be remembered with pleasure.

A WEEK or two ago I was passing an isolated group of cottages, and witnessed one of the little kindly acts which give grace to the Westerners. A motor car had broken down, and the gentlemen of the party were underneath trying to find the cause. Three ladies had to make the best they could of a grass-grown heap of soil by the roadside for a time. Their plight was witnessed from the cottages with an offer of shelter from the discomfort of their position, and from a threatened storm. The decline could scarcely be called graceful, but it did not chill the cottagers. Seats and shelter were fetched out, and with such good will manifested that it could not be refused. The motoring party spoiled the position by a tender of recompense, which I was delighted to see declined with decision, but with a courtesy that must surely have struck the motoring ladies with some amount of shame at the contrast with their own manners.

THERE has not been much of business in this week's notes so far, but the incidents with which I started out have led me on to say more than I had intended on the good qualities of my fellow dwellers in the country.

THE unusual (for the season) cry of "rain wanted" reached me from the lower portion of Dorset this week. Most parts of the West would be glad to effect an exchange on most advantageous terms to the thirsty souls who cry out for rain. The hay is almost as bad as the bedding of an animal in the morning; corn of all sorts laid and tangled by the storms; acres of grass on most farms waiting for the mowing machine; the pooks spread, to be hurriedly snatched together again before any drying has been effected, and the elevator rusting away where it has been set up. "Nearly as bad as 1879," says a walking almanack. He is about right, I should think.

"WHY is it that the number of cattle in the West has fallen off to so great an extent this year?" This is the conundrum which I was asked to solve the other day, and it was done seriously by a person I never suspected of interest in statistics. A little consideration located the real inquirer in an excise officer, preparing the annual returns of statistics for the Board of Agriculture. When I suggested that it was in milkers chiefly, this was agreed to, and then I bethought me of the harassing of the milk producer by the agitation in the London press, and the regulations which are being forced on local authorities in the country by the Local Government Board in consequence. Is the milk supply drying up at the source, as the first step to "purity"?

The Harvest in the South.

Harvest reports from farmers throughout the county of Sussex, which appeared in the *Sussex Daily News* on Friday, show that the effects of the dull sunless summer have been felt in all quarters, with the result that the harvest operations will be protracted long beyond the usual period. In some localities which have been more favoured than others, cutting of winter oats commenced early in the month, but in others so backward are the crops that a start has not been made even now.

More sun is badly needed for everything, and there has been too much wind for the binders to work well, while both hay and corn harvests have been greatly interfered with by the unsettled weather conditions. Wet, indeed, has been frequent, though the total rainfall has not been very exceptional. A good deal of the corn was laid by rain and wind, making hand labour necessary to supplement the machine reaper, but there has been no difficulty in securing labour.

As to results, they vary even in adjoining parishes; in some quarters the quality of the grain is said to be very good, while in others it is the reverse. The estimated yield per acre also varies considerably. Oats, however, are a good crop everywhere, as is always the case after a showery summer.

The effects of the wet season are seen in the unusually heavy straw crop. Some of the oat straw in West Sussex is reported to be 7ft. high. Rust has been noticed in the wheat on some farms, and a good deal of blight is reported from West Sussex generally.

The root crop should be good, but further wet may produce potato disease, traces of which have been noticed in some low-lying districts.

Whitchurch Cheese Fair.

This fair took place on Wednesday, when 84 tons were pitched, and the inquiry for best lots was keen, but a slight fall has to be recorded for medium and lower grades. Prices: 57s. to 61s. per cwt. for higher grades, 52s. to 56s. for mediums, and lowest qualities down to 48s. At the corresponding fair last year the pitch was 67 tons, and best lots made up to 66s. per cwt.

A man named George Jones, in the employ of Mr. Frank Lloyd, the well-known auctioneer, while going through the meadows at the Plassey, near Wrexham on Tuesday, was attacked by a bull, and although Mr. Victor Lloyd gallantly came to his rescue and attempted to drive the ferocious animal away, Jones was so terribly gored that he died as he was being conveyed to Wrexham Infirmary.

CORRESPONDENCE.

Saving Duke of York Potatoes for Seed.

SIR,—I should be glad if you will give me an answer to the following:—Two years ago I bought a quantity of Duke of York potatoes. They have turned out most satisfactory, and this year I have a splendid lot of potatoes. Would it be a risk to try them one more year, having such a nice lot of the seed, or would you advise a change?

A FIFTEEN YEARS' SUBSCRIBER.

*** Doubtless you read the reply given to a correspondent a few weeks ago respecting the "leaf curl" disease in potatoes, and if this trouble did not exist you would be quite right in growing the Duke of York potatoes again from your own seed. Even in spite of the prevalence of the "leaf curl" disease, it is possible that you might save your own seed, get a good crop next season, and have none of the above trouble, but by following the course you suggest you would be taking considerable risk. I have seen so many failures through the "leaf curl" disease amongst crops grown from home-saved seed, that I have come to the conclusion that the risk is hardly worth taking amongst early varieties like the Duke of York, and it is better to plant fresh Scotch seed every season. Just to give you an instance: In 1906 I obtained seed of an early potato from Scotland that strongly resembles the Duke of York. I obtained a heavy crop, and like yourself, I saved a nice lot of seed. For the purpose of experiment I planted some of the seed in the spring of this year, and the crop was a hopeless failure through "leaf curl," while the same variety fresh from Scotland cropped splendidly. Other varieties from home saved seed have done well, so it does not necessarily follow that if you planted your own seed next year you would not get a good crop, though in my experience Duke of York is a potato that is very liable to "leaf curl" disease. Apart from the possibilities of "leaf curl" it has been proved over and over again that potato crops are increased by radical changes of seed, though how long a potato may be grown profitably from the home saved seed is largely a matter of local conditions. Considering the way your potatoes have cropped this year I have no doubt that seed saved from them would give you a good return next season, but for the possibility of the disease I have referred to. This, however, is where the danger comes in, and in view of it my advice is to have a change next season and plant Scotch seed. Of course, if you care to experiment you might save some of your own seed and try it, but it would be risky to plant a large area with it.—RUSTICUS.

Barley Grass on Meadow Land.

SIR,—Being a constant reader of your paper, I write to know whether you can tell me why it is that squirrel tail or barley grass grows so freely under trees on meadow land, where sheep invariably lie for shade during the hot weather? Can you tell me what barley grass is a sign of (whether poverty of soil or otherwise), and how to eradicate it? I have a good deal of marsh land, and some of the land will grow nothing else.—Yours, &c., E. B. G.

*** There are two kinds of barley grass or squirrel tail; one (*Hordeum pratense*) which has the appearance of a small plant of the cereal barley, and the other is the wall barley grass or way bent (*Hordeum murinum*). The former is generally found growing in meadows and pastures, but not often to the extent as is apparent in your case, and the favourite habitat of the latter is on gravelly roadsides. The presence of a large quantity of barley grasses is an indication, not necessarily that the land is poor, but rather that it is starved, just as the growth of rushes and hair grass prove the need of drainage. The meadow barley grass is not a desirable plant, as its long rough awns are unpleasant, and in some cases they are said to have proved injurious to grazing animals. The fact that the grass grows more freely under the trees where the sheep lie may possibly be due to the moist and shady conditions, but in a case so bad I expect you will find eradication to be a slow and difficult process. One step in the direction desired would be to prevent increase from seeds by cutting the stalks before the seeds are ripe, and another course is to encourage the growth of more useful herbage by the aid of suitable fertilisers, remembering that whatever encourages the growth of desirable grass is detrimental to the increase of rough herbage. You do not say whether the land has been neglected in the way of manure, but the folding of sheep thickly on the field would tend to improve matters, particularly if the animals are fed with corn or cake. I do not know whether the land is of the character that responds to slag, but if so a liberal dressing of this fertiliser would tend to encourage the growth of clovers and other herbage that would probably gain ascendancy over the barley grass. In the use of artificial fertilisers one has to be guided by the nature of the soil, but so far as can be judged from the description you give the land needs feeding and getting into better heart in order to lessen the growth of the barley grass.—RUSTICUS.

Harvest Thanksgiving Collections.

SIR,—It is now twenty years since I, through the courtesy of the Press, made my first appeal to the public on behalf of the Royal Agricultural Benevolent Institution; and once more I beg your kind services to enable me to bring the claims of this great charity before your readers.

I must be forgiven if I repeat arguments I may have employed in former years; the circumstances of the institution vary little; its work is always conducted on the same lines, and the reasons for soliciting support from a generous public change only in that this support becomes annually more urgently necessary as the scope of the institution's labour becomes wider.

As your readers are aware, the Royal Agricultural Benevolent Institution provides pensions for destitute farmers, their wives, widows, and unmarried daughters. At the present time 1,152 pensioners are maintained at an annual cost of £24,368. All these pensioners are advanced in years, all are absolutely dependent upon the funds of the institution; many are decrepit, and not a few are physically helpless. Of the total number 598 are from seventy to eighty years of age and 373 are from eighty to ninety-six years of age. It is the object of the institution to rescue from want in the evening of their days those who, having depended upon the land for a livelihood, find themselves destitute through no fault of their own.

One result of the great industrial changes which have come about in our country during the last half century, is the transfer of wealth as well as population from the rural districts to the towns, and it is difficult to bring to those able and willing to help full knowledge of the depths of poverty in which the aged poor drag out their lives in agricultural England. Such poverty is increasing under the altered conditions of the farming industry; year by year it becomes harder for the agriculturist to gain a livelihood, and each year sees hundreds of men and women who have struggled bravely throughout a lifetime brought face to face with the destitution that awaits them in old age.

The harvest prospects of the present season are not hopeful, and many of those who have hitherto managed to keep their heads above water will be at a loss to make ends meet through the failure of crops. Needless to say, the consequences of the wet summer will bear most hardly upon the old, who, largely dependent upon their own labour, live continually on the borders of want.

The institution has the warm support of His Majesty the King, and the Archbishop of Canterbury last year wrote: "I have long been a warm advocate of the claims which the Royal Agricultural Benevolent Institution has upon the sympathy and support of all interested in rural life."

Most valuable has been the support given this institution by the Church since its aims and needs were made known. In the years 1882 to 1886 the funds received from church offertories have been a sum of £7,516 only, and during the last twenty years, from 1887 to 1906, the amount received from church offertories has been £144,590, on an average of £36,145 for each period of five years.

The same valuable results of publicity are apparent in the sums received in the shape of legacies.

During the five years 1882-86 the total bequeathed to the institution was only £2,564 18s., or an annual average of £511. During the nineteen years 1887-1905, £58,195 13s. 3d. has been received from this source, an annual average of £3,233.

I need hardly say how gratifying this great increase of support has been to the council; its value is best shown by the fact that it has thus been made possible to award pensions to over 200 deserving persons who had previously been left out in the cold for lack of money.

It is demanded, and rightly demanded, by the charitable that those who organise such endeavours as this should conduct their affairs with due regard for economy, and in this respect I venture to think the Royal Agricultural Benevolent Institution will bear close scrutiny. Upwards of 95 per cent. of its gross income is disbursed in pensions.

Having regard to the great amount of distress which exists among the humbler classes of our rural population, I feel that I may rely upon a hearty and generous response to this appeal on behalf of the institution which is doing so much to alleviate it.

The secretary, Mr. C. B. Shaw, will be glad to send to any clergyman who may desire to distribute them in their places of worship leaflets giving details of the work of the Royal Agricultural Benevolent Institution for the information of those likely to be interested therein. I may add that clergymen who devote collections to the funds are entitled to the same voting privileges as ordinary subscribers.

Every information concerning the institution and its work will be gladly furnished by Mr. C. B. Shaw on application to him at 26, Charles Street, St. James's, London, S.W. All contributions should be sent to Mr. Shaw at that address, and will be most gratefully acknowledged by him.—Yours, &c., WALTER GILBEY.

Elsenham Hall,
August 22, 1907.

Suggested Registration of Corn Samples.

SIR,—The difficulty which is always arising over the sale and purchase of corn is the question as to whether the bulk is equal in quality to the sample. It would be a wise step if agricultural associations would consider this very important matter and suggest a remedy which would be satisfactory to both buyer and seller. By no means is it suggested by the writer of this letter that either side as a rule is guilty of unfair dealing. There are careless farmers who show samples which they should know are superior to the bulk, and on the other hand cases have been known in which merchants and factors have, particularly on a falling market, thrown up a contract on the excuse that the bulk did not come up to the sample. But quite apart from these considerations, misunderstandings frequently arise. Can they be obviated?

Many farmers part only with a portion of the sample and keep the rest. But of what value would this fact be in a court of law? Who is to prove the retained half is the same? On the other hand experts can easily be brought to prove the opposite.

Then how many farmers make a legal contract at all in selling their corn? The transaction, as a rule, is childishly simple, the seller accepts a price and the purchaser enters it in his pocket-book. Some days later the corn is put on rail. In the meantime, and until the merchant has handled it, either party to the bargain can repudiate it. Surely, this is not business.

The first reform of "corn laws" should be to make universal the giving of contract notes in the corn markets.

This is a very simple procedure. Let a contract form be adopted which states price, quantity, and other necessary particulars, together with the condition that the bulk shall prove equal to the sample, and let it be signed by both parties. There would be no expense, and except in case of dispute it would not be necessary to have the contract note stamped. Generally payment is made within the fortnight, which is the time allowed for stamping. Should a dispute arise it will crop up before a fortnight; the note can then be stamped, and all will be in legal form and order.

Then as to the remedy against doubtful samples the difficulty could be entirely got over if the farmer would divide the sample in the presence of the purchaser, give one-half to the purchaser and have the other half registered and left at the Corn Exchange. For a small fee the caretaker would take charge of it. At the end of a fortnight, if no dispute arose, he would dispose of it, and there would be an end to the transaction.

These are simple and important reforms. But on his own initiative the farmer is not likely to adopt them. The compelling influence must be exerted by farmers' clubs and other powerful agricultural organisations. To business men the logic of the proposal is irresistible. It would save many an unnecessary contention, and would retain for the farmer some of the money which he is only too ready to spend in the vain and unsatisfying luxuries of the law courts.—Yours, &c.,
H. W. P.

August 22, 1907.

Potatoes.

SIR,—The time of the year is coming round when we consider the probable results of the potato crop. Alas! I fear that the report must be a poor one.

Those who have planted the Date and its numerous aliases are crying out that the leaf is attacked and the tubers also with the dreaded disease, and there must be loss. Other varieties, avoiding any names, are sounder, but the tops are turning in colour, prematurely ripe, before the full crop is formed.

Last season we had the very best crop for years of Dates, but two-thirds diseased; this season I expect the worst crop I ever knew.

I trust others will report more cheerily.—Yours, &c., NORTH LINDSEY.

August 23.

Fertilisers and Feeding Stuffs.

Intensive Cultivation.

The problem of successful farming nowadays, and particularly the problem of small holdings, must depend for its solution in intensive culture, which means that the crops grown one after the other in quick succession must be sown in soil worked into a condition as perfect as possible and must be regularly nourished with ample supplies of available plant food.

If horses are put to extra hard work they are supplied with extra rations, including energy-producing grain; similarly the soil, if expected to produce a quick succession of exhausting crops, must be supplied with the nourishing material to enable it to bear with success the strain.

Farmyard manure applied in moderate quantities will maintain the soil in a good physical condition and will keep it supplied with humus.

Then phosphoric acid and potash in suitable forms must be used liberally; the fertilising elements in them are not liable to be washed away, and, therefore, any balance not utilised by one crop remains available for the next. By the growth of clover between other crops a supply of nitrogen can be stored in the ground, although it is necessary to give the crops also the advantage of more available nitrogen in the shape of guano, nitrate of soda, sulphate of ammonia or other quickly acting material. The ideal way to cultivate on an intensive system is to select two or three money-producing crops, and follow them with a nitrogen-storing crop, such as clover or lucerne. Use in the money crops a fertiliser containing large amounts of potash and phosphoric acid and a fair amount of nitrogen in soluble forms. Deep ploughing and thorough harrowing must be given before all seeding, for we must understand that one great advantage in using fertilisers is that they are so fine that they may be worked or mixed through the soil, and unless the soil itself is thoroughly fined this cannot be done.

Value of Phosphate for Wheat.

In a Government report on wheat and wheat breeding over the wide area of Victoria, Australia, it is stated that the yielding power of the soil has been considerably enhanced by the general use of superphosphate in conjunction with bare fallows, especially in the driest parts, and with rape and such fodders in conjunction with sheep in the more favoured parts. The experiments carried out fourteen years ago illustrated the effect of phosphatic fertilisers in inducing early ripening, which was more marked when experimenting with barley than with either wheat or oats. The following are some rotations that fit most northern conditions where sheep are kept to feed down the rape:—Wheat, grass, fallow with or without rape; wheat, oats, grass, fallow with or without rape; or wheat, rape on stubbles, oats or barley, fallow. Under some conditions peas may enter into the rotation, and in course of time a higher system of management will be general. Where permanent pastures are desired top-dressing with fertilisers should be carried out.

Chemical Manure will not Replace Farmyard Manure.

Some theoretical scientists talk as if crops could be successfully cultivated by the application of artificial manure alone, being apparently under the idea that all that it is necessary to do is to supply the plants with certain calculated quantities of nitrogen, phosphoric acid, and potash in concentrated forms. It would be as reasonable to feed animals on capsules containing certain quantities of oil, albuminoids, and carbohydrates. Plants must have bulk foods, they must have humus in the soil. There are, says Professor Chester Smith, two principal ways of adding humus to the soil. First, by ploughing under farmyard manure, and, second, by growing green crops and ploughing them under. It is apparent at once that if the greatest amount of humus possible is to be made from farmyard manure, it should be hauled to the fields without rotting and ploughed under, so that the rotting may take place in the soil itself. From this point of view, therefore, the manure should be hauled to the field as fast as made. It should be ploughed under, also, not to too great a depth, but far enough to ensure the continuous presence of moisture throughout the season.

Experiments and observations made at the Michigan College have shown that where the manure was hauled on the snow and spread there, the water from the snow, when the thaws came, did not carry away the plant food from the manure, except in the very smallest degree. The losses from this source were small. It was also shown that, as far as immediate effects on the next crop were concerned, the earlier in the winter the manure was applied, the better.

The importance of humus in preventing the drying out of the soils cannot be too strongly impressed. Note that in the sand little water remained after three days' exposure, while in the muck and sand mixed there remained twenty parts out of sixty-five. This indicates that where the humus is present in our clay loams, they will withstand droughts. Commercial fertilisers will supply the plant food, but they do not directly supply humus. They may be used to aid in this matter if they are applied to crops to be ploughed under. Commercial fertilisers should therefore be used with barnyard manure, not to replace it.

Life of Seeds.

The period for which the seeds of different plants maintain their vitality varies a good deal.

The seeds of some vegetables are worthless after they are two years old, while the seeds of other plants improve with age until a certain period. For instance, the seeds of artichokes are good until they are three years old; asparagus, four years; beans, two years; kidney beans, one year; beets, ten years; brocoli, four years; cabbage, four years; carrot, one year; cauliflower, four years; celery, ten years; corn, three years; cucumber, ten years; egg plant, three years; endive, four years; kale, four years; leek, two years; lettuce, three years; melon, ten years; pea, two years; okra, two years; onion, two years; pumpkin, ten years; radish, four years; salsify, two years; spinach, four years; squash, four years; tomato, two years; and turnips, four years.

Gluten Meals and Feeds.

Gluten meals and feeds are the by-products left in the manufacture of starch and glucose from Indian corn. Corn consists largely of starch. The waste product in the manufacture of starch and sugar is relatively richer in oil and protein than in corn. Most factories remove part of the corn oil from the waste, so that nearly all the gluten meals carry less oil than they did a few years ago.

Gluten feeds differ from gluten meals in that they contain considerably more of the corn bran, and hence relatively less protein, fat, and digestible carbohydrates, and more of the indigestible woody fibre.

It is unfortunate that, according to an American food inspector's report, the gluten feeds and meals are so irregular in their composition, and that different makes vary so much. The gluten meals and feeds are desirable sources of protein, and if the manufacturers placed proper guarantees upon their goods there seems to be no reason why this class of feeding stuffs should not become very popular.

Gluten meal should contain about 35 per cent albuminoids and 3 per cent. fat.

Gluten feeds should contain about 25 per cent. albuminoids and 3 per cent. fat.

Prices of Fertilisers.

The demand for fertilisers is now practically over, but prices remain firm all round. The demand has been bigger than usual, and the stocks of most manufacturers have been cleared.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	11	17	6

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 lbs. of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

Butter Faking.

How the 24 per Cent. Moisture Clause is Regarded in the Colonies.

The *Journal of the Department of Agriculture*, published in Melbourne, has the following note on the subject:—

"A Bill regulating the sale of butter in the United Kingdom has passed its second reading and gone into Committee in the House of Commons. Although good and calculated to regulate the trade it contains a most objectionable and dangerous clause. It provides that the water percentage in margarine and butter is not to exceed 16 per cent. of moisture, but butter imitations may have as much as 24 per cent. The adoption of the latter provision will practically mean the legalisation of milk-blended butter and other like products. The Minister for Agriculture (Hon. George Swinburne, M.L.A.) has taken a deep and active interest in this subject and has secured the co operation of all the States in the Commonwealth and New Zealand with the view of having the objectionable clause eliminated."

New Source of Lime.

Chemical manufacturers are always studying whether any of the by-products arising from their regular manufacturing process cannot be put to a good use, and the results of their efforts in this direction are sometimes attended with results of great benefit to them and to other important industries. One has only to consider that basic slag is a by-product to be aware of the great value of some of these products.

The latest instance that has come to our notice of a by-product being put to good use is in the production of alkolime and phoslime, which are said to represent a new departure in fertilising limes.

It is claimed for them that they are delivered in a very fine powder, and that "phoslime" also contains a proportion of available phosphate, so that the manuring and liming can be done at one operation.

Salt on Barley.

The effect of a dressing of salt on barley grown after roots has been tested for five years by the Agricultural Department of the Yorkshire Council for Education. In some years it has apparently produced a remarkable increase, but in others the effect has been inappreciable.

The average results are given below:—

	No Salt.	5 cwt. Salt per acre.
Average annual yield of Saleable Grain per acre	45 bushels.	50 bushels.
Average annual yield of Straw per acre	33¾ cwt.	39 cwt.

Some Popular Fallacies Concerning Plant Diseases.

In a paper on this subject read before the Australian Association for the Advancement of Science, it is pointed out that some popular fallacies still survive in spite of all evidence to the contrary, and it is hoped that the mere mention of them may lead to views more in accordance with our present state of knowledge, or at least to an examination of the facts on which they are based.

1. That the weather is responsible for the disease where fungi are concerned.

This is shown to be a fallacy, from the fact that similar plants may be grown under exactly the same conditions, from different varieties of seed obtained from various sources, and yet the one will be free from disease, while the other is destroyed by it, as in the case of flax rust already mentioned.

Further, it is well-known to orchardists that apple trees of the same variety and age in the same orchard can be treated for black spot, and the disease prevented, while trees alongside untreated will be badly affected, showing that we can control the disease, although not the weather.

2. That fungus diseases are so obscure, and so imperfectly understood, that no special training is required to diagnose them.

This is simply an apology for ignorance, since there are quite a number of diseases whose life-histories have been carefully studied, and their true nature clearly understood; but because of this belief, often no provision is made by our legislators for making this knowledge available, and any self-constituted authority is regarded as quite capable of pronouncing a disease to be "fungoid," whatever that may mean.

3. That practical work in the field is alone necessary to understand and study disease.

This is only half a truth, and we sometimes hear the other half from the pseudo scientific man, who maintains that technical knowledge and work

in the laboratory is all that is required. Let it be clearly understood that a thorough knowledge of the diseases as they occur in the field is just as necessary as that acquired by the exact methods of the laboratory, and that a combination of both is required in order to secure the best results as regards their proper treatment. The best practical knowledge available has to be supplemented by the best scientific knowledge, and this is afforded by the experiment station, where practice and science go hand-in-hand.

4. That the plant itself is only a passive agent, and its surroundings, such as soil, manure, &c., are the main factors of health or disease.

It is at last beginning to dawn on the farmer and fruit-grower that the variety he plants, whether of wheat or fruit-tree, has an important bearing on the future growth, and that some varieties are more or less susceptible to disease; even the same variety may be more liable to disease at one age or at one season than another. There is something in the nature of the plant itself which determines its behaviour under certain conditions, and this has to be investigated and understood, before we can devise methods for avoiding or controlling this liability to disease. It often involves breeding a new plant to suit the conditions, and this means an intimate knowledge of plant-life.

5. That certain diseases, such as rusts and smuts, affect plants indiscriminately.

There is a very widespread belief, based upon superficial observation, that all rusts for example, are very much alike, and that the same rust can attack all sorts and conditions of vegetation. Thus the late Dr. Schomburgh, of Adelaide, in giving evidence before a Commission on Cereal Diseases stated that "The red rust attacks generally only gramineous plants; but in the Botanic Garden it attacked also the roses." Now the rose rust is quite a distinct kind from the wheat rust, and the one is incapable of infecting the other. Farmers have often sent to me rust on the native flax, with the remark that as it could pass to the wheat, there was no hope of preventing rust in the latter; but I had to inform them that here again the rusts were quite distinct, and did not pass from one plant to the other. That the various rusts confine themselves to definite plants is strikingly shown in the wheat, oat, and barley rust. The spores from wheat will neither infect oats nor barley, nor those of oats infect wheat or barley, and the spores from barley will not infect wheat or oats as a general rule.

Old beliefs and superstitions die hard, and it is surprising how many of the old notions still persist, in spite of all that modern science has taught, and that well-planned experiments have shown to be fallacious.

How to Manure Tomatoes.

In a discussion at the Vegetable Growers' Association of Canada the question of the best system of manuring the tomato crop was debated. The land should not be too rich, but it is not so often a question of over-richness as that of less manuring. Fresh farmyard manure, applied to the land the same spring just before planting, was followed by an excessively wet season, and an excessive growth of vine was had at the expense of early maturity. A piece of heavier poor land that for years had never had any manure, this same wet season produced a profitable crop of tomatoes, while it never has done so in a dry season. An excessive use of nitrate of soda has produced vines at the expense of early maturity on sandy loam in good heart, while the heavier clay land has responded to the use of nitrate of soda in an increased crop. For the average season, sandy loam well manured with farmyard manure for a previous crop, then ploughed and worked in the spring and manured with a good superphosphate (14 per cent.) at the rate of 600 to 800 lb. to the acre, and muriate or sulphate of potash 300 lb. to the acre, will give good results. If the plants are slow in starting, giving enough nitrate of soda to start them, but not to prolong the growth, will prove beneficial.

The Beet-Sugar Industry in Sweden.

One of the latest countries to take up the beet-sugar industry was Sweden, and it has proved so successful that whereas there were only six factories producing about 7,000 in 1889, there are now twenty-four factories producing about 150,000 tons. Instead of having to import large quantities of sugar, the country will soon be in a position to enter into the foreign market. In 1900 the production was 81,300 tons; in 1901, 115,500 tons.; 1902, 127,000 tons; 1903, 73,100 tons; 1904, 107,300 tons; 1905, 84,100 tons; 1906, 122,400 tons; for 1907 it is estimated at 157,700 tons. The fluctuations are due chiefly to variations in the harvest, and are observable in the statistics of all sugar-producing countries. The land in Central and Southern Sweden is admirably adapted for the cultivation of beetroot.

Potato Products in Germany.

According to the report of the British Consul-General, the area under potato cultivation in 1906 was slightly less than in the preceding year, but the total yield was 42,936,702 tons, against 48,323,353 tons in 1905. The exports from Germany of potato starch amounted in 1906 (ten months) to 377,450 cwt., against 136,671 cwt. in 1905, and the exports of dextrine to 154,269 cwt., against 141,314 cwt. in 1905. Business in potato products is, however, considered to have been dull, and the export business is said to have been seriously hampered on account of the increased production in the Netherlands and of the difficulty experienced by German starch factories in obtaining potatoes upon favourable terms. The production of grape sugar (including the liquid variety) largely exceeded that of 1905, but business was dull throughout the year.

Fertilisers in Germany.

It is interesting to note from the same report that the production of sulphate of ammonia continues to largely increase in the German Empire, so that they import less from this country, a fact which acts in moderating the price our farmers have to pay for this valuable nitrogeneous material. The production amounted to about 200,000 tons, which was an increase of about 25 per cent. over the previous year's output, and consequently the importation both in Germany and at Hamburg fell off considerably. The imports to Hamburg amounted to 7,646 tons, against 11,602 tons in 1905. The exports of this substance from the United Kingdom to Germany amounted to 17,545 tons, against 29,009 tons in 1905.

Phosphates.—Throughout the year the prices paid for all classes of phosphates continued to improve. A brisk business was done, and contracts were made extending over a number of years. The total imports to Hamburg and the neighbouring port of Harburg rose from 195,925 tons in 1905 to 215,874 tons in 1906, of which 148,676 tons consisted of Florida rock and 40,430 tons of Algerian phosphates. The price of Florida phosphates rose 33 per cent., and of other sorts 20 to 30 per cent.

WILL CORN PRICES RISE?

The interrupted harvest of 1907 is bound to be costly. All protracted harvests entail extra cost to farmers. It is bound to be marked by heavy losses in the way of shed corn. All windy Augusts produce this result. It is bound to inconvenience millers, who will hardly be able to use much of the new wheat before October. Continual showers and a low temperature entail softness in the new samples.

All these untoward circumstances, however, would have some set-off in the event of corn prices rising. Is such a rise likely, and should farmers hold their grain with a view to it? That is the question. The wheat crop will be smaller than that of last year, and therefore imports will have to be larger. But the exportable wheat surplus of the world at the beginning of a new cereal year—that is to say, on September 1 next—will almost certainly add up to a much smaller figure than was given by a like addition on September 1, 1906. Wheat, therefore, should be dearer in 1907-8 than it has been in 1806-7.

If farmers deliver large supplies of damp corn from Michaelmas to Christmas, prices at the end of 1907 may be low, but there is no compulsion laid upon the cultivator to do anything so unwise. The very astute American operators are in all cases asking substantially more money for December than for October delivery. He who runs may read.

With respect to barley the production of good malting and brewing qualities in California, Oregon, Asia Minor, and Central Europe is materially smaller than last year, and a slightly increased production in France and her North African dependencies is not a material set off. Malting barley should be selling for very good prices.

Feeding barley will probably undergo some depression in October and November, when Russia's large new crop of inferior stuff is pouring into our markets. It is costing the buyers 5s. per cental delivered at our ports, and they can sell it at 21s. to 22s. per qr. of 400 lb. weight. English growers whose barley does not come up to brewing level will, therefore, do well to hold it until the new year, by which time Russia's new supplies will have spent their force.

Oats are likely to be a large home crop, but as America has practically no export surplus of this grain, and as Russia grows very little weighing over 36 lb. to the bushel, all home-grown samples weighing 40 lb. and upwards should admit of being sold at a fairly good price. Heavy oats are bound to be worth good money as soon as we get into the winter months.

THE AGRICULTURAL OUTLOOK

Comparisons, it is said, are odious, and they certainly are when applied to weather and seasons—that is to say, if we compare the summer of 1907 with the one that immediately preceded it. Long before this time last year every farmer had completed his haymaking (except, perhaps, a few dilatory individuals who will not get on with the harvest, no matter how favourable the conditions may be), while most of the corn was cut, and in some cases in the stack. Truly it was a grand summer, and we realise it now when we think of the difference. September is well in view, and still people are haymaking, and have been since the end of June, picking up, as opportunities occurred, weather-spoiled stuff which is hay only in name.

There is one direction in which, perhaps, the contrast strikes in favour of 1907, for this time last year we looked out on pastures burnt up and sunbrowned, and there were general complaints about shortage of water. To-day keep is plentiful, so plentiful, in fact, that on many farms there is not a sufficient stock to keep it down, and still the grass is growing. Of course, there are advantages in a wet season which we do not get in a dry one, but if we are to have an extreme either way commend us to the latter.

Compared to a season like last year it is inevitable that the corn harvest must be late, and though reaping is nowgeneral, there will be a good deal of corn cut in September this year. Of course, a week of unbroken sunshine would

make a lot of difference in the cereal harvest, but we have looked for this so long that we despair now of getting it; and even if we did, it would be unwise to hurry the corn from the field to the stack, because there is an abundance of straw in most cases which has been growing all summer and is sappy in consequence. To be in a hurry to stack this material would be risky, and it will have to stand long enough in the field to dry the moisture out of it.

Again, we are faced with reaping difficulties this year, for the storms experienced some weeks ago beat down the corn so flat in places where their influence was felt that it is practically impossible to do anything with the machine, and the cost of cutting will necessarily be increased. It is no good hanging back, however, for, though late, the corn harvest is here, and it must be set about in earnest. Fortunate are the farmers who have a good staff of able and willing hands to push on with the work, for the advantages of a competent labour staff are manifold in a catchy season.

THE FARMERS' DIARY.

TUESDAY, AUGUST 27.—Buxton and High Peak Horse Show—Cartmel Agricultural Show—Hawes Agricultural Show Agricultural Fairs at Preston, Lampeter, Spalding, Bromsgrove, and Hay—Maidstone Live Stock Sale—Preston Horse Sale—York Special Horse Sale, first day—Special Pedigree Horse Sale at Wymondham, Norfolk—Sending-in Day for the Beaufort Hunt Show.

FRIDAY, AUGUST 30.—Chester Horse Fair—Strood Cattle and Sheep Fair—Watford Horse and Cattle Fair—Dorchester Great Sheep Fair, first day—Mansell's Special Sheep Sale at Shrewsbury—Price's Special Sale of 9,000 Lambs at Mold—Special Live Stock Sale at Yeovil—Sending-in Day for the Oswestry, Market Harborough, and Datchet Shows.

SATURDAY, AUGUST 31.—Weardale (West Durham) Agricultural Show at St. John's Chapel in Weardale—Settle and Ribblesdale Show at Settle—Dorchester Great Sheep Fair, second day—Special Live Stock Sale, Canterbury—Sending-in Day for the Craven and Skipton, Middleton and Teesdale, Ammanford, Otley, Ampleforth, Woodstock, Wolsingham, Thame, Templecombe, and Westmorland Shows.

MONDAY, SEPTEMBER 2.—First London Market of a New Cereal Year; attendance usually important at Mark Lane, the Hop Exchange, &c.—Gillingham (Dorset) Agricultural Show—Dronfield Agricultural Show—Bedwelty District Show at Rhymney—Crossgates (Leeds District) Joint Agricultural and Horticultural Show—Agricultural Fairs at Tregony, Uttoxeter, Padstow, Aberystwith, Kettlewell, Welshpool, Crewe, Thurles, and Stamford—Partridge Shooting should begin this day, but (owing to scarcely any stubbles being cleared) it is likely that nearly all the chief parties will be postponed till the week beginning the 16th.

Notes of the Week.

The climate of England is usually described as "fickle." This is far too mild an epithet for this so-called summer. It has been downright bad!

Storms of wind and heavy rain beat down the ripening grain crops, and prevent the completion of the hay harvest.

The sensation of the week is the reported grave scandal connected with the import of pedigree cattle to the Argentine.

It is sought to implicate some British breeders, but before such a charge can be accepted full particulars must be awaited.

Many of the best English breeders have always been chary about the tuberculin test, and it would now appear with very good reason.

Royal assent has been given to the Butter and Margarine Act.

The housekeeper should be educated up to the fact that, when she pays 1s. per lb. for the milk-blended 24 per cent. water article, she is giving 3d. for water in it.

It has been suggested to us that milk-blended butter is like a hornless goat, because it must be a "bad butter."

The National Church of England is one of the largest landowners in the country. The Ecclesiastical Commissioners control 250,000 acres of agricultural land.

"The Commissioners will give to the English Small Holders' Bill their heartiest approval and support," said the Archbishop of Canterbury in the House of Lords' debate.

The rural depopulation problem seems to be as serious in parts of America as in England.

In the State of New York farm lands have fallen in value in the last twenty-five years 170,000,000 dols., and within the district there are 12,000 abandoned farms.

Another article for which housewives will have to pay more is honey, the present cold season being disastrous to the honey crop.

Nitrate of soda should be lower in price if it is true that thirty-two new companies have been organised in Chili for its production within the last eighteen months.

Another argument for the Peace Congress. The Hessian fly is said to have been introduced to this country and to America in the straw-bedding of Hessian troops.

The first agricultural research station was founded in Germany about fifty years ago in a small village.

To-day there are seventy agricultural stations scattered over Germany.

In America there are 678 similar institutions.

In this country we are a long way behind in such work. For one reason, English farming during the developing stages of agriculture was the best in the world, and there was thus less leaway to make up.

A little girl who had listened to a discussion of the nature fakers in literature, when asked to define the human and animal families, replied: "A brute is an imperfect beast; man is a perfect beast."—*Judge*, New York.

A striking feature of the present season has been the phenomenal growth of some of the crops. For instance, we have heard of oats growing to considerably over 6 ft., and now one of our readers informs us that he has some Hereford spring beans which have reached the extraordinary length of just over 8 ft.

Forthcoming Sheep Sales.

An important sale of Suffolk sheep will be held by Messrs. R. Bond and Sons, at Ipswich, on Friday, September 6, when 800 sheep from the most noted registered flocks will be sold. This is the last important sale of the season of this breed, and it includes a grand selection of rams suitable for pure breeding or crossing purposes. Catalogues may be obtained from the auctioneers, Old Bank House, Ipswich.

Mr. E. S. Hothersall has received instructions from Mr. R. R. Rothwell to sell at Fulwood Hall Farm, near Preston, on Friday, September 6, 70 head of choice young Large White Yorkshire pigs, the pick of this successful herd, including all the prize winners at the Royal, Bath and West, and other leading shows. Catalogues can be obtained from Mr. D. Collyer, Estate Office, Miller Arcade, Preston, or Mr. J. Woollam, Fulwood Hall Farm, Preston, or the auctioneer, the Auction Mart, Preston.

The Birmingham Annual Shorthorn Show and Sale will take place at Bingley Hall, Birmingham, on Wednesday and Thursday, September 4 and 5, when Mr. W. H. Lythall will bring under the hammer 477 head of cattle entered by the most noted breeders. All the animals will be sold without any further reserve than entering them at not more than £21 each.

One thousand Irish store cattle will be sold by Mr. Gavin Low at 50, Prussia Street, Dublin, on Thursday next, the 29th inst., when a large number of Aberdeen-Angus crosses, Polly bullocks, Shorthorn bullocks, and heifers will be sold.

Messrs. Nock and Josland will hold their great annual sale of breeding and feeding sheep in Kidderminster Cattle Market on Friday, September 6. The entries on this occasion will surpass all previous records, and the 300 rams and ram lambs will include all the best breeds for crossing purposes, with entries from many prize-winning flocks at the Royal and other great shows. Shropshires will be sent from the old-established flocks of Messrs. Gerrard, Dee, and Berry, and also from the flock of Sir H. F. Grey. Oxfords from the noted flocks of Messrs. Jas. Horlick, W. A. Treweeke, J. Phipps Smith, and G. Corbishley will be offered. Hampshires from Messrs. A. C. Hall and A. Edwards will on this occasion be further augmented by large entries from Lord Rothschild and Mr. H. C. Stephens. Ryelands, which were introduced to this district for the first time in September last, and which have given great satisfaction amongst producers of fat lambs, will at this sale number 20 head from the noted flocks of Messrs. W. T. Barneby and W. H. Davies. A consignment of Border Leicesters from Cumberland will appear at this sale for the first time, whilst Kerry Hill rams will also be offered from Mr. M. Darlington. The 5,750 sheep and lambs will include an exceptionally fine lot of Shropshire, Oxford, Hampshire, Radnor, Kerry Hill, Clun and cross-bred ewes, and very large entries of store wethers and store lambs of the same breeds. There is an excellent train service to and from Kidderminster, and special trains will be despatched after the sale.

Lord Carrington, in a letter to the National Chamber of Trade, who had written him protesting against Clause 39 of the Small Holdings and Allotments Bill, says the Government are of opinion that the safeguards contained in the Bill are sufficient to obviate the possibility of the powers given for the encouragement of co-operative societies being used to the detriment of legitimate private enterprise. The Board of Agriculture would not fail to bear in mind the representations of the Chamber, and desired to see no injury done to the interests of private traders.

AGRICULTURAL LAW.

*Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "*Mark Lane Express,*" 3, Wellington Street, Strand, London, W.C.*

Right of Seizure of Furniture.

Sir,—A is owner and farmer, B is a workman on A's farm, living in A's cottage so long as he is in A's service without paying rent; C is a furnishing company, who has let B have furniture on the hire purchase system. C, finding B behind in his payments, goes to the cottage without any order of the court, simply on the terms of the agreement that he may follow the hired goods, and threatens to take away the hired goods. A appears on the scene and requests C to immediately leave the cottage, as he says C has no right to come into any human habitation of his occupied by a person rendering him services on his farm, and from whom he receives no rent, A's point being that the law in such cases gives him the same power over the cottage as over the house A lives in, and in such case A believes C to be a trespasser, and has power to eject C until he can produce an order of the court. Is the position A has taken up a correct one as regards his rights appertaining to the cottage and C's disability in the circumstances? A, in C's presence, has advised B to pay C as soon as possible.—Yours, &c,

Yeoman Farmer.

*** I am of opinion that B is a tenant of A possibly only at will, but still a tenant, and rent is not necessarily a conducive factor, for service itself is sufficient. B therefore, having C's furniture is bound by any agreement which he has signed, so far as it is lawful. C can peacefully retake his goods from B's custody, for by the terms of the agreement a default having been made—they belong to C. I do not see the analogy between a servant in a house and a tenant in a separate habitation; it is, however, ingenious, and will probably serve A's purpose, which is to befriend B. I suppose it is not necessary to cross A's land to reach B, otherwise C could, by A's order, be turned off if found crossing the land.—

Barrister-at-Law.

HORSES.

Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

Colour.

AN old proverb is to the effect that a good horse cannot be a bad colour, and it is true, with limitations, like so many other proverbs. One scarcely hears it quoted seriously in these days—certainly not by the man who has a horse to sell to his possible customer. Yet time was when it was quite a common saying if a customer took exception to a white marking or to anything in the colour of a horse. I remember a cob a relative of mine had. He was quite one of the right sort, a fine mover, and perhaps as good a hack as ever man crossed. In colour he was black, clear of white save for a broad blaze down his face, and he had a wall eye! Otherwise he was a very good-looking, even a handsome horse. For some reason my relative wanted to sell him, and a customer came who objected to his colour. The painters were at work painting the stables, and pointing to the paint-pots my relative said: "There is plenty of choice of colour there; paint h'm green, if you like, after you have bought him!"

When the Proverb holds good.

THE proverb holds good, in my opinion, only with racehorses and Hunters, and even with them it does not invariably hold good. However, I think we may fairly assume that if a horse is fast and stout as a racehorse or a Hunter, it does not matter much what his colour is. I once declined to buy a Hunter on account of his colour, and I regretted it ever after. The horse in question was a dark iron-grey—almost black. Indeed, at a distance he looked black, and his mane and tail were silver. He galloped and he jumped so well that I bid for him, but would not give the price which his owner had consented to take. There was some £15 between us, and I left him. My argument was, "here is a conspicuous horse; if he does anything wrong or cannot live through a run, everyone will know." The horse was sold some two months after I left him for £80 more than I was asked for him. He went into Leicestershire, and within a month he was sold for £100 profit. My argument worked both ways. He was a brilliant performer, and his conspicuous colour caused his brilliant performances to be talked about. "Did you see that queer coloured one of X's jump the rails or the brook?" was a question of frequent recurrence every week. There is, however, one bad colour, and a very bad one it is, for either Hunter or racehorse, and that is a washy chesnut. I never knew one that could stand the pinch. They go freely and well for so long, and then shut up like a knife. It is true that I have known horses of this colour carry a man well, and go through a run frequently enough, but when the little extra exertion was required they were found wanting. I have also generally found horses of this colour nervous, irritable, and deficient in courage.

Taste.

IT may be said with some amount of justice that colour after all is but a matter of taste—of inclination—or of fashion. To a certain extent this is true, but I question whether it is altogether true. Our ancestors thought and said that colour had a great deal to do with temper and temperament, and though much that they had to say on the subject may and does appear pedantic, they were fine horsemen and knew a great deal about horses, as a perusal of their many books shows. Of late a considerable amount of attention has been paid to colour. The general conclusion, so far as the light-legged breeds is concerned, is that bays show the purest descent. I think it may be fairly presumed that all our light horses trace back more or less to the Arab, and it is admitted that the Arab which has the purest descent is a bay. So that some recognition of the fact may have to do with the preference which many have for bays and which at one time was even more marked than it is now.

Individual Preferences.

INDIVIDUAL preferences which some people show for a certain colour has of course no foundation in the particular virtues said to exist or not to exist in horses of a certain colour. They are, however, very interesting, and dealers like these preferences, as they tend to enhance the price of certain colours. Lord Lonsdale, it should scarcely be necessary to say, has so strong a predilection for chesnuts, that he and his hunt servants ride nothing else. The late Mr. Merthyr Guest would have nothing else but greys when he hunted the Blackmore Vale. Sir Reginald Graham, too, when he hunted the Harworth, mounted his men on greys, and rode nothing else himself. There is a considerable amount of personal fancy in the colour of harness horses also. The late Sir Joseph Pease and his father and other members of the Pease family were famous for their black browns. Lord Lonsdale, as is instanced by his late purchase of Cherry Boy and Cherry Girl, and the late Admiral Chaloner preferred white. But bay is the colour which is the most generally preferred, and though this preference is no proof, it affords strong presumptive evidence that bays are the hardest.

The Early Prevalence of Greys.

ANYONE who takes the trouble to look carefully through the early volumes of the *Racing Calendar* and "General Stud Book" cannot fail to be struck with the immense number of grey horses which appear. It is not worth while going into details—he who runs may read. But the greys have gradually been disappearing, and there are at the present time very few grey horses at the stud in England. Perhaps the reason for this is that, as Sir Walter Gilbey has pointed out in his recent book, "Horses: Breeding to Colour"—a book which will well repay perusal—experience teaches us that to produce a grey it is imperative that either sire or dam should be of that colour, and as of late years we have had no great horse of the colour, it is only to be expected that greys would decrease in number.

Colour amongst Arabs.

THE proportion of colours amongst the Anazah tribe is given by Professor Ridgway as 35 per cent., bay, 30 per cent. grey, 15 per cent. chesnut, and 20 per cent. brown or black. "Roans, pie, balds, duns, and yellows," says he, "are not found among the pure bred Arabians, though the two last are occasionally among Barbs." What strikes one as very curious is the small proportion of chesnuts. Amongst English horses, whether Thoroughbreds, Hunters, or Hackneys, chesnuts have increased to a very great extent, but I think amongst Hackneys, at any rate, the gaudily marked chesnut is not so much in evidence as he was. He is still numerous enough, but attention has been emphatically drawn to the fact that gaudily marked chesnuts are not easy to sell, and the consequence has been that breeders have been more particular about colour.

Mrs. Hartley Batt and her famous Harness Gelding, Heathfield Squire, winner of numerous prizes. The photograph from which the above illustration was reproduced was taken at the Sussex County Agricultural Society's recent Show at Hastings, where Heathfield Squire added another First Prize to its credit.

Colour Pedigree.

A SYSTEMATIC attempt to breed to colour, save with pure breeds such as the Cleveland Bay or Yorkshire Coach horse, was not possible, except, of course, with the Thoroughbred, who was not likely to be bred on the colour lines, till the publication of the Stud Books of the various Breed Societies. To this in a great measure must the fact that so many horses of bad colour have been bred be attributed. To breed to colour there should be several ancestors on each

side of the colour desired. For instance, if a bay is desired there should be seven or eight ancestors on the sire's side of that colour, and at least three or four on the dam's side. It was impossible to be certain about this when there was no stud book registration. The whole question of colour is very interesting, and I may return to it on some future occasion.

Differing from the Judges.

NOT very long ago I heard an exhibitor exclaiming rather bitterly at the treatment he had received at the hands of the judges. He thought he had been very hardly used, and having once begun to talk on the subject expressed himself rather freely. He did not know what they saw in the winner, &c , and his was the best horse, &c. When he finished an old exhibitor said quietly: "Don't blame the judges, show better horses if you want to win in such company." This provoked a challenge to examine his horse, which was at once accepted. And a really good horse he is, such as any man would be glad to give a lot of money for. He has beautiful action and fine manners, he moves well in all his paces, and has quality, substance, and pace. We looked him carefully over, and the old exhibitor was spokesman. Said he to the owner, pointing out a trifling fault in the horse's conformation, "I suppose you did not notice that when you bought him." "Yes, I did," replied the owner, "and told the man I bought him of about it too, but what of that, he is no worse for it." The same thing was said about other two or three little faults, and the same reply given. Then, said the old hand, "Here are given quite sufficient reasons for your horse occupying the position he did. You knew your horse to be a good one, the judges did not; and they were right in putting a horse back that had the faults I have pointed out. Whilst they do not interfere in the least with a horse's utility, they are to a certain extent eyesores; at any rate a high-class show horse should be without them." The owner was silenced, but perhaps not convinced. Now I wonder how many of those who grumble at the judges are in the same position as my friend!

THE LOOKER ON.

Departure of Mr. Armour's Grey Team.

After having been exhibited fifty-five times in this country and travelled something like 2,000 miles during their 124 days' stay here, Mr. Ogden Armour's famous team of dapple grey horses sailed from Tilbury on the 17th inst. on their return journey to America. With them went two grey Shire horses which Mr. Armour has bought in England to add to his stud of 2,000 heavy greys in Chicago, and the story of this purchase is interesting. Mr. Armour fancies grey horses above all others, and his stud manager, Mr. Hodgkinson, has experienced great difficulty in obtaining even two animals to his liking.

Mr. Hodgkinson told a Press representative that the purchase of Shires had not only been made in the spirit of reciprocity for the excellent reception accorded the team of percherons in England, but also because Mr. Armour desires to experiment with the true British Shire.

"I advertised widely for tip-top animals," he said, "and I received about fifty replies. Of course, I wanted more than a couple of horses. I might have taken a score if I had found as many really good ones. But after travelling hundreds of miles up and down the country, inspecting draught greys of all conditions and ages, I could only find four to please me, and two of these were not perfectly sound.

"However, I think the two I have chosen are the two most promising grey Shires of their age in this country. One of them is the Hon. W. F. D. Smith's Grey Lord, a five-year-old, which has been exhibited four times, and placed first on each occasion. I consider Grey Lord good enough to go into the lead when the team competes in Chicago next December for the international championship, and I shall place him there.

"The other horse, is, I firmly believe, the most promising four-year-old in England. I bought him from Mr. T. Simpson, at Market Drayton. He had been working on a farm, and I have christened him Hodge."

It is not generally known that the visit of the Armour greys to this country was arranged at the suggestion of Mr. Edmund Beck, the manager of the King's horses. His Majesty exhibited Shire horses at Chicago last year, and Mr. Armour's team beat the Royal animals. Mr. Beck then promised Mr. Armour a good reception for his greys if he would send them to England, and the promise was certainly fulfilled.

Mr. George Harrison, Gainford Hall, Darlington, has shipped a ram lamb to Esbjerg, Denmark, from his pure-bred Leicester flock, No. 42 in the Flock Book of the Leicester Sheep Breeders' Association. This is the third ram lamb sold to the same purchaser and destination.

SHEEP.

SALES AND FAIRS.

Carlisle.

Special sales of lambs were held at the two Carlisle auction marts on the 17th inst., Messrs. Harrison having almost 3,000 and Hetherington's Auction Company almost 1,000 forward. Buyers were numerous, and included a good many representatives from the South and Midlands. At Harrison's Mart trade showed a distinct improvement on that of the last sale, and a good clearance was early effected, while at Hetherington's Mart bidding was scarcely as brisk as at the previous sale. At Messrs. Harrison's Mart the prices ruled as follows:—Lambs: Half and three-quarter breds to 29s. 6d., Oxford crosses to 32s. 6d., Leicester crosses to 25s. 6d., Cheviots to 22s. 6d., Black-faced lambs to 15s. Sheep: Half-bred hoggs to 40s. 6d., Black-faced wethers to 26s. 3d. At Hetherington's Mart the chief prices were:—Lambs: Half-breds to 25s. 6d., Leicester crosses to 21s., Cheviots to 16s. 3d., Black-faced to 18s. 9d., cross shearlings to 40s. 9d., Cheviots to 31s., Black-faced ewes to 24s.

Ipswich.

Ipswich Lamb Fair took place on Thursday, when the entries were not so numerous as last year, but quality was well maintained, and with a large attendance of buyers trade was brisk, and some good prices were realised.

Messrs. Robert Bond and Sons had a large sale, the number penned for disposal by this firm being about 1,500. Ewes and lambs were taken first. Sir Thos. V. Gooch, Bart., Benacre Hall, and Mr. Kenneth M. Clark sent a number of Southdowns. Full mouthed ewes belonging to the former gentleman made up to 38s. 6d., while three lots of a score Southdown shearling ewes from Sudbourne Hall went at 49s, 48s., and 47s. 6d.

Mr. C. Strutt's two-shear Suffolk ewes sold freely, 30 two-shear going at 60s., 20 at 53s. 6d., and a similar number of three sheer at 57s. 6d. Mr. Chas. Wenden, Great Bromley, consigned 40 shearling ewes (maiden), and, sold in scores, made 70s. and 62s. 6d. respective'y. Sixty first-cross ewe lambs, belonging to Mr. D. Howard, West Bergholt, made 43s.; two scores of half-bred shearling ewes, sent by Mr. W. Wilson, Belstead Hall, went at 65s., whilst Mr. E. J. Lavender's 80 half-bred shearling ewes realised 62s., 61s. 6d., and 61s. These were the principal prices for lambs, the chief ram sales being as follows:—

There was a fair demand for Suffolk rams, one belonging to Mr. Arthur H. Stanford, by Dedham Premier 2nd, making 12 guineas, whilst Mr. W. F. Paul obtained 8 guineas, 7½ guineas, and 6 guineas, &c., but rams other than Suffolks formed the chief feature of the sale, especially perhaps with Lincolns. Messrs. S. E. Dean and Sons, Heath House, Nocton, had a grand collection of Lincoln shearling rams. One fetched 15 guineas, another 14½ guineas, and others went at 14 guineas, 13 guineas, 12½ guineas, and 10½ guineas, and three at 11 guineas, while their ram lambs also sold briskly, one going at 13 guineas, another 12½ guineas, and others up to 11 guineas. Mr. William Wilson, Belstead Hall, had a particularly choice collection of forty first-cross lambs by Lincoln rams and Suffolk ewes, one of which made 9 guineas, three 8½ guineas, and others from 6 guineas to 8 guineas, whilst Mr. John White, Ham Court Farm, Brampton, consigned fifteen Oxford Down ram lambs, which made up to 7 guineas.

Messrs. Spurlings and Hempson penned about 1,400 ewes, lambs, and rams, for which there was a very sharp demand at good prices. The top price for ewes was 75s. for 40 black-faced shearlings, sent by Mr. Thomas Moy (Stanway); other consignors of black-faced shearling ewes obtaining up to 72s.; the Southdown shearling ewes made up to 57s.; Suffolk ewe lambs to 46s., and first-cross ewe lambs to 46s. 6d., whilst Southdown rams and ram lambs realised up to 6½ guineas.

Lockerbie.

Messrs. Harrison's second special sales of Cheviot and blackfaced wether lambs at Lockerbie took place on Thursday, when the consignments numbered 5,500. There was a large attendance of Cumberland, South of England, and Scottish buyers. A good trade resulted, and prices generally were 1s. to 2s. in advance of the first sale a fortnight ago. Most of the lots realised prices equal to last year's sale, or within 1s. The top price for Cheviots was 20s. 6d., paid by Mr. Hope Rigg, Gretna, for Corriesland tops. For Blackfaced Shorthope, Ettrick tops were the highest, the first lot being consigned to Mr. Dickson, Castle Sowerby, at 18s., while the second lot was secured by Mr. Beattie, Baurch, for 17s. 3d.

Lydford.

There was a large attendance at Lydford Sheep Fair on Thursday. There was a large number of sheep from the Moors and farms around, over 900 being offered, as against 800 last year. There was a good demand at the following prices:—Ewes from 40s to 47s, and ewe and wether lambs 25s to 35s. Mr. J. W. Spear sent in seven or eight Hampshire Down ram lambs, which made up to 3½ guineas.

Marquis of Winchester's Hampshires.

The sale of the Marquis of Winchester's registered ram breeding Hampshire Down flock took place upon the premises at Fox Farm, Amport, on Monday, a numerous company of breeders from the home and distant counties being present. After a capital luncheon business commenced with the ram lambs and one shearling, 36 of which were sold at from 4 guineas to 20 guineas, or an average of £6 10s., the principal buyers being Messrs. J. G. Kerr, Beeton, Homer, Canning (for Mr. C. Morrison), Gauntlett, Cole, Dowling, Barrett Bragg, F. May (for the Earl of Abingdon, Rawlins, &c.; these were followed by the ewes, of which 280 two-teeths made from £3 8s. to £5 10s., average £3 19s. 250 four-teeth ewes made from £3 6s. to £4 16s., average £3 10s. 6d.; and 140 six-teeth ewes made from £3 4s. to £5 6s., average £3 13s. 120 full-mouth ewes made from £2 18s. to £5, average £3 5s. 6d.; and 950 ewe lambs made from £2 9s. to £4 10s, average £2 17s. 6d.; whilst two pens of 6 fat wether lambs made 68s. and 57s. respectively, the average of 1,088 head all told being the excellent one of £3 11s. 6d.

Mr. R. Dixon's Lincoln Longwools.

Nearly eighty rams as well as twenty-four ewes were brought under the hammer at the sale of Lincoln Longwools belonging to Mr. Robert Dixon, of Brandesburton, Barff, and their high-class breeding secured for them a ready sale at good prices, the average per head for seventy-nine shearling rams being the good one of £15 6s. 5d. Top price was 45 guineas, given by Mr. Ward; whilst Mr. W. B. Sallow ran him pretty closely, he giving 42 guineas for another typical specimen. Mr. J. B. Bainton bought at 36 guineas, Mr. R. Fisher at 35 guineas, Mr. R. Aves at 30 guineas, and others at prices ranging up to 25 guineas; in fact, only four of the rams sold at less than 10 guineas. The shearling ewes made up to 5 guineas, and averaged £4 16s. 3d. for 24, the grand total of the sale being no less than £1,325 12s. 6d.

Rothbury.

Five thousand half-bred ewe lambs and 5,000 half-bred wether lambs (Leicester and Cheviot cross) were offered for sale at Rothbury on Thursday, they being consigned from some of the best stocks in the country. There was a large company of buyers from all over the county and from the south, and bidding was brisk throughout, but there was a drop in prices as compared with last year. The highest price for half-bred ewe lambs was made by a lot from Snipe House, which brought 38s.; Soppitt came second with 37s. 6d. A lot from Thorneyhaugh made 37s. The top price for half-bred wether lambs was realised by a consignment from Soppitt, which realised 35s. 6d., Brunton Packs coming next at 32s. 6d.

The Whiston Hall Shropshires.

The annual sale of Shropshire sheep belonging to Mr. Matthew Williams, of Whiston Hall, Albrighton, Shifnal, took place on Tuesday, and, as usual, attracted a large company of breeders, the animals offered being of the highest quality. Bidding was brisk, and the 35 shearling rams as well as 45 shearling ewes were disposed of at satisfactory figures. The prices and purchasers were as follows:—Shearling rams: 21 guineas, Mr. Williams, Scotland; 23 guineas, Mr. Hughes, South America; 19 guineas, Colonel Wordsley-Worswick; 20 guineas, Sir Walter O. Corbet, Bt.; 17 guineas, Duke of Grafton; 20 guineas, Stretton Farming Company; 18 guineas, Colonel Phillipson; 14 guineas, Mr. Rose; 7 guineas, Mr. Banton; 17 guineas, Mr. Mapp; 9 guineas, Colonel the Right Hon. W. S. Kenyon-Slaney, M.P.; 12 guineas, Mr. Griffiths; 9 guineas, Colonel Kenyon-Slaney; 15 guineas, Mr. Ward, Golding; 9 guineas, Lord Bradford; 8 guineas, Mr. Roberts; 9 guineas, Mr. Foster; 8 guineas, Mr. Templemore; 7 guineas, Mr. Weaver; 6 guineas, Colonel Wordsley-Worswick; 8 guineas, Mr. Thomson, Shifnal; 6 guineas, Mr. Walling; 7 guineas, Mr. Pryce; 6 guineas, Mr. Adams; 7 guineas, Mr. Taylor; 6 guineas, Mr. Chapman; 5½ guineas, Mr. Chapman; 6½ guineas, Colonel Kenyon-Slaney; 6 guineas, Mr. Stirling, Cosford; 5½ guineas, Mr. Charles Austin; 7 guineas, Mr. Walling; 5½ guineas, Mr. Walter Head; 6 guineas, Mr. Booth; 5½ guineas, Mr. Austin. Shearling ewes (in pens of five): 95s. each, Mr. Miller; 85s., Mr. Meredith; 85s., Major Sykes; 72s. 6d., Mr. E. Nock; 70s., Mr. R. H. Gwynne; 62s. 6d., Mr. Roberts; 65s.,

Major Sykes ; 60s., Mr. Minton ; 57s. 6d. Colonel Kenyon-Slaney.

Thornhill.

The Nithsdale Auction Company held a special sale of Cheviot black-faced and cross lambs at Thornhill on the 17th inst., when 9,000 were disposed of. There was a large attendance of buyers from the North of England and South of Scotland. Prices showed a decided drop compared with last year, the average decrease being 3s. 6d. to 4s. 6d. per head. Cheviot wether lambs made up to 15s. 6d., cross lambs to 32s., black-faced wether lambs to 19s. 3d., and half-bred lambs to 27s.

The Goodnestone Park Southdowns.

Messrs. Stride and Son, of Chichester, sold on behalf of Mr. H. Fitzwalter Plumptre the entire register Southdown flock which had been running upon the farms in hand, in consequence of the whole of them having been let. In addition to this prime lot of sheep there were also included in the sale the regular draft ewes, the surplus yearling ewes, and the rams and ram lambs from the Home Farm flock, making in all the large total of 1,230 head. Although there were not notably high prices realised, the sale taken as a whole was a satisfactory one, particularly so when it be remembered that there are but very few Southdown flocks kept in the district, in which we may mention, judging from the fine sheep included in the sale, it is very apparent that they thrive and do well.

Mr. Stewart, of Ardingly, took many of the best lots. Amongst the yearlings and ewes he bought in lots of fives at 90s., 84s., and 78s. Mr. Cobb, from Watford, gave 80s. and 63s. Mr. A. M. Singer, from Sussex, 80s., 71s., 63s., 62s., &c. Mr. C. J. Fletcher, Dale Park, Chichester, 73s, 67s, 60s., 78s., 70s., 68s., 64s., &c. The Wye College gave 71s. and 59s. Mr. C. Petley, 66s. and 63s. The Hon. R. P. Nevill, 58s , &c.

Amongst the four-tooth ewes there were some of grand type. Mr. Stewart got three lots of five of this description at £6 per head, Lord Northbourne one lot at 80s. Mr. Fletcher gave 60s., &c., Mr. King 60s., the Wye College 61s. For the six-tooth ewes ; Mr. C. J. Fletcher's agent gave 90s., 67s. twice, 60s., and took five other lots at from 57s. to 54s. ; the Wye College gave 58s. ; as did also Mr. A. M. Singer, who also gave 55s. The full-mouth ewes ranged from 68s. to Mr. C. J. Fletcher, 67s. to Lord Northbourne, 61s., 60s., and 58s. to Mr. Robinson, of Lewes ; Col. Hammond gave 56s., 55s. twice, and 54s., &c.

The top figure for ewe lambs, one lot of ten making this price to Mr. Cobb, and two other similar lots to Mr. C. J. Fletcher, who also took two other lots at 39s. ; the remainder ranged down to the price given in the summary. The wether lambs in lots of twenty-five made from 37s. 6d. to 30s. 6d. The yearling rams sold at satisfactory rates, Lord Portman purchasing at 19 guineas, 14 guineas, 11 guineas, 10½ guineas, 7½ guineas, and 7 guineas, Mr. Cobb at 10 guineas. For the stud rams prices ruled low, Lord Portman getting the full-mouthed ram, Woolverstone Duke 2nd, at 4½ guineas, and the others made from 5 to 7 guineas. The ram lambs were not wanted. Lieut.-Col. Hammond gave the top price, £6 6s., three others, two of them to the Hon. R. P. Nevill, making £3 3s. each, and sixteen others went to Mr. Jones, for Wales, at 2½ guineas each.

The range of prices and averages are shown in the following table :—

Description.	Number sold.	Top price. £ s. d.	Bottom price. £ s. d.	Average. £ s. d.

Sir P. A. Muntz's Shropshire.

The annual sale from the Dunsmore flock of Shropshire sheep belonging to Sir P. A. Muntz, Bart., M.P., took place on Wednesday, the catalogue comprising forty-two rams and fifty shearling ewes, all splendidly bred. Thirty-six rams were sold at an average of £11 3s. apiece. Captain Townshend paid 32 guineas for a shearling that had done well in the show ring, and about fifteen animals were knocked down to Mr. Wood for exportation to South America. The shearling ewes were a particularly nice lot, the best making up to 77s. 6d. each.

Speaking at the luncheon, Sir Albert Muntz said agriculturists would have to take care that they had an opportunity to exist in the future. There were people going about who would adopt the doctrines of small holdings and allotments which would do no good to anybody—certainly no good to the farmer or landowner, or to the person they wanted to benefit. They might rely upon it if they could not make a profit out of a farm of reasonable size, farmed on right lines, they could not make a profit out of small holdings and allotments and gardens. What would restore prosperity to agriculture was the raising of the value of the products of agriculture. By doing this they would enable the farmer to employ more labour, and to pay a higher rate of wages. A man could not pay a higher rate of wages if he was earning barely enough to keep himself. The practical way of dealing with the parrot cry, "Back to the land," would be to show the labourer it was worth his while to go back. If they could show that the products of the land would obtain a remunerative price he would go back, but not without. No number of gardens or allotments would take him back.

Marlborough.

About 17,000 sheep were penned at Marlborough sheep fair, which was held in fine weather on Thursday. The exceptionally good prospects of keep all round led to a keen demand for all classes of sheep, and there was a further advance upon the rates obtained at Britford fair. It was, in fact, one of the best selling fairs ever known, and a large amount of business was done at from 1s. to 2s. a head above the highest recent quotations. There was more competition than usual for the prizes offered by the Fair Committee. Mr. W. B. Gauntlett, of Collingbourne Kingston, secured Sir George Judd's first prize for 100 full-mouth ewes, which were sold by auction at 63s, others from the same vendor going at 59s. 6d. to 55s. ; the second prize being taken by Mr. W. S. Cleverly, of Tilshead. Mr. Thomas Lavington's prize for 100 wether lambs was taken by Mr. Sam Darling, of Beckhampton, with an exceptionally good pen, which, sold in fifties, went at 58s. to 53s. 6d. Mrs. F. E. Longheed Baskin, of Wexcombe, came second in this class.

The prize given by Mr. T. Lavington for chilver lambs was awarded to Mr. N. R. R. Young, of Winterbourne Monkton, for a very matching 100. Most of the sheep passed under the hammer, Mr. T. Lavington's catalogue comprising 12,500, for which a quick trade was experienced. Mr. Lavington also held a sale of ram lambs from the flocks of Mr. Sam Darling, of Beckhampton ; Sir George Judd, of Cocum ; and Mr. H. C. Stephens, of Cholderton ; whilst Messrs. Waters and Rawlence, of Salisbury, sold 85 ram lambs at satisfactory prices.

SHEEP NOTES AND JOTTINGS.

OBSERVATION, as one travels about the country, shows that a very considerable number of the lambs are not doing so well as could be wished. It is very evident that despite the abundance of food, in the shape of the luxuriant growth of clover, seeds, &c,, that the absence of dry weather and warm sunshine has prevented this large supply of food from being of its full value. The laxative character of the food is also detrimental to the well-doing of the sheep, particularly the young lambs, and flockmasters will be well advised in giving some additional dry food to all their lambs if they be intended for stock purposes, or to be fed on for the market.

IT is a very pleasing feature to notice how well planted nearly every field of roots is this season Everything points to a full supply on the part of the root crop so far as regards the plant and size and weight per acre, but what is wanted to bring this great crop to perfection is some warm and dryer weather.

IT is necessary for flockmasters to pay particular attention to their sheep's feet during such a season as we are experiencing. Neglect to keep the hoof well pared will lead to trouble in the near future ; therefore, all who are owners of sheep are recommended, if they have not already done so, to have their sheep's feet well pared and got into proper shape as soon as possible.

THE making up of the flock is an important work, and flockmasters will be well advised to see that none other than thoroughly sound and healthy sheep are put into the flock. Of course, in the case of ram-breeding flocks, there may be reasons which are perfectly sound that induce the owner to retain in the flock over-aged ewes, but in flocks that are kept for ordinary commercial purposes it is a sound practice not to retain the ewes any longer than the third lamb.

OF course these three-lambed ewes, as they are termed in certain parts of the country, are by no means used out ; they are fully able and capable of rearing up one if not more crops of lambs, but these should be reared in flocks where they are generally fed off with their dam.

IN selecting the ewes for mating, flockmasters are recommended to divide their flocks into separate lots for each sire, draw the ewes as uniform as possible, and then select the sire that will most nearly match them.

A PRACTICE which is much to be deprecated is that which is followed by far too many flockmasters at the present time—*i.e.*, running the whole flock together and turning therein three or four, or even more rams. It is true this system saves trouble, but it results in many ways unsatisfactorily.

THE division of a flock into certain sections, to be mated by each ram, enables the flock owner to get greater service from such rams. It enables him to breed better and more uniform lambs, and it also enables him to know and to record the sire of such lambs, both male and female.

RECENT experience in connection with the export trade convinces the writer that those who desire to participate in this trade for ewes must in the future be prepared to give the sire of such ewes at least. One or two recent orders of considerable size, for the purchase of ewes, have been received by a well-known agent from clients in South America, who have stipulated that the above-mentioned condition must be complied with, and it is evident from information received from South America that both the Argentine Government and the Uruguayan Government are taking steps to prepare for this qualification being required of all those who import sheep for stud purposes.

IN a contemporary we notice that a remark was made in reference to the exhibition of sheep, and it was therein stated that exhibited sheep were dyed to a yellow hue. The writer, evidently an amateur, refers to the practice which many flockowners have, of colouring their sheep when sent to the different shows.

THIS question has been discussed more than once by the National Sheep Breeders' Association and those who have had the opportunity of listening to the discussion and hearing the opinions expressed, inform me that nearly every speaker had some idea of his own upon the question, and that there is no chance of a uniform decision being arrived at, although all breeders agreed that an excessive use of colouring matter was to be deprecated.

UNQUESTIONABLY those who use colouring matter to excess are gradually, but surely, becoming a very small minority, for a reference to our notes made in respect to this matter for several years past discloses a marked diminution in the excessive use of colouring.

AS to any breed society making regulations that would prohibit sheep that were coloured from being exhibited. This would, we consider, be an infringement of the liberty of the subject, and one that should not be allowed ; and the reason why this decision had been arrived at is that it should be open to the breeder of every class of stock, not only sheep, but horses, cattle, pigs, &c., to exhibit such stock in that condition, &c., as will, in his opinion as a practical breeder, best show its merits and qualities to those who attend our shows.

IT is all very well for faddists to have their particular ideas, but so far as our knowledge goes, the governing bodies of the whole of our live stock societies and also of the agricultural societies are, generally speaking, practically men thoroughly conversant with their business, and consequently well able to draw up such rules and regulations as shall be able to secure the exhibition of live stock under the best and most favourable conditions.

A REFERENCE to the conditions in which sheep are exhibited reminds the writer that there is still a remnant of those conditions—which prevented the exhibitor from bringing out his sheep in that form which he as a practical breeder considered best — left in many of the prize schedules—*i.e.*, that one which refers to a fixed date upon which all sheep must be shorn bare.

THE continuance of this condition is, the writer thinks, useless, and the sooner it is done away with the better, for there can be no question but that many of those who prepare sheep for exhibition take little or no heed thereto. That this is so can readily be proved by any who have taken the trouble to examine the length of wool found upon show sheep at the early shows, and the length of wool found upon the same sheep at the later shows, and it will be a surprise to many to find how little the wool has grown during that period, and how rapidly it grew previously to the first show, if the sheep had been shorn absolutely bare after the date generally given in the prize schedule.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible. Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

By Messrs. STRIDE & SON.

SINGLETON, CHARLTON, EAST DEAN, DROKE AND NEW HOUSE FARMS,
ON THE GOODWOOD ESTATE,
CHICHESTER, SUSSEX.
(About ¾ mile from Singleton and 5 miles from Chichester Stations, L.B. and S.C. Railway).

HIGHLY IMPORTANT SALE OF HIS GRACE THE DUKE OF RICHMOND AND GORDON'S PURE-BRED SOUTHDOWN HILL FLOCKS.

MESSRS. STRIDE AND SON beg to announce that they are in receipt of instructions from His Grace the Duke of Richmond and Gordon, K.G. (the farms being let), to Sell by Auction, at the MANOR FARM, SINGLETON, on
THURSDAY, SEPTEMBER 5 next,
THE WHOLE OF THE PURE-BRED SOUTHDOWN HILL FLOCKS, comprising about:

2,200 SOUTHDOWN SHEEP, in regular flock ages, as follows:—
274 SHEARLING EWES,
532 FULL-MOUTHED EWES,
474 FOUR-TEETH EWES,
89 DRAFT EWES,
365 SIX-TEETH EWES,
500 LAMBS.

These pure-bred Southdown Hill Flocks were established many years back, chiefly by drafts of ewes from the Goodwood Home Farm Flock, by the late Duke of Richmond and Gordon as the various farms—which are situated amongst the hills North of the Goodwood Racecourse—came into hand.

Of late years much care and attention has been devoted to their breeding and selection. In 1903 rams used were from the flocks of Earl Bathurst, Mr. J. Colman, Mr. E. Henty, and Goodwood. In 1904 from Earl Cadogan, Lord Northbourne, Mr. F. N. Hobgen and Messrs. Waters and Son. In 1905 and 1906 from the Duke of Devonshire, Mr. J. Colman, Mr. Allan Cooper and Mr. Edwin Ellis.

The ewes are of good size and scale, with the hardiest of constitutions, and possess the quality, type and character which distinguishes the famous flocks from which they are descended.

The capital wether lambs which have been annually sold in Chichester Market furnish the best evidence of the mutton-producing capabilities of these flocks, while last year their wool made the highest price at the Chichester Wool sale.

All the flocks are fully eligible for registration.

Purchasers may leave their sheep on the farms free of charge, at their own risk, until September 29th.

The Flocks may be inspected by appointment with Mr. James Mackenzie, Manor Farm, Singleton, Chichester.

Buyers arriving at Chichester night prior to sale will find the "Dolphin" or "Anchor" comfortable hotels to stay at.

Sale immediately after 12 o'clock luncheon.

Commissions carefully executed.

Catalogues of the AUCTIONEERS, Auction and Estate Agency Offices, 63, East Street, Chichester, Sussex.

By Mr. CAVIN LOW.

Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended August 17, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (13,467), 11,887; sheep and lambs (1,780), 1,587; horses (294), 415.

Fresh meat:—Beef (104,946 cwts.), 75,498; Mutton (130,842), 37,022; pork (6,505), 5,342.

Salted or preserved meat:—Bacon (135,093 cwt.), 137,243; beef (3,881), 2,364; hams (35,104), 37,097; pork (5,468), 6,250; meat (8,997), fresh, 8,237; salted (8,997), 723; meat, preserved (9,604), 5,311.

Dairy produce and substitutes: — Butter (93,672 cwt.), 78,898; margarine (22,041), 18,328; cheese (70,549), 92,432; milk, fresh in cans or drums (60), —; cream (87), 17; milk, condensed (14,411), 12,798; milk, preserved (131), 42.

Eggs (great hundreds):—(416,681), 349,311; poultry (value £2,497), £651; game (value £461), £2,091; rabbits, dead (not tinned), (34,759 cwt.), 6,112; lard (43,006 cwt.), 47,144.

Corn, grain, meal, and flour:—Wheat (2,137,000 cwt.), 2,247,600; wheat meal and flour (231,600), 264,300; barley (352,400), 207,700; oats (368,200), 339,000; peas (64,240), 134,630; beans (17,370) 12,190; maize or Indian corn (822,500), 1,514,700.

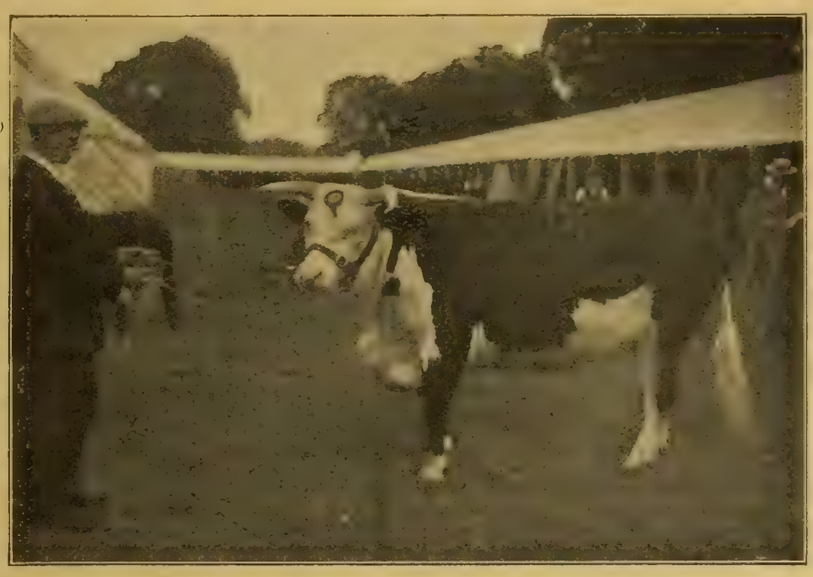
Fruit (raw):— Apples (12,757 cwt.), 9,111; gooseberries (—), 61 cwt.; pears (56,450 cwt.), 45,264; plums (67,309 cwt.), 60,039; strawberries (—), 310.

Hay (3,692 tons), 1,977; straw (1,211 tons), 1,466; moss litter (1,334 tons), 1,236; hops (1,152 cwt.), 6,644; locust beans (60 cwt.), —.

Vegetables, raw: — Onions (87,925 bush.), 163,141; potatoes (40,043 cwts), 32,063; tomatoes (32,342); 20,167.

Notes and Jottings.

THE fully tabulated statement of the results of the great milk and butter tests at the recent Tring Show have again been made public, and the general outcome reads much more satisfactorily than did the accounts of the trials at last year's show. Out of seventy-six animals tested this year, only in some two or three instances does the butter ratio appear out of order, whilst in the whole of the remaining lots the ratio is very good indeed—in some instances we should call it excessively high. The weather being cool, and the pastures and all other food being of a thoroughly nutritious character, had no doubt a great deal to do with this very satisfactory state of affairs. Very high general quality of milk.



A GREAT drawback, however, to the tests appears in the fact that out of 104 cows entered only seventy-six were exhibited for the tests, which means close upon 30 per cent. absentees. Such an excessive number should be accounted for by some means or other, so that the public might know whether excessive forcing had in many instances accomplished its deadly work, or whether the owners of these absentees, after testing their entries, found them so much deficient either in quantity or quality or both that they did not consider it worth while paying expenses of exhibition. If the latter was the real reason, we congratulate the intending exhibitors in having done a very wise thing. It is a great expense to send a heavy milking cow to a show for two or three days, losing all the benefit of her milk.

NONE but really good animals should be entered in these tests, let them be of whatever breed they may. A good yield impresses strangers very favourably with a breed, and also perhaps even more favourably with a breeder's herd that is able to turn out record-breakers or great record-makers in the way of quantity and quality of milk. We have many times written to this effect in advising owners of milking cattle not to enter their animals unless they are thoroughly satisfied that quantity and quality are both so well in evidence as to pretty well ensure them either winning a prize or a certificate of merit, or otherwise making a creditable output. If more home testing were done, and done carefully, our dairy herds would show up generally to much greater advantage than is often the case.

SEVERAL of the Shorthorns were of excessive live weight: 1,477 lb. is a great live weight for a milking cow, and one or two run still higher, up to 1,550 lb. and 1,513. These, however, were altogether eclipsed by the South Devons that recorded 1,813 and 1,628 lb. each. One of these had been in milk 155 days, and was still yielding at the rate of 49 lb. 8 oz. per day. This high record, however, failed to place the cow higher than he, even though the butter ratio was up to 23·80. For cows of such calibre the quality of the milk comes out remarkably well, probably due in a measure to their high condition. We have many times heard it remarked and there is no doubt it is in a measure correct, that fat in the cow produces to a considerable extent fat in the milk.

WE notice a rather unique advertisement in the papers at the present time; we allude to the sale of 100 head of sheeted Welsh cattle, the property of Lord Penrhyn, which are to be sold by auction by Messrs. Dew and Son at Lord Penrhyn's home farm, near Bangor, North Wales. These cattle are well worthy the attention of any breeders who are desirous of cultivating milk. It would not take any great length of time to raise a herd of very deep and rich milkers of these picturesque sheeted Welsh cattle. In a well-wooded park they are a great ornament to the landscape, and, as well as making milk, they are good beef producers, quite a dual purpose breed. Why greater attention has not been paid to them as a race of our native cattle is difficult to understand.

ARGENTINE buyers are still busy in the purchase of several of our breeds of pedigree cattle. Shorthorns appear still to hold sway so far as numbers and prices are concerned, Herefords following on at long prices and in considerable numbers, whilst Angus are also looking up in a satisfactory manner, and their next of kin, the Galloways, also. It is further very gratifying to find that the dairy breeds, especially Jerseys, have created quite a keen liking for their breed over the water, and at much higher prices than prevailed but a few years ago. All this tends to inspire breeders at home with greater energy in looking after their cattle, not only in the way of breeding, but also in the way of feeding and general care taking.

The Hereford Heifer shown above is Princess Beatrice, whose winnings this year include a First Prize at the Royal, Royal Counties, and Bath and West Society's Shows. She was born January 27, 1905, sire All Fours, dam Beatrice, and is the property of her breeder, Mr. W. B. Tudge, Stepaside, Onibury, Shropshire.

PUBLICATION was given recently in a daily paper as to the discovery of some disease communicable from cattle to man and from man to cattle, discovered at some small district show. It is greatly to be hoped that this is only one of those silly scares that appear to get into print without any just cause or reason, and frequently do considerable damage to business and districts whence they emanate. As we said in a recent note, the cattle of this country have never in history been so utterly free from disease and perfectly healthy as at the present time. Breeders are in ninety-nine cases out of a hundred taking every precaution to raise none but sound young stock, and to retain none but sound parents to propagate them. It does not pay to breed an animal with impaired, or likely to be impaired, constitution.

WITH such a remarkably satisfactory bill of health at home, there is every reason to hold fast the chain that prevents the importation of live cattle from over the seas. Not only would it be most unwise to risk the possibility of introduc-

ing disease, but the fact that our home cattle are so healthy and in such fit breeding condition renders it altogether unnecessary to attempt to increase our cattle census by the importation of foreign stock. Home breeding of the better class of cattle is the correct line to move upon, and, depend upon it, every farmer and breeder who adopts this policy with intelligence and energy will never regret having taken the step.

Mr. W. Ford's Sussex Cattle.

At the sale of Sussex cattle belonging to Mr. W. Ford, Singhurst Farm, Ticehurst, there was a representative gathering of breeders and a brisk trade, the animals being brought out in first-class condition. An average of over £22 per head was obtained for twenty-seven lots, which, considering the large number of young animals, was highly satisfactory. Top prices were 50 guineas and 41 guineas, which sum Mr. Campbell Newington gave for Ticehurst Twin 3rd and Stonesdown B1 respectively. Mr. Newington, who has recently started a herd, secured most of the best animals, and they should prove a profitable investment. Other chief prices were 32 guineas (which Mr. Newington gave for Melody of Ticehurst's heifer calf), 38 guineas, 29 guineas, and 23 guineas.

Dublin Store Cattle Sales.

Close on 900 store cattle were submitted at Mr. Gavin Low's sale at his auction mart, 50, Prussia Street, Dublin. The major portion of the entries were cattle of nice quality and in good condition. There was a large and representative attendance of buyers chiefly from Midland and Northern English counties and from Scotland, and trade for an August sale was fairly satisfactory, although scale rates were about 1s. per cwt. down from Mr. Low's sale in July. The general run of figures were: Shorthorn bullocks, two and a half to three years, from £8 15s. to £15; Shorthorn heifers, from £8 17s. 6d. to £13 12s. 6d.; Polly bullocks, from £10 5s. to £14 15s.; Aberdeen-Agus crosses, from £11 10s. to £13 12s. 6d.; yearlings, from £6 10s. to £9 10s.

Faking in the Argentine.

Reference was made last week to the serious charges that were being made in connection with some phases of the Shorthorn trade with the Argentine. A later edition of the Buenos Ayres *Standard*, now to hand, says that to get a tuberculous beast passed by a veterinary surgeon as being "free from tuberculosis" it is necessary that previously to the official inoculation the animal should be inoculated with tuberculin at periods of from five to six days. By this means the beast becomes "salted," and, although still suffering from the disease, does not show it by the abnormal rise of temperature general in such cases. A clean certificate is then given, and the animal is sent into the country, thus spreading the disease, which shows in all its progeny.

On May 15 last Dr. Leon Suarez, inspector of live stock in the Department of Agriculture, informed the detective section of police that for several years past grave irregularities in connection with the importation of cattle from Great Britain, especially bulls, had been noticed. Several inspectors of police got to work, and interesting revelations have now come to light. These irregularities, according to the *Standard*, were undoubtedly practised with the assistance of the *personnel* of the quarantine sheds, and about a year ago a certain James Llanso, an Argentine, employed at the inspection sheds, was dismissed. This, however, did not have any effect.

Information had come to the police that some twenty-four bulls would be inoculated on July 12, and detectives placed themselves in a position to watch the operation. As the result three men named Rodriguez, Acosta, and Cabellanas were arrested. The police secured the instruments, and found lying about a quantity of small bottles containing tuberculin. The dwellings of the prisoners were also searched, various thermometers, purging powders, &c., connected with the application of the serum being found. Several unsigned letters giving instructions about how bulls were to be injected, the dates and quantity, &c., were also discovered. The peons, on being interrogated, made a full confession.

The head of a firm of leading estancieros and live stock importers was interviewed by the *Standard*, and said:—"The affair is certainly serious, and will be taken up strongly by the authorities here. As the persons presumably implicated are Englishmen, it will mean the death-blow to the sale of British stock for years to come at any rate. Suspicion will last for some time, and severe preventive measures will be adopted to avoid a repetition of the scandal."

Messrs. Dickson and Robinson, Cathedral Street, Manchester, have issued a capital catalogue of bulbs and roses for 1907. It contains particulars of a large and choice selection of these favourite subjects, whilst the many illustrations add to the work.

Milk Fever Prevention.

"Gloucestershire," who, on page 92, writes concerning the loss of a cow from this malady, "in spite of precautions taken to prevent it which have hitherto been effective," will find that, on page 111 of the issue in which his own letter appears, an attempt has been made to deal with the conflict of opinion concerning the milking of "dangerous" cows to which he had directed attention on page 39, and will perhaps have noted the following passage:—"We have no hesitation in affirming that there is no certain preventive of the disease in predisposed cows, and we have seen practically all systems tried, often with apparent success for a while, and seen them all break down sooner or later."

This has received unexpected confirmation in the recent experience of "Gloucestershire," who has lost a cow, in spite of skilfully applied up-to-date treatment, from this disease incidental to parturition, "although precautions were taken to prevent it which have hitherto been effective." As they in this case proved futile, it would have been somewhat more correct had he written which have hitherto *seemed* to be effective, the difficulty being in determining whether there would have occurred any cases of milk fever among his cows had the precautions to prevent it been neglected or omitted, or some other system of prophylaxis been adopted.

"Gloucestershire" writes: "The vet. says he has had twenty-nine cases this season, out of which twenty-six recovered with this treatment (by injection of the udder), but to know how to prevent would be better than cure, and would be of great benefit to some of the inexperienced of your readers."

On p. 111 we anticipated this by the expression of a similar opinion in the following terms:—"The treatment of 'milk fever' is under modern methods attended with much greater success than formerly, when the animal was regarded as certain to die, whereas it is now confidently expected to recover; but prophylactic measures are still of great importance, if only because prevention saves the expense of treatment, nursing, &c., if the cow goes 'down.'"

Many veterinary surgeons, and particularly Continental practitioners, are able to record even a better percentage of recoveries than the gentleman employed by "Gloucestershire," but prevention would, for the reasons stated, be better than cure even if the recoveries were as certain as some vaunt their preventive to be sure. As already indicated, we do not know of any *certain* preventive of this disease, and in the light of his recent experience, it is probable that "Gloucestershire" will agree with us in saying that we do not believe that anyone else does.

The modern theory concerning "milk fever" is that it is ptomaine poisoning with the udder as the point of origin, or that the colostrum has a toxic and deleterious action, and this is now generally accepted; but of this much only are we quite certain—the class of cow predisposed to the disease is an animal of deep-milking breed who has attained a certain age or had a certain number of calves, and who exhibits a tendency to plethora.

We cannot prevent cows growing old, and we cannot afford to sacrifice them after their second calving, or we should never have a decent milker, and we want for both milk and butter making purposes the kind of cow that is predisposed to the disease on account of her deep-milking propensities. This only leaves us the tendency to plethora as a vulnerable point of attack, and the most rational as well as the most generally practised method of management with a view of minimising the risk is to avoid over-feeding, or succulent feeding, and temporarily discourage milk secretion about the period of parturition, with which the disease is essentially associated, when the cow is plethoric, of deep-milking habit, and dangerous age.

This does not mean such short commons as will not permit the cow being equal to the demands of the fœtus, but sufficient food for her maintenance without going beyond what is necessary to keep the animal in health.

Exercise during pregnancy is most essential to the well-being of both the cow and her prospective offspring, and this should be provided for by turning out daily on a bare pasture where the amount of grass obtainable is neither sufficient to make meat nor force milk. M.R.C.V.S.

(To be continued.)

Early on Sunday morning a flock of sheep belonging to Messrs. Radford, sheep dealers, which had been placed in a paddock near the railway line at St. Ives, Hunts, were discovered to be in a state of mutilation as the result of worrying by dogs.

OBITUARY.

Mr. H. B. Manley.

It is with regret we have to record the death of Mr. Herbert B. Manley, of the well-known firm of Messrs. Manley and Sons, auctioneers, Crewe. Mr. Manley was a member of the Whitchurch Volunteers, and with his battalion had spent a week at Scarborough. After the day's manœuvres, in company with two companions, Mr. Manley left the camp soon after six o'clock to spend the evening in Scarborough. On approaching "Jacob's Ladder," a rough and steep footpath some little distance from the town, he jocularly observed to his companions, "I will show you how to go down Jacob's Ladder," and commenced to run. When half-way down, having lost control of himself, through the impetus he had acquired in the descent, he tried to catch hold of a tree, but missed and fell on his head, fracturing his skull. He was conveyed in a motor-car to Scarborough Hospital, where he died at 11.30 without having regained consciousness.

The deceased gentleman was widely known, and the large number of breeders and dealers who frequent the Crewe sales as well as others with whom he came in contact will extend their sympathy to his brothers, the surviving members of the firm.

Mr. J. Oscar Muntz's Large Blacks.

Despite most unfavourable weather, the sale of Mr. J. Oscar Muntz's well-known herd of Large Black pigs at Theepstoe, Harrabridge, South Devon, attracted a large company of breeders, who paid some good prices for the first-class animals brought under the hammer. Sows sold particularly well, Mr. T. F. Hooley going up to 37 guineas before he could get Goodameavy Punchinella, whilst he gave 32 guineas for Goodameavy Medusa. Messrs. Whitley Bros. paid 30 guineas for Goodameavy Sunshine, and 29 guineas for Goodameavy Dream, whilst other sows realised up to 16½ guineas, the best price for boars being 9½ guineas. The total for the fifty-five lots was £405 16s., or nearly £7 6s. per head.

E. H. Peddley, of King's Samborne, Stockbridge, a farmer in a large way of business, was found guilty at Romsey, on Thursday, of savagely assaulting Henry Hughes, his shepherd. The chairman of the Bench said they had carefully considered the case, and a long list of previous convictions. Accused was the victim of ungovernable temper, and, as fines had no effect, he would be sent to prison for one month's hard labour.

SPIMO

SURE KILL for MOULD AS WELL AS APHIS on HOPS.

Costs 2/6 per 100 Gallons of DILUTED WASH, Ready for Use.

IT IMPROVES THE GROWTH OF THE PLANT & IMPARTS A GOOD COLOUR TO HOP SAMPLES.

F. WALKER, Tithby, Notts

Hop Growers, Rally!

I am delighted to know that the attacks made upon our industry, and the dangers to which it is thereby exposed, have induced our planters to consider their position, and to take measures in their own defence. A meeting has been held in London, under the presidency of Mr. Laurence Hardy, M.P., and attended by a goodly number of representative men, resulting in a resolution declaring the desirability of the establishment of an association, the principal object of which will be to provide funds for the defence of the whole body in case of any attack being made upon any individual member with respect to the quality or condition of his produce. The trade association meets most cases of dispute by reference to arbitration, but instances have arisen which involve an appeal to the courts, and growers have suffered when they were unable or unwilling to take upon themselves the responsibility of fighting an action. I have frequently urged that organisation is an absolute necessity; it is therefore very satisfactory to find that a movement is now started in this direction, which promises to lead to good results.

There are two features in the movement that indicate its future success. The first is the proposed unity of interest between the farmers and the Borough traders. I understand that the farmers and merchants are forming a guarantee fund, as a nucleus for any liabilities that may arise. This is as it should be. The prosperity of the planters is identical with that of the traders. They are all members of the same body, and as such it is most desirable that their views and actions should be based upon mutual grounds.

The other marked feature is found in the proposal to incorporate the new organisation. To this end, articles of association are being prepared by a firm of solicitors well versed in the Borough hop business. Such a decision denotes the determination of the promoters to put the matter on a solid and permanent foundation, and proves the serious view that is taken of the present position and future prospects of the industry. A provisional committee has been appointed, with Mr. Walter Berry as chairman. The fact that this gentleman has taken the business in hand assures me that knowledge and energy will not be wanting in the furtherance of this excellent scheme.

It is proposed that the growers' guarantee shall be limited to 10s. per acre of hops in cultivation, that an immediate call of 3d. per acre shall be made, and that no call beyond 2s. per acre shall be demanded without the consent of a full meeting of members. Such are the general outlines of the scheme, as far as I have been informed. I wish it every possible success, and trust I may soon be able to report some substantial progress.

If I may venture to suggest a motto for the new society I would take it from our classic dramatist:—"To thine own self be true." The spirit of these words is needful if organisation is to be serviceable, as it means the subordination of the individual to the interests of the whole number, and without the full recognition of this principle, all efforts for unity will be in vain.

The Outlook for Hops.

England.

Another week has passed, and uncertainty still prevails as to the probable yield of our plantations, because the weather remains in an unsettled condition. The members of the Canterbury Farmers' Club discussed the matter at their last meeting, and apparently were unable to arrive at any definite conclusion. It was said that the cold winds had checked the development, and that in many places the bine was slack, so that a prospect of more than five pockets, or say about 8 cwt. per acre, was hardly possible. But in other districts the outlook seems to be better. Again, one expert talked about the position being like that of 1879, when only 160,000 cwt. were grown. This view was not generally accepted, and the opinion of the meeting seemed to be expressed by Colonel Honeyball, who pointed out tha that the vermin having cleared off and the mould having been stopped, a moderate crop of excellent quality might reasonably be expected. He considered that a fortnight's rainy, warm weather would increase the crop considerably, and with regard to the cold nights, on which stress was laid by other speakers, his observations proved that the temperature had not been unusually low for the time of year, as during the previous three weeks the average had been over 54 deg. He attributed the slow development to high winds, deficient rainfall, and the attack of aphis blight.

When men of such experience cannot agree, it would appear presumptuous for me, who am only an outsider, to put forward my view. But having before me a large number of reports from all districts, I venture to express my humble opinion that our outlook is, on the whole, more encouraging for quantity than it was a week ago. Nearly all my correspondents speak of advancement and development, and although progress is slow it appears to be sure and safe. The cones are forming in a fairly satisfactory manner, and in many plantations observers are agreeably surprised that the hops are doing so well under the trials to which they have been subjected. Probably some of the more delicate sorts may be deficient, but the hardier descriptions will fill up the gaps, and the total average will, I believe, not be smaller than I mentioned last week.

America.

Mr. Durst, the extensive Californian grower, cables me to-day as follows:—"Harvesting is well under way. All going well. Our crop will be about 30 per cent. less than last year." From a letter just to hand from Washington State, I learn that my friends there consider that "the crops in the United States are, if anything, in better condition than when we last reported. A week of extremely hot weather has practically removed the vermin scare in Oregon and Washington, and has been beneficial in forcing the growth of the vine. Hops have armed out well in all Coast sections, promising a good average yield. The New York crop has also improved recently. To-day we estimate the United States at not less than 350,000 bales."

Germany.

Warm weather continues, and the development of the plant is advancing rapidly. Rain is required in some districts, the dryness of the soil being shown by the yellow tinge of the foliage. Unless some more moisture is supplied it is possible that the later sorts will suffer, as the cones will remain small. But the entire absence of vermin and the general health of the bine dispel all fears of the diminution of the crop as a whole, and very satisfactory results are almost universally anticipated.

Burgundy.

Hops are now looking well in every direction. The warm weather has dispersed the vermin, and all signs of mould; a full average crop is therefore expected.

Belgium.

The climate having been very unsettled the outlook for the crop has consequently varied. At present the prospect is not so good as it was a short time ago. Latest reports tell us that in Alost the plant is not generally healthy, although there are plenty of laterals, and the vermin has disappeared. But the plantations that have been severely attacked are very sickly, and can only give small crops. It is now estimated that this region will not yield more than 60 per cent. of a full weight. It is otherwise in Poperinghe, where all the gardens are in hops, and are very promising. The only exceptions are the white bines, which require rain. It is not expected that Belgium will harvest as many hops as last year.

The World's Crop.

Certain bold calculators are venturing on the speculative ground of the unknown, and are already giving us their ideas of the world's harvest for this year. The figure put forward is 1,800,000 cwt., or something like 300,000 cwt. in excess of 1906. Of course there is no reliance in such an estimate. All we can say at present is, that it appears probable that the supplies will be ample, and that consequently we can hardly forecast a range of high prices.

The Markets.

To attempt to talk about the hop trade at this juncture is almost waste of time and space, as there is nothing interesting to be said. In London a few transactions of quite a retail character are passing. Values seem to be only nominal, but can hardly be quoted lower. Business is evidently in suspense, waiting for more definite news from the country, and until this arrives we cannot expect any movement in the Borough.

The American markets are equally dull. My friends say that the situation for the remaining 1906's looks hopeless, and a further slump in values is inevitable. A few contracts for the coming crop are being written at 9 to 10 cents, but orders come in slowly, as no one has any confidence in futures.

In Nuremberg a little business has been done, the principal item being the purchase of a few bales of low Hallerdaus for exportation to England, the prices paid being 25s. to 30s.

The trade in Belgium is very sorely depressed, a heavy fall in quotations for new crop hops having taken place. There is no demand for yearlings.

EDUCATIONAL.

EDINBURGH UNIVERSITY.—AGRICULTURE COURSE. Prospectus, Edinburgh Agriculture College; also Regulations, Degree of B.Sc., and GARTON LECTURES on COLONIAL and INDIAN AGRICULTURE. — Apply to CLERK OF SENATUS.

HARPER ADAMS Agricultural College, Newport, Salop—This Residential College provides complete Practical and Scientific Courses in Agriculture. Courses of Study qualifying for all the higher Agricultural Examinations. Laboratories, Farm (recently extended), Dairy, Workshops For full particulars apply to the Principal—P. HEDWORTH FOULKES, B.Sc., F.E.S.

ESSEX EDUCATION COMMITTEE
DAIRY INSTRUCTION.
A TWO WEEKS' COURSE of INSTRUCTION in DAIRYING, including Butter-making and Hard and Soft Cheese-making, will be given at
THE DAIRY SCHOOL, COUNTY LABORATORIES, CHELMSFORD, commencing
On Monday, September 9, 1907.
Intending Students should send in their names as soon as possible to me the undersigned, from whom further particulars, including Application Forms & Syllabuses, may be obtained.
J. H. NICHOLAS, Secretary.
County Offices, Chelmsford,
August 24, 1907.

FARMS, BUSINESSES, &c., TO BE SOLD OR LET.

FARMS TO LET of various size, in Kent, Sussex, Surrey, &c.—LANGRIDGE & FREEMAN, Agricultural Valuers and Auctioneers, Tunbridge Wells, Kent, and 28, Queen Street, London, E.C.

Carriage paid on lots, netting or stakes, 70s. value.
Iron and Steel Hurdles, Fences Gates.—Excellent quality; 6 ft. hurdles, 4 rails, 35s. 6d. per doz.; 5 bars, 38s. 9d. Steel fencing wire, 11s. per cwt.; galvanised wire strand, 17s. cwt.; galvanised barbed wire 15s. cwt., 590 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wire and iron posts, 8½d. per yard.
Splendid Galvanised Roofing.—Perfect quality; 5 ft., 1s. 6¾d.; 6 ft., 1s. 10½d. 7 ft., 2s. 2½d.; 8 ft., 2s. 6d.; 9 ft., 2s. 10½d.; 10 ft., 3s. 3½d. Ridging, 2½d. per ft. Best Wire Nails, 11s. cwt.
Galvanised Cisterns, corrugated steel, 30 gals., 9s; 50 gals., 13s. 3d.; 100 gals., 21s. Corn Bins; Sheep, Pig, and Cattle Troughs at very low prices. Lists free.
J. PRIEST & SON Ltd., Castle Iron Works, Victoria Road, Bristol

SELDOM SEE

a big knee like this, but your horse may have a bunch or bruise on his Ankle, Hock, Stifle, Knee or Throat.

ABSORBINE (YOUNG'S)

will clean them off without laying the horse up. No blister, no hair gone. 8s. 3d. per bottle, delivered. Book 8-C free. ABSORBINE, JR., for mankind, 4s 6d. bottle. Removes Soft Bunches, Cures Varicose Veins, Varicocele, Hydrocele, Ruptured Muscles or Ligaments, Enlarged Glands. Allays Pain. Manufactured only by W. F. YOUNG, P.D.F., Springfield, Mass., U.S.A. Sole Agents for United Kingdom: THO. CHRISTY & Co., 4, Old Swan Lane, London, E.C.

Seasonable Topics.

Heated Haystacks. IT is not altogether surprising that in a season like this we should hear frequent reports of haystacks taking fire as the result of over-heating. The weather has been so catchy and the anxiety so general to pick up hay during the short spells of sunshine enjoyed, that risks have had to be run. Only the other day we were talking with a farmer who is deploring the loss of nearly fifty tons of hay destroyed by fire. The man was perhaps more upset than he would have been because one of his men, suspecting over-heating, advised that the rick should be cut, and had his master listened to the counsel the hay would have been saved. It is easy enough to be wise after an event, but in such a season as this there is nothing like taking every precaution. It is risky to sail too close to the wind, and whereas the stack which gets so warm that fears are aroused may escape and be all right, on the other hand it may not, and fire means serious loss. It is easy to tell by the condition of the hay when it is put in the stack whether it is likely to get hot, and it is wise to avoid further risks by frequently testing the rick, and if necessary to cut it rather than run the risk of spontaneous combustion.

IN A BERKSHIRE RICKYARD.

Coolness at a Fire. THERE is no news spreads like the report of a fire, and when such a calamity happens people from all the country round rush to the spot prompted in many cases by mere curiosity, in and others by a genuine desire to help. Even a hay-rick burning has the same fascination as anything else that is on fire, and without exactly knowing it the owner of the stack may be let in for considerable expense. We have a case now before us of a fire which broke out in the stack-yard of a home farm attached to a mansion. There was any number of willing helpers, but the bailiff lost his head a bit, and a good many of those who were supposed to be rendering assistance simply got in each other's way. But the sequel came later when the news got abroad that the men who had helped to put out the fire would be paid for their services. They came in shoals, and the minute particulars each applicant could give of the time he started, the time he left off, and the amount of work done, was simply amazing. It was a case of accepting statements and paying up, but the bill for putting out that stack fire was considerable by the time all the claims were satisfied. There was the harrowing suspicion throughout that all who were paid did not work, and the moral is in the unfortunate event of a stack fire to keep cool and take careful stock of those who help to put it out.

The Plague of Sparrows. SPEAKING in a general way, farmers have quite enough worries to cope with this season without adding birds to the list; but the saucy sparrow is neither a respecter of persons nor seasons, and he has left his mark of destruction on many a cornfield during the past few weeks. We have seen several fields of otherwise good wheat sadly injured by sparrows, and at this season of the year it is not an easy matter to check their depredations. The extermination of the sparrow is out of the question, and we do not think that such a thing would be desirable, if possible, so the obvious course is to keep down the sparrow population. This is effectually done in districts where properly organised sparrow clubs exist, such as in Kent, for instance, but it is not enough for local agricultural societies to merely offer a few prizes for heads during the winter season. A good deal of this sort of thing is done, but the sparrow plague is not lessened to any appreciable extent, though when a village or a district has a properly organised club, and the members realise that they have a responsibility in the matter, things are different. As for those who suffer through an excess of sparrows in any locality, it is little use grumbling unless they take steps to lessen the evil.

The Size of Sheaves and Cornstacks. SO far as appearances go, at the moment of writing there are prospects of the corn harvest being of the same catchy nature so far as weather is concerned as that of the hay has been throughout. In view of this a little discussion on the subject of sheaves and cornstacks is by no means out of place. For the convenience of handling and quickly clearing ground we prefer a fairly large sheaf, but we must take climatic conditions into account. In cases where clover was put down with corn at seeding time the forage has grown vigorously and is half the height of the straw. It is impossible to cut the latter without getting a good bit of the clover, and if tied into large sheaves the chances of drying quickly are not improved. In fact, our opinion is that small sheaves will answer the best this season. Speaking of stacks we confess to a liking for fairly large ricks as there is less thatching needed, and not so much preparation of foundations. But it is all a question of conditions, and in a season like this the small stack is safer, and if built long and narrow all the better chance is given for the wind to dry and mature the corn.

Thatching and Thatching. THE chief object of thatching of course is to provide a covering for the hay or corn stack to keep out the wet; but, dear, dear, what different specimens of thatching one does see to be sure. By the common rough and ready style the stack may or may not be rain proof, but the appearance of the thatch gives you the impression that it was thrown on, and the palpable want of neatness and finish is enough to break the heart of any expert thatcher of the old school. Is it that thatching is becoming a lost art and that the young men of to-day do not take the trouble to make themselves proficient at the work? Perhaps; but there is another question to ask: Are the modern conditions of agriculture of such a nature that the farmer cannot afford to pay for the time such as the old thatchers spent in order to give that neat finish to the work that is so pleasing to the eye? There may be something in this, but be it as it may, the art of thatching has deteriorated, and there is a desire in some quarters to revive it, as we observe that in one or two counties requests are being made for more education money to be spent in giving instruction in this important work.

The Appearance of Milk-sellers. IT was at a watering place on the west coast where we first made the acquaintance of the female, or, shall we say, lady milk-seller. There we saw a number of smart little floats doing the rounds of the houses, and in each was a couple of bonny-looking country girls, who needed no rouge to put colour into their cheeks, nor cosmetics to prevent the sun spoiling their countenances. They were attired in spotless print frocks, white aprons, and straw hats with just enough ribbon about the latter to give the necessary finish to the simplicity. We do not profess to be experts on dress, but the costumes of the milk girls suited them to a nicety, and we were prompted to think that there is a good deal in appearance. One has no qualms about buying milk from a man or woman who presents a neat, clean, and smart appearance, just as the butcher with a clean smock and spotless apron and sleeves inspires one to have confidence in his meat. We do not write this, by the way, with any suggestion that women should replace the ordinary milkman on his round, but we mention the instance to show how any vendor of food commodities may inspire confidence or otherwise by his personal appearance.

More Fruit Legislation. WHEN legislation was first introduced a short time ago for dealing with the American gooseberry mildew, and, if possible, stamp it out, we realised that this was only the thin edge of the wedge, and powers would be extended in due course to other fruits besides gooseberries. So matters are turning out, as may be seen from the statement made by Sir Edward Strachey a short time ago in the House of Commons, that the Board of Agriculture were considering the terms of an order to prevent the importation of not only gooseberry mildew, but also of other pests injurious to horticulture. This is doubtless as it should be, for we have more pests of our own than fruitgrowers can cope with, and no further introductions are required. The sensation made about American mildew has caused such a scare in fruit growing circles that we hope the Board of Agriculture has not got wind of any other pest that might settle on our shores and increase still further the anxieties of fruit-growers. When the Board has taken all possible precautions to prevent any other pests being introduced, it would be well if some serious and combined efforts were made for dealing more effectively with those that are already established in our midst.

Agricultural Politics.

BY A LOBBYIST.

Parties and the New Land Act.

Well, the Small Holdings Bill is now the Small Holdings Act ; but I ween that we are not, as a consequence, very much nearer that new heaven and that new earth the prospect of which has so emotionised the Prime Minister. All the same, its successful emergence from the Houses of Parliament means the triumph of Parliamentary sagacity, of a mutual desire on the part of all sections in the State to provide bettered facilities for securing small holdings, and of courteous determination. I am not inclined to hail the Act as being the achievement of the Government alone. True, it is the result of the initiative of Ministers—true, too, its sagacious pilotage through the shoals of the Parliamentary sea was a Ministerial effort; but even Mr. Harcourt himself would deny that it had not a fair reception at the hands of his political opponents in the Commons. Even in the House of Lords suspicion of the coercion to be exercised alike upon landlords and reluctant county councils, and preference for the principle of purchase over that of hiring, were in the end wisely subordinated to the anxiety to see the measure placed upon the statute-book. I am not among those political publicists who aver that the Government would rather that the Lords had adopted the stiff-necked attitude, and by insisting upon their amendments on the three crucial points—coercion of the landlords, coercion of the county councils, and the substitution of the principle of purchase for that of tenancy—have wrecked the measure. "This," say these publicists, "would have been in harmony with the filling-up-of-the-cup tactics." I believe that Ministers were penetrated with a whole-hearted desire that the measure should pass, provided, of course, that it reflected the desires that animated them. The first of those desires was that, whilst the local representative bodies should have administrative power vested in them, a central executive body should possess the ability to supersede local authorities that were lukewarm or dilatory. The next was that prejudice against the principle of the measure on the part of a landlord should not thwart the policy. The third desire was that the measure should not, by accumulating owners, erect a new barrier to the State-ownership of the land.

* * *

Tenant-Farmers and the Lords.

For one intervention on the part of the House of Lords the tenant-farmers of England have every reason to be greatly grateful. Now, under the original terms of the measure the tenant-farmer who had had a part of his farm taken from him for the purpose of establishing small holdings would have had his compensation fixed for him by a valuer possessing autocratic powers, against whose judgment there would be no power of appeal. It might be that the agent of the county council would be generous-minded. It is more probable that he would have the fear of a public criticism—a criticism quickened by the natural anxiety that the rates should be kept as low as possible—before his eyes. The Lords demanded for the tenant-farmer the right of arbitration in such a case. True, arbitration must naturally be the more expensive process, but it is also the more scientific one ; and, after all, even though the burden of rent might be made a little heavier for the small holder, the tenant-farmer has a right to the adequate protection of his own interest. Mr. Harcourt did not entirely yield the demand of the Peers, but he at least yielded its principle. Recourse to arbitration is now limited to the conditions specified by the Agricultural Holdings Act. Well, I am not certain that this is a bad or injudicious compromise. After all, if universal arbitration were possible the procedure might be a harassing infliction both on the councils and on the small holder. The incident, indeed, is typical of the general spirit with which fair-minded men of all shades received and considered the measure.

* * *

The Dwelling House and the Holding.

Why did not the House of Lords insist upon their demand that there should be no dwelling-house erected at the public expense on an allotment of less than three acres? Assuredly one house to three acres is sufficient. The provision of the Act by which the limit is a plot of not less than one acre may lead to extravagance, over-building, and the imposition of a grave tax upon the local exchequer. Mr. Harcourt's desire is, of course, that every small holder should, by reason of his living on his holding, have an emphasised affection for it, and an emphasised anxiety for its success. This very same desire is really, however, an absolute justification for the anxiety of the Opposition to provide facilities for the complete purchase of the property by the small holder. If the fact that the small holding must inevitably be the home for the small holder stimulates and nerves his zeal, then the magic of ownership must assuredly deepen his hardihood and earnestness. It may be that Mr. Harcourt's resolve will operate in the direction of preventing too-small holdings. Both the county councils and the Whitehall executive would naturally hesitate to create mere patch holdings, if each petty adventure meant the erection of a dwelling-house. Perhaps Mr. Harcourt's provision will mean that only holdings will be created of an extent which offers a fair prospect of a livelihood. We may thus have a comfortable body of holders called into existence rather than an indigent body of holders.

* * *

The Agrarian Achievements of the Session.

How far has the session affected agriculture and the agrarian areas? Well, whether or not the Small Holdings Act will achieve all its authors expect of it—one of its ebullient acclaimers declares that we may evolve out of the officialdom to be called into existence under it "some of the motive power which revolutionised Poor Law administration from the centre seventy years ago"—we must confess that the session has brought forth two other measures of the most vital moment to agriculture. Some of us would rather that the Government had adopted a more definite policy in regard to milk-blended butter, but, at all events, there is no contravening the assertion that the Butter Bill is a most valuable piece of legislation and has erected obstacles against fraud which should be hailed with enthusiasm by the whole agricultural community. The purpose behind it will not be completed until the fraudulent milk-monger is no longer able to poison the infant community by his deleterious chemical concoctions. The Foods Regulation Act is a measure which must operate to the advantage of the producers of pure and wholesome food—that is, the British farmers. The Local Government Board possesses powers under this Act that should make the foreign vendors of bags of mystery and tinned putrescences quake with fear. Honest English beef, mutton, and pork are not to be penalised in the English markets in order that the Transatlantic pig manufacturers may overgorge themselves with unhallowed profit. The foreign food products that enter into competition with English food products will be under the obligation to obey the laws of honest competition. Here, then, we have three notable achievements. If the influence of the Small Holdings Act on the economy of the country-side is more or less problematical—after all, years must pass ere its much heralded benevolence can have any serious expression—there can be no doubt whatever about the value of the Butter Act and the Foods Regulation Act. Both must confer an undeniable and immediate advantage on the general agrarian community. We can, indeed, point to no session in the last decade having for the country-side the moment of the past session. This is not the language of inflated partisanism ; it is the language of dispassion. If I desired to adduce another justification for it I would point to the fact that we are a stage nearer a bold and national system of afforestation.

* * *

The Men of the Session.

No rural Parliamentarian has—apart from those possessing Front Bench rank—imposed himself upon the Parliamentary imagination. You can point to no representative of a rural constituency—always excepting the Front Bench men—and say, "Here is a man destined to make history and carve by his own deeds a niche in the nation's Valhalla." Mr. Harcourt, has, of course, revealed that in him we have a statesman of the finest intellectual distinction—firm in his grasp of his own design, clear and cogent in exposition, deft and resourceful in debate, and chivalrously courteous in his method. Mr. Chaplin has secured so remarkable a place in Parliamentary esteem in the last few months as to deepen the mystery of his supersession by Mr. Balfour in the formation of his last Government. Mr. Walter Long has emphasised his eminence ; but, though he did admirable work in connection with the Small Holdings Act, we now think of him as the accepted leader of Irish Unionism rather than as the land tenure and local government expert. Mr. Jesse Collings has displayed a fidelity to his earlier agrarian and land reform aspiration that has something of heroism in it. At the Local Government Board Mr. John Burns has revealed a prescient sympathy with rural and county anxieties that—though it has provoked his erstwhile associates to ribald fury—marks him out as a man of singularly receptive mind and practical methods. These are the men who, in reviewing the session through the agrarian lens, attract the eye. There are men, like Mr. Masterman on the Radical side, who have betrayed distinction, but it is the distinction of the idealist rather than the distinction of the practical mind. There are men, like Lord Turnour and Lord Helmsley on the Conservative side, who have intruded themselves pretty frequently in the debates, but this has been the intrusion rather of pertinacity than of statecraft. No ; the Front Bench men have, from the agricultural point of view, few rivals to their practical eminence.

By a fire which occurred on Tuesday upwards of £400 damage was done to a shed and three hay stacks on the Elton estate, near Stockton. There were two stacks of this year's crop and a shed owned by Mrs. D. Fletcher, Norton, and a stack of last year's crop, the property of Mr. T. Harrison, Middlesbrough.

THE ROYAL DUBLIN HORSE SHOW.

The fortieth annual show of horses and sheep, under the auspices of the Royal Dublin Society, was held in the beautiful grounds at Ball's Bridge on Tuesday, Wednesday, Thursday, and Friday of last week, and was favoured with exceedingly fine weather for the proceedings. The flowing tide of favour that is now being lavished upon the horse was even more intense at Dublin than at the great show at Olympia in June last, and admirers in their thousands at Dublin came from all countries of the world to see the magnificent horses that from year to year make their appearance at this show. Ireland is peculiarly adapted for the production of Hunters and Thoroughbreds, the limestone and subsoil that prevails over so vast an extent of the country has much to do with the splendid growth and development that these horses make in the Emerald Isle; but there is another point that favours the breeding of these horses in Ireland that does not often enter into consideration when their merits are being discussed, and that is the softer surface obtaining practically the year round from the weeping skies of that country. When we compare the soft, genial footing that the Irish turf affords with the parched and often iron-bound surface in English pastures during the summer, it is at once seen how much more perfectly their limbs and joints will develop and become elastic with the softer treatment, as compared with the vibration that galloping about on an iron-bound surface invariably produces. The best racing blood obtainable has for many years found its way into Ireland one way or another, and the natural love of the Irish people for their horses has induced them to mate and manage the breeding of these horses with the greatest possible skill. The many leading events in the racing world that have fallen to the lot of Irish bred horses point unmistakably to the quality of stock that is produced, whilst setting practical things on one side, as a matter of beauty there is no other horse in the world that fills the eye like these magnificent Irish Hunters; their great power, quality, and style cause them to be the admiration of every foreigner that sets foot on British soil, whilst lovers of the chase at home are never so happy as when astride these great goers and jumpers. It is very satisfactory to run through the breeding of the best horses now exhibited at Dublin, to see how thoroughly certain horses of blood continue to hold their own in the keen competition of the present time. It is many years since we saw Ascetic winning first prize as the best weight-carrying Hunter sire in the Ball's Bridge grounds, and we recollect how we admired his magnificent loin quarters and general power, as well as his style and quality. There are, perhaps, not as many of the great sire's progeny left in Ireland as there ought to be, but in England one rarely comes across a good class of Hunter brood mares but what the name of Ascetic is associated with the breeding of one or other of them. Then there was another sire, Scene Shifter, that the writer very much admired, and the present catalogue of Ball's Bridge shows how his blood has made its mark and is still making. Royal Mask and his progeny, a grand sire of horses, will bear fruit for generations to come, and the successes of Hackler, Gallinule, and other notables are too prominent in every breeder's mind to need reference. With such good breeding on the part of its bones, such splendid development, and the flowing tide of favour that the gee gee is now securing from the general public, it is no wonder that the attendance at Ball's Bridge last week should be a record one all round, and that amongst its many visitors should be included the very cream of English society as well as the heads of other countries.

Thoroughbred Stallions.

The society's catalogue commences with the breeding classes, stallions eight years old and upwards, calculated to get weight-carrying Hunters, occupying the first place. The winner in these upon the present occasion was Mr. Patrick Cullinan's Flying Hackle, a ten-year-old brown, bred by the late P. J. Dunne near Trim, sired by the great horse Hackler, his dam Damoiselle by Atheling, who, if we recollect, was by Stirling.

JUDGING HUNTER GELDINGS, 13 TO 14 STONE, AT THE ROYAL DUBLIN HORSE SHOW.

Flying Hackle is a very good-looking horse, well built, and what all good judges like, has great depth of rib, and he is doing good work as a sire, so that it may be said he well deserves his great honour. The second horse was Anklebiter, also a brown and now fifteen years old; he was exhibited by Mr. J. C. Higgins from co. Tipperary, and bred by Mr. Chatterton in England; with Hampton and Gladiateur blood close up there is no wonder he has proved such an extraordinary sire, and has been very successful in winning prizes in most parts of Ireland. In addition to being put together properly, he has considerable substance which he bequeaths to his progeny in a remarkable manner, he is a good mover. The third honour went to another very good stallion, Ray's Cross, a nine-year-old bay, exhibited by the representatives of the late James Walsh, and bred by Mr. John Gubbins in co. Limerick. St. Florian was his sire, and his dam Dew Cross by Rosicrucian, so that the blood here is again good enough for anything, and Ray's Cross is a great favourite.

Class 2, for Thoroughbred stallions under eight years old calculated to get weight-carrying Hunters, produced seven entries, rather a small number for such an important class. Pretty easily at the head of these was Mr. E. W. Robinson's Red Sahib, a son of the grand old sire Red Prince II., now seven years old; he was bred by Mr. T. P. Butler at Tallow, in Co. Waterford, and is making his mark as a sire both in England and his native country, his progeny coming out well throughout; his dam was Hindoo Girl by Tacitus, granddam by Uncas. Mr. Arthur McMahon, from the Colt Stud Farm, Abbeyleix, won second prize in this class with Blairmore, a seven-year-old, bred by Mr. Craven in England, got by Blainfinde by Kendal, his dam by Albert Victor. This horse was a great favourite with many at the ringside, and looks like being as useful a sire in the future, as he has already been in the past. The third prize was awarded Mr. Francis Flannery for Firmillian, bred by Lord Ellesmere, and a grandson of Hampton on the sire's side and Carnival on the part of the dam. He is built for speed, and his progeny so far are doing remarkably well. The Croker Challenge Cup for the best horse in these two classes was awarded to Flying Hackle, and the reserve to Red Sahib.

Thoroughbred Yearling Colts.

Thoroughbred yearling colts came next. Of these there were forty-five entries; a very striking lot all round. The growth and development of these yearlings is altogether astonishing; they seem to show such amazing power with their good quality and breeding. First prize in these was accorded to Mr. J. C. O'Sullivan for Baliva, a chesnut by Americus, his dam Cloheen by Sceneshifter; he looks like developing into a grand horse in the future, and was bred by his owner. Messrs. Bourke, from Co. Kildare, exhibited the second prize winner Cadamstown Boy, also a chesnut bred by the late Mrs. Bourke; his sire Succoth by Enthusiast, and the dam by Bendemeer; his breeding and quality leave little to be desired. Dr. White, from Elphin, was both breeder and owner of the third prize colt, which is by Merry Methodist out of a dam by Terror, granddam by Solon, so that the best of breeding is present also in this instance. The Perpetual Challenge Cup for the best yearling colt was awarded to the first prize winner, Mrs. O'Callagan being reserve with a very nice chesnut of Ben D'Or blood on the sire's side out of a dam by Necromancy.

There was a great falling off in the number of yearling fillies as compared with last year, and several other previous years, only twenty-eight competing upon the present occasion, breeders probably finding that the forcing necessary for this early development is not beneficial from a breeding point of view later in life. Mrs. A. M. O'Callaghan was awarded first prize for a sweet filly by that great sire General Peace by Gallinule; Mr. J. G. Evans, from Co Meath, came in second with another very good filly of his own breeding by Diakka, which was followed by Lady St. Gris, a sweet bay bred by the late Captain Murphy, of Mullingar, exhibited by Mr. S. Ray from Naas;

THE HUNTER STALLS AT THE ROYAL DUBLIN HORSE SHOW LAST WEEK.

this filly was got by St. Gris, her dam by Autocrat. Again it is very pleasing to find the prize winners are all of such magnificent strains of blood.

Thoroughbred Brood Mares.

Thoroughbred brood mares with foal at foot comprised thirteen entries, the first of these being Mr. E. E. Lennon's Auburn's Pride, a nine-year-old, bred by Mr. Allan Cameron, in Co. Roscommon; she is by Hackler, her dam by Florian, and she has a colt foal at foot by General Peace Denis Richard. Mr. E. N. Power's Lady Gallinule—as her name indicates, is a daughter of Gallinule, her dam by Favo—obtained the second honour; and Mrs. O'Callaghan's beautiful mare Irish Girl, fourteen years old, full of quality, sired by Gallinule, was placed third. The class generally was very good.

Mares over six years old with foal at foot calculated to breed weight-carrying Hunters were thirteen in number. The winner in these was Mr. R. G. Carden's famous mare Lady Tacitus, bred by her owner and sired by Tacitus. In addition to the first prize, this mare also secured the Coote Challenge Cup and the Hunter's Improvement Society's Medal for the best Hunter brood mare. Mr. James Cole was placed second in the class with May Morning by Marmiton, her dam by Ascetic, another roan with quality about her. Mr. Lawrence F. Ball's Griffinrath by Hackler carried off the third prize. The best foals in this class were Mr. Patrick Turley's, by Astrologer 2nd, and the best filly foal, Mr. R. G. Carden's by The Gull.

Mares six years old and under with foal at foot to produce weight-carrying Hunters, contained eleven entries. The best of these was Mr. R. Geraghty's Annagor's Pride by Annagor, her dam by Prince Eugene. Mr. Daniel Burke's second prize mare Shannon Lass was a daughter of Black Prince, whilst the third prize mare, Mr. Hassett's Belle of New York, was a daughter of Troy by Kendal. Mr. D. F. Casey obtained fourth for Star of Ross by Man of Ross, and Mrs Panton's Magnesia by Red Prince II. was reserved. Most of the mares in the latter classes were animals of great stamina and quality, exactly calculated to breed weight-carrying Hunters of the highest class.

Hunters.

The general Hunter classes were once more filled very satisfactorily as regards numbers, and though a good number of prizes went to English horses, still, on the whole quality was very satisfactory as regards the home exhibits. The demand for first-class Irish Hunters has been very great for two or three years past, and the country has been scoured over privately from time to time by English and foreign buyers, who are always anxious to secure the most promising young stock to take to their own countries. Naturally this makes a great deal of difference to the Irish exhibits. The best weight-carrying Hunter up to 15 stone and over was Colonel Grenfell's Sir John; he was bred by Mr. Patrick Coughlan in Co. Cork, whilst the first prize winner in the next class up to from 14 to 15 stone was Tytchley, exhibited by Mr. John Drage from England, but bred in Ireland. The same exhibitor also secured first honour in the following class up to 14 stone. This, again however, was an Irish bred horse. Still another honour went to Mr. Drage for an English exhibit, the famous Hunter All Gold, but he too was bred in Ireland, and is one of the finest stamp of Hunters that has been seen in England this year. The remaining classes of Hunters may be dismissed with a few general remarks that, as a rule, the younger horses show very fine breeding and great general improvement in style as compared with the earlier days of the society's labours.

Harness Horses.

Harness horses were largely in the hands of English exhibitors, Mr. John Kerr winning first in Double Harness with Loudwater Robin Hood and Loudwater Little John; the same exhibitor was also first in another class with Loudwater Gongelt and Loudwater Grangelt, which also secured the Milward Jones Perpetual Challenge Cup for the best pair of carriage horses. Mr. Kerr also got another first prize for Loudwater Fashion and Loudwater Flourish, whilst other winners from England were Mr. Paul Hoffman and Miss Ella Ross.

The pony Harness classes were also very satisfactory. The chief winners in these were Miss Gubbins, Mr. W. G. Carson, and Miss Anderson.

The Harness classes altogether attracted considerable attention—more than usual, and the pacing class also created great interest.

SHEEP.

The display of sheep throughout was considerably over the average, some breeds presenting vast improvements upon any previous occasion, notably the Oxford Downs, which appear to be flourishing in Ireland and extending their quarters very rapidly. Border Leicesters also still hold their own, as do Lincolns, Roscommons, and the Mountain breeds. Shropshires, though a good representation, have been as good upon some previous occasions, probably better; whilst Hampshires do not appear to be gaining many friends.

This section of the catalogue commences with the Border Leicester breed, which, as already intimated, well hold their own; indeed, have seldom if ever been so good. The chief exhibitors in these and the most successful were Mr. T. W. Stokes, from Hillsborough, Co. Down; Sir Algernon Coote, from Mountrath; Mr. C. M. Doyne, a very old exhibitor, Mr. R. W. Bell, also from Hillsborough: Miss Staples, and several others. The Irish bred exhibits well held their own, the Border Leicester challenge cup being awarded to Mr. R. W. Bell for sheep of his own breeding. Aged and shearling rams were very good, the latter class having no less than twenty-eight entries; the other classes were not as well filled numerically, shearling ewes and ewe lambs having eight entries each.

The old native breed of Roscommon sheep, one of the hardiest and most useful in any country, also present great improvement, especially in the older portion of them. Lambs of this breed were not quite as well matured as they might have been. That veteran breeder of this variety, Mr. G. R. Acheson, from Co. Roscommon, carried off the challenge cup for this breed, and was very successful throughout; other very successful breeders being Mr. P. J. Fitzmaurice, Mr. Edward Scott, and Mr. M. R. Anderson.

Lincolns, as already stated, were well up to former years. The challenge cup for this breed went to Mr. R. G. Carden, who exhibited some capital specimens, both of his own breeding and also from England. Mr. J. R. Lloyd, Mr. Joseph O'Brien, Mr. Patrick Hanlon and several other breeders were also well represented, and shared in the honours; whilst Mr. Richard Reynell carried off first prize for ram lambs and also for shearling rams.

The Black-faced Mountain breed of sheep are increasing rapidly in Ireland, and becoming greatly in favour both with breeders and buyers. There is an immense area of mountain land in that country that suits them fine, whilst the small joints and high quality of their mutton will always make them favourites with the consumer and butcher. The majority of these and the best of them were in the hands of Mr. H. D M. Barton, and displayed very nice quality and breed type. Colonel John Leslie was also a successful exhibitor, as well as Mr. S. M. Dobbs.

The challenge cup for the Shropshire breed was won by Mr. R. F. H. White, who exhibited a number of entries of capital stock animals that well retained the attributes of the Shropshire breed, and full of quality. Lady Margaret Chartteris was also a very successful exhibitor, as were Mr. R. H. Stubber, Lord Barrymore, Captain W. L. Naper, and others.

Oxford Downs were very strongly exhibited by Dr. Vaughan Harley, from Buckinghamshire, whose exhibits carried practically everything before them, winning the special prize as well as first honours in each class.

Hampshire Downs were few in number, and all in the hands of Mr. J. C. Hanbury, whilst Sir Algernon Coote annexed all the money in the Cheviot section.

Black-faced Suffolks had a single representative exhibited by Mr. B. F. Eustace.

THE WEEK'S SHOWS.

Derbyshire.

The annual show of the Derbyshire Agricultural Society, which was suspended last year on account of the visit of the Royal, was held at Derby last week in glorious weather; and though the entries were fewer than in 1905, this cannot be put down to the suspension last year, but to the fact that the season has prevented many from showing, and also to the fact that this exhibition clashed with that of the Warwickshire Agricultural Society. The cattle numbered only 86, as against 123 in 1905 and 108 in 1904. Of horses there were 307, as compared with 424 and 365 respectively, whilst sheep numbered 37, an increase of 5; pigs 30, an increase of 10; and butter and cheese 49, as against 48 in 1905. A new departure was a dog section, in which both the King and Queen were represented, their Majesties winning with Borzois, bassett hounds, and spaniels.

Derbyshire has always enjoyed a notable reputation for Shires, and the representatives this year were again up to a very high standard of quality. The cup offered by Mr. Edward Elsey for the best mare, filly, or foal was won by Mr. Egerton Orme, of Etwall, who was amongst the most successful exhibitors in the Shire section. Another of Mr. Orme's entries, a four months' filly foal, was placed reserve for the cup, and also won the "any age" cup offered by Mr. J. W. Whitehurst, conditionally upon the exhibit having been sired from the Markeaton Stud. The same exhibit won Mr. G. H. Bennett's cup for a tenant farmer's foal, whilst still another success which Mr. Orme scored was in being placed reserve for the Bennett trophy with Ash James, a beautiful four months' old colt, by Dunsmore Jameson, which has already had a distinguished career, having taken first at the Staffordshire show, and at Tutbury and Belper. Mr. J. W. Whitehurst was another successful exhibitor of Shires, his most notable achievement being the winning of the Shire Horse Society's gold medal with a capital three-year-old filly, to which Mr. Orme's two-year-old Combermere Abbess was placed reserve. In the open Shire classes many of the winning exhibits were of wide reputation. With Bardon Ruler, Mr. W. T. Everard, of Bardon Hall, Leicester, won the first prize in the open competition for two-year-old entire colts. In the next open class the winner was Mr. F. Farnsworth's Ratcliffe Coming King, a son of that well-known sire Lockinge Forest King. Mr. Whitehurst's Yatesbury Lass, a finely-proportioned five-year-old chesnut mare, was first in both the open and limit classes for mares with a foal at foot. She was the winner of the challenge cup at Bakewell, and was also very successful at Belper. In the open and local colt classes Ash James once more carried all before him, and Mr. Orme's cup-winning filly also had a strong lead in the classes in which she was shown. Mr. Everard's Ashleigh Royal Duchess was adjudged the best two-year-old filly in the open competition, and another of Mr. Everard's fillies was the first-prize winner amongst those included in the open entry for yearlings.

The Hackney and harness classes contained a number of celebrities who, with one or two exceptions, conquered once more in the ring. The judges started with contests restricted to landlords and tenants. Here the Messrs. Cockayne, of Sheffield, scored with Paddock Queen and a Paddock Polonius foal. The youngster was also decorated with one of the Hackney Society's silver medals. The Sheffield-owned Paddock Lucy, however, could not win in an open class from Mr. J. W. Featherby's (York) Astonishment, who, since his striking successes at the Yorkshire, has repeatedly been in the very forefront. The pick of the yearlings was Norbury Roosevelt, sent by Mr. E B. Carnley, of Alford, Lincolnshire. Coming to the harness horses, Astonishment again held the lead among geldings and mares over 15 hands, second position being occupied by Paddock Performer. Mr. G. E. Franklin's King Gobang easily beat all the animals between 14 and 15 hands pitted against him. With regard to ponies under 14 hands, a strong outside opinion did not accord with the decision which put Mr. Charles Clark's (Whaley Bridge) Ingoldsby in front of Mr. Caleb Jones's (Sheffield) Warburton Aneroid, who was a leading Royal winner. The Wigginton Stud, Tamworth, came first with tandems, with the Messrs. Cockayne second.

Shorthorns were not so good as we have seen them at Derby, and in some cases were rather disappointing. Among a moderate group of aged bulls the premier place was assigned to Pride of Sunshine, bred by the King, and owned by Mr. Thomas Atkinson, of Redvale's Farm, Bury, Lancashire. The leading yearling bull was a handsome Lincoln Red, Burton Hermit II. from Mr. John Even's noted herd. Bull calves were just useful, the winners being entered by Mr. R. Finney, of Hemmington, Derby, and Mr. R. Smedley, of Asher Fields, Pentrich, near Derby. The Shorthorn Society's county prize of £10 for bull calved in 1906 was won by Mr. Smedley with a beautiful roan named Rolleston Diamond of Sir Oswald Mosley's breeding Cows and heifers were more meritorious than the bulls, though, with the exception of the yearling heifer class, the competition was very weak, three contests only producing a total entry of ten. The first prize of £10 for pedigree dairy cows was given by the Shorthorn Society, the second of £5 coming from the society promoting the show. For these substantial premiums only two animals competed, and their milk yields and breeding qualities were of such a character that they secured both awards. The winners were Ruth Clarence 32nd and Mercote Lavender Princess, and they represented the herd of Mr. Reuben Shelton, of Ruddington, Notts. One of the best classes was that for cows in milk or to calve in 1907. The fight for pride of place lay between Mr. Atkinson's Jennie and Mr. Even's Burton Quality 3rd, victory resting with the Lancashire cow, who was champion at Peterborough and first at Leicestershire and Lancashire. Mr. Atkinson was again to the fore in the two-year-old heifer class, his entry beating the Staffordshire-owned Cheddleton Peri. Captain W. B. Harrison, of Aldershaw, Lichfield, has a capital yearling heifer in Aldershaw Primrose 3rd, who scored rather easily over the Duchess of York, exhibited by Messrs. W. and A. Holden, of Chevin, Belper. In the section devoted to Channel Islands cattle, Mr. O. F. Mosley, of Melton Mowbray, was first prize winner in each of the three classes, whilst the whole of

the Kerry and Dexter Kerry cattle came from the Duchess of Devonshire's herd.

One would have liked to have seen a bigger display of sheep, though there was little fault to find with the quality. The successful exhibitors of long-woolled specimens were Messrs. Francis Dunn, Flagg, Burton (four firsts and three seconds); A. J. Tomlinson, Bubnell Hall, Baslow (one first), and Philip Walker, Shipley, near Ilkeston (one second). Shortwoolled sheep were stronger in numbers, but Mr. W. Gibbs, of Kirk Langley, Derby, claimed five first and two second premiums; Mr. T. B. Handley, of the Lowes, Swarkestone, took a first and a second; Sir Peter Walker gained two seconds, and Mr. Poyser, of Swarkestone, had a second prize.

Pigs, too, were not particularly numerous, but good all round. In the Large White breed classes Mr. R. M. Knowles, of Colston Bassett Hall, Notts, won three firsts and a second, the other two second awards at the disposal of the judges falling to Mr. Thomas Hewson, of Peterborough. The whole of the six prizes for Tamworths went to Mr. F. W. Gilbert, of Swarkestone.

Worsley.

The Worsley and District Agricultural Society decided to hold their show on a Wednesday this year instead of the usual Saturday, and it is satisfactory to be able to report that the experiment proved a complete success, for on Wednesday last the attendance at Drywood Park was greater than ever. Despite the occurrence of other shows the same day, the entry of stock and dogs was the best the society has had, and the satisfactory feature was that the increase in quality and numbers was in the classes of stock that have hitherto been rather weak. Thus the cart horses were by far the best the society has had for some years, the cattle were better, pigs exceptionally good, and the dog show was an excellent one. In the horticultural show the entries, owing to the season, were fewer; but in quality the growers of vegetables who showed seemed to have risen superior to the season. Cats and rabbits have become so important that they had a separate tent. The Earl and Countess of Ellesmere were present during the best part of the day, and the Countess presented the cups to the fortunate winners.

Airedale.

The Airedale Agricultural Society were fortunate enough to have delightfully fine weather for the show at Bingley on Wednesday, and thus the forty-first annual meeting of the society proved one of the most successful. The total entries were 1,797, against 1,685 last year, and 1,514 the year before. This may not be quite equal to some of the totals achieved when the show was spread over two days, but it is far ahead of any of the records of recent years, and is probably the best of all the single day exhibitions. Simultaneously with the expansion of the catalogue there is an increase of about £55 in the prize money, which amounted in all to not far short of £600. One result of a liberal policy was seen in the high quality of the exhibits. Horses and cattle made a decidedly better show, and sheep, which a year ago had to be eliminated because of the poorness of the entry, numbered 48, several of the best known breeders being among the exhibitors. Shires and Hackneys composed the bulk of the horse section; all the cattle were either pure Shorthorns or of the Shorthorn type, and some of the best strains were represented.

Wigton.

The Wigton (Cumberland) Agricultural Society held their fifty-third show at Highmoor on Thursday, when, unfortunately, the weather was far from favourable, and thus affected the attendance. The show of stock was a highly creditable one, and had the weather been better the animals would have shown to much greater advantage. The entries totalled over 500, an increase of 80 upon last year, in addition to which a poultry section, added for the first time, had about 300 entries. Shorthorn cattle and heavy horses were the feature. All the successful Wigton district cattle breeders were represented, and no better show has been seen here, despite the fact that many young bulls and heifers have lately been sold out of the district for exportation. Heavy horses were solely confined to the Clydesdale breed, and were well up to the average, and there was the best show of slender horses for some years.

Arrangements have practically been concluded by Earl Carrington, as president of the Board of Agriculture to let a further area of over 900 acres of land in the Isle of Sheppey, in six holdings. This land has been farmed by the Crown in hand for the last ten years, as no tenant could be found for it. The last report on the Crown lands shows that the area of land in hand when Earl Carrington took over the management of the Crown lands was 3,494 acres, which will now be reduced by this and previous lettings to 490 acres, consisting of one farm in Oxfordshire.

Warwickshire.

The Warwickshire Agricultural Society's Show at Rugby apparently did not suffer by clashing with that of the Derbyshire Agricultural and Horticultural Society, for the entries were the best on record, totalling 1,007, as compared with 759 at Nuneaton last year, 809 at Coventry in 1905, and 889 at Rugby in 1895. The large entry was certainly gratifying, and for it some credit must be given to the Rugby and Dunchurch Agricultural Association, for they abandoned their show and amalgamated with the county society, thus helping to make the event worthy of the county.

Cattle.

Catt'e came first in the catalogue, and they made an excellent show all round, though the bulls and dairy cattle were perhaps the outstanding features. The tenant farmers' and local classes showed what a marked improvement is being carried out in the breeding of these animals, whilst in the open classes there were many animals that had figured successfully in other parts of the country. A notable exhibitor and prize winner was Sir Richard Cooper, whose famous Shenstone Court herd of Shorthorns added considerably to its already long list of honours. Sir Richard won premier honours in an exceptionally strong class of bulls with Chiddingstone Malcolm, a weighty roan of true type, Mr. George Harrison, of Darlington, coming second in this class with Elvetham Sweetmeat, bred by Lord Calthorpe, a remarkably good roan. In the class for younger bulls the positions of these two exhibitors were reversed, Mr. Harrison winning the premier prize with Pride of Tees, a very promising son of Primrose Pride. Shenstone Gipsy Lad, who has won several firsts this season, was the animal which secured second prize for Sir Richard Cooper. A prize for the best Shorthorn bull in Warwickshire attracted a good entry of useful animals, the best of which was a young red named Birk's Jewel, belonging to Mr. John Crawley, of Rugby. In the Shorthorn dairy cow class, Lord Rothschild won easily with Red Rose 3rd, a beautifully proportioned animal, Mr. W. A. H. Bass, Burton, being second with Lady Dorothy 50th. In the class for cows over three years there was a collection numbering fourteen, and the coveted red card was secured by Mr. Harrison, who was represented by Towey Princess. Competition in the heifer classes was also keen. Of the animals under three years old the best was Sir Alexander Henderson's Buscot Truth, a good looking red heifer bred at Buscot Park, whilst in the class for heifers under two years old, Sir Richard scored with a couple of well-known show animals.

That much neglected but interesting and useful breed, the Longhorns, as usual figured in the catalogue—the only county show at which they have done so this year—and they were the centre of much attention on the part of visitors. Mr. W. Hanson Sale, of Atherstone, was a prominent winner. In the cow class he won the first and second prizes, the former with Lady Panza, the handsome red and white, which won first at the Royal in her class and first there in the milking tests, and the second with another typical specimen named Arden Dairymaid. Mr. W. Shaw, Jun., took all three prizes for heifers, whilst Mr. W. L. Riley, Mr. B. Levett, and Mr. Sale divided the prizes for bulls. There were only two classes for Channel Island cattle, and the winners were good types of the breed.

Horses.

The agricultural horses were as usual the feature of the horse section, some of the best known breeders being represented. The Shire stallions were an excellent lot, fit for any show, and it was a big honour to win in such company. Mr. F. E. Muntz's King Forest was the winner, Emly Friar, Mr. Barr's brown stallion, coming second. Shire colts were strong both in numbers and quality, but Sir Albert P. Muntz, Bart., M.P., had little difficulty in carrying off first and second awards, Mr. Farnsworth's Ratcliffe Charming King being placed third. Yearlings were good all through, and the first two fillies in the open class, shown by Sir P. A. Muntz and Mr. Carrington respectively, have taken prizes all over the country. In the open class for Shire fillies Mr. F. E. Muntz won first with Aldeby Lady Jameson, a high-priced purchase at the recent Dunsmore sale, and unquestionably one of the finest of the Shire mare type at her age. Messrs. Thompson's Desford Future Queen, who has won both at London and other shows, came second. The class for Shire mares, four years old and upwards, was remarkable from the fact that nealy every animal has been a winner at the Royal or London shows. The first prize went to Mr. Appleby's Lockinge Garnet, a mare of very nice quality, and possessing grand movement. In the open class for colt foals Sir P. A. Muntz won with an animal which has won on each occasion shown, Mr. Wait coming second with a colt of beautiful build and character. In the open class for filly foals Sir Alexander Henderson came to the front with Buscot Rosemary, a nicely-balanced, well-grown animal. The Duke of Sutherland's filly, placed second, was younger than the winner, but she has a prominent future before her. The Dunsmore Cup was secured by the Duke of Sutherland's Lilleshall Moss Rose, an animal of great scale and width generally, which was second in the class for Shire mares with foal at foot, and many thought she ought to have been placed first. The Parnell Cup and Roberts Challenge Bowl went to Mr. Dunn's Glen Rose, a magnificent brown, with a long, low body, set upon grand legs.

Though not equal to the Shires the hunters, hacks, and ponies made a very good show. Mr. Eaton Kimbell won the Hunters' Improvement Society's gold medal for the best brood hunter mare with Nora Creina, who took first in the class for mares adapted for breeding hunters, in foal or with foal at foot; whilst the silver medal was taken by Mr. F. D. Wilkinson's Quick March, winner of the first prize for a two year-old filly likely to grow into a hunter. In the hunter classes there was, as has been the case up to now, nothing to approach Whisky, Mr. J. H. Stokes's grand bay. He was placed first in the middle-weight hunters' class, and thus brought his total winnings up to eighty-one firsts and twenty-eight championships. He had to beat a number of good horses, amongst them Mr. F. D. Wilkinson's Summertime, and another from his own stables named Mustard. Mr. F. D. Wilkinson secured the first prize for the best light-weight hunter with Cardonald, which has nice shoulders, splendid bone, and fine action, whilst in the weight carrying class for Hunters, Mr. Stokes had no difficulty in carrying off first with Axiom, which was described by a judge as handy as a pony and beautiful to ride. Mr. Sedgley's King Cole, who secured the second prize, is something of the same type as the winner, but lacks his substance.

Sheep.

The Shropshires were the chief attraction in the sheep section, though there was an uncommonly good display of Oxford Downs. In the open classes for Shropshires Sir Richard Cooper maintained his reputation by securing first prize for shearling rams, second prize for shearling ewes, and first for five ewe lambs; whilst Sir P. A. Muntz got the second prize for rams and the first prize for shearling ewes. In the class for two ram lambs of the Oxford Down type the first prize was secured by Mr. W. J. P. Reading, of Lechdale, whose exhibits beat those of Mr. J. Horlick, Cheltenham, but the latter came to the front in the class for shearling rams or ram lambs, and was also second for five ewe lambs. Lord Southampton was the winner in that for five shearling ewes, Mr. J. T. Smith, Towcester, coming second.

Pigs.

Pigs made the best and largest display for several years. Mr. R. Ibbotson, of Knowle, won the principal prizes for Tamworths, including the Tamworth Pig Breeders' Association's gold medal for the best representative of the breed. Mr. Thomas Henson and Mr. John Neaverson, both of Peterborough, secured nearly all the prizes for Large or Middle Whites. Mr. Henson took the National Pig Breeders' Association's silver medal for the best boar of Large White, Middle White, or Tamworth breed with Peterborough City, Mr. R. Ibbotson being reserve with Knowle Don, which was also reserve for the Tamworth Pig Breeders' Association's special, whilst the Pig Breeders' Association's silver medal for best sow of same breeds fell to Mr. J. Neaverson's Eye Lass 2nd, Mr. R. Ibbotson's Chesnut 10th, the champion Tamworth, being reserve. For Berkshires, which were not numerous but of first-class quality, the prizes were taken by Mr. R. W. Hudson, Mr. F. G. Gilbert, Derby, and the Rev. H. T. Longden.

Cartmel.

The Cartmel Agricultural Society's thirty-fifth annual show was held on Tuesday in Cartmel Park, on the Duke of Devonshire's Holker estate in North Lancashire—an ideal place for an agricultural show—and being favoured with delightfully fine weather was very largely attended. The entries numbered 738 as compared with 713 last year and 718 in 1905. Cattle were slightly down, but in the horse and sheep sections there were substantial increases, the figures being—horses 184, against 155 last year, and sheep 96, compared with 76. The outstanding feature of the show was the excellent display of heavy horses, a fact which is largely due to the efforts of the patron of the society, Mr. Victor C. W. Cavendish, M.P., to encourage Shire breeding in the Cartmel Valley.

The cattle section consisted of excellent displays of both Shorthorns and Jerseys, the latter being perhaps the best lot seen at a local show in Lancashire this year. The Blythwood Challenge Bowl, offered by Sir James Blyth, Bart., for the best Jersey cow or heifer, has this year been won outright by Mr. J. J. Shepherd, of Grange, with a fawn heifer calved in 1905, and sired by President out of Pearl II. Mr. M. Phizacklea, of Newby Bridge, gained the Fowler Challenge Cup with a nice heifer, while Mr. J. Johnson, of Mireside, took Captain Fraser's Challenge Cup with a Don Carlo.

Cheshire.

Prior to 1905, the Cheshire Agricultural Society held migratory exhibitions, but the results were not encouraging, and it was decided to try the plan of holding five successive shows at Chester, and the experiment has proved entire'y successful, for the third show held on Wednesday was, like its two immediate predecessors, a success from every point of view. The entries totalled 2,335, compared with 2,395 last year and 1,995 in 1905; and the attendance was a record, reaching 11,182 at five o'clock, compared with 8,701 in 1906 and 8,578 in 1905. The president is Sir Gilbert Greenall, Bart., who has done so much to foster the breeding of good stock. Sir Gilbert, who was accompanied by Lady Greenall, shared in the duties of judging, and also presided at the public luncheon.

Cheese and Butter.

Cheese was given premium position in the catalogue, and naturally the famous Cheshire was shown to the greatest advantage; in fact, it was considered by many to be one of the finest shows of cheese ever seen at this county's exhibitions, the remark applying more particularly to the coloured cheese. The champion cheese was found in the coloured class, and it was shown by Mr. H. Denson, a tenant on the estate of the Duke of Westminster. Thus it was quite in the order of things that the Duke of Westminster's cup should be won by one of the Duke's tenants. The quality of the cheese was described as being extremely rich, of silky texture and of handsome make.

Although there was only one class for butter there was a capital entry, most of the butter makers in Cheshire and adjacent counties competing, and the quality generally was very good.

Cattle.

There were fewer entries than usual in the cattle section—a falling off in number, which may have been due to the late date at which the show was held. Quality, however, was very good, one of the judges declaring that the section generally was the best he had seen at the county show. In the class for bulls above two years old several of the bulls were of such level quality that the judges had to call in a referee to decide between Mr. C. E. Parton's (Haughton) Evening Star and Mr. John Hobson's (Audlem) red bull for first and second prizes. The principal prize was finally awarded to Mr. Parton, which was the youngest bull in the class, being just over two years old. Yearling bulls were considered to be the strongest and best class in the show, and the best of them was Village Purple, Mr. Miller's bull, which won at the Birkenhead Show. In the class for bulls under one year, Mr. C. W. Kellock with Buxom Jack was a notable winner, and he won also in the class for bulls under two years. The dairy classes contained a number of deep milking cattle. In the four-year-old class Waterloo Rose 4th, the property of Mr. S. Sanday, of Puddington, was a good winner, and among other well-known exhibitors, who were first-prize winners, was Mr. S. S. Raingill. of Altrincham; Messrs. Parton and Charles Bell, of Norley. Sir Gilbert Greenall's silver cup for the best dairy cow was won by Mr. S. S. Raingill, whilst the Cheshire Land Agents' Association's silver cup for the best bull was awarded to Mr. Edwin Clarke, Moss Brow, Warburton. Two classes for the exhibition of Channel Island cattle and labourers' cows failed to attract attention, and the judges suggested that they should be discontinued.

Horses.

The heavy horse classes were somewhat weak as regards numbers, but some good quality animals were forward. The Earl of Egerton's Hendre Prince William was the only entry in the class for Shire stallions foaled prior to 1904, whilst there were only two entries in the two-year-old class, the winner of which was shown by the Keynsham Stud Co., of Monmouth. In the two-year-old class, Rustic Friar, the property of Mr. Lewis Dodd, of Tarporley, justified his previous fine record in the show yard, for besides taking first prize he also secured the Shire Horse Society's medal for the best stallion. The class for three-year-old geldings or fillies was a strong one, and here Mr. S. S. Raingill won with a big filly, which later secured the cup presented by Earl Egerton of Tatton for the best Shire mare. The two-year-old fillies were a strong class, but there were only one or two good promising youngsters in the yearling class, the best in the class being a useful filly exhibited by Mr. Lewis Dodd. In the class for mares or geldings for agricultural purposes, the grey mare Darling from Mr. James Gould's famous stud won easily, and she also carried off the prize for brood mares For brood mares with foals, Mr. R. Evans, of Belgrave, led the way in an excellent class, beating Mr. Gould and Mr. Beecroft. There were some good filly foals for agricultural purposes, but the colt foals were a somewhat indifferent lot.

The clashing with the Warwickshire and other shows caused the light horse entries to be fewer than usual, but on the whole the Hackneys were first class. The open class of stallions attracted six entries, and the prize went to Mr. A L Goodson's Heathfield Fireaway, a very fine chesnut. The brood mares were not up to the standard of the stallions taken collectively, but the winning mare, which belonged to Mr. Hinrichsen, of Congleton, was a very nice animal, which secured the Hackney Horse Society's medal. The two leading Roadster foals attracted some attention, but the other foals were not of a high standard. Mr. Goodson showed a previous winner in the yearling Hackneys, and was again the winner of the first prize.

Hunters made a much better show than the Hackneys, as they should do in such a hunting country. One of the strongest classes was that for Hunter colts or fillies, which contained animals representative of the best stock. The brood mares and the fillies likely to make Hunters were excellent. Among the colts, Mr. F. W. Hesketh's bay, which won one of the Tarporley Hunt Club's prizes, was the best, whilst Mr. Joseph Millington, of Middlewich, won with an excellent gelding in the mare or gelding class, this being the animal's eleventh successive first.

Sheep and Pigs.

Sheep were more numerous than they have been for a number of years, and all round it was a good show. As representatives of their respective breeds, the Shropshires, Leicestershires, and Lincolns were especially strong, and the prize winners would have held their own in the very best company.

There was even a better show of pigs, the Large Whites and the Berkshires being exceptionally good, as may be imagined when it is stated that the exhibitors included such well-known breeders as Sir Gilbert Greenall, Mr. Jefferson, of Peel Hall, and Messrs. Dodd, of Mollington. The last named won in the class for Large White boar against a strong entry, and again in the breeding sow class with a sow that was reserved at the Royal Show, whilst they also won with the litter from this sow—a dual victory which is not often achieved. In the Berkshire classes Mr. Jefferson had matters all his own way, for he won in the boar class, beat all comers in the class for breeding sow—the animal exhibited being considered a perfect type—and he was again successful in the class for pair of gilts. In the Large Black breeds Mr. Frank Dodd, of Tarvin, and Mr. J. A. Jackson, of Bolesworth, were the principal winners. Quality was strongly represented among the any other variety breeds. Sir Gilbert Greenall in the boar and sow classes was a notable winner with animals which won at the Royal Show, the boar having been a winner every time it has been out.

Buxton.

Buxton Horse Show is not often favoured by the weather, so that a fine day for the show held on August 24 was heartily appreciated by the society, as was also the large attendance. The entries were, however, not so numerous, being 213, as compared with 247 in 1906. In 1903 and 1904 the respective totals were 305 and 304, while an entry of 370 in 1900 constituted a record.

In accordance with the custom at Buxton, district classes were provided in each of the sections making up the horse department. Shires were a creditable collection, and though some of the local competitions might have been stronger, horses from neighbouring studs asserted their superiority in the open classes. A notable example of this was seen in the honours bestowed upon Mr. Robert Whitehead's Peak Dolly, a London winner, who looked very fit. After heading a local class of brood mares and obtaining the Partington Challenge Cup in a limited contest, she was, through winning the Wainwright Challenge Cup, declared to be the champion female. She added a fourth victory to her list of successes by being awarded the Shire Horse Society's silver medal. The Whitehead Challenge Cup, confined to six local classes, was gained by Mr. Joseph Swindell's Buscot Smart, a six-year old bay mare by Markeaton Royal Harold. The open brood mare class had a distinguished leader in Mr. H. H. Smith-Carrington's Hendre Crown Princess, who shows all the bloom of maturity.

Hackneys are never a big order here, and this year's display can only be described as moderate. One or two animals stood out in every class, the rest being of just middling quality. Mrs. Fred Holmes's Dainty Kate had an easy win under the saddle, but she was only placed second when brought out in harness, being beaten by an unnamed representative of Messrs. Cockanes's study.

There was a nice show of Hunters. The first prize taker in a couple of local brood mare classes, Mr. R. B. Tennent's Violate, was awarded the Hunters' Improvement Society's gold medal,

SOCIETY ANNOUNCEMENTS.

ALTRINCHAM SHOW. WEDNESDAY, SEPT. 25. £1,850 IN PRIZES, besides Silver Cups and Medals, for Horses, Cattle, Sheep, Pigs, Goats, Turn-outs, Hunters, Jumpers, Roots and Grain, Butter, Cheese, Honey, Implements, Dogs, Poultry, Pigeons, Rabbits, Cats, and Cavies. Prize list may be had from the Secretary,

J. HERBERT HALL,
2, Dunham Road, Altrincham.

Entries close.—All Classes except Implements, Space and Dogs, Saturday, September 7, with double fees up to September 11; Implements and Space, August 31; Dogs, September 13.

FROME SHOW.—WEDNESDAY, SEPTEMBER 25, 1907.
Schedules of the Secretary,
T. C. HARDING,
Auctioneer, Frome.

THAME AGRICULTURAL ASSOCIATION.
Show will be held on THURSDAY, SEPTEMBER 12, 1907.
Entries close as follows:—Fat Sheep, Class 8, March 5; Wet Sheep, Class 5, 6 and 7, April 16; Hedging, Classes 9 and 10, March 20; Steadside and Ploughing Classes, August 31; Horses, Cattle and Sheep, Roots, Honey, Poultry, Butter and Eggs, August 31; Rick Building and Thatching, September 16.
J. B—n, Secretary.

DAIRY SHOW, LONDON, OCT. 8, 9, 10 & 11.—Great Exhibition of DAIRY CATTLE, PRODUCE, APPLIANCES, &c. Entries close SEPT. 9.
Particulars of Wm. C. YOUNG. Secretary, 12, Hanover Square, London, W.

WOLSINGHAM AND WEAR VALLEY AGRICULTURAL SOCIETY'S 144TH ANNUAL SHOW will be held at Wolsingham, WEDNESDAY, SEPTEMBER 11, 1907 (on same site as Durham County Shows held in 1892 and 1906).
Cattle, Sheep, Horses, Ponies, 8 Classes Riding and Driving, Leaping, Pony Scamper, Goats, Dogs (K.C.L.), Honey, Dairy Produce, Field Produce, Open and Local Classes, Sheep-Dog Trials, Poultry, Pigeons, Rabbits, Cats, Cavies, Cage Birds (C.B.U.), &c.
Entries close August 31.
Schedules from
T. C. HUME,
Leazes Lodge,
Wolsingham, Co. Durham.

WARWICKSHIRE HUNT HORSE SHOW at KINETON, SEPTEMBER 20, 1907. Entries close September 3.—LORD WILLOUGHBY DE BROKE, Hon Secretary, Kineton, Warwickshire.

KINGTON HORSE SHOW, SEPTEMBER 19, 1907.
Competition Open to the United Kingdom.
£350 in PRIZES and FOUR SILVER MEDALS.
Heavy Weight Hunter—
1st Prize, £20; 2nd, £10; 3rd, £5.
Light Weight Hunter—
1st Prize, £10; 2nd, £5.
Entries close Sept. 3, or with Double Fee, Sept. 7. Prize Schedules and Entry Forms from the Secretary, T. H. VAUGHAN MORRIS, Byford House, near Hereford.

LEIGHTON BUZZARD & LINSLADE FOAL SHOW SOCIETY held on SEPTEMBER 17 (TUESDAY).
Entries close September 3. Post entries (double fees) September 10.
WALTER C. PRUDAMES. } Hon.
W. GRAVELY W. WILLIS } Secretaries.

SOUTHDOWN FLOCK BOOK.
NOTICE is hereby given that the Southdown Flock Book will be definitely closed to unregistered flocks on December 31 next, after which date no sheep from unregistered flocks will be accepted under any conditions whatever.
Owners who have not yet registered their flocks are earnestly requested to write for full information respecting the Southdown Sheep Society to
W. J. WICKHAM,
Secretary.
12, Hanover Square,
London, W.

GRANSDEN AND DISTRICT, at GREAT GRANSDEN.
SEPTEMBER 24, 1907.
Entries close September 10.
H. J. KISBY, Secretary.
Great Gransden, Sandy, Beds.

HAY HORSE SHOW, FRIDAY, SEPTEMBER 20, 1907.
Entries close on September 5th; double fees, September 12th.
REECE MORRIS, Secretary,
Broad Street, Hay, Hereford.

MARKET DRAYTON & DISTRICT AGRICULTURAL SOCIETY.
THE EIGHTH ANNUAL SHOW of HORSES, CATTLE, SHEEP, PIGS, LIVE & DRESSED POULTRY, PIGEONS, CHEESE, BUTTER, DOGS, BEES, HONEY, BEESWAX, HORSE LEAPING, SINGLE TURNOUTS, and TANDEMS, will be held at the SYCH (adjoining the Railway Station), MARKET DRAYTON, ON THURSDAY, 19th SEPTEMBER, 1907.
19 VALUABLE CUPS and MEDALS.
Entries Close for Butter, Live and Dressed Poultry, Pigeons, Eggs, Bees, and Honey, 9th September; Dogs, 12th September; Horse Leaping and Turnouts, 18th September.
Schedules and Entry Forms from the Hon. Secretary, THOS. PODMORE, Market Drayton.

though in an open class competition the nine-year-old daughter of Gradnite suffered defeat at the hands of Mr. F. B. Wilkinson's Rosalinda, who has won honours all over the country. With foals, Mr. Tennent claimed three premiums, two of them being gained in a general contest. The yearling winner was furnished by Mrs. Payne-Gallwey, in a beautiful chesnut colt, Athlone by Limerick, second honours falling to Mr. Wilkinson for the bay filly Ladybird. The Notts breeder was more assertive in the two- and three-year-old competitions, taking premier awards with His Grace and Expert.

Next came Mr. J. H. Stoke's opportunity. Of nine prizes offered in three classes he took five—two firsts with the famous Whiskey and Ladylike, two seconds with Lyons Mail and Little Bronze, and a third with Black Pearl—and, with the aid of Whiskey, finished up by winning outright the Buxton champion 50 guinea cup, presented by Mr. R. Whitehead. The cup had to be won three years in succession by one horse—a feat which Whiskey accomplished. Mr. Stokes's Ladylike also stood reserve for this championship.

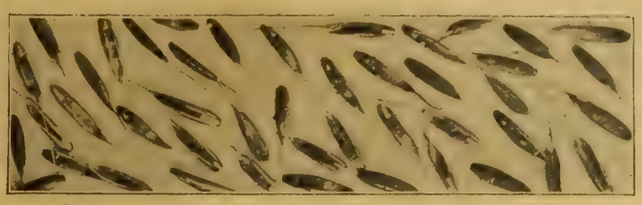
Allendale.

Delightful weather favoured the sixty-third annual show of the Allendale Agricultural Society, and there was a large attendance of visitors, whilst the entries were a record, and the collection of stock one of the best that has been seen at Allendale, so that the show was an all-round success. Colonel L. C. Lockhart, Hexham, presided at the luncheon. As usual, the cattle exhibits were the feature of the show. The district has for long been noted for its Shorthorns, and at this show there is every year a display which for evenness of quality would be difficult to see excelled at a local show anywhere. The horses were also very strong this year, and, as one might expect, the working horses were conspicuous in numbers. Hackneys were a very good lot, and the prize-winners especially worthy. Hunters, as a whole, were a very useful class for the district. In the district driving class there was a nice show of Dales ponies. The district is famous for its Black-faced sheep, which is the breed of the district, and the classes were well filled with excellent animals.

Hawes.

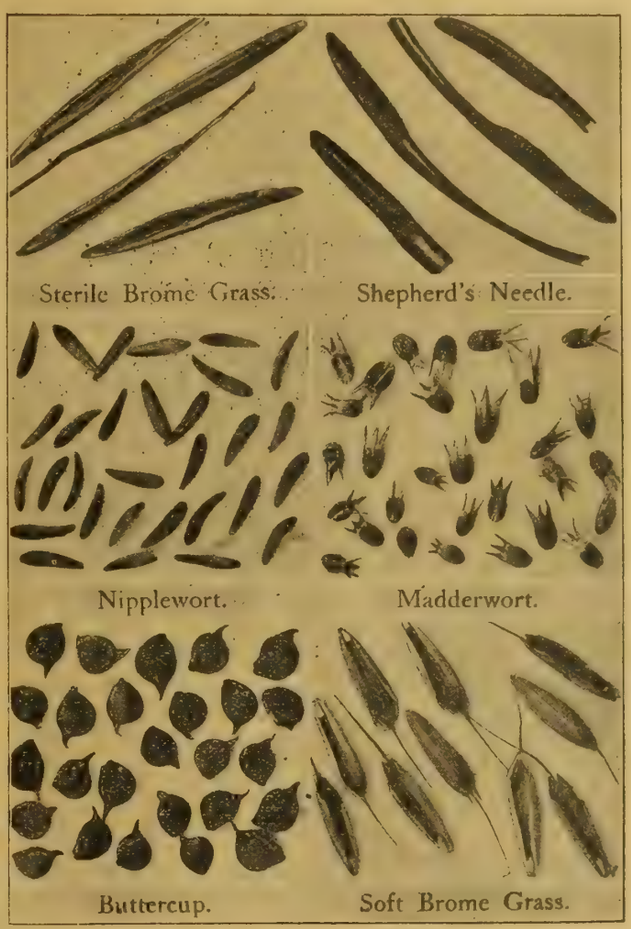
The backwardness of the season had an effect on the fifteenth annual show of Hawes Agricultural Society held on Tuesday, both the entries and attendance being somewhat smaller than usual. There was, nevertheless, a most creditable display of stock in the cattle classes. The Winn challenge cup for the best Shorthorn cow in the hands of the breeder, milking qualities to be specially considered, open to tenant farmers in the Aysgarth Union, went to Mr. H. Wilson, High Gill, Ay-garth. The best stock cow was also shown by Mr. Wilson; while Mr. W. Moore, Hardrow, had the best heifer calf, and won with a group of three calves.

The horse classes contained some good quality animals, as did also the sheep classes, which comprised Wensleydales, Scotch, and half-breeds. Mr. J. Close, Carperby, won the special for the best pair of Wensleydale lambs, given for members of the Wensleydale Incorporated Blue-Faced Sheep Breeders' Association.



North-East Somerset.

The North-East Somerset Farmers' Club were fortunate enough to have delightful weather for their show in the lovely grounds of Newton Park, and with a good entry all round and a large attendance of visitors the show was a complete success. Horses numbered 124, as compared with 138 in 1906; of cattle there were eighty-four entries, and increase of seven; sheep numbered thirty seven, or one more than last year; whilst other entries comprised—cheese, forty-seven; butter, twenty-two; poultry, forty-seven; honey, eighteen; and cider, fifteen.



The cart horses were a good lot, particularly the mare and colt class, in which Lord Winterstoke was first with Holker Marionette and a nice dark brown filly colt, which caught the eye of the judges, so that they gave her the Shire Horse Society's silver medal.

The yearlings calculated for draught or agricultural purposes were rather a weak lot, while not much could be said in favour of the two-year-olds. There was a very good competition in the event for pair horses, whilst the nags made a fair show. Cattle made a good show on the whole, the best class being that for heifer calves, and Lord Winterstoke scored a win with two useful Shorthorn heifers. The young stock generally was deserving of commendation. The Channel Island cattle were not numerous, and the competition was somewhat limited, Earl Temple being the most successful of the exhibitors. Sheep were not numerous, but the quality was fair. The cheese was up to the average, whilst butter was an improvement on some of the previous shows. Cider was rather disappointing, and it was evident that some of the exhibitors have something to learn in the manufacture of this popular beverage.

Italian Rye Grass and Its Impurities.

Pure Italian Rye Grass.

SOME OF THE WEEDS
to be found in Imperfectly Dressed Samples of Italian Rye Grass.
For our illustrations we are indebted to
Messrs. Dickson and Robinson, Manchester.

Banbury.

Although the weather for a time on Tuesday foreboded a rainy day, it turned out delightfully fine, and there was a large and fashionable attendance at Banbury Horse Show. There was a curtailment in the number of the classes, but the entries were very satisfactory, especially in the light horse section, and a great many horses were in evidence which have figured in other show rings this season. Many animals on their way to the Warwickshire Show at Rugby called *en route*, and some of them succeeded in taking prize money from Banbury with them. Chief honours in the Cart horse section went to Mr. Bruce Fry, of Mollington, who won the Shire Horse Society's medal with Mollington Movement, a three-year-old filly of exceptional merit. Honours were widely distributed in the Hunter classes. Mr. Jackson, of Pershore, took leading place in the open Harness class. The open jumping classes were difficult to judge, and the gate had to be raised three times, but in the end Mr. Glencross, of Frome, took both first prizes.

Chester-le-Street.

The annual show of the Chester-le-Street and District Farmers' Club is always one of the most popular of the many cattle shows that take place year by year throughout the County Palatine, and with beautiful weather favouring the exhibition of Wednesday the attendance was one of the best ever recorded. In addition to having a pretty showground on the old racecourse in the park, the society is fortunate in having so generous a patron as the Earl of Durham, whose beautiful gardens were again open, whose beautiful gardens were again open, and were again a great attraction to the visitors. The entries were an increase over those of last year, the improvement being largely in the horse classes, while cattle, sheep, and poultry showed a decline. Always the chief feature of this show, the horses, the majority of which were Clydesdales, were again a grand lot, and included prize takers at the Northumberland and Durham County Shows and many local exhibitions.

Guildford.

Being favoured with ideal weather, the annual summer show of the Guildford and West Surrey Agricultural Association, held at Stoke Park, Guildford, on Wednesday, was very largely attended. The entries, which numbered over 500, showed a slight falling off, but the quality of the animals was well up to the average, and in some cases competition was very keen. Among the winners were the Duke of Northumberland, who was given first prize for a Jersey heifer and the first for a pen of ewe lambs. In the class open to all England for the best Southdown ram, the Duke was second, and he took a similar honour for a pen of fine Southdown ewes.

Lord Calthorpe showed some excellent cattle,

and with Sweetheart, a Shorthorn cow bred at the Royal Farm, Windsor, he won the Duke of Northumberland's prize and a 30 guinea challenge cup offered by the president (Mr. Harry Waechter). Lord Calthorpe was also given premier honours in the class for Shorthorn heifers, first for a Shire gelding, first for a Shire colt, first for pair of cart horses, and second for a single cart horse and for a Shire mare. Mr. Jeremiah Colman, of Sutton Park, Surrey, was another successful exhibitor. He secured the premier awards in the open to all England class for a Southdown ram, and also for five Southdown ewes, and for the best Shorthorn heifer, and second for a Shorthorn bull, a Shorthorn cow, and a Shorthorn heifer.

Mr. Max Michaelis, Tandridge Court, Oxted, retained the Norbury Park Challenge cup, value 25 guineas, for the best Shire mare or filly in the show, and also the Shire Horse Society's gold medal for the best mare or filly exhibited in the local Shire classes. Mr. Leopold Solomons, Norbury Park, Dorking, was made first reserve for the Shire Horse Society's gold medal, and also for the Norbury Park challenge cup; he secured the prize offered by the Lord Lieutenant of Surrey (Colonel Henry Cubitt) for the best Shire mare or gelding, was first for the best Shire mare, the best filly under three years, the best Shire filly foaled this year, and for Shire stallions.

The president's 20-guinea challenge cup for the best dairy cow in the show fell to Mr. Thomas Jones, of Godstone; the challenge cup, the gift of Mr. F. G. Colman, M.F.H. (Surrey Union Hunt), for the best Hunter, was won by Mr. Wilfred Johnstone, of Esher; and Mr. Alfred Benson, Upper Gatton Park, Merstham, won the Hackney Horse Society's medal for the best hackney or pony. The challenge cup for butter was awarded, after keen competition, to Mr. H. P. Sturgis, Leatherhead.

Chiltern Hills.

The fifty-fifth annual show of the Chiltern Hills (Wendover) Agricultural Society took place on Thursday in the beautiful domain of the popular president, Mr. Alfred de Rothschild, C.V.O., at Halton, and, being favoured with beautiful weather, was very largely attended, in fact it proved a record show in this respect. The society certainly deserved it, for the show is a very comprehensive one, including Hunters, agricultural horses, horned stock, sheep, pigs, roots, butter, eggs, poultry, vegetables, &c. Unfortunately, owing to the lateness of the season, the always interesting show of corn—for which a good number of entries had been received—was unavoidably omitted, but in all other departments improvements were to be noticed, and the show proved highly creditable to both the society and the exhibitors. One feature of the show was the success of Mr. Alfred de Rothschild, whose team won Lord Rothschild's silver cup, and also that given by Sir Thomas Barlow for the best teams in the ploughing classes, whilst he also took the first prize for heifers, and in the sheep classes two silver cups with some fine pens of Hampshires. The jumping competitions, which were more popular than ever, produced good sport.

SHOW GOSSIP.

The annual Birmingham autumnal Shorthorn show and sale, promoted by the Birmingham Agricultural Exhibition Society, to be held on Wednesday and Thursday next, has obtained an entry of 477 animals, a record number for the autumnal fixture. The females number 275 and the bulls 202; no fewer than sixty-three of the cows will have calves at foot. A feature of the sale is the inclusion of Mr. R. W. Hudson's well-known herd of fifty-one head. Other important exhibitors are Lord Calthorpe, Earl of Camperdown, Earl of Carnarvon, Lord Fitzhardinge, Earl of Northbrook, Lord Penrhyn, Lord Sherborne, Viscount Tredegar, Colonel Kingscote, Sir R. P. Cooper, Bart., Hon. Victor Cavendish, Miss A. de Rothschild, Mrs. Walsh, Messrs. S. H. Allen, W. A. H. Bass, A. E. W. Darby, Dyke Brothers, G. Freeman, W. T. Garne and Son, A. A. Haley, J. Handley, W. B. Harrison, J. T. Hobbs, J. Horlick, C. H. Jolliffe, C. E. Morris-Eyton, D. H. Mytton, R. R. Rothwell, and W. M. Scott. Many of the animals entered have won prizes at the principal shows, and, as usual, no higher reserve than 20 guineas is allowed. Catalogues (7d. each by post) may be had from the secretary, Mr. W. H. Lythall, Bingley Hall, Birmingham.

We would remind intending exhibitors that entries for the Altrincham Show close on Saturday next, September 7, or with double fees up to Wednesday, September 11. Dog entries only will be taken up to Friday the 13th. With 631 classes in the prize list, every section and variety is most liberally catered for. Three railway stations are near the show ground, and trains from Manchester run out to Altrincham every few minutes. The Manchester Corporation trams run *viâ* Sale and Stretford to near the entrance to the show field. Great attractions are provided, and every arrangement made for the comfort and refreshment of the public. The secretary of the show, Mr. J. Herbert Hall, 2, Dunham Road, Altrincham, will forward a prize list and entry form free on receipt of postcard.

Owing to the enormous increase in the entries in certain sections of the Mid-Somerset Show at Shepton Mallet over previous years, the committee have found it necessary to increase the number of judges. Cheese entries number nearly 400, a clear increase of 100 over the number entered at the corresponding date last year being recorded. The society once before made a good jump of the kind; that being of about seventy at once, and on another occasion a jump of sixty. For the first time in the history of dairy shows in the West of England, so far as can be ascertained, the butter entries number well over a hundred, butter coming from all parts of England, and from Wales, Scotland, and Ireland. Horses have also advanced by thirty beyond the record which was obtained last year, and number over 240. The two jumping classes, which are open to any distance, have attracted a large entry, including some of the finest jumpers in the kingdom, and there is also a local class of fencers which is sure to cause a considerable amount of interest on September 3 at Shepton Mallet. The total entries for the show exceed a thousand.

Lincolnshire Notes.

"SEED time and harvest!" Somehow, things generally come right. I am authoritatively assured that should this weather continue the harvest in Lincolnshire will be a very satisfactory one indeed. The crops are badly laid, and the early samples show a grain full of moisture; but the yield will be quite up to, and possibly rather more than, the average. It will not be so bountiful a harvest as last year, which produced an almost perfect cereal, but it will be a more profitable one. We may thank the higher prices of foreign corn for that.

THE popularity of the sales of the Lincoln Long-wool Sheepbreeders' Association is exceeding all bounds. For the September sale on Thursday and Friday there is the full complement of 400 rams entered. The regulations will allow no more, otherwise I understand that over 500 applications were received. The catalogue contains some new names, and a new feature is the sale of gimmers, of which there are 106 to be disposed of on Thursday. The success of the sale is receiving the very serious consideration of the Association, which is now discussing the advisability of extending its conditions. It cannot afford to refuse entries by the hundred at a time.

THE first harvest fatality, at Deeping Fen, carries its moral. Could not a safer seat be found for the driver of the reaper? In most cases his only accommodation is a small and insecure seat in the centre, and right over the knives and forks. The slightest jerk or the least unsteadiness, and he is in danger of being thrown overboard to instant and awful death. Can the danger be minimised? If for no other reason it is worth trying in these days of universal compensation. There is a contrivance in the shape of a wire shield secured to the back of the seat, and strong enough to hold up the driver should he lose his balance. It would pay the insurance companies to insist on something of the kind.

WHILST the hay dealers are organising an anti-railway crusade, the still more vexing question of railway rates all round is being agitated. I understand that a meeting will be held shortly in Lincoln, at which all the representative agricultural bodies in the county, together with the chambers of commerce, will be invited to co-operate. The object of the gathering is to send a protest to the Board of Trade and local members of Parliament against the heavy rates charged for the carriage of produce in the district. They are 20 to 25 per cent. greater than those of the London and South-Western or the North-Eastern, and, needless to say, are a serious handicap to Lincolnshire farmers. The Lincolnshire agriculturists are massing their forces against the evil, and it is hoped that something effective will result. If not it is going to be a hard fight, but the farmer can win it if he will bring up his big battalions.

THE Lincolnshire hay dealers are up in arms. Instructions have been received to the effect that the railway companies propose to make demurrage charges upon hay and straw of 3s. per truck and 1s. per sheet for every day after twenty-four hours that the trucks are left in siding. The regulations may be justified, but they will impose severe restrictions on the hay merchants, who complain that his business will be seriously injured by them. They complain that no such restrictions are imposed in regard to corn, and that they are altogether unnecessary in regard to hay as the companies are amply protected against unreasonable delay in the removal of goods by the charge of 6d. per week; also that the rates on this class of traffic are 25 per cent. too high. The dealers ventilated their grievances all round on Friday, and an agitation has been set on foot which may or may not come to something. Hitherto the railway companies' proclamations in this regard have not be taken seriously.

THE interesting letter from "H. W. P." in the columns of the MARK LANE EXPRESS calls attention to a difficulty which has often cropped up on the Lincolnshire corn exchanges. The matter has before now been on the agenda of the Lincolnshire Farmers' Union for discussion, but it has slipped consideration. It is a cause which the Union might well make its own.

I HEAR that a very good bargain was struck by the syndicate composed of Mr. William Dennis, of Kirton, and others who associated together for the purchase of Lord Grimthorpe's Binbrook, Ashby-cum-Fenby, and Utterby estates on July 12 last. The property, which comprised 1,719a. 3r. 9p. of land, with buildings, was bought at auction for £21,700. It has since been divided up and sold privately, at a profit running into thousands.

LINCOLN is down on the farmer just now. Henry Paddison, of Branston, returning from market rather more unsteadily than he ought to be, was chased by a police-sergeant on a bicycle and lodged in the cells. Mr. Padley, on his behalf, suggested that the police had set a trap to catch farmers returning from market; but this was strongly denied. Mr. Paddison had a fine of £1 to pay.

LINCOLNSHIRE FARMERS' UNION.

At the meeting of the Central Committee of the Lincolnshire Farmers' Union held on August 23, the secretary stated that several railway companies had issued a notice that on and after September 1 they will not accept hay and straw traffic at their sidings unless accompanied by forwarding instructions or the farmer or trader entered into an undertaking to furnish forwarding instructions within forty-eight hours from the commencement of loading, and failing which he agreed to pay truck and sheet demurrage at the rate of 3s. per truck per day, and 1s. per sheet per day after the expiration of the above-named period of forty-eight hours without deduction or dispute.

Mr. J. D. Blanshard said the railway companies were in the habit of issuing orders of that kind every now and again, and of abandoning them about a month later.

It was agreed to take no action in the matter.

Mr. E. W. Howard introduced the question of the swine fever regulations. He contended that the areas to which the orders referred were too large, and ventured to assert that if the authorities would take as much notice of pig-dealers and their carts as the railway companies did of their vans after they had been used for carrying swine, fever would not exist to the extent it did. The carts and premises ought to be thoroughly disinfected. Pig breeding paid very well, but he had been unable to go in for it because of the swine fever regulations.

Mr. H. Mawer said the carts of pig dealers were disinfected at the Lincoln market every week.

Mr. Howard: The railway companies disinfect their vans immediately after use.

Mr. G. W. Bellwood said this was an important matter, and if they could get someone from the Board of Agriculture to come down and go into the whole question with them more often a good deal of good might be done. Notwithstanding the precautions that were taken and the money that was spent, the Board of Agriculture were still at their wits' end to know what to do.

Mr. Howard moved that they write to the county councils urging them to be more strict in watching pig-dealers' premises and their carts, and requesting that the areas should be made as small as possible.

Mr. J. T. Glew seconded, and it was adopted.

The chairman, Mr. Colin Campbell, and Messrs. Bellwood and Howard were appointed a deputation to meet the Land Agents' Council in London to consider matters affecting agriculture.

The council sanctioned the formation of branches of the Union at Doncaster and Peterborough.

Nottinghamshire Notes

HARVEST operations are now in full swing throughout the county, and the majority of farmers have got a good deal of their corn cut. The numerous stooks in the fields betoken that some huge straw stacks are assured, while from inquiries which I have made among several of the largest farmers in the district who have knocked out a stack or two of oats and barley go to show that the yield will, after all, be a very fair one.

WINTER oats at Stoke, near Newark, looked remarkably well, and two farmers have threshed one stack each there. In one instance 84 qr. of marketable grain have been secured off ten acres, and in the other 97 off twelve acres, both being over 8 qr. to the acre, which can only be regarded as very good. The straw stacks, too, are of large dimensions, and will come in very useful for cattle during the coming winter.

BARLEY, too, has been threshed here and there, but as yet it is full early to speak. At Bottesford, however, which is just over the border, the yield has been 4¼ qr. to the acre; and at Screveton, a few miles to the south of Newark, 93 qr. have been weighed up, the result of one and a half days' threshing and the product of 14½ acres, which is 5 qr. to the acre.

AT Newark market yesterday several samples of wheat, barley, and oats were on offer, the produce of this year's growing. Wheats, however, were in poor condition, being soft and damp, and millers and corn merchants were not eager to purchase. One or two lots were sold, Messrs. Smith and Sons, of Langley Mill, a few miles from Nottingham, paying 33s. 6d. on rails. For black winter oats there was a good inquiry at prices ranging from 18s. to 20s. per qr., and barley made from 26s. to 28s.

THIS afternoon I paid a visit to the farm tenanted by Mr. Henry Rhodes, of Wbyburn House, Hucknall Torkard, which comprises about 350 acres, and is a portion of the Duke of Portland's estate. There are some excellent crops of barley and oats, but the land is scarcely suitable for wheat-growing, though there were one or two fields which will easily yield well over 4 qr. to the acre.

MR. RHODES, happily, is one of those gentlemen who does not farm for a living, but merely as a hobby, he being a large manufacturer of Shetland shawls. It is eight years since he took possession of his present holding, and the improvements he has introduced are truly surprising.

DUTCH barns have been erected, the crewyards covered in, and a new system of watering arranged, by means of which taps have been placed in all parts of the farm buildings; all that is now necessary, when the cattle require drink, being simply to turn on the taps and the troughs are filled in a very short time.

SEVERAL fields of oats have got badly laid, and one or two pieces of barley are suffering from the same cause; but the cropping taken all round looks admirable. Bordering Annesley Park—immortalised by Lord Byron, who once resided there—Mr. Rhodes suffers considerably from the rabbit pest. In order to overcome this to some extent rye and oats are grown in as many fields as possible, and promise good returns.

THE roots on the farm look excellent, especially the mangolds and swedes, though many of the former are running to seed, attributed to the fact that we have had such a quantity of rain. One field devoted to Thousand Headed kale and Autumn Drumhead cabbage is a wonderful crop, and Mr. Rhodes hit on the happy idea of drilling two rows of each crop, and by filling half the cups of the drills with putty his idea has answered wonderfully well. The kale is of enormous bulk, and will keep a large quantity of stock, while the two rows of cabbage allow plenty of room in which to spread out its branches, and is an excellent plan to follow.

THOUGH Mr. Rhodes is not what many of his neighbours please to term a thorough farmer, he is in all ways practical, and his live stock and crops are eloquent testimony to this assertion. What is more, his horses generally carry off one or more prizes at the Welbeck Tenants' Show, while a few years back he carried off the second prize for the best farm on the Duke's estates.

SEVERAL hay and corn stacks were destroyed by fire on Wednesday at the Moat Farm, near Loughborough, in the occupation of Mr. J. R. Mills. Threshing operations were in progress, and while the men were at dinner smoke was seen issuing from an old oat straw stack. An alarm was at once raised, the Loughborough Fire Brigade summoned, and though everything possible was done, the whole of the farm produce, consisting of six stacks, was destroyed. Unfortunately Mr. Mills is only partly insured, while only two years back he had two valuable horses burned to death. The fire on Wednesday is supposed to have been the outcome of a spark from the engine igniting the straw.

THE letter in the MARK LANE EXPRESS of Monday last, signed "H. W. P.," opens up an interesting question, and, in conversation with several farmers this week, I find that they are in agreement with the suggestion that some sort of registration of corn samples ought to be made compulsory.

CORN merchants—three of whom I have interviewed—are also of the same opinion, and, though they disagree with one or two of the statements, admit that it would be more business-like to have a signed contract and a portion of the sample left in the hands of some unbiassed official. It certainly would avoid much trouble, especially in the sale of peas and barley. This is a question upon which I am seeking further expression of opinion from thoroughly representative men.

AGRICULTURAL shows in Derbyshire of long ago were very different to the one held during the present week on the Osmaston ground. Though it was the forty-fifth exhibition held under the auspices of the Derbyshire Agricultural Society it is nearly ninety years since its predecessor was established under the title of the Scarsdale and High Peak Agricultural Society, which had Chesterfield as its headquarters.

GLANCING at a schedule for the society's show on July 26, 1827, I notice that the president was the Rev. C. H. R. Rodes, and the vice-president Mr. S. Oldknow, of Mellor, who was a partner of Arkwright—a name so well known because of his connection with the introduction of lace machines.

ON that occasion there were thirty-three prizes offered—sixteen for cattle, six for sheep, two for pigs, six for horses, and three for farm servants. In the course of some instructions in the schedule is the following:—"Much inconvenience having arisen at former meetings from persons crowding around the judges whilst scanning the stock, it is particularly requested that no person will intrude into or near the pens unless upon the society's business whilst the judges are making their decision. The judges are respectfully requested not to award premiums where the stock exhibited does not possess decided merit. It is also intended that the judges shall in their decisions be governed more by the general merits of the animals (exhibited as breeding stock) than by the extreme fatness of them, particularly where it appears such animals have been forced."

THOUGH these notes are really intended for the lace county, Derbyshire is so very near and so many of our farmers exhibit and visit the shows held in the Peak county, that the above quotation will doubtless be read with interest both by farmers and judges.

AMONG those gentlemen adjudicating at Derby on Wednesday were three well-known Notts agriculturists, viz., Mr. Arthur Stretton, of Sibthorpe, near Newark, for Shorthorns; Mr. H. Smith, jun., Cropwell Butler, for sheep; and his father, Mr. H. Smith, sen., for pigs.

THERE were a large number of farmers from Notts present at Elvaston Castle on Tuesday, when the occasion was the annual puppy walk for the Harrington Hunt. The Earl of Harrington was present, and looked much better for his sojourn abroad. At the luncheon his lordship spoke on the breeding of horses, and contended that though motor cars had come into such general use there was still plenty of room for good class animals, which he urged those present to breed. "A good horse," said his lordship, "eats no more than a bad one."

PLUMS are so numerous in the county that at Nottingham good sound fruit was on Wednesday sold for 3 lb. a penny. They were rather green, and chiefly those which had either fallen off the trees or been pulled in the thinning process. It is twenty years since they were so plentiful in the Bingham district, and many branches have been broken off the trees owing to their being unable to stand the strain of the increasing weight of the fruit.

MANY readers of the MARK LANE EXPRESS will regret to learn that Mr. W. F. Everard, of Bardon Hill, Leicester, and exceedingly well known in this county, has lost through death his noted three-year-old Shire filly Bardon Marion, which has won so many prizes in the Midlands this year, while at the Royal Show at Lincoln she gained first prize. She died on Saturday morning last, and from a post-mortem examination it has been ascertained that the cause of her decease was a ruptured diaphragm. Mr. Everard took several prizes at Derby show yesterday, and many of his friends expressed their sympathy to him at his sad loss.

MR. H. W. PALMER, the energetic secretary of the Lincolnshire Farmers' Union, was over in Nottingham on Wednesday, and I ventured to ask him what was the next great question his organisation was about to take up. Mr. Palmer informed me that the high railway rates in Lincs and Notts were about to be taken up, and contended that they were from 10 to 20 per cent. higher for agricultural produce than several companies charged in other parts of England. Here, then, is another reason why farmers should combine, for unless the railway companies see that farmers are in earnest in the matter they will not attempt to reduce them.

August 29, 1907. R. K.

Midland Notes.

MOST of us have strong and definite ideas about necessary agricultural legislation. Here are those of Lord Norton, which need no comment:—I would propose that the official price of wheat should be the maximum rent of agricultural land, and that such land should be relieved of highway rates by a wheel tax, and the education rate paid by the Treasury, and an income tax paid by occupiers of land on profits; the cash price of the loaf fixed by law *pro rata* the official price per quarter of wheat, when the loaf would be 4½d with wheat at 25s. per quarter. Under such regulations there would be no rack renting, and an acre of allotment would be secured to a holder at 25s. rent plus interest on the outlay necessary for buildings or a cottage. I have no faith in any medium to Back to the Land between an allotment of one acre allocated to a cottage and pigstye, with a weekly wage, and a small holding of not less than fifty acres, with homestead and buildings, independent of a wage.

IT is not too soon, one hopes, to congratulate the good people of Bewdley upon the failure of a movement which threatened to deprive this little Worcestershire market town of some of its old rights. The incident has its instructive features. The local magistrates lately dismissed a police prosecution for obstruction on the ground that a charter of Charles I. gave carts a privilege to stand in the streets on certain market days. For the moment, at any rate, the County Standing Joint Committee has so far acquiesced as to refrain from application to the justices to state a case. One gathers that they are prepared to admit the right on the occasion of the yearly cherry fair, but that more prosecutions are likely to follow if it be claimed to apply to the ordinary weekly market.

AN unbiassed outsider would probably consider officialism has been making much ado about nothing. Most Bewdley people, it is likely, will resent a course of action which threatens serious interference with the trade of the town. A few light carts—or even heavy ones—drawn beside the kerk can create nothing more than a technical obstruction in a wide thorougfare like Lode Street, Bewdley; and at Worcester, Tewkesbury, and many other places, similar rights are exercised without damage to anybody. But officialism is apt to be wilful, to see harm where plain people can see none, and to look askance at ancient rights which seem to contravene the ordinary law of the land.

IN the Vale of Evesham there is a glut of plums this year, and the smaller growers, who can do all their picking without paying for outside help, are rejoicing. But a season like this has the effect of emphasising a long-standing grievance—the difficulty and expense of distributing the produce.

THE Evesham growers are hoping for good results from the recent visit of a Board of Trade official, whose inquiries are expected to lead to the formulation of new rules and regulations for the railway companies. Up to the present time, however, nothing has been done, and the growers remain in their old dilemma. They cannot afford to pay what are known as companies' rates, because the produce will not stand them. On the other hand, to send off stuff at the cheaper owners' risk rates is to bar oneself from every possibility of compensation in case of damage or unreasonable delay to fruit in course of transit. In this respect the companies seem to have absolutely the whip hand. In present circumstances no evidence of negligence seems good enough to make a railway company pay for its default.

THE Evesham Fruit Pests Committee has presented a petition to the County Council with

egard to the gooseberry mildew pest. In their view the enforced destruction of infested bushes under the new Destructive Insects and Pests Act "will inflict very great hardship and loss upon the industry," and they submit that "growers who are compelled by law to destroy their infected bushes should be adequately compensated."

WE are having the usual trouble over the irregular attendance of children at school during the pea and fruit picking season. As the Dudley and other magistrates have been imposing ten shilling fines with costs—no small matter for poor people—the delinquent parents will look back upon their country holidays this year with little satisfaction.

THERE will, however, probably be fewer police-court cases this year than there have been hitherto. There is a tendency in some cases to rearrange the holidays so as to include the hop-picking season; and though by no means all the affected districts have fallen in with this arrangement, it looks as though more would do so as time goes on. Black Country Education Committees have to recognise that the annual hopping excursions simply cannot be stopped. Parents will go, and they will continue to take the children along with them for the simple reason that there is nothing else to be done with them. And to insist upon arranging holidays so that the hopping season comes in term time means a loss to all the ratepayers through diminished Government grants.

WE are enjoying, at last, a turn of genuine harvest weather, worthy of August, and compensating for many hardships and disappointments of this trying season. The corn is three weeks late, but to day the sound of the reaper is to be heard on every hand. There are hundreds of acres, however, on which the machine can hardly operate at all. The area laid flat and tangled inextricably by rain and wind is very large this year, and even now it is too early to say anything of the quality of the new wheat and oats. The present summery conditions are welcomed by none more thankfully than by the hop growers. Picking will hardly begin before the second week of September, so there is still time for the crop to improve substantially—and it is doing so rapidly.

August 29, 1907.

West Country Notes.

IT is rare for a farmer to listen with any degree of patience, to say nothing of approval, to a suggestion on agricultural matters from a man who professedly knows nothing of that industry. When it comes from a man who for the first time is making acquaintance with the best samples of a particular product, and who says so, it is still more. This is because too often the novice tries to teach the professional how to do that in which he is expert.

I HAVE been listening to-day to a hard-headed man of business from the Midlands talking agriculture to farmers, and was rather surprised to hear applause greeting a practical suggestion he made. Not a new one in a sense, but somewhat fresh in its application, it was received with favour, and drew out an interesting bit about the present system of marketing goods which set my thoughts working.

IT was in respect to the branding of cheese with the place of origin. Hitherto it has been the case that by branding foreign goods with the country of origin a splendid advertisement has been given to our trade rivals. Now it appears that in respect of Cheddar cheese this man, who had been in the habit of paying a good price for the article, had been fondly believing that he had been eating an English production. He was evidently one of a very big crowd, and when he tasted the real thing he at once detected the great difference.

TO the makers he said: "Why don't all your agricultural societies agree to adopt a common brand for the products of your district?" "We who pay a good price for what we believe to be Cheddar of English make would then know what we were getting," he added. And the sentiment struck home.

A VERY well-known dealer told me afterwards that the foreign buyer of Cheddar cheese will not buy any cheese as Cheddar that does not bear the Royal Arms of England upon it and is stained to a particular colour. I had seen cheese so made, and had wondered what the particular reason for its being so branded was. The dealer who had them was not, however, to be drawn.

NOW I knew where some of these were made, and the quality of them, and also the selling price to the dealer. Though I could not get at the price which the foreign—as it proves to be—retailer got for these cheeses, I had a shrewd idea that it was over cent per cent above what the maker received for a somewhat similarly coloured cheese which was not branded and was stated at once to the merchant to be sold at cent per cent above the price he was paying, and he reluctantly admitted this to be correct. He had previously stated that for these cheeses he was getting the biggest price of any.

NOW I am not going to say what the quality of that cheese was, but if I wanted to advertise a make of cheese by sending out the best, I should not send those. If the best cheese were so branded there ought to be more men able to retirely early from agriculture.

WILL the new Butter Act effect much is being discussed, and amongst the farming community at any rate no strong hopes are entertained of much improvement.

THE breaks of fine weather are being made the most of for the clearing up of the fodder that should have been hay, but which can only be called so by courtesy. The corn farmer of the West is busy, and very varying are his returns. On the whole less damage appears to have been done than was feared, but that is not saying much. To cut at all is difficult in some cases where the heavy storms have laid the corn.

HERE and there a man is to be found who says he has no trouble. One such assured me that his certain preventive of corn being laid was to sow thin. His crops, he believed, grew stronger and stood better against bad weather than his neighbours who were more liberal with their seed, and who produced a dwindly plant at the outset. There is nothing new in this idea, but it is one the man desirous of doing his best with his crops is apt to overlook.

THE veteran secretary of the East Somerset Agricultural Society, good old Franky Harrold, was able to be at his post for the annual show, though looking less active than usual. Everyone was delighted to find that he had so far recovered from his recent severe illness to be present in his usual capacity, which he has so well filled for a very long period. Mr. Harrold is postmaster of the central town of the group combining for this district show. Last year they had the satisfaction of finding it possible to put away a nest egg of some £40. This year they had the great luck for the season of a fine day, and the result should not be less satisfactory.

SOME capital horses were competing at the show, and the stamp of brood mares was even better than usual. Yet one of the leading exhibitors perferred to motor to and from the show, and was chaffed accordingly.

THE North-East Somerset Show was located in a good quarter this year, midway between Bath and Bristol, on the main road practically, and this should prove an excellent thing for the show funds.

THE chairman of the Committee of Management is the mouthpiece of the Board of Agriculture in the House of Commons, Sir Edward Strachey. The entries for the show constituted a record, being fifty above last year.

Preston Cheese Fair.

The pitch at the August cheese fair at Preston on Tuesday was considerably less than at the corresponding fair last year, owing to diminished output and the fact that many farmers are holding in anticipation of rising markets. A fair trade was experienced at prices showing a slight advance on last month. Medium cheese made from 55s. to 57s. 6d.; fine produce 60s. to 65s. per cwt.

In reply to a question put by Mr. Field in the House of Commons as to whether the last report of the Royal Commission on Tuberculosis is of such a character as will enable the Government to forthwith introduce legislation dealing effectively with bovine tuberculosis, especially in relation to the seizures and condemnation of alleged tuberculous meat, the consumption of which is alleged to be a serious menace to public health, Mr. Burns replied: The report contains definite statements as to bovine tuberculosis in relation to milk, and these are receiving my consideration with a view to such legislation as may be necessary; but the question of tuberculous meat is not dealt with by the report, and legislation on this subject could not be based upon it. I understand, however, that the question is now being investigated by the Royal Commission, who will report upon it in due course.

Northern Notes.

THE last official "Return of Market Prices," issued by the Board of Agriculture, gives a total of 132 store pigs as having been penned last week at Darlington and Wakefield. These are the only Northern markets where any stores were offered. Hull, Leeds, Newcastle, Salford, and York were all a blank as regards this class of swine. This is a pretty accurate index of the state of affairs in the North. The trade is being scotched, if not killed entirely, as a result of the policy pursued by the Board of Agriculture.

THE member for the Buckrose Division of Yorks, as already stated in the MARK LANE EXPRESS, recently interviewed Lord Carrington on the subject of a petition by Yorkshire farmers; and this week Mr. White, the member alluded to, has received an autograph letter from his lordship telling him that he proposes to cause an inquiry to be held at Driffield, where a big trade was done in pigs prior to the issue of the Order of 1906. This news was received with very great satisfaction by the community, as the closing of the markets has affected hundreds of persons who were regularly making a few shillings or more per week, according to their good or ill luck.

THE traders in pork, as well as the producers of pigs, are making a great stir just now, and it is hoped the inquiry at Driffield will result in a modification at least of the Orders which are stultifying the trade all round. Their effects are the most keenly felt by the small farmer, the village allotment holders, and the jobbers.

ONE regrets very much to see in the latest agricultural returns—a copy of which was sent me by the B. of A. on Tuesday—a continued decrea e in the number of cattle in Great Britain, the figures given showing a reduction of 98,000 head on the year. How is this to be accounted for? A reason why the rearing of cattle is reduced is the ever-increasing demand for new milk. Numbers of young cattle are sold at a small price to be slaughtered in order to clear the way for all the milk to be sold. In this way the rearing of ca'ves is falling off.

BEFORE arable or feeding farmers could commence the rearing of cattle proper buildings for the purpose would need to be erected. Then comes the question, Whose duty is it to do this necessary work? It might be said it was the owner's duty, but in view of the fact that the Act of 1906 so alters the conditions of tenancy, it can scarcely be a matter of surprise that owne s of land do not feel inclined to spend any more money than can be possibly avoided in imp ovements. If the best possible return is to be made for the produce grown by the arable farmer, it is imperatively necessary that Dutch barns and covered yards shall be erected on farms which do not already possess them.

A SUGGESTION has been thrown out that the Royal and the great county shows might with beneficial results take a leaf out of the book of purely local shows by offering prizes for first and second crosses between any two distinct breeds, as such a plan would help to establish a rule as to which breed it is most desirable to use for crossing. There is a good deal to be said in favour of prizes for cross-breds; and we have seen recently, in the discussion at the Smithfield Club, for instance, the thwarting of the proposal of the National Sheepbreeders' Association as to the eligibility for registration of all sheep sent for exhibition. An animal, it was decided, whether it had pedigree or not, should be judged entirely on its merits.

SOME of our old local societies in the North of England have interesting histories, and their ages run into five and six decades. At a recent show—the Ryedale—Mr. T. Parrington, whose name sounds very familiar in connection with the Yorkshire County Show, said he had judged for that society fifty-three years ago; and he recounted an interesting fact that at the Ryedale Show he bought the best horse he had ever seen, and one which became the property of the Emperor Napoleon III., the horse being, as a matter of fact, that monarch's favourite charger at the time of his abdication.

AT the conference on October 25, to be held at Northallerton, of the North-Eastern Agricultural Federation, the subjects recommended for consideration are the Municipal Milk Bill, Tuberculosis, Taxation, and Small Holdings. The Earl of Carrington has promised to attend this conference; his consenting to do so is highly complimentary to the federation, as this will be the second year in succession that he will have listened to the deliberations. The presence of the Minister for Agriculture is one of the readiest means of bringing home to him any grievances or proposals for new legislation. None can deny that

the noble earl lends a sympathetic ear to the plaints of the farmers.

A SMALL place called Brandsby in North Yorkshire can boast of an agricultural trading association. It is a limited liability company, and it has a well-built and well-equipped depôt, where almost all agricultural necessaries can be obtained. The association is worked on the co-operative and and profit-sharing principles. In the dairy, where the most modern methods are employed, a large output of cream and cheese is maintained. The president is Mr. J. M. Strickland. He buys all his seeds, manures, &c., required for over 400 acres through the association. The society has for hire a strawsonizer for much spraying. This is one of its latest acquisitions.

WHILE people are talking of the present as a "late" harvest, there are many elderly farmers who can recall quite a number of harvests every bit as late, and when, too, they cut everything by hand. We are so accustomed to doing things in a hurry in these days that we become impatient of delay. Last year in some parts of Yorkshire cutting was completed on August 20. The reapers have only begun this week in the same district. Crops have, or rather are, ripening unevenly, and there is a tremendous lot of twisted corn. A delightful and welcome change in the weather set in on Tuesday.

August 30, 1907.

CORRESPONDENCE.

Kaffir Corn.

SIR,—I am sending you per this mail two samples of Kaffir corn, and I would be much obliged if you would let me know the analysis, as I can find it in no book on feeding stuffs.—Yours, &c., H. G.

Johannesburg.

*** We have no practical experience of the feeding value of Kaffir corn, but find from a book of reference that its composition is:—

Water	9·3
Ash	1·5
Crude fibre	1·4
Carbohydrates	74·9
Protein	9·9
Fat	3·0

Comparing this analysis with that of oats, of which the analysis of total valuable constituents is:—

Protein	11·8
Fat	5·
Carbohdyrate	59·7

it will be seen that it is of a more carbonaceous character.

Calculating out its "food units" by the MARK LANE EXPRESS scale, its value works out at 107 total feeding units.

It should be noted that in the above analyses the total food constituents are given. These figures are in excess of the *digestible* constituents which are often given, but as the digestibility of a food is a relative term, depending on the kind of stock, the age of the stock, their health and other variable factors, it is perhaps best to judge of a food by its total constituents, assuming the food to be a good one and in good condition.—ED.

The Black Currant Gall Mite.

SIR,—During 1905 6·7 I have gratuitously distributed upwards of 3,000 reports to different fruit growers in the British Isles, giving particulars of the lime and sulphur treatment for the black currant gall mite. Many of these growers have since written me and stated that "the cure recommended has proved most successful," or "we are entirely free from the 'big bud' now."

I propose issuing shortly a further report upon this subject, in which many of these reports will be incorporated, and I write to invite all growers who have tried this remedy to write me, stating upon how many acres or bushes they have tried it, with what result, and if they have any objection to their report being published with the others (not necessarily with their name and address).

Thanking you for making this known through your columns.—Yours, &c.

WALTER E. COLLINGE.

University of Birmingham,
Dept. of Economic Zoology,
53, Newhall Street, Birmingham.
August 29, 1907.

A Poor Outlook.

SIR,—The potato crop! Don't mention it! Very poor here. Cottagers disgusted and digging their best for the pig, and will have none for eating or to sell for rent.

Harvest just commenced in a field or two, wheats ripening, or rather not ripening, a miserable dirty colour, and must prove deficient. Beans a big crop, but dashed by storms and pods poorly filled.

Roots and grass 120 per cent. Cows, although up to the knees, are not yielding milk properly.

Lambs have got the strongylus filaria, and some have lost 100. I trust the mortality will cease. The wet summer has favoured the parasites.—Yours, &c., W. C. BROWN.

Doncaster, August 23.

Harvest Prospects in the West.

SIR,—Attention is now almost wholly centred on harvesting operations, which, favoured with greatly improved weather to what we have been having, are now being carried on with uninterrupted activity, the brilliant sunshine helping to finish off and harden the corn in a way that very few after the terribly disastrous rainstorms that played such havoc with the standing crops could have in any way anticipated.

Although considerable tracts in some districts have been badly "laid," rendering cutting by machinery very difficult, still the drying winds, coupled with the bright, warm sunshine, have done much to repair the mischief, and the corn, though still soft and somewhat discoloured, promises generally to be a much better sample than most farmers thought it would be, and the harvest, in spite of the phenomenal character of the season, is expected to prove considerably better than even the most sanguine could have anticipated, though the cutting of the crops will in many instances be attended with greater expense than is generally the case in more propitious summers.—Yours, &c., C. L.

August 30, 1907.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

A Tithe Question.

SIR,—Will you kindly say in your next issue if a tithepayer is compelled to pay tithe rent charge on the Mark Lane tithe rent charge averages forty miles away. It would cost about two shillings per quarter to send it there to Mark Lane market?—Yours, &c., SOUTH OXON

*** The value of the rent charge charged upon the land in lieu of tithes by the apportionment is, under the Tithe Acts, 1836 and 1837, reckoned to be of the value of such number of bushels and decimal parts of a bushel of wheat, barley, and oats as the same would have purchased at the prices of 7s. 0½d. for a bushel of wheat, 3s. 11½d. for a bushel of barley, and 2s. 9d. for a bushel of oats; and by the Tithe Act, 1836, s. 56, the average is settled each January from the returns of the seven previous years, ending on the Thursday before the preceding Christmas Day. I do not see why these charges averages should not be taken, nor do I see why the cost of carriage should be considered in the matter.—BARRISTER-AT-LAW.

The *London Gazette* of Tuesday last contains an Order of the Board of Agriculture dealing with glanders or farcy, and its important regulations should be known by all owners of horses, asses, or mules. It revokes the Glanders or Farcy Order of 1894, and its provisions take up no fewer than four pages of the *Gazette*. Copies of the Order can be obtained on application to the secretary of the Board of Agriculture and Fisheries, 4, Whitehall Place, London, S.W.

Mr. S. T. Nicholson, hon. general secretary to the National Chamber of Trade, replying to Earl Carrington's recent letter to the Chamber regarding the Small Holdings and Allotment Bill and Co-operative Societies, says that his lordship's statement as to Clause 39 differs from the clause itself, and that in neither case is it made definitely clear that the co-operation to be supported by public funds is to be solely agricultural in character, or that other objects may not be included which will be injurious and unjust to the individual trader who is compelled to be the security for the experiment and on whom its possible failure would fall. To subsidise any of the existing stores, connected as they are with the wealthiest trading organisation in the country, would be a palpably unjust method of reform with which it is impossible for the Chamber to credit either his lordship or the Government.

Acreage of Crops and Number of Live Stock of Great Britain in 1907.

The Board of Agriculture on Tuesday issued its preliminary statement of the crops and live stock of Great Britain in 1906, compiled from returns collected on June 4, also giving last year's figures for comparison. We give below the table in full, from which it will be seen that there has been a decrease of 22,645 acres in the area under crops and grass. The acreage under wheat continues to get smaller, and this year denotes a further shrinkage of no less than 130,208 acres; barley has been sown on 39,072 fewer acres than in 1906, and rye has decreased by 3,597 acres, but oats continue to grow in popularity and show the big increase of 80,010 acres. Increased acres are to be noted in peas and beans, the latter being grown on 20,370 more acres than in 1906, whilst peas have increased by 12,159 acres, but there are big decreases in potatoes, and turnips, and swedes, potatoes being 17,000 acres less than in 1906, whilst the acreage under the other two crops has fallen away to the extent of 27,889 acres. Mangolds on the other hand show an increase of 18,600 acres, and now cover 450,063 acres, whilst kohl rabi, cabbages, vetches and tares, and lucerne all show increases. Clover and rotation grasses for hay occupy 2,250,371, and not for hay 2,240,657, the former being an increase of 58,784, and the latter a decrease of 8,502 acres, whilst permanent grass covers for hay shows an increase of 151,928, and not for hay a decrease of 118,419 acres when compared.

Coming to the live stock, the most striking feature is the increasing popularity of sheep and pigs, for of the former there are 696,143 more than in 1906, and of pigs 313,347 more, but both horses and cattle show big declines, horses numbering 12,274 less than in 1906, and cattle a decrease of no less than 98,337 when compared with last year.

The official figures for both crops and live stock in 1907 and 1906 are appended, and afford some interesting comparisons.

* Excluding 12,742,779 acres returned as mountain and heath land used for grazing in 1907, and 12,748,364 acres in 1906.

† The acreage of any crop or grass grown under the trees in orchards is also returned under its proper heading.

‡ Including mares kept for breeding.

Fertilisers and Feeding Stuffs.

Fertilisers and Feeding Stuffs Act.

Limits of Error in Guarantee.

In the Fertilisers and Feeding Stuffs Act, Section I., it is stipulated that any statements made on the invoice of a fertiliser or feeding stuff as to the percentages of the principal constituents shall constitute a guarantee within the *prescribed limits of error*.

This latitude in the guarantee is intended to protect the manufacturer in cases of slight accidental deviations from the guarantee, it being recognised that such differences are liable sometimes to occur in the process of manufacture. The Board of Agriculture, acting on the powers conferred on them, have prescribed the deviations, or "limits of error," which may be allowed, and within which no legal responsibility can be fixed on the manufacturer.

In the consideration of this matter the Board of Agriculture have assumed that the manufacturers will act in a *bonâ fide* manner, and will not take advantage of the legal latitude to lower the standard of their goods while publishing the higher analysis.

The Fertiliser Manufacturers' Association, representing the principal fertiliser manufacturers, have announced that the members of the association will not avail themselves of the latitude to lower the quality of their goods, but will give compensation on the basis of the full published analyses in cases where a shortage of the quality may be proved.

The representatives of the feeding stuffs trade have not, so far as we are aware, issued a similar notice, but we are sure that the leading manufacturers will be guided by the same principle.

It would be well, however, if the manufacturers would let this intention on their part be widely known, because at present a good many farmers are in doubt about it.

Just recently a well-known farmer sent us two samples of compound cakes, sold to him with the following analyses :—

No. 1.—Oil	10 per cent.	}	price
Albuminoids ...	20 ,, ,,	}	£6 15s.
Carbohydrates ...	40 ,, ,,	}	per ton.
No. 2.—Oil	11 per cent.	}	price
Albuminoids ...	20 ,, ,,	}	£7 5s.
Carbohydrates ...	38 ,, ,,	}	per ton.

And he asked me to have them analysed for the following reason :—

"By the rule you give in your paper there appears to be only a few shillings' difference in the price, or should be, as far as I can make out. Now the question comes whether either of the makers of these two cakes is taking advantage of the Act which allows a margin of 1 per cent. in each constituent, as I have heard some makers are doing, thus showing a better analysis than should be the case. Both vendors say their cakes are made from the best of materials, so that their feeding value should be equal in this respect. For my own part, I am inclined to believe farmers are taken in, in spite of the many Acts passed for their protection, simply for the reason that they neglect to look after their own interests as they should. I may say the cakes are supplied from firms of reputed good standing, one of which advertises in the MARK LANE EXPRESS."

The letter speaks for itself, and no doubt represents the views of many farmers.

Here are the results of analyses :—

No. 1 Sample.

Moisture	11·25
Oil	8·27
Albuminoids ...	20·69
Carbohydrates ...	43·82
Indigestible fibre ...	8·57
Mineral matter ...	7·40
	100·20
Containing nitrogen ...	3·31
Ditto sand ...	1·80

Remark of Analyst.

"This sample does not come up to the guarantee as regards oil. It will also be seen from the analysis that the cake is dirty, containing far too much sand, which in a feeding stuff ought not to exceed 1 per cent."

No. 2 Sample.

Moisture	10·50
Oil	10·90
Albuminoids ...	20·81
Carbohydrates ...	42·82
Indigestible fibre ...	8·37
Mineral matter ...	6·60
	100·20
Containing nitrogen ...	3·33
Ditto sand ...	1·00

Remark of Analyst.

"This sample is up to the guarantee, and the cake is clean and in all respects satisfactory."

It will thus be seen that the cake as per sample No. II., although costing 10s. per ton more money, is in reality the better value.

Referring to the remark of our correspondent, that the Act allows a margin of 1 per cent. in each constituent, by reference to the Board of Agriculture regulations (Limits of Error) leaflet No. 18 he will find that the limit of error in a compound cake is

"One-tenth of the percentage of oil and one-tenth of the percentage of albuminoids stated in the invoice."

So that the *minimum* percentage of these cakes should be—

No. 1—Oil ...	9	per cent.
Albuminoids ...	18	,,
No. 2—Oil ...	9·90	per cent.
Albuminoids ...	18	,,

The carbohydrates need not be guaranteed.

Pigs on Pasture.

The advantage of letting pigs run on pasture is conclusively shown in the course of a series of experiments conducted at the Iowa experiment station. The pigs on timothy pasture ate more concentrated feed and gained more rapidly than pigs kept in yards eating the same kind of concentrated rations. The saving effected by the pasture in the amount of feed required per 100 lb. gain was almost inappreciable in the case of those pigs fed on rations of corn and meat meal or corn and tankage in the proportion of 5 to 1. On the other hand, pigs fed in yards required, for each 100 lb. of gain produced, 25 per cent. more of the ration composed of corn 2 parts and shorts 1 part, and 20 per cent. more of the ration composed of corn and shorts equal parts, than the pigs fed similar rations on timothy pasture.

The cheapest gains in the feeding of young and growing pigs were obtained from a ration of corn alone and clover pasture. The pigs fed on corn and clover pasture made 87 per cent. more rapid gains than did those pigs which were fed on expensive supplementary feeds with corn on timothy pasture, and almost 30 per cent. more rapid gains than those pigs fed on corn alone and timothy pasture. The amount of concentrated feed required to produce 100 lb. of gain was nearly as low for the ration of corn and clover as in the case of any of the other rations used, either in connection with the pasture or dry lot feeding. The gains due to the pasture itself were greatest when relatively smaller amounts of protein were supplied in the concentrated part of the ration, and amounted to 278 lb. of pork per acre from timothy pasture when a concentrated ration composed of 2 parts corn and 1 part shorts was fed after 1·85 tons of hay had been harvested four weeks before the experiment commenced. The ration composed of corn and clover pasture produced 116 lb. more pork per acre than the ration composed of the same number of pounds of corn and timothy pasture.

Horseflesh in Paris.

Horsebreeders in France are beginning to regard with more equanimity the substitution of motor traction for horse traction. It is true that the extension of railways, automobiles, and motors will eventually take the place of horses, but the change will be gradual, and the conditions of life will adapt themselves to the transformation. It is a fact shown clearly by statistics that the prejudice in France against the consuption of horseflesh is dying out.

Some years ago horseflesh was eaten only by the submerged classes in Paris, but now the working classes are adopting its use, and it is regularly employed in the hashes and stews eaten by the middle classes.

The number of horses butchered in Paris for the needs of the inhabitants has regularly increased for the last twenty years, which is stated to be the reason why the price of horses has not diminished and does not seem likely to do so.

Until last year only animals in good condition but prematurely spoilt by excessive work were slaughtered, but now all animals unfit for regular work pass into the hands of the butcher. Even stallions are utilised, although their flesh, like that of the bull, is inferior to the flesh of castrated animals.

Butchers now pay from £10 to £15 for animals that formerly were worth practically nothing, and the business is so lucrative that fortunes are being rapidly made.

In 1906 the number of horses slaughtered for food was 56,000, furnishing about 12,000 tons of meat. This outlet, writes Mr. Mossu, who has made a study of the subject, should suffice to remove the apprehension of those who think that horsebreeding may die out.

As may be supposed, of this large quantity of 12,000 tons the larger portion was used for the manufacture of sausages, meat paste, &c., while only about 4,000 tons was utilised as fresh meat. The consumption of 1906 exceeded that of the previous year by nearly 1,000 tons.

Horseflesh is no longer regarded as refuse meat, but is quite *à la mode*. Doctors frequently recommend it, not as superior to beef, but because it can be eaten raw by patients suffering from anæmia, without the evil consequences which sometimes follow the consumption of raw beef.

Economy and good quality, says Mr Mossu, are the two factors which conduce to the success of horseflesh, and point to a development in the future prosperity of horsebreeding.

It will be long before we in England come round to similar views on the subject, but it is interesting to note the course of events on the Continent. Not only in France, but in Germany and Belgium the horse is being more and more regarded as a source of food.

Potato Experiments at Inveresk.

A large number of farmers, potato merchants, and others interested in agriculture paid a visit of inspection one day last week to the trial potato plots, carried on by the Edinburgh and East of Scotland College of Agriculture at Inveresk, near Musselburgh. The experiments are made on an extensive scale, and embrace nearly seventy plots arranged to test a number of varieties of first early, second early, and late potatoes, as well as to afford information on other problems connected with potato cultivation.

The Earlys were first inspected, the weights being given as follows :—

	Tons.	Cwt.
Ninetyfold	13	13½
Sharp's Express	11	0
Conquest...	10	13½
Epicure	10	4½
Puritan	9	19½
Southern Queen	9	10½
Jeannie Deans	9	6
Sir John Llewellyn	9	4½
Mid-Lothian Early	8	16½
Duke of York	8	12
Dalmeny Early	8	6
Recorder...	7	19½
Webber's Early	7	7½

As regards the second Earlys, the college authorities have been directing their efforts to find a variety equal to British Queen in quality, but producing a heavier yield and with more power of resisting disease. Last year Dalmeny Radium was first among this class, and promised to be a good substitute for British Queen. It was seen that it was very similar in show and general appearance, with the exception that it was slightly stronger than British Queen, which was growing alongside of it in two parts of the field. The late varieties also promised very well, several of them, such as Dalhousie, being outstandingly good. The manurial trials were then explained. Spraying gave indication of fruitful results, lots which had been sprayed a fortnight ago being distinctly greener and stronger in foliage and presenting a fresh appearance.

Opening of New Nitrate Fields.

The financial Bill recently passed by the Parliament in Chili contains a measure intended to facilitate the increased production of nitrate of soda.

The Government will establish a mortgage bank for the opening up of new nitrate fields. To this end short-dated debentures will be issued in gold with a strong sinking fund, and specially guaranteed by a quota payable for each quintal of nitrate exported, which will be levied by the Government at the same time as the export duty. This new institution will start with a working capital of 5,000,000 pesos furnished by the Government as a special guarantee fund.

Various financiers interviewed on the subject expressed the opinion that with an increase in the production of nitrate, minerals, wool, and live-stock in the south of the country, the foreign exchanges would show a strong and rising tendency in a few years, as had been the case in the Argentine and in Brazil.—Reuter.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of other article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).										
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Ammonia, organic as in Guano and Bones	17 6	12 6	15 0	—	—	12 6	—	—	15 0	15 0	—	—	—
,, in Sulphate of Ammonia ...	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
,, calculated from Nitrogen in Nitrate of Soda ...	—	—	—	13 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	—	—	2 0	—	—	—	2 0	—	2 0	2 0	—	—	—
,, assimilable...	1 6	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
,, insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June 1906.

Cakes and other Feeding Stuffs.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.		s. d.
Albuminoids	2 8	to	3 0
Oil or fat	2 8	,,	3 0
Carbohydrates	1 1	,,	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.			=	Feeding units.
Albuminoids	22·1	×	2½	=	55·2
Oil	5·2	×	2½	=	13·0
Carbohydrates	33·2	×	1	=	33·2
Total feeding units					101·4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

THE CEREAL YEAR.

I.—BREADSTUFFS.

The average price of English wheat has now been below the level of 30s. for two successive cereal twelvemonths, and the tendency to increase the home wheat acreage has met with a rude check. To-day, when a new cereal year opens with prices well above 30s., the farmer will be asking whether he should increase his wheat sowings in the hope that the period of low prices has passed. The matter would seem to rest very largely with himself, for the deliveries of home-grown wheat during the past twelve months have neither been heavy in themselves nor depressed by foreign competition.

The whole trouble has consisted in the competition between the English farmers to sell early after harvest, so that two-thirds of the crop was sold in the first six months of the selling season, and millers were enabled to profit by an entirely artificial superabundance, an excess of supply on demand which bore no relation to the position on a survey from harvest to harvest. The question of sowing wheat this autumn therefore resolves itself mainly into one of resolution to hold wheat with some reasonable degree of firmness from Michaelmas to Lady Day, or at least into a new civil year.

So far as the facts of the weekly returns go the solution of the wheat-growing problem in England would appear to lie, not with any return to protection so much as with the establishment of State Agricultural banks, as in Russia. The failure of ordinary banks to help the farmer is admitted, the law allowing them no effective lien on the corn. But if the Government were to advance to farmers cash on their wheat at the current bank rate and up to a value of 20s. per 480 lb.—two-thirds of a rather low selling value only—the present astonishing and disastrous state of affairs might become a thing of the past.

Let us look at just a few weeks in the cereal year which closed on Saturday. In the week ended September 22 when millers were only offering 25s. 9d., farmers actually let them have at 186 recorded markets 90,292 qr. In the week ended August 17 millers paid 33s. 6d., but could only get 14,258 qr. Now there is a difference of 7s. 9d. per qr., and the Government could well afford to lend a farmer 20s. for a year at 9d. By well afford we mean that no burden would be laid upon the taxpayers; there would be no dole. There might be need for a new Act making it penal to move mortgaged wheat without a Government order, but the Board of Agriculture could easily arrange this detail, and there are few farmers whose wheat stacks are their only security. Even as late as February 16 farmers were selling 84,514 qr. at a mean price of 26s. 7d. per qr., though by June 1 31s. 4d. was obtainable, and money to hold on from February 16 to May 31 should have been possible at the outlay of 2½d. on the quarter. The means of getting the advance quickly, without law costs and so forth are what are lacking, and this lack drives agriculturists to selling heavily in a depressed market.

The price of flour in the past cereal year has followed that of wheat pretty closely, but bread was in proportion far too dear from September to April inclusive. Since May, it has been fairly in proportion to wheat and flour values, but all through the winter period of maximum bread consumption the public were effectually shut off from participating in the current cheapness of the produce of the wheat fields. The foreigner during the last twelve trading months has not ruled the roast. He has supplemented home deficiencies, but has not done so at all excessively. At no period have we been overstocked with imported wheat or flour. Latterly, indeed, the failure of the producers of the finer sorts of foreign flour to send supplies has become so marked that it is a question whether English mills turning out flour on the Hungarian and Belgian systems would not do a profitable business.

The exportation of five million cwt. per annum of meal and milling "offals," which are pre-eminently required for our own live stock, has probably something to do with the decrease in our herds of pigs, and is not a circumstance which we can contemplate with much satisfaction in any case.

COSTLY HARVESTING.

The corn harvest is now in full swing, and it seems something like old times to see gangs of men at work with scythe and sickle cutting oats and wheat, and women following up behind tying the sheaves after the manner of years ago. Farmers view this old-fashioned method of doing things, and count up the cost of such ways of harvesting compared with the work of the modern reaper and binder; but there is no help for it, for the machine has yet to be invented that will deal effectually with corn when it is beaten down as flat as it is in a good many fields this year.

This expensive corn cutting coming on the heels of a very costly hay harvest, adds considerably to the outlay, and the chances of profit will consequently be reduced. Another point is that while climatic conditions have increased the demand for labour, good labourers are not very plentiful, and high wages are being paid. It is true the labour supply has been augmented by the sturdy Irishmen who have crossed the Channel to assist in the harvest, and that their services are appreciated, is proved by the fact that they have no difficulty in securing employment. Whatever the working capacities of Pat may be in his own country, he is a rare good fellow in an English cornfield, and the amount of work he will get through on rough fare, and with still rougher lodgings, proves his worth.

Poor farmers! they are classed as a community of grumblers, but even their worst critics admit that they have reasons to complain this season, while the expenses mount up and the prospective returns are not correspondingly bright.

Thirsk Harvest Hirings.—There was a fair number of Irishmen at these hirings on Monday, and several contracts were made. The following were the average wages received:—Irishmen, 20s. to 25s. per week, with potatoes, &c.; Englishmen, able to stack and thatch, 18s. to 20s. per week, with all food.

DAIRY.

The London Dairy Show.

The prize schedule has now been issued for the London Dairy Show of 1907, which will be held under the auspices of the British Dairy Farmers' Association at the Royal Agricultural Hall, Islington, on October 8, 9, 10, and 11. As was intimated at a meeting of the Association some time since, there are several alterations this year, and the results of our comparison of the schedules for this and last year are as follows:—

Taking the cattle section first, we find that in the milking trials the points for time since calving are reduced to a maximum of twelve instead of fourteen. A new class is provided for Lincolnshire Red Shorthorn cows, at the instance of the Lincolnshire Red Shorthorn Association, with prizes as in the other classes. Last year's classes for cows and heifers "not eligible to compete in preceding classes" are omitted, and the following two classes are provided for cows to be used in the milkers' contests instead of the special class originated last year:—(*a*) Pair of cows of any breed or cross, in milk, with prizes £15, £10, £7, £5, £3; (*b*) Single cows, any breed or cross, in milk, with prizes £5, £4, £3, £2, £1. In the bull classes it is notified that bulls from dams that have won the special milking prizes of the Shorthorn Society, or the prizes or certificates of the Dairy Shorthorn (Coates' Herd Book) Association, are eligible, as well as bulls whose dams have won prizes or certificates of merit in the milking trials or butter tests of the B.D.F.A. or any other society. The only alteration noticed in the goat section is that instead of two points being deducted when the milk contains less than 4 per cent. of fat (in the milking competition) only one point will be deducted.

In the cheese section separate classes are provided for coloured and uncoloured Cheshire cheese, and a new class is made for Derby cheese, while the prizes for double Gloucester are increased to the extent of £4. The Champion Cup, given by the Lord Mayor and Corporation of London, is offered this year for the best Stilton, last year the honour was given to Cheddar; but we miss the extra prize which was last year given by the Royal Lancashire Agricultural Society for the best exhibit of Lancashire cheese. The cheese fair remains the same as in 1906, as does the section for collections of dairy produce, but in that for bacon and hams there are several alterations. For instance, the bacon section is divided into two classes, one for smoked and the other for unsmoked. Last year there were three classes—viz.:—(1) Cumberland and York; (2) smoked; and (3) pale dried (other than Cumberland and York); whilst for hams there is one class less, and no mention made of any particular variety, there being one class for smoked hams, two for unsmoked hams—one under 14 lb. and the other over 14 lb.—and the usual selling class for hams of any variety.

There is only one change in the butter section, and that is that Colonial butter will, for the first time, be judged according to a scale of points, a card to be placed at the top of each exhibit showing the points awarded. The points are as follows:—Colonial salt butter: Flavour, 55; texture, 20; colour, 10; salting, 10; packing, 5; total, 100. Colonial fresh butter: Flavour, 60; texture, 25; colour, 10; packing, 5; total, 100.

Skim-milk bread and scones, an always popular feature at the Dairy Show, have been retained as last year, and the honey classes are practically the same, the only difference being that the class for twelve sections of honey (size 4¼ in. by 4¼ in.) has now the proviso, "other than heather." The root classes are the same as in 1906, but we notice the addition of two conditions, namely, "At least one root to be cut in each exhibit," and "White cards only will be allowed to be put up by exhibitors or seedsmen."

In the appliance section the gold medal and the silver medal of the association will be offered for milk strainers, or strainers and filters combined, capable of effectually dealing, other than by centrifugal force, with at least 100 gallons of milk in an hour, whilst as last year there will be the class for "Any new invention relating to the dairy industry, or one showing distinct and practical improvement, not eligible for competition in any other class and not previously exhibited at the dairy show," and in this the judges may award a silver or bronze medal to any exhibit showing sufficient merit. Finally we notice that the success of last year's milkers' contest has encouraged the society to further increase the prizes, those for men to the extent of £4, and those for boys and girls respectively to the extent of £6 10s. in each class, whilst the prizes for women milkers amount to £25. Entries for the show close on September 9 with the secretary, Mr. W. C. Young, 12, Hanover Square, London, W.

About 3,000 lambs were offered at the "harvest fair" at Little Driffield on Monday, and they met a slow demand at 38s. to 43s. per head.

Notes of the Week.

According to a well-known proverb "all things come to him who waits," and our belated summer has arrived at last.

From the vigour of his rays, Phœbus means to make up for lost time.

During the past week Ireland has presented two faces to the world—one of peace and one of war. In Dublin the horse show and harmony; on the West cattle-driving and discord.

The horse show was, was usual, a great success; well attended by visitors, all apparently in a happy and contented frame of mind.

It would be out of the radius of our Royal Agricultural Show to visit Ireland, but, if it were practicable, such a visit would do much good.

Sir Walter Gilbey has issued his usual eloquent appeal on behalf of the Royal Agricultural Benevolent Institution.

There is no institution more worthy of support, and his appeal should meet with a liberal response.

The clouds have sent us too much moisture this summer, but how necessary an ample annual rainfall is may be seen from the consideration that it takes 422 tons of water to make 1 ton of the dried substance of potatoes.

It is a matter of regret that the Countess of Warwick has found herself obliged to close her farming colleges from want of financial support.

Many of us may not sympathise with Lady Warwick's views on all subjects, but there is a general agreement that her schools have been doing good work.

The Government has been safely delivered of the "Small Holdings and Allotment Bill," and the infant is doing as well as can be expected.

Let us hope the little stranger will develop a peaceful and healthy disposition, even if he does not prove the prodigy his fond parents anticipate.

He who takes good care of the land,
Him will the land take good care of.

The good old times! In 1600 three quarts of nut-brown ale could be bought in most parts of England for the price of one penny.

It is hard on British makers that the War Office should place an order in America for 100,000 pairs of horseshoes.

It is calculated that it takes the produce of seven acres of wheat to pay for the sugar grown in one acre of beetroot.

Most English housewives would regard the coming rise in the price of bread with less concern if they knew that the extra money for the wheat went more largely into the pockets of the farmers of this country.

An American expert says, "There is no reason in sight why all our grains will not bring higher prices for many a year."

The acreage under wheat cultivation in the British Isles shows a further decrease this year. If we have a favourable autumn our farmers would do well to grow more wheat.

Doctors say that butter is one of the most nutritious articles of food. Bread and butter is an almost perfect diet.

But it must be genuine butter.

In our Australian Colonies the production of butter is booming. Victoria alone produced last year 33,611 tons, worth £3,500,000.

Rust disease in wheat is said to cause an annual loss to the world's cereal crop of more than £100,000,000.

Scientists are working diligently to discover an immune breed of wheat of a prolific type, and there seems to be a prospect of ultimate success.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 3.—Agricultural Shows at Cowbridge, Shepton Mallet, Moor Green (near Nottingham), Bicester, and Gillingham (in Dorset)—Sending-in Day for Shows at Notton Road, Kilnsey, Market Deeping, Appleby, and Stanhope—Fairs at Kington, Thurles, Bury St. Edmunds, Westbury, and Ashbourne.

WEDNESDAY, SEPTEMBER 4.—Ashby-de-la-Zouche Show—Agricultural Shows at Knutsford and Doddington—Birmingham Shorthorn Show and Sale, first day—Bath Horse Show, first day—Peterborough Foal Show and Horse Sale—Ashby-de-la-Zouche Annual Horse Show and Sale—Manchester Horse Sale—Fairs at Leominster, Looe, Lostwithiel, Stalbridge, and Nantwich.

THURSDAY, SEPTEMBER 5.—Bath Horse Show, second (popular) day—Birmingham Shorthorn Show and Sale, second day—Abergavenny Agricultural Show—Rutland Show at Oakham—Lincoln Longwool Association Show at Lincoln, first day—Agricultural Show at Grayrigg, near Kendal—Thornton's Sale of Dexters, Eastbourne—Sending-in Day for Show at Ilkeston—Wimborne Great Sale of Cart Horses—First Day of Crewe Autumn Horse Sale—Horse Sale at Birmingham—Fairs at Montgomery, Northallerton, Barnet, Devizes, and Bristol.

FRIDAY, SEPTEMBER 6.—Second Day of the Great Lincoln Sheep Show—Agricultural Show at Badminton—Ram Lamb Sale at Chelmsford—Ram Sale at Kidderminster—Dickinson's Sale of Shearling Rams at Lincoln—Mansell's Special Sale of Live Stock, Shrewsbury—At Kerry, Montgomeryshire, Great Annual Sale of Kerry Hill Sheep—Lichfield Special Horse Sale—Second Day of Crewe Autumn Horse Sale—Fairs at Haverfordwest, Tarporley, and Stockport.

SATURDAY, SEPTEMBER 7.—Opening of the Bakers' Exhibition at Islington—Agricultural Shows at Ammanford, Cowshill, Skipton, Kirkby Stephen, Middleton-in-Teesdale, and Wharfedale District at Otley—Sending-in Day for Shows at Wardle, Abingdon, Blandford, and Kington—Fairs at Buckingham and Doncaster.

MONDAY, SEPTEMBER 9.—Nuneaton Special Horse Sale—Fairs at Harlow, Carmarthen, Ashford, Oakham, Glastonbury, Sutton Coldfield, Buxton, Lisburn, Warwick, Darlington, and St. Ives.

Flock, Herd, and Stud Books.

The growing popularity of the Oxford Down breed of sheep at home, and also for export to the colonies and foreign countries, is shown by the increase of no fewer than twenty-five registered flocks during the last twelve months. The new volume (No 19) of the Flock Book therefore shows a satisfactory increase on its predecessor, for the new flocks then recorded numbered 12. Volume XIX. contains particulars of rams Nos. 4949 to 5322, and ewes 1708 to 1854, whilst there is the other usual useful information for all interested in the breed. The Flock Book is published at 10s. 6d., and can be had of the secretary of the Oxford Down Sheep Breeders' Association, Mr. Howard Sammons, 11, Queen Street, Oxford.

In Volume XVI. of the Southdown Flock Book recently issued, it is recorded that since the publication of the previous volume sixty-four additional flocks have been accepted for registration, thus making in two years an increased entry of no fewer than 116 flocks. Several old established flocks have, however, been dispersed, but the net increase during 1906 was fifty. The total number of flocks registered in Volume XVI. is 240, comprising a total of 81,850 breeding ewes. Details of rams was 6,493 to 6,987; ewes, 3,207 to 3,472; and wethers 13 to 14 are given with other information of interest to breeders.

Particular attention is drawn to the fact that after December 31 next no flock will be accepted for registration unless brought from a flock or flocks already entered, and no sheep will be accepted for registration if purchased from an unentered flock. In view of this fact members are requested to do their best to secure the immediate registration of all eligible flocks not yet entered.

Volume XVIII. of the "English Herd Book and Register of Pure-bred Jersey Cattle," just issued, contains the pedigrees of 1,280 cows and 350 bulls, together with a list of births in the herds of members of the English Jersey Cattle Society, prize-winners at the principal shows, and butter test awards, 1906, particulars of sales, and other information concerning 1906 of importance to Jersey cattle breeders. The volume, which as in other years is well printed and nicely bound, may be obtained of the secretary of the English Jersey Cattle Society, 7, Princes Street, Hanover Square, London, W.

Volume VI. of the Welsh Pony and Cob Stud Book contains the entries or 46 stallions, 199 mares, 19 racehorses, and an index of owners, breeders, foals and sires of produce, whilst there are several articles of interest to breeders of Welsh ponies, &c., amongst them being one by Sir Walter Gilbey, and another article, "Some Early Phases in the History of the Horse," by Mr. C. Collman Rogers. Several illustrations are given, and the whole makes quite an interesting stud book. It is published by the Welsh Pony and Cob Society, the secretary of which is Mr. J. Hamer, Greenfield, Penybont, Radnorshire.

Forthcoming Sales.

The catalogue is now ready of the Lincoln Longwool Sheep Breeders' Association's twenty-second sale, which will take place at Lincoln on Thursday and Friday next, September 5 and 6, when sheep from the flocks of probably all the well-known breeders will be offered. The catalogue may be obtained from Mr. W. Frankish, St. Benedict's Square, Lincoln.

Messrs. Nock, Deighton, and Kirkby will sell on Monday, September 9, at Bridgnorth, Salop, about 5,000 sheep, comprising about 150 rams and ram lambs, and 4,500 ewes, store wethers, and lambs. The sale will commence at 10.30 sharp.

We would remind our readers that Messrs. Stride and Son's second sale of pure-bred Southdown sheep will take place on Wednesday next at Chichester, when about 220 rams and ram lambs and 3,000 ewes and lambs from the flocks of all the well-known breeders will be sold. The sale will commence at 10 o'clock.

The Seaham Harbour Stud Company's annual sale of Clydesdales, Hackneys, and ponies will be held on Wednesday, September 18. The catalogues are now being prepared.

Consignments of rams or ram lambs from the Oxford Down flock of Mr. Hobbs will be sold by Messrs. R. W. Hobbs and Sons at Bury St. Edmunds on September 3, Edinburgh on September 12, Kelso on September 13, and Northampton on September 19.

Sir Gilbert Greenall's sale of Kerry cattle and Large and Middle White pigs will take place at Walton Hall, Warrington, on Thursday next, September 5, Mr. W. Bainbridge being the auctioneer. The high position held by this herd of Large and Middle breed pigs constitutes a guarantee of first-class character of the animals catalogued in this sale. Many of them are winners, and all are descended from prize-winning families. Every pig is entered or eligible for entry in the Herd Book of the National Pig Breeders' Association.

Messrs. John Swan and Sons', Ltd., great annual sale of 22,000 half-bred draught ewes will take place at Newton St. Boswells, N.B., on Monday, September 16; whilst their special sale of half-bred gimmers, feeding sheep, and half-bred, three-quarter bred, Oxford, cross Suffolk and Cheviot lambs will be held on the following Thursday at the same place, St. Boswells. The attention of buyers is directed to these sales, as they afford purchasers the best selection of half-bred ewes and half-bred gimmers obtainable in Scotland.

Mr. Frederick Ward's annual sale of Lincoln shearling rams is to be held at Quarrington on Saturday next. Last year 117 rams were disposed of for an aggregate of £2,426, making an average price of £20 14s. 9d. There are some other interesting facts about Quarrington rams. Two years ago twenty-seven of them were sold in Buenos Ayres at an average of £140 each, one making £430, and seven an average of £204. The Quarrington flock sired a great many of the Royal Show prize winners, as well as the highest priced ram, which made £700 in the Argentine last year. The great feature of the Quarrington ram is its size, its immense amount of bone and heavy fleece.

In many parts of the country plums are exceptionally plentiful this year, and it is feared that much of the fruit will be allowed to remain on the trees to spoil, owing to the exceptionally low prices that are now being realised. In the Nottingham market on Wednesday morning good sound English-grown plums were being sold at the rate of three pounds for a penny, whilst at Covent Garden English plums were quoted at 2s. to 3s. 6d. per half-sieve, as compared with 4s. 6d. to 5s. at the same period last year.

Ilminster Fair took place on Wednesday, when there was an exceptionally heavy entry of stock of all descriptions, and a very large attendance of buyers from all parts of the West of England. The whole of the stock was submitted to auction, and the entries included about 100 head of cattle and 3,500 sheep. The following are the prices quoted, and which are considered satisfactory:—Cows and calves, £15 to £16 10s; heifers and calves, £13 to 17s; barreners, £10 15s to £15 5s; suckler calves, 22s to 2 guineas; fat calves, £3 10s to £4 18s; suckers, 8 guineas to 14 guineas; steers, £7 10s to £9 5s. Down lambs, 42s to £48 6d; Down ewes, 49s to 55s 6d; fat sheep, 51s to 60s; rams, from 5 to 12 guineas; Down Chilver lambs, 39s 6d to 44s. Few horses on offer made up to 35 guineas.

HORSES.

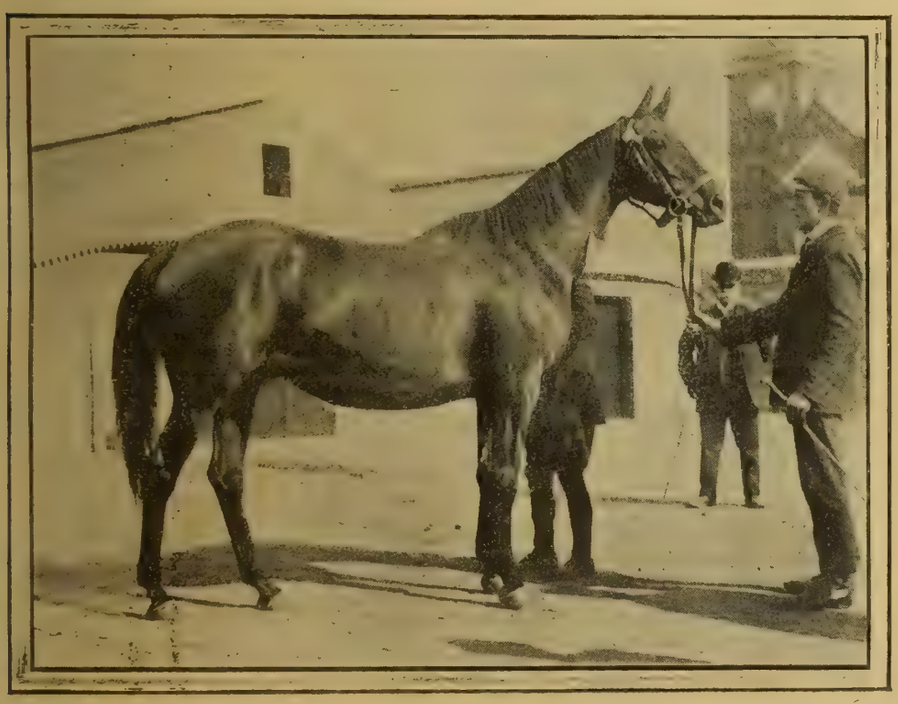
Notes and Jottings.

"He doth nothing but talk of his horse."
—"Merchant of Venice."

The Decline of the Arab.

THOSE who know the East well say that the breeding of Arabs of the best type is on the decline. And curiously enough the reasons for this decline are widely different. One is the introduction of the rifle amongst the Bedouins. When the lance was their principal weapon of offence, or indeed their only one, the horse was the only possible animal for the foray. But now that the Bedouins have taken to arms of precision the camel answers their purpose as well, or better. The other reason will be looked upon as a very remarkable one by those who have been accustomed to put implicit confidence in the fairy tales which have been written about the Arab's love for his "steed." It is that the Indian demand has fallen off owing to the decline of Arab racing.

The Trade in Arabs.



A FEW years ago the trade in Arabs was very brisk, Bombay being the principal market for them. The idea that the Arab would not sell his best horses is an erroneous one. The rich Arab, like the rich man in any other country, will not sell his favourite horse, but it stands to reason that where horses are bred there must be surplus stock, and these the Arab, who is a keen business man, was eager enough to sell. Especially were good stallions put on the market. The Arab, who very wisely traces his pedigree through the female side, naturally stuck to his best mares—a policy which would have been well if it had been followed by us.

What the Decline Means.

THIS decline in Arab breeding, if it continues and increases, cannot but have a very serious effect on the breeding of light horses in England. The Arab himself is not a high class racehorse. Neither is he a good Hunter; his lack of size and scope prevents him carrying a man over a big country when hounds run hard. His peculiar trotting action does not admit of his being a high-class Harness horse; and though he was considered an excellent if not a typical Polo pony under the old conditions of polo playing, since the height of the Polo pony has been raised English ponies have been bred that can carry a heavy man in a fast game better than any Arab. But every one of these breeds owes a deep debt of gratitude to the Arab. With the Racehorse we have nothing to do, save as a Hunter sire; but our Thoroughbreds certainly owe much of their stamina and their hard, flinty bone to their Eastern ancestors. I would even go farther than that, and say that the Arab might well be used as a Hunter sire on a certain type of mare—for instance, on the light carting mare or the powerful Cleveland Bay or Yorkshire Coaching mare. These big, strong mares should not be mated with big horses. They always breed better to the small, active, prepotent sire, and there is no sire so impressive as the Arab, for the simple reason that there is no breed of horses which has been kept so pure for such a long period as the Arab has. As for the Harness breeds, it is pretty generally acknowledged that the Cleveland Bay is descended from horses of Eastern blood, which were spread about the country during the Roman occupation of Britain; and there is, I think, every reason to believe that there was another introduction of the Thoroughbred into the breed in the middle of the eighteenth century. A horse who is known as Old Traveller, and who travelled in the neighbourhood of Yarm, figures in the pedigree of many of the old Cleveland Bays, and undoubtedly several of his sons travelled as Cleveland Bays. And Traveller was full of Eastern blood, some of which was Arab.

The Arab Strain in the Hackney.

HACKNEY breeders claim that their favourites have a great deal of Arab blood in their veins, and it is only fair to say that they make their claim good by the pedigrees of the older horses. Indeed, many horses of recent date have been closely allied to Arabs. One instance occurs to the memory in Mr. W. Pope's famous piebald pony Magpie. Not only was there Arab blood in the top crosses of this great prize winner, but she was fourth in direct descent from an Arab mare. It would, I think, be no exaggeration to say that she was half Arab in blood, and she certainly showed a good deal of the Arab character, especially in the beautiful quality and texture of her bone and in her remarkably developed sinew. She also wore well on her legs, which was another Arab characteristic, for her showyard career was considerably above the average.

The Thoroughbred brood mare Auburn's Pride, winner of First Prize and Perpetual Challenge Cup for best Thoroughbred brood mare at the Royal Dublin Horse Show last week. She is 9 years old and the property of Mr. E. E. Lennon, Merrison Square, Dublin, but was bred by Mr. A. Cameron, Mount Plunket, Roscommon, her sire being Hackler, and her dam Magnet.

Influence on the Polo Pony.

IF the Arab is not the best pony in the world to carry a heavy man in a fast game, he at any rate has had much to do with the production of that handsome and useful animal, the weight-carrying Polo pony. It seems unnecessary to refer to the big mark which Mootrub and other Arabs have made on the Polo pony, and to insist that the latter has got a good deal of his docility, his handiness, his courage, and his hardihood from his desert-bred ancestors.

Another Use of the Arab.

THERE is another purpose for which the Arab is used and for which he is peculiarly adapted. A great admirer of the breed has said very appropriately that as the Hunter is the horse of sport, the Arab is the horse of the foray. And undoubtedly the Arab is the best light cavalry horse in the world. This is perhaps scarcely recognised in England to the extent that it ought to be, but on the Continent the merits of the Arab as a cavalry horse are thoroughly recognised. Mr. Wilfrid Blunt, whose Arab stud at Crabbett Park has achieved such a world-wide fame, finds some of his best customers amongst European Governments. And here I would point out that Mr. Blunt's example might be followed with advantage by other gentlemen who take to breeding horses as a hobby, for Arab breeding on scientific lines will, I think, be very remunerative in the future.

Prejudice Against the Arab.

THERE is, unfortunately, a prejudice against the Arab amongst English breeders, a prejudice which is due in a great measure to their knowing little about him. There are moderate Arabs and there are moderate horses of all breeds. But if there are some Arabs with loaded shoulders it does not necessarily follow that all Arabs have loaded shoulders. Some Arabs, many of them, are bad hacks on an ordinary road, and many of them have a very peculiar gait on the trot, going with a straight knee. But I have sat behind some Arabs that were excellent Harness horses, that went at a very fair pace, and that never made a trip. I have had in my time more than one horse that was in direct descent from an Arab, and they were as hard as nails, no day too long for them, and they were always ready a day or two sooner than those that had not Arab blood in their veins. The value of the Arab cross can scarcely be too highly estimated.

How to Breed a Harness Horse.

THE breeding of Harness horses is a question which is constantly cropping up, and all kinds of theories are propounded, many of them very valuable theories indeed. I am, however, not going to discuss any theories, but am going to point out how one of the best harness mares I ever sat behind was bred. It was only a day or too since I was behind her, and her performance, for her age, fairly astonished me. She is twenty-two years old and she took two of us three miles on a rather hilly road in a quarter of an hour. Her dam was a stylish, well-bred Irish Hunter by Ascetic. She was quite on the high side and pretty nearly thoroughbred, and was a brilliant performer in the hunting field, until a big jump into a road finished her career as a hunter. Her owner wanted a horse to run in his dogcart, and thought she might breed one to a strong Hackney with action. So he mated her with Star of the East, a powerful horse and a fine mover, and the result was the mare referred to above. A big price was bid for her when she was young, and when in her heyday she could do her fifteen miles within the hour with a heavy load. She is a remarkably handsome mare, full of quality and with very fine action, and she is very fresh on her legs for the work she has done. If she had been taken care of and trained she would have made a show Harness mare. It will be remembered that Norbury Squire, who won so many prizes in harness, was bred on similar lines to this mare, being by a Hackney sire (Danegelt) from a Thoroughbred mare.

THE LOOKER-ON.

Mr. T. S. Taylor's Hackneys.

A sale of pedigree Hackney and Harness horses, belonging to Mr. T. S. Taylor, who is giving up the stud at the Bait Hill stud farm at Wymondham, took place on Tuesday in the presence of a large company of buyers, and though there was a good demand prices did not rule high, as the following details of the chief lots sold will show :—

May Queen, bay brood mare, Sir Walter Gilbey, 23 guineas; bay filly foal, Sir Walter Gilbey, 15 guineas; May Day, brown brood mare, Sir Walter Gilbey, 24 guineas; brown filly foal, Sir Walter Gilbey, 17 guineas; black yearling colt, Mr. Howell, 13½ guineas; bay colt, two years, Mr. Carlton, 30 guineas; brown filly, three years, Mr. Case, 15 guineas; brown filly, three years, Mr. Stebbings, 33 guineas; black colt, three years, Mr. Case, 27 guineas; bay colt, three years, Mr. Clement Barker, 20 guineas; black pony stallion, six years, Mr. Wharton, 15 guineas.

CATTLE.

Notes and Jottings.

IT is not often that so many opportunities of obtaining pedigree cattle of such a variety of breeds and so good of their breed as will be the case during the present and following weeks. Last week we alluded to the quite special event of a sale of those beautiful and highly useful sheeted Welsh cattle to take place at Lord Penrhyn's home farm near Bangor on August 28. On Thursday next Messrs. John Thornton and Co. will offer another quite unique collection of cattle in the shape of the fine herd of Dexters, the property of the Duchess of Devonshire at Eastbourne. This herd has been quite at the front on all practical occasions, having won many milking test prizes.

IT is not generally known what admirable dairy cattle these miniature Irish Dexters are. Heifers in the herd under notice have given as much as three gallons of milk daily for a long time with their first calves, whilst from an inspection point of view a well-bred and well-shaped Dexter is about as handsome a little beast as could be imagined. Then as to beef, the breed, either in its pure state or when crossed, is second to none in quality, and the small joints it provides are always appreciated at a high value. Still there is another great point in favour of this breed, and that is the small quantity of food required to keep it and the fact that they will and do thrive wonderfully upon land that can only be looked upon as fit for rabbit warrens and the like.

IN addition to several private sales of Shorthorns during the present week the great autumnal sale at Bingley Hall, Birmingham, takes place, and this upon this occasion will probably be the largest autumnal sale ever held at Birmingham, being much increased by the addition of the entire herd of fifty-one head, comprising Mr. R. W. Hudson's stock from Danesfield. Many high-priced animals have passed through this herd, and there are many worth looking after on account of their breeding and merit at the present time. The sale this year extends over two days with a total of 477 head. The females are usually sold upon the first day and bulls upon the second day, and Birmingham is a very accessible centre.

SEVERAL very highly important sales of Aberdeen-Angus cattle are also notified to take place immediately, including Sir James Duke's entire herd at Lewes, on the London, Brighton, and South Coast Railway. This herd is rich in the valuable Pride of Aberdeen, Rose of Spott, Leachel Lass, Ruby, Jipsey, Waterside Matilda, and Trojan Erica families. The Aberdeen-Angus is essentially a beef breed, and we have seen bullocks from this herd occupying the highest places in the Smithfield Show, than which no better testimonial as to their quality could be mentioned. The herd is stated to be in good breeding condition, but without any forced feeding. Several other important sales of this breed are also notified in England and Scotland.

ANOTHER sale that should and will doubtless attract considerable attention will be that of the dispersion of a large number of the old Dishley Lohghorns and some crosses, the property of Lord Gerard, at Eastwell Park, Ashford. There are some splendid cattle in this herd, steers having been sold frequently at as much as £36 per head, and some of the cows are also deep and rich milkers as well as good breeders. The lots to be offered comprise strains of the very oldest and most valuable blood, and it may be mentioned that the Longhorn milk in the Royal tests at Lincoln was about the second richest in butter fat of that from any breed. There are some fine Devon and Longhorn and crosses with Guernseys, &c., included in the sale, several of which will distinctly prove to all interested in cattle the value of the old Longhorn for crossing purposes.

A VERY good herd of Sussex cattle are also to be sold on September 12, the property of Sir L. Lindsay-Hogg. This breed is now rapidly emerging from what may correctly be styled a very dark cloud, for whereas from a beef point of view the breed is second to none for weight and quality at a given early age, yet they have found very few patrons either at home outside their own limited area or in foreign lands. They are now, however, begining to take their place amongst the breeds that are coming to the front, and this not upon mere fancy lines, but from their admitted practical utility and ability to make a good profit.

ANOTHER herd of yet another breed of great importance to come under the auctioneer's hammer on the 12th inst. will be the herd of pure-bred Devon cattle the property of Mr. W. Kidner, at Fennington, near Taunton. The herd consists of sixty females and some twenty males, the latter mostly bulls. The Devon is now rapidly making friends abroad, and it will be no surprise if prices for these juicy red plums should rise to double their present value in a little time. South Africa is making a great effort to become possessed of the blood, and the country is one of great extent. Japan is also giving them a trial, and we know from experience how readily and rapidly Devons grow in favour when they are bred and managed with care. Few if any beef cattle leave a better return, and they can easily be converted into milkers.

IT is very gratifying to find that so many of our breeds of cattle are now increasing in favour with the foreign buyer. Shorthorns and Herefords have for a long time enjoyed a very wide field of favour, nor does this demand show the slightest symptom of abating, large shipments following each other in rapid succession, and now to these breeds have to be added Angus in good numbers, Devons, Kerries, and Dexters, and also Guernseys. Jerseys, too, have been and are being well looked after for homes on the other side of the water, but many of these are purchased from the island as being considered the most purely bred and naturally the headquarters of the breed. In fact our herds of cattle have not only become the admiration of the whole world, but also a necessity for those foreigners to buy who desire to have the finest of cattle.

IN these days of innumerable milking trials and attempts to increase the yield of milk by breeding, we are frequently met with the information from one or another that the best milkers as a herd, and frequently the winners in competitions, are none pedigree animals. Pursuing the question further down, we are informed that though the animals are not pedigree stock they are purely bred. Where is the difference? Simply in the fact that the one lot have not been registered, whilst the pedigree ones have all been entered. A great point arises here. The owner of a first-class herd of milking cows, when asked if they are pedigree cows, replies: "No; but I have always used pedigree bulls for generations. in fact, for in some instances, we hear, as much as forty or fifty years."

WHEN this has been the case, and the heifer calves are retained to keep the herd up at its numerical requirements, naturally these cattle are pedigree ones, or, in other words, as purely bred as they can be. Then we turn to the so-called pedigree ones, and we find in many instances these are of such short pedigree as only just to have become eligible for the herd book, therefore though pedigreed are not nearly as purely bred as the non pedigree stock so-called. A good deal of dissatisfaction has arisen from time to time in our showyards where this question is concerned. Some exhibitors have been known to exhibit cattle ostensibly Shorthorns in the cross-bred classes, and have even had the audacity to enter the same animals at another show as purely bred Shorthorns.

THE weather during the past seven or eight days has been of a much more agreeable character; indeed, over a great portion of the country lovely and much warmer days have been experienced. It is much to be desired, not only for the saving of labour and getting the corn off one's mind, that the improvement may continue for several weeks. Oats, generally speaking, are enormous crops, and are cutting up well, so that with fine weather to harvest them, the straw will be very valuable to mix with much of the damaged hay that abounds in the country, and not only the straw but the corn also, for nothing is much cheaper or wholesome for young cattle and milch cows than a good supply of home-grown and home-ground oats; they are always a good thing.

THE mangold crop, too, is bulbing very fast now on well-farmed ground, the higher temperature being very favourable to this root, so that there is prospect on many farms of a supply of these to help out in making the damaged hay more nutritious and appetising. Prices of all cattle produce seem likely to be well maintained, as we read the importations of beef especially have fallen off considerably during the last ten days. Cheese, too, is going off well, and greater attention being paid to it, and the best dairies of butter also make a fair price. These loopholes will in all probability enable farmers to get as high, or perhaps a higher price for their winter milk than they have ever done upon those farms where milk selling is the order of the day.

The Craigavad Shorthorns.

The well-known herd of Shorthorn cattle belonging to Mr. A. M. Kirker, Craigavad House, County Down, was dispersed at the Royal Victoria Horse Bazaar, Belfast, on August 23. The herd was founded upon purchases made at the Caledon sale in 1898, and subsequently through importations from some of the leading herds in England and Scotland. In consequence of the system of management adopted, stock bred in the herd have realised satisfactory figures, and many of them have been shipped to the Argentine direct at prices that showed the esteem in which they were held by South American breeders.

There was a good attendance at the sale, but there were fewer cross Channel breeders present than had been anticipated. The top price was 100 guineas, paid by Mr. Mathew Marshall Stranraer, for the roan three-year old cow, Craigavad Lily, got by Nonpariel Courtier. This cow is beautifully coloured, and promises exceedingly well. One of the most prominent bidders was Major Chevasse, Waterford, who paid the next highest price, 65 guineas, for Quarryhill Kora, a roan out of Luxury, a sire at present in the King's Windsor herd. Major Chevasse also became the owner, at 40 guineas, of Lady Godiva, a rich roan daughter of Orphan Knight; whilst another roan named Craigavad Pink, sired by Master Stephen, was secured by the same purchaser for 41 guineas. The best-priced bull calf was a get of Quarryhill Kora by Villager, a red-coloured youngster, which fetched 58 guineas from Mr. Gibson, Craigavan. Another red bull calf named Carmen, home bred and got by Nonpareil Courtier, was led out at 50 guineas, at which price he was knocked down to Mr. A. Moutray, Auchnacloy. Other figures ranged from 15 to 40 guineas, the latter price being paid by Mr. Porter, Dublin, for Lady Augusta, a light roan, possessing many of the best features of the breed.

Sale of Sussex Cattle.

The sale of close on fifty head of pure-bred Sussex cattle belonging to Mr. Salliard, of Buchan Hall, Crawley, at Horsham market, attracted a large company of breeders, and there was a good demand, though no high prices were realised; but seeing that so many of the lots were calves, the average of the sale, £17, was considered satisfactory. Lot 1 was the old prize-winning cow, Elsa, champion of the breed on several occasions, who is now in her sixteenth year, and still looking well, but she made only 14½ guineas. She had a yearling bull in the sale, Bewbush Statesman 2nd, which went cheaply to the Hon. R. P. Nevill. Bewbush Duke, winner of first prize at the Royal and other prizes, was much admired, but did not reach his reserve price of 60 guineas. He should, however, soon find his way into a good herd at that figure. Mr. Blacklocks, of Lydd, was a buyer of several cows and calves, giving 15 guineas and 17 guineas for two of the latter. Mr. Nevill secured the best lot in the sale in Music, a very beautiful young cow of Mr. James Braby's breeding. She is a prize winner and well within her value at 34 guineas. Smeeth Prebble 2nd went to Mr. Gordon Neame, of Faversham, at 20 guineas, and her very promising bull calf, exceptionally dark in colour, and well grown, was bought by Mr. E. E. Braby. Doubtless he will be heard of again in the showyard. Mr. Buchanan, of Lavington, bought three very good heifers in Bewbush Derby 1st (30 guineas), Prebble Smeeth twin 2nd (31 guineas), and Bewbush Elsa (24 guineas), Mr. John Ainger taking the best of the younger stock in Bewbush Hairgrass at 27 guineas.

Store Stock Sale at Dublin.

On Thursday Mr. Gavin Low held a well-attended sale of store cattle. About 800 beasts were sold at very satisfactory prices. Amongst the most notable sales were Mr. Frank's eight Aberdeen Angus two and a-half year olds (which took the first prize offered by Mr. Low) and sold at from £15 2s. 6d. to £16 17s. 6d.; Mr. Aitken's eight Hereford bullocks (took second prize), and were sold for £16 5s. each. Dr. Gray took a first prize for some Hereford cross bred bullocks, which he sold for £13 12s. 6d. Mr. Heaven got £12 17s. for ten two and a-half year olds A.A. heifers, and Mr. Symes (who took second prize) sold his pen for £14 5s.

The following were some of the prices realised:—Horned bullocks and heifers (two and two and a-half years old), from £10 2s. 6d. to £16 7s. 6d., being 27s. to 31s. per cwt.; Aberdeen Angus, £10 5s. to £16 17s. 6d.; Hereford crosses, £11 12s. to £16. The top price of the day was £17, obtained by Captain Slater for a handsome lot of Hereford cross-bred bullocks (two and a-half years), which were sold at £17.

A good clearance was accomplished, though it was considered that the cattle did not go quite as well as at former sales. Some yearling heifers which got first and second prizes were sold at £12 10s and £12 15s each. A good clearance was accomplished.

The Smithfield Club Show, 1907.

The prize schedule for the Smithfield Club's Show at the Royal Agricultural Hall, Islington, on December 9 to 13 next has made its appearance, and reminds one again of winter, which seems only to have just closed. Still, one has to take time by the forelock nowadays, and thus show schedules issued several months before the time of the show occasion little or no surprise.

To come to the prize schedule itself, we may remark that a comparison with that of 1906 shows several alterations, and the first is a reduction in the total amount offered. This year the sum is £4,113 16s. 6d., as compared with £4,152 6s. 2d. last year, so that there is a decrease of £38 9s. 8d. The amount, however, still allows of some handsome prizes in all sections, and there is no actual reduction in the class prizes or specials, which remain at the same amount as last year. The cause of the reduced total is the elimination of one or two classes which have not met with sufficient support, and have as a result been allowed to drop out. A notable example of this is that Cotswold sheep, which used to have, like the other breeds, a section to themselves with a special breed award, have gradually dwindled, until this year they are swallowed up in the section for Devons or any other long-woolled breed. This section now also includes the South Devons, which last year only numbered one. Cheviots only totalled two in two classes, so that exhibitors of these particular breeds have only themselves to blame for the loss of a section at the premier Christmas show of Great Britain.

There is another omission to note in the sheep section, and that is that the section for Dorset sheep has only one class this year, this being for lambs under twelve months old, and none for wethers. Last year the section for Small White or Black pigs failed to attract an entry, and the result is the section does not figure in the schedule this year. The porker class suitable for the London trade was so successful last year that two more classes have been added, and if these additions receive anything like the support accorded the one class in 1906 the section this year should be a notable one.

Beyond the items mentioned above, there is no striking alteration in the prize schedule. It will still be possible for a steer or ox to win £260, a heifer £255, a pen of three long or short woolled sheep £110, a pair of pigs £70, or a single pig £10, to say nothing of the special challenge cups, which are the same as last year. For the cattle classes the prizes amount to £2,013; for sheep, £1,100; pigs, £475; carcase competition, £281; table poultry, £121 8s.; whilst for the feeders of first-prize animals a sum of £122 18s. 6d. is set apart, so that exhibitors have something worth competing for at the Smithfield Show. Copies of the schedule can be had of the secretary, Mr. E. J. Powell, 12, Hanover Square London, W.

Our illustration above is of the Hereford Bull Rob Roy, which has been exhibited at many of the leading Shows this year. Its winnings include First Prize at the Oxford Show, Second at the Royal Show at Lincoln, and Reserves at the Bath and West and Royal Counties Shows. It is the property of Mr. G. D. Faber, of Rush Court, Wallingford, but was bred by Mr. W. Tudge, Summer Court, Herefordshire, its sire being Commandant 22,040 and dam Golden Blossom by Gold Box 15,339.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible. Charges for announcements under this heading Six Shillings an inch.

By Messrs. STRIDE & SON.

SINGLETON, CHARLTON, EAST DEAN, DROKE AND NEW HOUSE FARMS,
ON THE GOODWOOD ESTATE,
CHICHESTER, SUSSEX.
(About ¾ mile from Singleton and 5 miles from Chichester Stations, L.B. and S.C. Railway).

HIGHLY IMPORTANT SALE OF HIS GRACE THE DUKE OF RICHMOND AND GORDON'S PURE-BRED SOUTHDOWN HILL FLOCKS.

MESSRS. STRIDE AND SON beg to announce that they are in receipt of instructions from His Grace the Duke of Richmond and Gordon, K.G. (the farms being let), to Sell by Auction, at the MANOR FARM, SINGLETON, on
THURSDAY, SEPTEMBER 5 next,
THE WHOLE OF THE PURE-BRED SOUTHDOWN HILL FLOCKS, comprising about:
2,200 SOUTHDOWN SHEEP, in regular flock ages, as follows:—
274 SHEARLING EWES,
532 FULL-MOUTHED EWES,
474 FOUR-TEETH EWES,
89 DRAFT EWES,
365 SIX-TEETH EWES,
500 LAMBS.

These pure-bred Southdown Hill Flocks were established many years back, chiefly by drafts of ewes from the Goodwood Home Farm Flock, by the late Duke of Richmond and Gordon as the various farms—which are situated amongst the hills North of the Goodwood Racecourse—came into hand.

Of late years much care and attention has been devoted to their breeding and selection. In 1903 rams used were from the flocks of Earl Bathurst, Mr. J. Colman, Mr. E. Henty, and Goodwood. In 1904 from Earl Cadogan, Lord Northbourne, Mr. F. N. Hobgen and Messrs. Waters and Son. In 1905 and 1906 from the Duke of Devonshire, Mr. J. Colman, Mr. Allan Cooper and Mr. Edwin Ellis.

The ewes are of good size and scale, with the hardiest of constitutions, and possess the quality, type and character which distinguishes the famous flocks from which they are descended.

The capital wether lambs which have been annually sold in Chichester Market furnish the best evidence of the mutton-producing capabilities of these flocks, while last year their wool made the highest price at the Chichester Wool sale.

All the flocks are fully eligible for registration.

Purchasers may leave their sheep on the farms free of charge, at their own risk, until September 29th.

The Flocks may be inspected by appointment with Mr. James Mackenzie, Manor Farm, Singleton, Chichester.

Buyers arriving at Chichester night prior to sale will find the "Dolphin" or "Anchor" comfortable hotels to stay at.

Sale immediately after 12 o'clock luncheon.

Commissions carefully executed.

Catalogues of the AUCTIONEERS, Auction and Estate Agency Offices, 63, East Street, Chichester, Sussex.

By Messrs. STRIDE & SON.

CHICHESTER, SUSSEX.
GREAT ANNUAL SECOND SALE OF PURE-BRED SOUTHDOWN EWES, RAMS, RAM LAMBS, EWES AND LAMBS.
WEDNESDAY NEXT, SEPTEMBER 4, 1907.

MESSRS. STRIDE AND SON beg to announce that present entries for the above sale, which is held in the Market, comprise about:—
220 SOUTHDOWN RAMS & RAM LAMBS,
3,000 SOUTHDOWN EWES & LAMBS,
from the following flockowners: His Grace the Duke of Richmond and Gordon, K.G., Goodwood; His Grace the Duke of Devonshire, K.G.; Sir Julius Wernher, Sir Henry Aubrey-Fletcher, Col. A. F. Walter, Mr. Alfred Heasman, Mr. Francis Elmer-Speed, Exors. of the late Mr. Geo. Peel, Mr. F. Stanford, Mr. A. M. Singer, Mr. T. W. Thorpe, Mr. J. G. B Stone, Mr. J. Buchanan, Mr. O. Ellis, Mr. T. Bushby, Mr. F. C Sparkes, Mr. E. J. Reddaway, Mr. G. Lock, Mr. F. H. Sawtell, Mr. Percy Herington, Mr. H. Paynter, Mr. C. Napper, Mr. H. C. Formby, Mrs. Pascoe, Mr. C. W. Schroeter, Exors. of the late Mr. Tait.

Also the whole of Mr. Francis Elmer Speed's CHOICE PURE-BRED REGISTERED SOUTHDOWN FLOCK (No. 206 in Flock Book) removed from KNOWLTON COURT, DOVER, for convenience of sale, comprising about:
330 EWES IN AGES,
25 RAMS and RAM LAMBS,
sold on account of the farms in hand being let; and the whole of Mr. J. E. PIKE'S capital SOUTHDOWN FLOCK, removed from WHEATCROFT, EMSWORTH, for convenience of sale, comprising about 150 EWES in ages.

FURTHER EARLY ENTRIES SOLICITED.

SHEEP taken off rail and placed in suitable keep any time prior to sale.

Sale of rams at ten o'clock. Ewes at 11 o'clock.

COMMISSIONS CAREFULLY EXECUTED.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending August 27, 1907 :—

| | | |

auction at Driffield on Wednesday, in the presence of a good company of buyers. Messrs. F. Cook and Son had over 30 shearlings from Mr. J. D. Robinson, Sledmere, which made £2 10s. to £3 each. Messrs. Hornby and Wilberfoss sold a number of gimmer shearlings from Mr. J. Catton, South Hall, Cranswick, which realised 59s. to 61s. each, Mr. J. W. Stephenson's consignment making 50s. to 56s. 6d. Ewes from Mr. R. Holtby, Elmswell, ranged from 48s. to 54s. per head. Leicester ewes from Mr. L. Clarkson's, Huggate Lodge, sold from 49s. to 54s. each.

Messrs. G. W. Clark and Sons had the largest consignment, consisting of gimmers from Mr. J. H. Topham, Bainton, which reached 54s. to 57s. each. Gimmers from Mr. G. B. Dunning Driffield, made 49s. 6d. to 55s. each, and those from Mr. T. C. Wilson, North Dalton, fetched 49s. to 55s. each. Mr. J. C. Burdass's (Dotterill Park) ewes made to 49s. 6d., Mr. W. Knapton's (Ruston Parva) lot making 53s. to 58s.; Mr. C. Shipley's (Ruston Parva) consignment made 52s. to 54s. each; Mr. J. Saville's realised 47s. to 50s. 6d., Mr. J. Harrison's lot ranged from 55s. 6d to 64s. each, and Mr. G. R. Shipley's (Langtoft) lot fetched 48s. to 52s.

Hexham.

Between 4,000 and 5,000 lambs were offered at the Hexham Auction Mart on Wednesday, when trade was slow and dear. The three-parts-bred, of which there were 1,700 catalogued, made from 24s. 6d. to 36s. 6d. per head. Oxford Down crosses, 24s. to 38s. 6d.; half-bred Cheviot and Leicester ewe lambs, 24s. 6d. to 38s. 9d.; half-bred wether lambs, 24s. 6d. to 30s. 9d.; and mule lambs, 21s. to 31s. each.

Marlborough.

Messrs. Waters and Rawlence held their accustomed sale of ram lambs from registered Hampshire Down flocks at Marlborough Fair Thirty-six ram lambs from the flock of Mr G. L. Dean were first offered, and were all disposed of at from 5 guineas to 10½ guineas; 15 from Sir W. G. Pearce, Bart., Chilton Lodge, Hungerford, made from 4 guineas to 5 guineas; 15 from Mr. W. C. Young, Stratford-sub-Castle, 5 guineas to 8½ guineas; and 15 from Mr. A. F. T. Drake, 5 guineas to 12 guineas.

Mr. C. Coxon's Shropshires.

The annual sale of Shropshire sheep from the well-known Elford Park flock, Tamworth, the property of Mr. Charles Coxon, took place on Tuesday and, as usual, was largely attended. The catalogue included forty-five rams and seventy-five shearling ewes, which met a ready sale. The highest price for rams was paid by Mr. C. T. Pulley, the amount being 42 guineas, Mr. Clarke giving 33 guineas for another ram; whilst other prices realised were 21 guineas, 18 guineas, 15½ guineas, 14 guineas, 10 guineas. The average was £13 3s. 6d. Sixteen pens of ewes were sold at an average of £3 17s. 8d. per head, Lord Wenlock and Mr. Clarke being the chief buyers.

Salisbury.

Messrs. Waters and Rawlence submitted to auction at their Market House Yard, Salisbury, on Tuesday, selections of ram lambs from the flocks of Messrs, J. H. Dibben and Cary Coles, the former making from 5 guineas to 10½ guineas, with an average of £6 9s., and those of the latter 5 guineas to 20 guineas, with an average of £7. A few of each were unsold in the absence of sufficient buyers to effect a clearance.

Southmolton.

A sale of registered Exmoor horn sheep was held by the Exmoor Horn Sheep Breeders' Society at Southmolton on Wednesday, when nearly 5,000 sheep were disposed of in the presence of a large company of breeders. The prizes and chief prices were as follows:—

Old rams—1, J. H. Turner, Molland (sold to Mr. R. R. Bothwell, Morebath, for 11 guineas); 2, G. Thorne, Northmolton (sold to Mr. Bawden, Withypool, for 7 guineas); 3, W. Gammin, High Bray (3old to Mr. H. Chichester, Shirwell, for 8 guineas). Premiums—1, F. S. Yendell; 2, G. Thorne, Northmolton; 3, H. Buckingham, Northmolton.

Hoggs—1, and silver cup given by the Mayor of Southmolton (Mr. J. Sanders), J. H. Turner (sold to Mr. R. S. Westacott, Hawkridge, for 15½ guineas); 2, D. N. Purchase, Molland (sold to Mr. W. Burnell for 5 guineas); 3, J. Robbins, High Bray (sold to Mr. F. S. Yendell, Northmolton, for 10 guineas). Premiums—1, H. Buckingham, Northmolton; 2, D. N. Purchase; 3, G. Richards, Northmolton.

At Sanders and Sons' auction about 1,130 Exmoor sheep were disposed of, the average prices being, for ewes, 36s. 6d. to 46s., whilst about 35 rams made from 3½ guineas to 16½ guineas. Blackford and Son sold about 3,000 sheep, which made from 36s. to 54s.; horn, 28s. to 36s. 6d.; lambs, 27s. 6d. to 34s. One lot of Devon long-wool rams, the property of Mr. T. C. Ley, of Georgenympton, made from 5 to 8½ guineas; whilst Mr. J. S. Verney's (Bishopsnympton) made 5 guineas, and Mr. P. C. Tory's (Dorset) from 3½ to 4¼ guineas.

The Langdon Abbey Southdowns.

Mr. W. P. Hampton's flock of Southdown sheep was sold on the 23rd ult. at Langdon Abbey, Dover. The flock was in healthy breeding condition, and although the sale was fixed only a month ago the sheep were in choice condition and of true type. The yearling ewes made up to 53s., the four-tooth up to 60s., Messrs. McWilliam and Robinson taking the best pens, the sixth-tooth went up to 59s., the Duchess of Devonshire taking this pen, and also the highest priced full-mouthed ewes at 52s. Ewe lambs received up to 42s, several fats going to Mr. Cabb and Mr. T. Huggan. The 280 ewes averaged nearly 50s. Rams made up to 9½ guineas (C. Morris), and all round averaged £7 16s. 4d. There was a small company, and most of the sheep were purchased to go out of the district.

Thirsk.

At Thirsk on Monday there was an excellent trade for the 425 lambs and grazing sheep offered. The following were the prices realised:—Down lambs, 33s. to 36s. 6d.; twice-cross lambs, 32s. to 36s.; half-bred lambs, 28s. to 29s.; Wensleydale rams, to 51s.; Wensleydale ram lambs, to 58s.; half-bred shearlings, 39s. 6d. to 44s. 6d.

VETERINARY.

Advice of a Veterinary character, by a M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 7, Wellington Street, Strand, London, W.C.

Milk Fever Prevention.

(*Concluded from p. 270.*)

A diet consisting of a moderate quantity of hay of average quality, with 1 lb. of linseed cake to neutralise any tendency to constipate the bowels, seems that finding most favour among practical dairymen, and recommended by country veterinary practitioners, who, of course, see and have to deal with cattle on a hundred farms, where some antiquated fossils, who prate of their experience, have to deal only with their own.

The state of the bowels must be carefully noted, and they should be kept rather relaxed during the concluding stages of gestation, and up to the time of calving, either by dieting or the administration of medicine. The regulation pound of Epsom salts is generally sufficient for this purpose, and the "dangerous" cow should have such a dose once or twice prior to calving, and from 12 oz. to 1 lb. of Epsom salts, with 1 oz. of nitrate of potash and ½ oz. of ginger after the event, unless it is the custom to give a "cleansing drink."

The management after calving, at least for the danger period, which does not usually extend beyond three days, is of some importance, but too frequently what is best is made subservient to what is most convenient.

There is no manner of doubt but that the safest plan of management in the case of the cow predisposed to milk fever is to leave the calf with her and let it suck at its own sweet will; refraining from hand milking at all.

By doing so we avoid exciting the cow by separating her from her calf, and the animal is much quieter. There are doubtless objections to be urged against this plan, and we know all about the interference it causes in the routine management of the cows, and the trouble there often is when the pair are separated; but practically it amounts to a choice of evils, and in the case of the "dangerous" cow, allowing her to have her calf with her for two or three days is the least.

It must not be understood that we are affirming that this is in any way a certain preventive, for we have seen too many cows "down" and delirious or unconscious, with their helpless offspring looking wonderingly on or vainly trying to suck the flaccid udder, to do anything of the kind.

To be sure, it has not always happened that other precautions prior and subsequent to calving have been observed, but some cases are certain to occur, even where the cow has from beginning to end been "farmed" on the most approved lines, and nothing is omitted that human ingenuity can devise to prevent the disease. But even then something is gained, for experience goes to show that where management fails to attain the object arrived at, the cow so managed who goes "down" stands a much better chance of recovery under modern treatment than the animal left to take her chance in the ordinary way.

Among other things, treacle is an excellent laxative for the newly-calved cow, and 3 lb. or 4 lb. may be given in a bucket of thin gruel as the first food after the event.

Forcing the milk is, of course, contra-indicated, and for the first few days the diet should be spare.

There is one other point of importance, and that is the date of calving. Experience goes to show that more cases occur in warm weather than in cool—in summer than in winter—and where "dangerous" cows are concerned it should, as far as possible, be contrived that they calve from October to March inclusive. No cow-keeper who knows his business will willingly have an aged cow of a milking type calve from May to the middle of September. Here, again, there may be some inconvenience, but we are concerned with the best methods of preventing milk fever and the choice of the least evil, rather than what is easiest or least troublesome.

With further reference to the influence of the presence of the calf, this not only has a soothing effect on the cow, but the fact that the calf does not empty out the udder, as when the cow is milked dry by hand, is of some importance, for there is not the same encouragement to the cow to increase the secretion, and it *does* make a difference whether milk is produced or not.

There are many dairymen who affirm that clean stripping practised immediately after calving is closely associated with the production of milk-fever, and go so far, like one of the parties to this dispute, as to maintain that merely removing enough for the sustenance of the calf for the first three or four days instead of regularly milking dry is, in itself, a preventive of milk-fever.

Since the above was written we have seen the remarks by the writer of "Cattle Notes and Jottings" on pp. 134 and 135. We feel that any discussion of the subject would be futile in his present frame of mind, or existing knowledge of the modern theories concerning parturient paralysis; besides which, "Hawks do not pike out hawks' e'en." But we cannot forbear remarking that while "beforehand milking" is being vaunted as "never known to fail," our unfortunate friend "Gloucestershire" has a cow dead of the disease which appears to have been subjected to this "beforehand milking." M.R.C.V.S.

Sale of Lord Penrhyn's Farm Stock.

The live and dead farm stock belonging to Lord Penrhyn was disposed of at Penrhyn Castle stables on Tuesday and Wednesday last, and was well attended. The harnesses and carriages were first offered and sold well, prices for the former ranging up to £9 10s., whilst the latter realised up to £32, which was given for a pair wagonette with cover. Then came the horses, which consisted chiefly of young colts and fillies in first-class condition. Prices for these ranged up to £40, whilst seventeen Welsh mountain ponies were sold at from £3 to £15each. Five unbroken young blood horses fetched from £14 10s. to £34 10s., whilst the Shire stallion Bury General White was withdrawn at £47 10s.

The cattle were of first-class quality, and showed careful breeding, but they sold somewhat cheaply. The bulls, 5 in number, realised from £10 to £18; 28 milch cows ranged from £7 10s. to £20; 16 two and three-year old heifers brought from £8 5s. to £14 5s. each; 15 heifer calves sold at from £2 5s. to £5 each; 5 bull calves were knocked down at prices ranging from £1 to £5 5s.; whilst yearling steers and heifers fetched from £5 12s. 6d. to £7 15s.

Some pure-bred Shropshire ewes and ram lambs were also offered and realised 45s. and 46s. each, and rams from 35s. and 50s. each.

Nantwich Cheese Fair.

Mr. R. Challinor, secretary to the Cheshire Dairy Farmers' Association, reports as follows upon the cheese fair held at Nantwich on Thursday:—The pitch was about 65 tons. The fair opened with a good attendance of buyers, and the tone of the market was fairly good. Prices:—Finest, 56s. to 60s. per cwt. (one lot made just over 60s.); medium qualities sold at 52s. to 55s.

This year's show of the Tiverton Agricultural Society, though one of the best as regards display of stock held by the society, was not a financial success. The total receipts at the last show were £820, including subscriptions £416; entrance fees £122; gate, £178; and grand stand, £33. The expenditure was £854, including £70 allowed for depreciation of stalls and ring fence, so that there was a deficit of £13.

The Countess of Warwick has stated in an interview that unless she receives support from the Essex County Council her agricultural school at Bigods will not reopen after the vacation. The parents of the pupils are, her ladyship says, too poor to continue payment without the prospect of scholarships, and these the Essex authorities refuse to give. The Hertford Council gave some notwithstanding. The Essex authorities gave £100 a year for a time, and then stopped it because farming subjects in lieu of the usual curriculum of French, &c., were taught. It is the aim of the school to bring the people back to the land, and give them a practical education for rural pursuits, yet the Board of Education at first refused grants because the higher mathematics and French were dropped, but gave them afterwards when support had been given by prominent educationists. Most of the pupils come from the farming class. Over 188 passed through the school, and 105 have remained in agricultural life; most of the others have gone into the Civil Service.

Live Stock Record.

DIRECTORY OF BRITISH PEDIGREE STOCK OWNERS.

GILTS AND BOARS ALWAYS ON SALE

At Reasonable Prices.

PIGS.

Sale of Lincolnshire Curly Coated Pigs.

The first sale held by the newly-formed association took place on Wednesday last at Boston, and proved a notable success. The prices for the leading lots offered, together with the general average of the same, all prove how much this combination of the interests of these breeders will tend to enhance the value of their stock and also increase the demand for the same, because quite a number of those sold were taken out of the district.

Mr. Arthur Sabel, the associations auctioneer, officiated, and the arrangements were carried out under the superintendence of Mr. C. E. Williams, the honorary secretary of the association. The following are the leading details, prices, averages, &c., of the several consignments:—

Mr. J. Bowser sold three boars to average £6 9s. 6d., top price 6½ guineas, to Mr. B. Rowland, and three gilts to average £4 0s. 4d., best price 4¾ guineas, to Mr. Booth. Mr. W. Bray sold two sows, both to Mr. H. Dudding, at 32 and 31 guineas each, average £33 1s. 6d, a gilt at 11 guineas to Mr. W. S. Fox, and two boars at 9½ gs. to Mr. Caudwell, and 7½ gs. to Mr. Skelton.

Mr. Henry Caudwell sold the first, second, and third prize Royal boars, farrowed in 1907, at 23 guineas to Mr. Stennett, 35 guineas to Mr. A. H. Carter, and 35 guineas to Mr. H. Dudding respectively. Mr. G. Fron's boar went to Mr. J. Bowser at 15 guineas, two from Mr. W. S. Fox at 7½ and 6½ guineas each, another from Mr. G. Godson made 32 guineas to Mr. E. Welsh. Four gilts from Messrs. C. E. Harris and Sons averaged £10 2s. 1d.; best prices were 14 guineas to Mr. E. Howood and 13½ guineas to Mr. Royds, of Caythorpe; two boars from this herd averaged £5 10s. 3d. Three others from Mr. T. E. Horncastle averaged £6 0s. 9d., with 8½ guineas to Mr. Porter as top price; two gilts from this herd averaged £6 6s. Three boars from Mr. H. S. Scorer averaged £7 10s. 6d., Mr. Harris giving top price—10 guineas. Four gilts from Mr. G. H. Welsh averaged £4 4s., and three sows from the same herd averaged £8 15s., Mr. Royds giving 12 guineas for one and Mr. Francis 7 guineas for another. A Boar from Mr. C. E. Williams' herd made 10½ guineas, and two gilts 10½ and 10 guineas to Messrs. Bonser and Hooker, and Mr. D. Wood's boar went to Mr. Porter at 12 guineas.

The twenty-two boars averaged £12 9s. 4d., the five sows £18 19s. 7d., the fifteen gilts £7 7s., and the whole sale of forty-two head, £11 7s. 5d.

Our Hop Acreage.

My forecast last week of the probable reduction of the English hop area is proved by the official returns, just issued, to be practically correct. I estimated our present area at about 45,000 acres, and the statement of the Board of Agriculture defines it as 44,938. This shows a reduction from last year of 1,784 acres, and from 1905 we have lost 4,029 acres, equal to more than 8 per cent. A comparison of the present position with that of ten years ago is much more serious, as during that interval our area has diminished by nearly 6,000 acres, or about 12 per cent.

Although it may be argued that, as our improved cultivation has increased our productive capacity the loss of acreage is not of such importance as appears on the surface, it must be admitted that we are losing much in the employment of labour and the consequent circulation of money, and I fear we must accept these changes as indications of the unremunerative character of the industry, and must therefore conclude that such falling off is a serious feature from a national point of view. If we seek for the causes, we are immediately directed to the competition of foreign producers, and to the freedom they enjoy from the legislative restrictions under which our native business is conducted. Our open markets, contrasted with the tariff regulations of our opponents, provide good ground for complaint, and also for demand that the facts annually declared, and constantly evident, should secure the serious consideration of our Government.

We cannot lose sight of the smaller consumption of hops, clearly proved during the past few years, nor can we avoid the consequences of this tendency, which may in some degree account for the reduction of our acreage; but however we may be affected thereby, the necessity for the preservation of our home industry and the supply of English hops to British brewers appears to be more exigent as the years pass.

The published returns, which I append, show that the depression which has brought about the loss of acreage is not limited to any one county. The planters of the premier county, Kent, have grubbed no less than 1,127 acres, of which 867 acres are lost by the Eastern division. In Hampshire 97 acres, in Surrey 33 acres, and in Sussex 136 acres are now taken away. The Midland districts have lost 395 acres, of which 338 acres are grubbed in Herefordshire.

These are the facts which give us much food for thought, and suggest the inquiry as to what can be done to arrest the downward movement. I trust that the new association for the defence of growers, to which I referred last week, will soon be in form, and will be aroused to definite action without delay.

The figures given by the Board of Agriculture are as follows:—

Counties, &c.	1907. Acres.	1906. Acres.	1905. Acres.
Kent .. East ..	8,996	9,863	10,417
Kent .. Mid ..	9,647	9,849	10,464
Kent .. Weald ..	9,526	9,584	9,774
Kent .. Total, Kent	28,169	29,296	30,655
Hants	1,842	1,939	1,978
Hereford	6,143	6,481	6,851
Salop	129	127	135
Surrey	744	777	843
Sussex	4,243	4,379	4,647
Worcester	3,622	3,672	3,807
Gloucester and Suffolk	46	51	51
Total	44,938	46,722	48,967

New Hops.

The first pocket of the 1907 crop of Worcester hops came to market on Wednesday consigned to Messrs. J. W. Buckland, Son, and Co., hop merchants, Worcester and London, and has by them been despatched to Mr. E. E. Bevan, Vale of Neath Brewery, Neath, Glamorgan. The grower, Mr. John Smith, May House Farm, Newland, has a fine crop and is to be congratulated on the quality which is especially in evidence in this particular pocket, though it has come to market two or three weeks later than usual, the season being exceptionally late, but the quality shows that the slow development of the plant has ensured the future general fine properties of the 1907 crop of Worcester hops.

Country Notes.

England.

Amongst the reports that have come under my observation this week, there are several that are much more "croppy" than I have seen this season. Such expressions as the following are now found:—"There will be many more hops grown than could have been anticipated." "Hops hang thickly." "Our district will probably average 12 cwt. per acre." "There should be quite an average crop in our district." "The hops have improved considerably." "In many grounds the crops will be heavy." "The yield will probably be larger than was expected." "Hops have made excellent progress, and there is little doubt now that the crop will reach a full average." "Taken all round there will be, as regards quantity, one of the best crops of recent years." "Hops are doing well, and will give a good crop." "The crop will exceed expectation." "The prospect holds good for a heavy crop all round." "In some grounds the crop is large, and taking the whole district, it looks like being a good average in regard to quantity." "There will be a full average crop and perhaps a little over."

These must not be taken as representing the universal condition, but they are remarkable as indicating the alterations made in the crop prospects by the more genial weather of the last few days. Of course, there are many plantations in which improvement has not been so evident, but I think we may conclude that our recent estimates need not be lowered, but may rather be enlarged without much risk of error. An illustration of the various conditions which are found within a short distance of each other came under my own observation the other day.

I went through some gardens growing Fuggles and Bramblings, all of which had been well looked after, and gave evidence of the care and skill that had been exercised. They were absolutely free from vermin and mould, the bine was plentiful, strong and healthy, and the burr had passed into hop quite satisfactorily. Although the laterals carried hardly any cones, the tops were amply supplied but they had not grown out, and looked somewhat starved. The sky was clear, and the sun was pouring down his warm rays, but it hardly appeared possible that there would be time for full development before the necessary picking, therefore we could not estimate the crop at a higher average than about 8 cwt.

In other gardens, less than two miles away, where similar attention has been paid to the growth, and where the advantages of soil and situation are no greater, the hops were of good size and well developed, and looked like an average of 14 to 15 cwt. These instances prove the difficulty of forming a correct opinion this season, and we must be content to wait for the harvest for our certain information.

America.

Crop reports continue to be favourable, and, in fact, the outlook as to the total harvest becomes more promising with each advice. Even in New York State, where it was thought there would be deficiency, a full average yield is expected. The Californian growers, who have been inclined to minimise their crop, are compelled to admit that it will be quite up to an average. As regards the remainder of the Pacific Coast districts, there is no doubt that a bumper crop is being harvested.

Germany.

There is little to add to recent reports. Rain has fallen where it was needed, and has been succeeded by warm sunshine, so that the weather has been favourable to growth and development, and the experience of planters in the picking of the earlies encourages them to look for a heavy total.

Belgium.

The outlook this week is rather more satisfactory than when I last reported. The Belgian climate is very similar to our own, and the sunshine with which we have been favoured is also benefiting the Alost and Poperinghe plantations. Present estimates set the crop at a rather higher figure than last year.

PUBLICATIONS RECEIVED.

"The Farm Live Stock of Great Britain."

From Messrs. Oliver and Boyd, Edinburgh, we have received a copy of the fourth edition of Professor Wallace's "Farm Live Stock of Great Britain." It was originally published "to lay before the student, in the shortest possible form, the many interesting facts about farm live stock which ought to be known to everyone who takes an interest in this branch of the extensive subject of agriculture," but in the course of its revision it has increased its scope; it has in its fourth state reached an almost too bulky volume, and we suggest that future editions be divided up into four volumes—viz., one each for horses, cattle, sheep, and pigs—for the information given about each is sufficient for a volume by itself.

Its bulkiness is the only fault we have to find with the volume to which stock-breeders in general should give their hearty appreciation, for it is without doubt the first work in existence on the subject it deals with, and has the advantage of being up to date. A feature of this new edition is the very large number—over two hundred—of illustrations of live stock. These are in the form of photographic plates (they are not backed with reading matter), and they represent many of the best well-known specimens of the present-day breeds of horses, cattle, sheep, and pigs. The plates are excellently printed—as, by the way, is the whole of the volume—and they certainly add to the usefulness as well as interest of the fourth edition.

As to the work itself, this has been rewritten and brought up to date, and the magnitude of the task may be imagined when it is mentioned that it has extended over three years, and has necessitated a vast amount of reference. The result is a book that can be thoroughly relied upon, and which should be found in every farmer's and stock-breeder's library.

Professor Wallace takes the various breeds one by one, gives their history, their points, compares their merits with other breeds, gives information concerning the societies associated with the breed, whilst their common diseases are briefly described, and the remedies to be used in each case are stated. Thus it will be seen that everything connected with the various breeds of live stock is dealt with, and in such a manner as to be of interest to anyone who has anything to do with live stock, whilst the value of such a record will be appreciated by all.

Professor Wallace is to be congratulated on the success which has attended his labours, and his reward is the widespread appreciation of the volume, and also, we hope, a very extensive sale, though the price—16s. net, which is, by the way, not at all beyond its merits—will, we are afraid, be prohibitive to a good many would-be purchasers.

The last number of "British Birds"—an illustrated weekly magazine devoted to the birds on the British list—is, like other numbers, full of interest to all lovers of birds. The frontispiece is a capital photograph of a Reeve going on to her nest, while there are other illustrations also from photographs. "British Birds," which is edited by Mr. H. F. Witherby, F.S.S., is published at

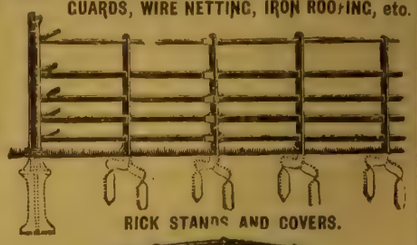
1s. net by Messrs. Witherby and Co., 326, High Holborn, W.C.

Three useful handbooks published at 6d. net have come to hand from Messrs. Greening and Co., Ltd., namely, "Practical Fruit Culture," by John Whitehead; "Glass Culture," by James Cheal; and "Home Pets," by, amongst others, Dr. Gordon Staples and Herbert Compton. Each volume consists of just over 100 pages of printed and clear type, whilst the information given shou'd prove most useful to those for whom it is provided.

A useful volume for bee-keepers and intending bee-keepers is "Bees for Pleasure and Profit," by C. Gordon Samsom, of which a third and revised edition has been published at 1s. by Messrs. Crosby, Lockwood and Son, 7, Stationer's Hall Court, E.C. It is a complete guide to the manipulation of bees, the production of honey, and general management of the farm, is well illustrated, and is written in an interesting manner. These facts, together with its cheapness, should ensure a wide circulation for this new and enlarged edition.

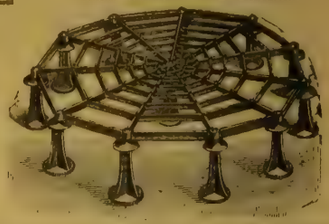
The Journal of the South-Eastern Agricultural College, Wye, for 1907, is a somewhat bulky volume containing reports of the various departments of the college, and as a result of its extension in size, it is probable that in future years each department of the work of the college will have its special Journal. The 1907 edition contains a great deal of general interest, and the many illustrations which accompany the letterpress add considerably to the usefulness of the Journal. It is published at 6s., but can be had by residents in Kent or Surrey for 3s.

The bulb catalogue for 1907, issued by Messrs. Webb and Sons, of Wordsley, Stourbridge, is, like the other publications of this firm, an excellent production, being full of interesting details, and accompanied by splendid illustrations of perfect specimens of various flowers; but perhaps the most striking feature is the cover, which is printed in colours, and depicts a maid of Holland surrounded by blossoms of the most favourite bulbs. The cover is most striking and distinctive; it suggests bulbs at once.



"The Traveller's Practical Manual of Conversation" is the title of an excellent little handbook providing a large number of conversational and colloquial sentences in English, French, German, and Italian, arranged according to subject, the subjects being in alphabetical order, so that the tourist can readily turn to the very thing he or she wishes to say or ask. It is in handy pocket form, and also gives travel notes, tables of money, &c, and a dictionary of the words required in everyday life. It is published at 1s. by Messrs. E. Marlborough and Co., 51, Old Bailey, E.C.

Sir Walter Gilbey has added two more volumes to the already long list of interesting and useful works. The new volumes are "Horses—Breeding to Colour" and the "Pig in Health—How to Avoid Swine Fever." In the former he explains the different colours in horses, and gives his views as to the reason for the increasing frequency of some colours and the decrease of others; whilst suggestions are offered as to how horses may be bred to colour; whilst in the book of pigs Sir Walter has collected some curious notes of a historic nature. The latter half of the volume is taken up with diseases of swine in olden times, swine fever, modern swine keeping, housing, selection, and feeding. Both books are beautifully got up and illustrated, and are published at 2s, post free 2s. 3d., by Messrs. Vinton and Co., 8, Breams Buildings, Chancery Lane, E.C.



On comparing Sutton's bulb list for the current year with preceding editions a marked advance will be observed, especially in the new classification of narcissi. The list is considerably extended and the leading varieties are illustrated with beautiful reproductions from photographs. The lists of hyacinths, tulips, &c., have been compiled with the accuracy and care which distinguish the publications of the great Reading firm. Some of the numerous illustrations afford excellent examples of successful grouping; others show effective contrasts in the treatment of beds and borders. The pages devoted to begonias, cyclamens, gloxinias, and a few other flowers which do not belong to the category of Dutch bulbs, are extremely interesting from the fact that many of the plants formed part of the grand displays at the Royal Horticultural Society's Temple Show and other important exhibits. The gold medals awarded to Messrs. Sutton and Sons during the current year bring the total of these prizes to 342. A copy of the list should be in the hands of every lover of a garden, and it can be obtained by writing to the publishers at Reading.

POULTRY.

Durable Poultry Houses.

The advantage of making a right start in the matter of appliances is seen when visiting poultry plants in different parts of the country, and those who go in for fowls—no matter whether it is for one pen with the object of producing eggs for their own table, or for ten or more pens to breed numbers with the idea of founding a lasting stock from which to supply all comers—will do well to build houses which can be easily moved to another and larger place when necessary, and which will last for 20 years if required; whilst the only labour necessary during the whole of their period of use will be that of whitewashing the interior and creosoting the exterior twice in each year, and a fresh length of tarred roofing felt for the roof once in four or five years.

The best material to make a poultry house of is ⅜in. match-boarding (yellow), and the framework of 2in. quartering, which should be mortised together and the sides and back made separately, and then bolted together with coach screws. The roof should be made lean-to shape, and covered with well-tarred felt.

Houses may be made so that they can be carried from place to place, or they may be made so that they can lean against a wall. Whatever position they occupy care must be taken to well cover the floor with peat moss litter, as this is a deodoriser, and keeps the bottom of the house nice and dry.

Where rats are found they should be prevented getting into the house by strips of wire netting being put down in the ground about 12 in. below the surface. This will prevent burrowing under the boards, and be an effectual safeguard against rats, and any house may be made rat-proof in this way.

Inside the house perches should be fixed so that the ends drop into a socket, which keeps them about 15 in. to 18 in. above the floor of the house. Heavy birds should never roost higher than this, and light ones should not have perches higher than 2 ft.

These should always be movable, as if they are nailed the red bugs get underneath the ends, and are most destructive to the comfort and health of the fowls, as they suck their blood when they are on the perches at night. The perches should be paraffined two or three times during the summer to kill these, and bark should under no consideration be left on the perches.

Perches for fowls should be made quite flat and about 2 in wide, the sharp edges being bevelled off. Where round perches are used the pressure upon the breast-bone causes many of the chickens to have crooked breasts. There should be quite a clear 15 in. between each perch; if this is not allowed the birds are apt to peck at each other.

The nests should be placed so that the front of each box faces the darkest part of the house. Some people reverse this order of things, but experience clearly proves that a hen takes more readily to the nest when it is shaded from the light.

Poultry-houses must always be ventilated, and to do this effectually the opening should be made at the topmost point of the building at either end. This is a most important point in poultry-house construction, because the birds should never be allowed to roost in a draught; and the vapour and ammonia from the excrement rise to the top of the house, and are carried out by the rush of pure air. This is one reason why the perches should be kept low, so that the foul air may rise and be swept out by this, the only proper method of ventilation.

The opening for the fowls to go in and out should be fitted with a sliding frame, which should be covered with wire, and this also admits air and helps to purify the house, especially during the hot days of summer, when all possible ventilation is needed.

The window, which should figure in every fowl-house, should be made so that it might be opened or shut, according to the weather, fowls being very fond of light, which always has a tendency to benefit the health and well-being of living things.

It is not necessary to keep fowls warm in fowl-houses at night. The cooler they are kept the more eggs are produced during the winter months. Shelter from wind and rain is all they require. Fowls, as a rule, will lay many more eggs in an open shed than they will produce in a warm brick building during the winter months. As a matter of fact, they cannot have too much ventilation, as long as they do not sit in the draught. We always leave our doors or windows open at night, even in the coldest weather.

When fowls have a warm house for roosting in they should have a warm, sheltered run during the day, as if they do not they feel the cold so when they run out first thing in the morning. The warmer the houses—whatever breed is kept—we find the less number of eggs produced.

Fowls should never be huddled together; too many birds in one house means disaster and often disease.

In putting the houses together it is well to use screws as far as possible, so that the buildings may be easily taken to pieces. The sides should be made so that each one is a piece, as this makes it quite easy to transport them flat from place to place.

Where people live in the country they will, in many parts, frequently have sheds or outhouses that will be useful for poultry, but for town dwellers this is almost out of the question, and we know that generally such poultry-keepers have to provide their houses for the accommodation of their stock.

At the annual prize distribution of the Aldersey Grammar School, Bunbury, Cheshire, the headmaster, Mr. G. F. Dutton, reported that the pupils had continued the practice of collecting harmful insects, and during the past six months they had brought to the school 312,837 living specimens of these pests. The ox warble insect had absorbed a good deal of attention, and one boy had visited every farm within a large area and brought to school many canisters of maggots which he had squeezed out of the backs of the cattle at milking time.

OBITUARY.

Earl of Dunmore.

We regret to announce that the death took place at Frimley Manor House, near Camberley, early on Tuesday morning, of the Earl of Dunmore. His lordship had not complained of being unwell, and was out on Monday, but he was taken suddenly ill during the night, and died before a medical man could arrive. Lord Dunmore, who was known as the leading British adherent to Christian Science, was the seventh holder of the title, and was one of the best travelled and most versatile members of the House of Lords.

The deceased lord, who was a large landed proprietor, will long be remembered for his work in connection with live-stock breeding, for he was among the first to recognise the growing importance of live-stock breeding as a branch of our greatest industry, and as a breeder of Shorthorns during the sensational period that has been described as the golden seventies he had the honour of obtaining the highest price for a Shorthorn bull and the highest average of any sale in the world. The sale at which these records were made took place in August, 1875, and was certainly one of the most remarkable events of its kind that has ever taken place. Thirty-nine animals were sold for no less than £26,223, thus giving the extraordinary average per head of £672 8s. A bull named Duke of Connaught was sold to the late Lord Fitzhardinge for 4,500 guineas; another bull, Third Duke of Hillhurst, made 3,500 guineas to Mr. Larking, Ashdown; a cow, Marchioness of Oxford, realised 1,810 guineas from the late Duke of Manchester; Red Rose of the Isles, 1,950 guineas from Lord Bective; and Red Rose of Balmoral, 1,280 guineas, also from Lord Bective. The last portion of the Dunmore herd was sold in August, 1879, the year of agricultural disaster, and the results were of course not so good, but still the very fine average of £241 14s. 3d. was made for fifty-four animals, the highest prices being 3,200 guineas and 2,700 guineas.

Lord Dunmore, it may be added, was one of the founders of the Shorthorn Society in 1875, and was also instrumental in forming the Clydesdale Horse Society and the Highland Cattle Society, and it may be safely asserted that it was chiefly due to his enthusiasm and efforts that the organisation of stockbreeders was brought about and thus led to the institution of the numerous breed societies which we now have and appreciate. Lord Dunmore's death will therefore be regretted by none more than breeders of live stock, and more particularly Shorthorn breeders, for it was his excellent example that led to the formation of many notable herds and raised the Shorthorn to a popularity which increases every year.

The annual report of the Royal Horse Show, Richmond, presented to the shareholders last week, congratulated them on the success of this summer's show, despite the unfavourable weather. A dividend of 20 per cent. for the year was declared.

TENDERS.

CONTRACTS FOR FLOUR AND WHOLEMEAL. — The Prison Commissioners are prepared to receive Tenders for the supply of the above to the following Prisons, viz: Aylesbury, Bedford, Birmingham, Bodmin, Borstal, Brecon, Bristol, Brixton, Cambridge, Canterbury, Cardiff, Carlisle, Carmarthen, Carnarvon, Chelmsford, Dartmoor, Derby, Devizes, Dorchester, Durham, Exeter, Gloucester, Hereford, Holloway, Hull, Ipswich, Knutsford, Lancaster, Leeds, Leicester, Lewes, Lincoln, Liverpool, Maidstone, Manchester, Newcastle, Northallerton, Northampton, Norwich, Nottingham, Oxford, Parkhurst, Pentonville, Plymouth, Portland, Portsmouth, Preston, Reading, Rothin, St. Albans, Shepton, Mallet, Shrewsbury, Stafford, Swansea, Usk, Wakefield, Wandsworth, Warwick, Winchester, Worcester, Wormwood Scrubs, and the State Inebriate Reformatory, Aylesbury. Forms of Tender with all necessary particulars can be obtained at any of the Prisons, or at the Prison Commission, Home Office, Whitehall, London, S. W. (where also samples may be seen). Tender forms must be delivered, prepaid, at the Prison Commission, not later than noon on Tuesday, the 10th day of September, 1907.

METROPOLITAN BOROUGH OF FULHAM.

THE FULHAM BOROUGH COUNCIL is prepared to receive TENDERS for the SUPPLY of OATS, HAY, CLOVER, MIXTURE, STRAW, BEANS, BRAN, and LINSEED for about 65 Horses, in such quantities as may be required during the six months ending March 31, 1908.

Tenders must be made on printed forms specifying conditions of contract, to be obtained on application to the Borough Surveyor, Mr. FRANCIS WOOD, M.I.C.E., Town Hall, Fulham, and to be delivered at the Town Hall, Fulham, to the undersigned by 4 p.m., on WEDNESDAY, SEPTEMBER 18, 1907, sealed and endorsed "Tender for Horse Provender."

The Council does not bind itself to accept the lowest or any Tender.

By Order,
R. M. PRESCOTT, Town Clerk.
Town Hall, Fulham, S.W.

TENDERS FOR FLOUR.

THE CONJOINT FLOUR COMMITTEE of the Spanish and Portuguese Synagogue, the United Synagogue, and Federation of Synagogues, are about soliciting TENDERS for the supply of about 1,600 to 1,800 sacks of best HOUSEHOLD FLOUR, to be made of sound English wheat, the flour to be delivered free of all charges, in such quantities and at such times and in such places in London as may from time to time be directed.

The grinding of the flour must begin about the end of October, and be completed within six weeks, a mill being exclusively set aside for the purpose. The preparation of the mill, as well as the grinding of the flour, will have to be carried out under the superintendence of the Jewish Ecclesiastical Authorities.

Millers desirous of tendering can obtain full particulars, and copy of Form of Tender on application to Mr. P. ORNSTIEN, Secretary of the United Synagogue St James's Place, Aldgate, London, E.C.

The Conjoint Flour Committee will meet on THURSDAY, SEPT. 26, for the purpose of opening Tenders, which must be made on the printed form provided for the purpose and addressed to the said Committee, at the Offices of the United Synagogue, Saint James's Place, Aldgate, London, E.C., not later than THREE o'clock in the afternoon of the day named, accompanied by a 4 lb. sample of the flour to be supplied. The Committee do not bind themselves to accept the lowest or any Tender.

September, 1907.

The Cow is a Good Chemist!

And it may be relied upon always to report, through the milk pail and in its own condition and health, whether its food is what it ought to be or not.

Being ourselves both practical farmers, and probably the largest buyers of feeding stuffs in the country, we have been, so to speak, compelled to study this particular subject.

Our experience has been that for the Dairy Cow the best quality of feed is none too good, and we have directed our efforts towards producing the very best dairy foods it is possible for human skill to produce.

We also happen to own a large and well-equipped Mill for the production of Feeding Cakes and Meals; we can, therefore, manufacture economically, and sell at a price which is very little in excess of that paid for ordinary feed.

In these facts will be found the simple reason why observant dairymen everywhere are beginning to recognise that in

BIBBY'S DAIRY MEAL, CAKE AND CAKETTES

they have feeds ready to their hands which yield a better economic result than is otherwise to be obtained.

The Cow is a Good Chemist!

"UVECO"

For

HORSES, SHEEP, CATTLE, and PIGS.

THREE IMPORTANT FACTS.

1. A Bushel of UVECO, costing 2/-, is equal in feeding value to a Bushel of Oats, costing over 3/-.
2. Cows give more milk and better quality when fed on UVECO than on Meal.
3. 28 lbs. of UVECO equals 40 lbs. of Meal.

This means an enormous saving in the cost of feeding PIGS.

UVECO, being bulky and dry, is just the food to mix with home-grown corn.

Samples and particulars from Sole Makers

Seasonable Topics.

Methods of Distribution. THERE is apparently something wrong with our methods of disposing of heavy crops of fruit, which no one has yet been ingenious enough to put right. It seems hard to believe that we in this country, with its densely-populated centres of trade and manufacture, should not be able to consume all the fruit that is produced, no matter how heavy the crops may be, but cases of over-supply spring up from time to time. Just now the trouble is with stone fruit, and we hear of plums being sold by growers at ruinous prices, while there are prospects of many tons of fruit never being picked at all. Is it really that in a good plum year like this more fruit is produced than can be consumed, or is it that the methods of distribution are so inferior that excessive quantities cannot be dealt with efficiently? The question is open, and must remain so, but it seems obvious that there is something wrong. Naturally in a season of plenty the price must be lower than usual, but this should be sufficient reason for the commodity being purchased in greater quantities and thus enable the growers to dispose of their crops at prices which at least show a profit. What with the difficulties he has to grow fruit, and then, when Nature is kind to him, the trouble he encounters in selling it remuneratively, the path of the fruit-grower is not such an easy way to fortune as some people would have us believe.

In the Name of Charity. IN a recent issue of the MARK LANE EXPRESS there appeared a letter of appeal on behalf of the Royal Agricultural Benefit Institution, in which the case of the institution was well made out. It is good to think that the funds are augmented to the extent they are from the offertories in places of worship, and the occasion of a harvest festival when thanks are returned for the fruits of the earth seems a fitting time for people to show their gratitude in a practical manner by helping an institution which lives for the benefit of farmers who have fallen on hard times. The Royal Agricultural Benefit Society has a general claim, for farming is a precarious business, and there are men to-day who were once prosperous and never thought they would need help. Yet through sheer force of circumstances they have come down, and would fare badly but for the above institution. It seems to us that there are other ways by which the society could be assisted that may not have been adopted. The other day we attended a show of fruit, flowers, vegetables, poultry, and dairy produce, at which all the exhibits were given and sold for the benefit of local medical institutions. Could not something of this kind be done at agricultural shows, for, unless we are mistaken there are many people who show such things as butter, cheese, dead poultry, and eggs who would willingly give their exhibits to be sold for the purpose of assisting the Royal Agricultural Benevolent Institution? That the institution is approved of and is doing good is shown by the increased support it has had in recent years, and it is the knowledge of its usefulness that prompts us to make the above suggestion.

Home-made Commodities. IN this paragraph we may be able to suggest one of the reasons why markets are glutted with perishable fruit when crops are heavy. In how many working households in the country is jam made? In the country, of course, where ideas are supposed to be old-fashioned, every thrifty housewife takes advantage of cheap fruit and lays in a stock of jam for the winter; but in towns this commodity is bought as it is wanted from the nearest provision shop, and the jam factor must get the advantage as he buys the fruit at his own price when the supply is plentiful. Supposing, just for argument's sake, that every housewife felt, as her grandmother did, that it was her duty to lay in a stock of jam, what an enormous difference it would make to the consumption of plums in a season like this, and assuming that the means of distribution were such that every would-be jam maker could get her fruit at a reasonable, and not necessarily a very low price, we should hear less about plums rotting on the ground because they do not pay to pick.

The Outlook for Roots. AMONG the many drawbacks of this gloomy season it is pleasant to be able to turn to some of its redeeming features. Last year at this time we looked out on fields of roots that were sparse, gappy, and in many cases parched up, and farmers seemed to be competing with each other as to how many times they had sown turnips and how many crops they had lost through the "flea." The trouble this time has been the weeds and the difficulty in getting labour for singling and hoeing, but so far as hops are concerned the outlook is hopeful and promising. With mangolds, turnips, and swedes there is, generally speaking, a good plant, and everything points favourably for individual size and heavy weight per acre. To sheep breeders this state of affairs is particularly gratifying, but roots now want sunshine and dry weather to bring them to perfection. In short, roots have grown, and are still growing well, but they want maturing, and to effect this September sunshine is needful. The clerk of the weather has only a short time now in which to redeem his reputation. Let us hope he will be equal to the occasion.

Judging the Judge. THOSE of our friends who are in the habit of acting as judges at shows are doubtless aware of the many times in which they come in for judgment at the hands of the critics whom they fail to please. There must be times, of course, when exhibitors and even outsiders fail to see eye to eye with judges, and in the same way there is such a thing as a judge being wrong, because according to an old saying, a man who never makes a mistake never makes anything. It is a good thing to criticise in a proper way the work of judges, because it shows interest, and we like to see an exhibitor who may be disappointed, asking the reason why certain awards are made, because he wants to know, and more often than not, when the points are explained to him, he is satisfied. On the other hand, we cannot stand the exhibitor who has apparently acquired a good deal of knowledge but has not yet learnt how to lose. We frequently meet with him in the showyard, and if he does not happen to have won first prize he is generally fretting and fuming and pouring the story of his wrongs into the ears of anyone who will listen to him.

The Great Wyrley Cattle Maiming Outrages. THE country at large, and, perhaps, farmers in particular (who have a good deal to do with animals) are incensed and disgusted at the revolting outrages on cattle in the Great Wyrley district, and if the culprit were caught red-handed we think he would stand a chance of realising the meaning of lynch law. Already one man has been convicted as the supposed culprit and has been set at liberty and still the outrages continue. There is a deep mystery about the dastardly proceedings which remind one of the Jack-the-Ripper crimes in London some years ago, but the maniac —we cannot think he can be anything else—in this case, does not kill outright, but maims his victims, which with dumb animals is perhaps worse. One fails entirely to discern any motive in such crimes, nor can one imagine any human being in his sober senses being guilty of such arrogant cruelty. We can only hope that the outrages will soon be put a stop to and that the culprit will be brought to justice and receive the punishment that he richly deserves. In the meantime it is easy to understand the feelings of terror which prevail amongst keepers of horses in the Great Wyrley district.

Hedge Trimming. IN view of the catchy time and the lateness of the harvest, there is no prospect of reducing the labour staff on the farm, and when conditions are at all favourable harvesting

is the one absorbing task and topic. The difficulty is to go straight on with it, and the man comes to the master for a job on days when harvesting operations are temporarily checked. There is a standing task with the hedge, however, and trimming may be proceeded with when the growth is not saturated with wet. The advantage, too, of getting on with hedge-cutting as early as possible is that the thorns and brambles, being tender, are severed with less effort by the plashing hook. Hedge-cutting season is looked upon by cyclists as being the time for punctures, and as about every other man in the country rides a bicycle now, a large community is affected. In the early days of pneumatic tyres hedge-cutters seemed to take a delight in strewing the road with thorns to catch the offending cyclist, but fortunately that old spirit of antagonism has subsided, and hedge trimmers usually brush the thorns from the road as the work proceeds, so that the cyclist has less need to fear punctures than he had in the past.

Agricultural Politics.

BY A LOBBYIST.

Labour M.P.'s and Agrarian Problems.

Of course, it would be a stupid mistake to assume that the next session of Parliament will have associated with it the discussion of so many agrarian problems and so many questions connected with the land as had the last session. Indeed, there is a growing restiveness against the countrysides of England, Wales, Scotland, and Ireland monopolising—and this is particularly the case with the Labour and Socialist members—the attention of Parliament. The dissatisfaction of the extreme politicians with this Parliamentary proceeding is heightened by the fact that, in their view, the English and Irish land legislation, and even the suggested solution of the Scottish problem, are in the nature of anodynes and palliatives rather than of the nature of firm remedies. Just as these politicians believe that the Evicted Tenants Act is likely to accomplish little that will be lastingly beneficial for Ireland, and even as an expedient for dealing with a temporary difficulty is weak and invertebrate, so they regard the Small Holdings Act as a dilletante experiment chiefly designed to conciliate a few doctrinaire faddists who have really no conception of the actual vitalities of land reform. It may be asked why, if this be so, these politicians did not oppose both measures? Well, in the first place, they thought that if Irish Nationalism accepted the Irish measure they ought not to cavil at the proposal. Next, they were in a measure reconciled to the Small Holdings Act because the refusal of the Government to initiate the principle of peasant proprietorship was in their view a recognition of the doctrine of land nationalisation. At all events, it meant in their esteem that the Government was resolved to create no further obstacles to the State-resumption of the land. Dissatisfied as they are with the agrarian policy, these politicians declare that the country-sides have had enough attention devoted to them for a while. It is now, they aver, time to concentrate a more persistent attention on the throbbing anomalies of our great centres of life and to the wisdom of so enlarging the basis of taxation that aggrandised wealth shall be further penalised.

* * *

The Government's Scottish Intentions.

There is still, however, one direct agrarian question which must receive the attention of the next session. If the Government were pusillanimous enough to shirk dealing with the Scottish land question, it would be hopelessly discredited in the eyes of its more virile and effective following. Refusal to immediately deal with the issue would be held to be a craven yielding to the Lords which disentitled the Government to any respect or sympathy. This refusal would be hailed even by Radicals as an admission not merely of the constitutional authority of the Peers, but as a confession of their legislative wisdom. There is no doubt, too, as to the lines on which that legislation will proceed. The new Bill will propose even more definitely than before that there shall be only one land system erected in Scotland—that there shall be no differentiation in principle between the Lowlands and the Highlands. Perhaps the Bill will be given a more inflexible character, because of the implied assertion of Lord Rosebery—a strange derelict figure in our statecraft with no influence in Liberalism outside the most tepid Whig section—that such a policy would be "declared lunacy." The Conservatives and Roseberians aver, and rightly aver, that the economic and agrarian conditions of the Lowland and Highlands are hopelessly at variance, and that two sets of panaceas should thus be adopted. The Radicals aver that to divide Scotland and to apply an English economy to the Lowlands would be to exasperate the Scottish national sentiment into rebellion. This is the sharply-defined, piquant issue. It is ominous enough, in all sooth; but the Labour section and Socialists will demand that it shall absorb but a trifle of the time of the session. They have their own axes to grind—their own legislative ambitions to gratify.

* * *

Will the Tied-house System be Affected?

There is one other issue in which the countryside will be concerned, and that is the proposed licensing legislation. This concern arises not so much from the main principles involved in the Ministerial designs—though, of course, the country-side cannot be indifferent to them, but rather from the speculation that the proposal will deal with the tied-house system. The abolition of the tied-house system was once a distinct ambition of the agricultural Parliamentarians, and more particularly with those who hailed from East Anglia. What is more, it was one of the few suggestions that appealed equally to men on either side of the House. Its leaders were men who, alas! are no longer known to St. Stephen's—Sir Cuthbert Quilter and Mr F. W. Wilson. Their contention was, briefly, not only that the system established something like a method of serfdom, but that it made for the ill of the public, inasmuch as it often affected the accommodation and even the quality of the beverages supplied. They held, too, that this system had its worst expressions in the countryside, and that it introduced a demoralising element into the rural economy. Of late, however, there has been a recession of interest in this matter. The modern reformers are more concerned with the entire prohibition of alcoholic liquors than with its purity. Still, this prospect of inevitable licensing legislation has served to revive the memory of the old-time proposal and to quicken anew a half-enthusiastic interest in it. Mind, it would not be difficult to ginger this half-enthusiasm into a whole-hearted sentiment. The brewer has constituted himself the fugleman of the anti-Radical cohorts. His appeal to arms—a rather blatant effusion — is already to be seen in hundreds of public-houses. The Radicals would not be sorry of an opportunity of countering the move and hitting vigorously back.

* * *

Shall We Benefit from the Motor Tax?

We must seek to discipline Mr. Asquith's very scientific mind into a conception of the fact that if a heavier motor tax is to be imposed a considerable part of the financial result ought to be applied to the maintenance of the public highways. The tax should be utilised in a considerable degree for the relief of county rates, now dramatically overburdened as a consequence of this road-damaging motor-traffic. That Mr. Asquith intends to impose this enhanced tax is freely confessed by himself. If, however, he simply utilises the result to partially compensate the National Exchequer for "the loss suffered by the remission of the sugar-tax, he will be guilty of an act of callous ungenerosity and brutal unfairness to the local authorities. If motor-traffic is possible at all in England, it is, of course, largely because of the character of the roads. This traffic deplorably cuts up those roads, and their maintenance is therefore a burden, which, in the majority of instances, yields no compensating advantage to the local areas. To tax this traffic—and that is what this enhanced motor-tax would mean—without in some way benefiting the local areas whose sacrifice renders it possible would thus be an action unworthy of fair-minded statecraft. All the same, despite the logical justice of the claim of the local authorities, it is well that this statecraft should be ever and anon reminded of it. Will Messieurs of the Chambers of Agriculture take the hint? Mr. Asquith should not be permitted to lull himself into the belief that they are apathetic and indifferent.

* * *

Mr. Burns and Afforestation.

Will Mr. Burns realise his desire to initiate a formal State scheme of afforestation? Undeniably there has been a considerable impetus given in the last two years to the afforestation movement. The mere fact that the Irish Committee has been appointed within the last few days with a view to suggesting means for the public acquisition of land in Ireland for the purpose of afforestation is an evidence of this. In England there is practically a consensus of Parliamentary opinion that the sedulous neglect of the principle of afforestation and of the cultivation of certain of our State lands and waste lands and thus building up a national inheritance is a reflection upon our traditional common-sense. If Mr. Burns can persuade an unsensitive Treasury to entrust the Local Government Board and the Board of Agriculture with a sum sufficient to initiate the scheme—to initiate it in an experimental guise—he will have the unwonted distinction of receiving the plaudits of his erstwhile Socialist friends. The Socialists and extreme Labour men of the House of Commons are as ardent pro-afforestators as either Mr. Burns or Lord Carrington. Perhaps their sympathy has been rather quickened by the belief that a State-system of afforestation must inevitably make for the advantage of their *protégés*, the out-o'-works. Well, it may or it may not. At all events, Mr. Burns himself would not invoke the aid of the Treasury in this matter simply in order that he may gratify the political patrons of the gentlemen who, after all, play a much more picturesque part in buttressing the lamp-posts of West Ham. West Ham must ever loom large in our vision, but I ween that the right hon. gentleman would purely be influenced by national considerations.

* * *

Organised Labour and Farm Workers.

Well, I suppose the incident will not altogether evoke a spirit of tense indignation among the farming class. All the same, it is noteworthy that the Trades' Union Congress did not give a moment's attention to the agricultural labourers and their condition. This Congress a little arrogantly dubs itself "The Parliament of Labour." It is, however, that labour in which the rural worker has no part or lot. The matter is not without significance, apart from the light it throws on the attitude which the labour leaders adopt towards the farm workers. The disciplined labour organisation of Great Britain is a purely urban instrument. It cares nothing for rural interests, excepting so far as the land as a problem provides it with opportunities of flamboyant orations and yields it occasion to fashion impossible policies. Of practical sympathy it reveals not one jot which, withal, will not cause overwhelming heartburning in the farmhouses.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

The Pigeon Nuisance.

SIR,—I have twenty acres of peas this year, and I cannot keep the tame pigeons away, they come in hundreds. Should I be wrong in shooting them? I might add the nearest cote is quite two miles away. With peas being so dear, I cannot afford to feed 500 or 600 pigeons every day. If I cannot shoot them, what is my remedy?—Yours, &c., F. A.

West Ashby, Horncastle.

September 2, 1907.

*** If they come over your land I think you would not be justified in shooting the pigeons. If you know their owner, and you suffer from their depredations, you had better give him notice and tell him that you will hold him responsible. You would be liable for killing, wounding, or taking to a fine of £2 over and above the value of the bird (24 & 25 Vict. c. 96, s. 23).—Barrister-at-Law.

THE DELAYED HARVEST.

Our Reports from various parts of the Country all show how protracted and expensive the present Harvest is. A spell of sunny weather is essential to the rapid ingathering of the crops, and would do a great deal to redeem a wet and cold season.

East Yorks.

The season has been a most disappointing one on account of the little sun and warm weather we have had.

Bulky Crops.

Harvest is general now, and the crops are bulky. Straw will be plentiful, but I am afraid the yield and sample will not be so good as it ought to be. Wheat has come most slowly to harvest, and will have to be cut greener than it generally has been. Barley has ripened much the quicker this season. Oats are a heavy crop and are very much laid in some places.

Turnips Backward.

Turnips are backward, but are growing now, white turnips in particular; but swedes, I do not think, will ever be an average crop this season, the cold nights we have had seem to have stopped their growth.

Live Stock Markets.

Cattle and sheep have fed well, and lambs are also doing much better. The prices of beef and mutton have been rather lower lately, but I hope are on the improve again now.

It is to be hoped we shall have this month fine to get along with the harvest.

September 5, 1907. E. F. J.

South Notts.

Harvest work is progressing very slowly; on some farms nearly all the corn is battered down, and extra men are at work, causing losses in two ways, less grain, and that not expected to be good quality as some is grown through, especially oats and barley, and extra expense in casual labour.

The Late Harvest.

Wheat is scarcely ripe and this is September 4. Last year we commenced cutting wheat on July 30 and had finished harvest by this time. There is no doubt we shall have an abundance of straw, but on these arable farms we want a good yield of corn, even at the expense of straw.

Ploughing in Wheat

I may say last autumn I had a difficulty in getting my land fine enough for drilling wheat, so on twelve acres I reverted to the old-fashioned way of ploughing in. This wheat is nearly ripe and is standing perfectly, and I shall be much disappointed if we have not a yield of 5 qr. per acre. I think possibly we have been guilty of drilling our autumn-sown corn too shallow, and the experiment will be again tried more extensively this year, even on bare fallow.

Barleys are about an average and are ripening fast; several pieces, I fancy, have been cut before they have the curl on the grain, which means an uneven sample to the maltster.

Beans—Good and Bad.

Beans have suffered with the wireworm in the spring, and in some places are very patchy. Mine in one field are extremely good and extremely bad, being yards bare in places, in others thick with as many as 35 pods on a stem.

If we have fine weather for a month we should get some good corn.—Hoping it will be so.

September 5, 1907. J. A.

Shropshire.

We have now had four days since Friday's rain, which put a stop to harvest work, while showers keep the grain wet.

To-day (Wednesday) has been fine, with the glass rising; it is now on "Fair," while yesterday morning it was on "Rain." But the sky is cloudy. Fine weather is most anxiously looked for.

Crops Badly Laid.

Not one-quarter of the corn is yet gathered in. It is all cut about here. The crops are very good, but so badly laid that there has been much difficulty in cutting it with machines, especially self binders, and much has had to be cut with scythes.

Potatoes are a failure in most places.

The Markets.

Beef not so well sold this week. Mutton and bacon pigs quite as dear. Store pigs easier.

September 4, 1907. E. B.

Worcestershire.

It is very difficult to arrive at any definite or reliable information respecting the late harvest of 1907.

Crops over Average.

Crops of all kinds are over average as regards straw, but quality, which is in many cases already quite gone, and quantity fit for marketing cannot be decided until cut, thrashed, and carried, which at the present date with this variable weather seems most uncertain.

Wet Grass and Live Stock.

Grass has only been dry for a few days in July since Easter, consequently stock of all kinds have not matured for the butcher as they ought.

September 4, 1907. T. R. H.

THE CORN HARVEST.

Lancashire.

The last four months have been a most trying time for the British farmer, with scarcely two fine days together, excepting a few days in July.

Backward Grain Crops.

The hay harvest was only finished at the end of August, when the corn harvest started, but much of the grain crops are backward owing to the wet and cold weather; the best crops are so badly laid it will not be possible to cut them with the self-binder.

Roots Fairly Good.

Swedes and mangolds are fairly good, though the latter would have been better if they had had more sun, and potatoes are showing signs of disease. C. J. S.

September 5, 1907.

Cheshire.

With regard to the farming position in Mid-Cheshire, Mr. T. Young, of the College of Agriculture and Horticulture, Holmes Chapel, reports that the straw crops promise a good bulk of produce, but nearly all oats are so much laid by heavy rains that the harvest will be a slow and expensive one.

Good Hay Harvest.

The hay harvest was a very late and dragging time, but as a rule there have been good crops, and they have been gathered in better condition than was anticipated from the bad weather. Second crops are late and will be bad to win.

Potatoes Not Promising.

Roots as a rule promise well. The outlook of the potato crop is not promising. Potatoes are "going off" quickly, and disease will be prevalent.

Live Stock Doing Well.

Live stock may be said to be doing well and keeping healthy, especially when it is remembered that they have had a very wet and cold summer to face.

Cambridgeshire.

The agricultural prospect in this district has improved very much indeed the last month.

Good Average Crops.

Although very late indeed, it is a good harvest, and from reports the yield of wheats, oats, and barley are very good—a good average crop all round. It has ripened up much better than expected at one time.

Roots and Hay.

Wurzles a fair crop. Potatoes not to turn out well; many diseased ones. Good crops of hay and clovers; not so good in quality and not got in as as well as usual.

Harvest will not be finished before October 1.

September 5, 1907. SOHAM.

Isle of Wight.

Harvest was general here about August 14; weather very favourable.

Straw Plentiful.

Most of the barley is stacked, and should be an average crop. Wheat and oats are also pretty good. Anyhow, straw is plentiful; the thrashing machine has now to tell the tale. Given fine weather, all the corn in the island will be stacked next week.

An outsider might think that all the farms began about the same time. This is not so, as climate

and soil varies so much within very short distances.

Some wheat has been thrashed, but supposed price is not up to newspaper quotations. Roots good, some troubled with wireworms and grub.

The Use of Cattle.

Young seeds very promising.

What few cattle are grazed have done well, but no one can make anything of that at 12s. per score and stores as dear as when beef fetched 15s. It is quite true what an old farmer I knew used to say, that the only good bullocks were was to get rid of the straw and grass.

Wool was a disappointment after last year's flick up. Good haytime. Rainfall: July, ·95; August, ·76.

September 4, 1907. H. W.

Cornwall.

The harvest in this district is from two to three weeks later than last year. Up to now the weather has been favourable, and, given another fortnight of fine weather, the bulk will be secured.

The Grain Crops.

There is a bountiful supply of straw with all crops, and the oat and barley crops seem to be well kerned. The latter is rather badly stained owing to so much rain a few weeks back.

Wheat is rather a poor crop with regard to grain; many fields are little better than chicken wheat, and a few others—particularly the late-planted wheat—are a fairly good sample.

Extra Cost of Harvesting.

Harvesting the crops this season will cause the farmers a lot of extra expense, as many of the fields of corn are badly laid and tossed about. There is a good supply of grass everywhere, and cattle and sheep are looking well. Roots also are fairly good, but not quite as clean in some places as one could wish, owing to so much wet and a short supply of labour.

The Hay Crop.

The hay crop has been good, and most of it saved without rain in this neighbourhood, as we had fine weather here from about July 8 to July 23, and farmers took the opportuity of saving their hay at that time.

The Markets.

Prices for beef and sheep have been fairly good all through the summer; wool is less money than last season by from 1½d. to 2d. per lb. All grain and feeding meals have been dear to buy the last few months, and it is to be hoped that farmers will be able to make more satisfactory prices with their corn than they have the last few years.

Labour Troubles.

Labour is scarce and dear, and many of the men are not as good as they should be and take no interest in their work, the former is owing to the revival of Cornish mining and other industries, the latter I think is caused by so much rank "Radicalism and Socialism" being talked, and by the fact that Cornwall returns seven Radical M.P.'s and no others.

September 5, 1907. A. P.

DAIRY.

British Dairy Farmers' Association.

A meeting of the Council was held at 12, Hanover Square on Wednesday, when the Finances and General Purposes Committee reported that they had made the customary examination of the accounts, the available balance at the bank on September 3 being £439 on current account against which payments to a total of £838 were passed. In connection with the imports of milk and cream into the United Kingdom the committee reported that no fresh milk was received from abroad in the nine weeks ended August 31, against a total of 288 cwt. in the corresponding weeks of last year. In the same periods the imports of cream came to 638 compared with 1,040 cwt.; of preserved milk to 644 against 736 cwt.; and of condensed milk to 143,312 against 140,050 cwt.

Condensed Milk Analyses.

The following report by the Consulting Chemist, Mr. F. J. Lloyd, had been received with regard to further samples of condensed milk which had been analysed by him at the request of the committee:—

When I received instructions to make analyses of another five samples of condensed milk, and this time not to confine myself to machine-skimmed milk, I endeavoured to obtain samples of full-cream milk from the same sources as I had obtained the machine-skimmed. It must be clearly remembered that I had not bought these former samples as or knowing them to be machine-skimmed, but had simply asked for the brands of which they sold the greatest amount, and it was only after purchasing the samples that I found in all cases they were machine skimmed. Now upon attempting to obtain samples of full-cream milk I was met with two difficulties: First, that in many of these places nothing whatever was kept but condensed machine-skimmed milk; and secondly, that after numerous efforts in various places I could only find three full-cream condensed milks on the market. Subsequently I obtained Sample A89, unsweetened, and also Sample A88, which I had not previously examined, and which appears to be the cheapest machine-skimmed milk on the market. It is only fair to state that the makers of this brand print on the label surrounding the tin—"Unsuitable for the use of infants and invalids."

As regards the composition of the samples themselves nothing need be said, they all represent milk reduced to about one-third its volume, so that to bring it back to the richness of ordinary milk as regards fat and other solids, one part of these milks could be mixed with only two parts of water. It will be seen that even taking the first two samples, 45 oz. of milk would cost 5½d.—*i.e.*, only a little over a quart of milk, which is a much higher price than the same quantity of milk can be bought for in a fresh condition. There can, I think, be no doubt whatever that the people who use condensed milk dilute it to such an extent that it becomes practically a mixture of equal parts of milk and water. Indeed, on one of the tins, the directions state that for puddings, coffee, tea, &c., the milk may be diluted with four or five times its volume of water.

The society might endeavour to discover how far the condensed milk used in or imported into England consists of full-cream or machine-skimmed milk. I think also that some steps should be taken to draw the attention of the medical profession to the composition of condensed milk, and to the danger which must arise from infants being fed upon it. Probably much of the ill health among children, frequently attributed to the consumption of impure fresh milk, if investigated would be found to be due to the use of condensed and machine-skimmed milk. It is very doubtful whether the vast majority of the poor people who buy and use this condensed machine-skimmed milk have any knowledge of what they are using. They simply buy what is cheapest, and make it go as far as they possibly can, without any regard to the health of their infants.

The Committee further presented a recommendation with regard to their renewal of the lease of the Agricultural Hall for the purposes of the Dairy Show from 1908 to 1912 inclusive. The report was adopted.

Butter and Cheese Prices and Prospects.

Messrs. Weddel and Co. in issuing their annual review of the trade in colonial dairy produce, provide British farmers with a very good "tip" as to the probable trend of prices during the coming winter, and their remarks should not be allowed to fall upon deaf ears. So far as climatic and other conditions prevail, there is every indication of large supplies of butter during the coming winter. In the butter exporting countries of the Northern Hemisphere, the supply of fodder is much larger than last year, so that it is reasonable to expect an increase in the milking herds, especially in those countries which carry on winter dairying and supply British markets with their butter, such as Denmark, Russia, Sweden, Holland, and France. In Siberia, at present, hot dry weather is adversely affecting the make, but it is not enough to cause a serious falling off in the supply of winter butter. Canada is exporting considerably less than last year, but as receipts from there were only 2,000 tons during the last three months of 1906, and none at all from January to July, this deficiency will not be much felt.

In the United Kingdom, conclude Messrs. Weddel, the most favourable circumstances exist for an increase in the milking herds and the consequent augmentation in the make of butter this winter. On the other hand, trade is everywhere so prosperous that the consumptive demand is certain to be well maintained.

Turning to the outlook for cheese it appears that there are no indications at present of any great shortage in the make of cheese. The Canadian season is late, and consequently the production to date is not equal to last year, but even if there should be a deficiency it will be made up by the very large increase in the United Kingdom and Europe.

To sum up, considerably lower prices are to be expected for both butter and cheese than have prevailed during the past year.

Chester Cheese Fair.

The monthly cheese fair at Chester took place on Wednesday, and was largely attended by representatives of wholesale houses in the North and Midlands. Farmers brought in 65 to 70 tons of cheese, for which there was a sharp demand, the whole being cleared out at the following quotations:—Fine Cheshire, 58s. to 64s.; medium qualities, 52s. to 56s.; and common from 50s. per cwt. and upwards.

Ashbourne Cheese Fair.

The September Cheese Fair for summer-made cheese at Ashbourne was held on Tuesday, when the pitch—all Derbys—was very small, but the quality, considering the poor season for maturing, was very fair. The whole of the cheese changed hands at 55s. to 58s. per cwt.

Market Drayton Cheese Fair.

Although there was hardly so large a supply as last month there was a pitch of close upon 30 tons of cheese at this fair, held at Market Drayton on Thursday. Buyers were even in larger attendance than usual, and a very satisfactory clearance was quickly effected. Best qualities made from 65s. to 68s., and medium grades from 50s to 55s. per cwt.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended August 31, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (13,599), 10,194; sheep and lambs (1,731), 408; horses (1,026), 331.

Fresh meat:—Beef (87,130 cwts.), 137,505; Mutton (82,192), 130,751; pork (8,293), 8,174.

Salted or preserved meat:—Bacon (105,585 cwt.), 123,397; beef (2,038), 2,616; hams (27,623), 37,417; pork (4,574), 5,979; meat (7,672), fresh, 10,942; salted (7,672), 1,215; meat, preserved (3,763), 7,069.

Dairy produce and substitutes:—Butter (80,617 cwt.), 73,678; margarine (20,316), 17,666; cheese (73,723), 67,714; milk, fresh in cans or drums (99), —; cream (208), 15; milk, condensed (15,854), 14,784; milk, preserved (182), 51.

Eggs (great hundreds):—(311,659), 416,271; poultry (value £2,819), £2,116; game (value £1,022), £720; rabbits, dead (not tinned), (42,333 cwt.), 50,689; lard (32,182 cwt.), 29,649.

Corn, grain, meal, and flour:—Wheat (1,883,700 cwt.), 1,988,000; wheat meal and flour (250,000), 201,900; barley (479,100), 522,500; oats (337,000), 122,300; peas (70,190), 40,120; beans (3,380) 18,120; maize or Indian corn (1,193,600), 1,086,600.

Fruit (raw):—Apples (16,813 cwt.), 15,752; pears (53,320 cwt.), 59,505; plums (93,563 cwt.), 49,577.

Hay (2,790 tons), 909; straw (1,477 tons), 788; moss litter (1,444 tons), 1,582; hops (681), cwt.), 818; locust beans (— cwt.), 2,070.

Vegetables, raw:—Onions (184,107 bush.), 189,410; potatoes (31,215 cwt.), 40,461; tomatoes (32,212); 26,435.

The September Colt Fair at Highbridge on Monday was largely attended, and trade was unusually brisk. Considerably over a hundred colts were offered, and the top price reached was £20, while £19, £18, £17, £16, £15, and £14 were common offers.

Two periods of remarkably long farm service are disclosed in the awards of the Gillingham (Dorset) Farmers' Club to agricultural labourers for longest continuous employment. In one instance William Henry Herridge, aged 72 years 2 months, is shown to have been employed on Milton Farm, Gillingham (occupied by Mr. L. B. Matthews), for 60 years 2 months; and in the other, Aaron Grey, aged 67 years 6 months, possesses a record of 55 years 6 months' continuous service on Mr. A. R. White's farm at Charnage, Mere.

SHOWS.

Peterborough Foal.

The twenty-seventh annual foal show at Peterborough, held on Wednesday, in every way maintained its reputation. Sixty-three entries were received, and it was the general opinion that they were one of the best lots of foals seen at Peterborough. Shires were the feature of the show. The fillies were, perhaps, a trifle better than the colts, and it was a foregone conclusion that Mr. Orme would carry away the first rosettes in the colt and filly classes, and finish up with the championship. His winning colt—a son of Dunsmore Jameson, which was one of a very strong dozen paraded—has never yet been beaten, except by his stable companion the filly, which the other day took a championship over his head. He took two firsts at the Staffordshire Show, two firsts at Tutbury, was reserved for both cups and took a couple of firsts at Belper, three firsts at the Derby County Show, and was reserved there for the championship—not a bad record, when first and champion at Peterborough are added, for a youngster of four months.

The second winner in the class was Mr. J. G. Williams' Redlynch Forest King foal, a remarkably weighty colt, but with hardly the quality of limbs of the winner, whilst third fell to Sir Albert Muntz's big bay son of Dunsmore Jameson, which hitherto had won premier honours wherever shown. Fourteen marvellously even and well-developed fillies gave the judges a lot of trouble, but, as we have already said, Mr. Orme's exhibit came up at the top. She is a filly of exceptional carriage, with a fine outlook and grand shoulders. Mr. F. Farnsworth got second with his Ratcliffe Forest King progeny, and third went to Mr. Morley's Raydon Duke filly. When the tenant farmers' exhibits came together they showed up exceedingly well, and made two striking classes. Mr. W. R. Odam, of Thorney, got the first colt prize with a very nice level son of Hendre Conqueror, which was later given the prize for the best stock left by the society's horse.

Nine Hunter foals were entered, and made a most successful class. Messrs Cheney, of Gidding Grove, always formidable opponents, secured premiers honours with a nice weighty bay filly by the not very well-known horse, Bachelor. Second place was taken by Mr. T. C. Molesworth's good-looking dark chesnut colt by Hereford, whilst a well-bred foal belonging to Mr. G. F. Stops, of Market Harborough, was third.

There were only seven Hackneys, compared with a dozen last year—a falling off which it is rather difficult to explain. The first three were easily the pick of the bunch, they making a trio of remarkably good foals. Mr. Hickling's chesnut son of Copper King, shown for the first time, was easily at top, and a better known foal, belonging to the same owner, was second—a younger filly by Garton Duke of Connaught; whilst Mr. A. J. Rowell, of Bury, came closely third with a nicely-moulded, good-moving filly, sired by the same horse as the one in front of her.

Mid-Somerset.

The Mid-Somerset Agricultural Society's show, held at Shepton Mallet on Tuesday, was in every respect a success. That all-important factor, the weather, was not favourable. The entries were about 200 more than last year, and the attendance of visitors was exceptionally good. As regards the show itself the outstanding feature was the increase of the cheese section, the entries showing an increase of 100; butter also showed a noticeable improvement. The horses were about an average, whilst the cattle were more than last year. A new feature was a flower tent, honours being awarded for meritorious displays, and the experiment turning out in accord with the best anticipations, the addition is likely to be a permanent one.

The chief feature of the show was undoubtedly the cheese tent, a marquee some 240ft. long and 40ft. broad, being required to hold the exhibits, which numbered over 400. The stimulus which the Mid-Somerset show has given to the industry is undoubted, and how the competition has increased may be judged from the fact that at the first exhibition the total entries of cheese numbered five. The pitch was of quite a representative character, and makers as far north as Scotland were competitors, but the majority of the prizes went to the home district. When the eight judges came te select the winner of the champion silver challenge bowl, value 10 guineas, for the best lot of Cheddar cheese in the show, given by Mr. Berryman, the ex-president, the majority preferred Messrs. Cary and Portch's to Mr. White's, and the award was thus made.

The cattle classes were up to the average, and the dairy cows call for particular mention, the quality being such that it would bear favourable comparison with some of the biggest shows. Mr. A. Hiscock, of Motcombe, took the championship for the best cow in the show with Polly Dayrell, a splendid representative of the Shorthorn breed, whilst Lord Winterstoke's noted winner, Royal Scotsman, a very heavy-fleshed bull for his age, had no difficulty in taking off premier honours in the old bull class. In the cart horse classes Lord Winterstoke had a notable triumph, taking off all three medals offered. Holker Marionette secured two of these, but she was run close in the championship by a promising daughter, a black filly foal, which gained first in her class, and also a silver medal for the best young cart horse under three years. The Hunters were up to the average, the principal prizes going to Messrs. Willcocks and Reed (Exeter), J. A. Mullins (Long Cross, Surrey), and W. Phelps (Wells). The light-weight Hunters were very even, and all seven received commendation.

Mid-Cheshire.

The show of the Mid-Cheshire Farmers' Association was held at Knutsford on Wednesday, under the presidency of Mr. H. M. Wilson, Master of the North Cheshire Hounds, and was a striking illustration of how farmers and hunters can pull together for their mutual benefit. Cattle had premier place in the catalogue, and for the most part were worthy of Cheshire. Mrs. Platt, of Bexton, had some useful farmers' stock, and won Mr. Norris Midwood's special for the best bull in the local section, Mr. Mee, of Chelford, with a pair of good dairy cows, taking Mr. King's special. The heifer classes were among the best of the local section, and Mr. Mee won the champion prize given by Colonel Longford Brooke. With Mr. R. R. Rothwell showing bulls here and Mr. Sam S. Raingill his famous cows, there was stock of above average merit in the open section.

There was an excellent show of pigs, especially of the Large White breed. Mr. C. Leonard Agnew's special for the best pig in the show was taken by that famous breeder, Mr. J. Jefferson, of Chester.

There has been a noteworthy improvement in heavy horse breeding in Cheshire, and the farmers are now able to provide quite good classes with many animals in them worth remunerative figures. The Tarporley Hunt class for cast mares, and the open brood mare class and Mr. Lowcock's cup for the best brood mare in the show went without any hesitation to Mr. Raingill's famous young mare Lockinge Forest Blossom. She has excellent feet and points and true Shire quality. Another excellent filly was Lord Egerton's Tatton Dray Queen, which has won champion prizes at most leading shows. The breeding classes of hunters were rather poorly filled, but there were nice quality animals at the top of each class that look like making middle-weight hunters. The breeding classes of Hackneys were also poorly filled, but there were nice animals forward, particularly among the foals. There were many other sections of the show such as farm produce, poultry, pigeons, dogs, cats, rabbits and cavies, and all secured the share of attention from the numerous visitors.

Fareham and Hants Farmers' Club.

The horse show of the Fareham and Hants Farmers' Club was held in Leigh Park, Havant, and proved a most successful one, for entries were good—about 300—the weather was all that could be desired, and the attendance, together with the takings, most satisfactory. The origin of the show was to bring about an improvement in the type of horses kept by members for their ordinary every-day work, and thus the agricultural horses claimed chief attention. Of these there were eight classes, which were confined to members of the club and subscribers of £1 and upwards residing within a radius of thirty miles from Fareham or using the club's horses. The entries all round were good, and, as one of the judges remarked, the quality was a distinct improvement on that seen at this show half a dozen years. The champion prize for the best bred horse in this section went to Mr R. Hind, of Westbury Manor Farm, Petersfield, for his typical brood mare, Jewel, which has not been beaten anywhere this year; whilst the Shire Horse Society's silver medal for the best Shire mare, filly or filly foal, went to Miss E. D. Coats for Redlynch Saxifrage, winner in the class for three-year-old mares.

The Hunter classes were confined chiefly to residents in Hampshire, or within a radius of twenty-five miles of Havant Station, but there were one or two open classes. All were well supported, and some first-class quality animals were forward, notably the light-

Photo by] MID-SOMERSET SHOW. *[Messrs. Bell and Son.*

A view of the Mid-Somerset Agricultural Society's Show at Shepton Mallet on Tuesday. The ring is about a third of a mile in circumference. In the background can be seen the great Cheese Tent—240 feet by 40 feet—and the Butter Tent, the size of which is 140 feet by 30 feet.

weight Hunters, the best of which was Admis, a five-year-old bay gelding, belonging to Mrs. Price, of Brockenhurst. He was a winner at Olympia, and has taken five or six prizes since then. The judges described him as "a most excellent ride, with beautiful manners," and awarded him first prize in the class for lady's Hunters, the largest class of the day, and the medal of the Hunters' Improvement Society for the best Hunter mare or gelding. The ponies, both polo or children's, contained many first-rate animals, and in connection with the former the bending competition again proved a popular feature, as were also the trade classes, which were highly creditable all round.

Bicester.

Bicester Horse Show, held on Tuesday, under the presidency of Mr. J. P. Heywood Lonsdale, the popular Master of the Bicester and Warden Hill Hunt, attracted a large and fashionable attendance. There was an excellent show of Hunters, and Mr. King, of Whitesfield, won the medal of the Hunters' Improvement Society. Mr. Kelvy, of St. Albans, won in the open jumping class in Shires. Mr. Roper won the Shire Horse Society's medal, and Mr. Bruce Fry repeated his Banbury success in the open filly class with Mollington Movement by Lockinge Forest King.

At the luncheon, the Earl of Jersey, in proposing Mr. Lonsdale's health, said that he hoped that whatever had been done in Parliament this session, nothing had transpired to interfere with the convenience or prosperity of those connected with the soil. If the Small Holdings Act proved successful they would welcome any addition to those of their number who were connected with the land, and the larger proprietors would be glad to know that small holders had met with success, feeling sure that the same prosperity would be shared by other occupiers.

Rutland.

The seventy-seventh annual show of the Rutland Agricultural Society was held at Oakham on Thursday. There was a satisfactory increase in the entries, especially in the cattle classes, the family class being particularly well filled. The total number of entries in this section exceeded 100, as against seventy-one in 1906. An increase was also noted in the entries of sheep, which made a better show than usual. The Shire horses were well up to the average standard, and the Hunter classes had some excellent entries, advantage having been taken by the owners to show foals, brood mares, and three-year-olds in classes formerly restricted to tenant farmers or tradesmen. This change was decided upon at the last annual meeting, and those who advocated the alteration were able to congratulate themselves that their suggestions had had the desired effect. The four-year-old classes, open to anyone in the district, also brought out a good entry and made a very creditable show. The heavy-weight class, open to all England, produced a representative lot of animals of rare type and quality. Altogether there were 235 exhibits of horses, being ten more than last year.

Cotswold.

A good entry, fine weather, and a large attendance was the record of the Cotswold Agricultural Society's Show at Chipping Norton on Thursday. The entries numbered 319, and were divided as follows:—Cattle, fifty-five; sheep, forty-seven; pigs, six; agricultural horses, forty-five; Hacks and Hunters, fifty-seven; driving, forty-five; jumping, twenty; butter, nine; poultry, six; eggs, twelve; and roots, seventeen. For the best two-year-old bull, Mr. W. M. Scott, Stow-on-the-Wold, secured the first prize, closely followed by Messrs Dyke Bros., Sibford Gower. Mr. Frederick Phillips, of Andersford, exhibited the best bull under two years, whilst for the best bull calf under two years Mr. F. E Bice, of Lower Slaughter, secured premier honours. Other successful exhibitors were Mr. G. H. Simpson-Hayward and Mr. R Hartley. There was a fair show of sheep, the weakest classes being, strangely enough, the Cotswolds; all others were particularly good, especially those exhibited by the tenant farmers. The agricultural horses were very strong, Mr. J. S. Camden, Stratford-on-Avon, securing first prizes for mare for agricultural purposes and best cart mare or gelding in regular work. Mr. J. H. Gregory was successful in the four-year-old and two-year old classes, also for best team and best groomed pair. The classes for Hacks and Hunters produced some keen competition.

Bath Horse Show.

THAT the Bath Horse Show has lost none of its popularity is proved by the capital attendance at last week's fixture. The entries were not quite so numerous as has been the case, Hunters showing a somewhat notable decline—74 against 92 last year—but the hacks and harness classes were the best for several years, numbering 114 as against 100 in 1906.

First Day.

The Hunter classes commenced the proceedings on the first day, and they were judged by Mr. Romer Williams (London), and the Rev. A. Milner (Dorchester). In the weight-carrying Hunters' class there were seven entries, and the competition was keen between those two well-known prize-winners, Mr. J. Drage's brown gelding, Midnight, and Mr. J. H. Stokes's Axiom, which have met in opposition on various occasions. This time the judges put the Chapel Brompton representative first, with Axiom, and the Olympia winner next; while Mr. S. Codrington's shapely Pattern came reserve. The champion of the Dublin Show, Chatterbox, belonging to Mr. Drage, turned out in the next event, which was for middle-weights, and romped home an easy winner. Mr. J. H. Stokes's brown mare Radiance was second, and the same owner's four-year-old mare Ladybird reserve; but in the next class, for novices, Mr. Stokes came to the front with Ladybird, a handsome bay mare, the offspring of Red Eagle. Mr. H. C. Walton was second and third with Caradoc and the Priest. In the four-year-olds (the first prize winners of the opening events being barred), Mr. J. H. Stokes scored a double win with Radiance and Ladybird. In the weight-carrying class, restricted to neighbouring counties, there was an entry of nine, and of these the best was Mr. S. Codrington's Pattern, who thus scored his thirteenth first this season. One of the best-filled classes was the middle-weights for the restricted area, Mr. M. J. Taylor, of Ivy Bridge, winning the red ribbon with Flaxman. The competition for the silver cup, presented by Captain Forester, for the first prize winners in the six principal classes, resolved itself into a match between Mr. Drage's Chatterbox and Mr. Stoke's Radiance, and the judges decided in favour of the first named, who thus followed up his Dublin success.

The saddle events were judged by Mr. A. E. Evans, and one of the first to be decided was that for covert hacks. Little Minister, the handsome chesnut gelding belonging to Mr. O. Muntz, of Yelverton, scored a good win, and this was only the prelude to other successes, for he carried off two other firsts in succeeding classes, thus adding to his winning career in the West of England. There was another meeting between Mrs. W. C N. Chapman's beautiful mare, Miss Trix, and Mrs. Price's Adonis, and this time the last named beat its rival. In the weight carrying cobs a notable score was made by Mr. A. M. Fry, who took first and second prizes with Snowball and Henbury. In the class for horses not less than 14 hands, after Little Minister came Miss Trix.

In the next event for horses exceeding 13 hands 2 in. and not above 14.2, there was an excellent entry of eleven, and the first prize-winner turned up in the Wigginton Stud's chesnut mare Gavotte, a nice five-year-old; with Mr. W. Foster's Mel Valley Veronique coming next. The novice class also attracted a very large entry, and the judges had plenty of work to do. Eventually Captain Gooch (Banbury) came to the fore with Bay Rum, a valuable five-year-old, Messrs. Wilcocks and Rew, of Exeter, getting second with Splash.

Mr. W. Foster had much more opposition in the pony class than at Shepton the previous day, but Mel Valley Spring Chicken proved the best of the thirteen entries, whilst in the pony class to be ridden by children not over thirteen years of age (a nice entry), Mr. Iver Pethick's bay gelding secured a popular win.

The Harness classes were noticeable for the quality of the horses competing, which were distinctly in advance of several previous years. For pairs of not less than 14.2 Mr. J. Kerr, of Loudwater, Herts, was put first with Loudwater Gongelt and Loudwater Grangelt, which won at Dublin, but Mrs. Hartley Batt was close up with her splendid bays, Hopwood Horace and Hopwood Spark.

For tandems under 14.2 Mr. Howard Frank, of Wimbledon Common, obtained the leading position with Tissington Kitcat and Tissington Cock Robin. There was a big surprise in the single harness class not less than 14.2, for as the result of a prolonged test between Mr. Paul Hoffmann's Riot, a winner at Dublin, and Radiant, owned by Mr. Gerald Jurgens, of North Cray, the verdict was given in favour of Radiant, which was admirably handled by Mr. Alfred Butcher, of Bristol. Mr. Kerr came in third with Loudwater Gongelt, whilst Mrs. Hartley Batt's Heathfield Squire, which was first in this class last September, had to be content with a reserve ticket. In the single harness cob or pony competition, Mr. H. Frank was first and second with Tissington Kitcat and Cock Robin respectively.

Jumpers are always in brave array at Bath, and this year there was splendid competition. In the class over full course it was such a close thing between Blink Bonny (Mr. Glencross, Frome) and Rufus (Mr. Grange, Farndon, Cheshire) that the judges divided the first and second prizes between them, whilst in the restricted class, no water being taken, Mr. Glencross's Kitty was first, and Mr. Nixey Smith second with Monarch.

Second Day.

On the second day judging started with the young Hunters, which were somewhat disappointing both in quality and quantity. Seven or eight yearlings were led into the ring, and Mr. J. W. Olver, of Westnorth, Cornwall, was placed first with Battersea, a promising chesnut, which was only given third prize at the Mid-Somerset Show on Tuesday, whilst General Jago Trelawny's Battleaxe, first at that show, was now only third, the two being divided by Dairymaid, the property of Mr. A. M. Fry Clifton, a brown of nice quality, to which was afterwards given a silver medal, offered by the Hunters' Improvement Society for the best Hunter filly in the show. Two-year-olds were not so good as usual, the best being Sybell belonging to Mr. George Churchill, West Harptree, which was placed first, second honours going to Ensign, owned by Mr. Niccisson, of Hinton Manor, Swindon. Three-year-olds were a much better class, and all the prizes went to well-known

SOCIETY ANNOUNCEMENTS.

MARKET DRAYTON & DISTRICT AGRICULTURAL SOCIETY.

THE EIGHTH ANNUAL SHOW of HORSES, CATTLE, SHEEP, PIGS, LIVE & DRESSED POULTRY, PIGEONS, CHEESE, BUTTER, DOGS, BEES, HONEY, BEESWAX, HORSE LEAPING, SINGLE TURNOUTS, and TANDEMS, will be held at the SYCH (adjoining the Railway Station), MARKET DRAYTON,

ON THURSDAY,

19th SEPTEMBER, 1907.

19 VALUABLE CUPS and MEDALS.

Entries Close for Butter, Live and Dressed Poultry, Pigeons, Eggs, Bees, and Honey, 9th September; Dogs, 12th September; Horse Leaping and Turnouts, 18th September.

Schedules and Entry Forms from the Hon. Secretary, THOS. PODMORE, Market Drayton.

CLYDESDALE HORSE SOCIETY.

STUD BOOK VOL. XXX.

Entries now being received at 50 per cent. additional on ordinary fees. No Schedules issued after October 1.

ARCHD. MACNEILAGE, Secretary,
93, Hope Street, Glasgow.

THAME AGRICULTURAL ASSOCIATION.

Show will be held on THURSDAY, SEPTEMBER 12, 1907.

Entries close as follows:—Dry Sheep, Class 8, March 5; Wet Sheep, Class 5, 6 and 7, April 16; Hedging, Classes 9 and 10, March 26; Servitude and Ploughing Classes, August 31; Horses, Cattle and Sheep, Roots, Honey, Poultry, Butter and Eggs, August 31; Rick Building and Thatching, September 16.

T. BUSH, Secretary.

GRANSDEN AND DISTRICT, at GREAT GRANSDEN.

SEPTEMBER 24, 1907.

Entries close September 10.

H. J. KISBY, Secretary.
Great Gransden, Sandy, Beds.

EAST BERKS HORSE SHOW SOCIETY.

12TH ANNUAL SHOW, AUGUST, 1908.

Foal Futurity Classes for Hunter and Shire Brood Mares.

First Instalment of Entry Fees due on or before 1st October, 1907.

Schedules and full particulars of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C.

DAIRY SHOW, LONDON, Oct. 8, 9, 10 & 11.—Great Exhibition of DAIRY CATTLE, PRODUCE, APPLIANCES, &c. From Sept. 9 to 13, Entry Fees are 50 per cent. additional.

Particulars of Wm. C. YOUNG, Secretary, 12, Hanover Square, London, W.

LEIGHTON BUZZARD & LINSLADE FOAL SHOW SOCIETY held on SEPTEMBER 17 (TUESDAY).

Entries close September 3. Post entries (double fees) September 10.

WALTER C. PRUDAMES. } Hon.
W. GRAVELY W. WILLIS } Secretaries.

SOUTHDOWN FLOCK BOOK.

NOTICE is hereby given that the Southdown Flock Book will be definitely closed to unregistered flocks on December 31 next, after which date no sheep from unregistered flocks will be accepted under any conditions whatever.

Owners who have not yet registered their flocks are earnestly requested to write for full information respecting the Southdown Sheep Society to

W. J. WICKISON,
Secretary.

12, Hanover Square,
London, W.

winners—the first to Mr. J. H. Watson, Kidderminster, with Juggler; the second to Mr. R. Birmingham, of Badminton, for Acrobat; and the third to Mr. Charles Beedell, Newton St. Cyres, Devon, for Gay Lad. Hunter brood mares with foal at foot was a particularly numerous class, and here again the decision at the Mid-Somerset Show was reversed, the first prize-winner at Shepton Mallet being set back, and the red ribbon handed to Mr Willoughby Cotton, of Western Rhyn, North Wales, for Creole, a good-looking black, which should breed capable cross-country horses. Mr. Ernest Robinson, of Brookleigh, Esher, was second with Golden Leaf; while Mrs. Gee, of Bristol, secured third place with Fanny Fern II., which was awarded the Hunters' Improvement Society's gold medal for the best Hunter brood mare in the exhibition.

More harness classes were judged after lunch—a lot of good ponies coming together under 13.2—and Mr. W. Foster's pretty gelding, Mel Valley's Spring Chicken won well, beating Mr. J. H. Tate's Monofly, second, and Mr. G. Griffiths's Lady Go Bang, third. There was a more formidable lot still in the class for cobs or ponies under 14 hands, and here Mr. Foster scored as well with Mel Valley's Tree Stars, Monofly getting second here also, and the Wiggington stud's Gavotte third. In another 14 hands 2 in. class or over, Mr. G. Jackson won from a very smart lot of ten with the neat little chesnut mare, Allesboro Wild—Tris, by Discount, and bred by her owner. She beat Mr. W. S. Cunard's White Cloud, a very good one, and Mr. J. G. Goldworth's Stocking, a fashionable bay, which took second and third respectively. Mr. Paul Hoffman's splendid dark chesnut gelding Riot won the medal given by the Hackney Horse Society for the best mare or gelding exhibited in single harness, Mr. George Jackson's Allesboro Wild Tris being reserve. The single harness classes concluded with the usual local competitions, which produced several meritorious exhibitions. Mr. William Pinsent, of Newton Abbot, secured the silver medal offered by the Hackney Horse Society for the best pony, mare, filly, or filly foal, with Fernihurst Lady Olivette, which was the only candidate eligible.

Abergavenny.

The show held in Bailey Cark, Abergavenny, on Thursday, fully maintained the good reputation of the Abergavenny Agricultural Society, the entries being highly creditable in quality, whilst as regards numbers they were the best on record. Hunters numbered 120 entries, trotting horses 6, jumping 7, harness classes 31, tradesmens' classes 15, cart horses 59, cattle 68, sheep 52, pigs 9, poultry—fowls 9, ducks 9, white eggs 9, coloured eggs 11, butter 14, shoeing competition 16, timbering competition—colliers 14, timbermen 20. Hereford cattle were represented by some notable animals. Mr. P. Coats, of Sheepcote Clifford, Herefordshire, took premier honours in the class for bull, cow, and offspring; Mr. D. Jones, Dyffryn, being second. There was a keen competition for Hereford stock bull, but eventually Mr. Jones's animal was judged the best, the second prize going to Mr. Henry Williams, of Red House, Llansantffraed. In the two-year-old bull class, any breed, Mr. H. R. Evans, Staunton-on-Arrow, Herefordshire, was easily placed first, whilst Mr. D. A. Thomas, M.P., was first with his yearling, any breed, and also took firsts for his two-year-old and yearling heifers. Lord Glanusk was successful with his rams, but in the Shropshire breed Mr. D. A Thomas swept the board, taking three firsts. Mr. Reginald Herbert, of Clytha, Abergavenny, was the most successful exhibitor of pigs. There was a very fine show of horses, both light and heavy, many prominent prizewinners being forward.

Ashby-de-la-Zouch.

The fourth annual show of the Ashby-de-la-Zouch Agricultural Society was held in the Bath Grounds, Ashby-de-la-Zouch, on Wednesday, under the presidency of the Earl of Loudoun. There was an all-round increase in the entries, as compared with last year, and as the event was favoured with fine weather, whilst the attendance was very satisfactory, so that an all-round success can be recorded. Prizes to the amount of over £340 were offered, in addition to special prizes, one of the latter being for the two best cows or heifers, or cow and heifer, in-milk or in calf, the property of a farmer This was won by Mr. E. A. Jackson, of Cow Pasture Among the prominent winners in the horse section was Mr. J. H. Stokes, of Great Bowden, who showed his famous bay gelding Whiskey, the winner of thirty-one firsts and twenty-six championships this season, and on this occasion he had no difficulty in taking the first prize in the hunting class, whilst the same owner's chesnut Mustard was second.

CORRESPONDENCE.

Useless Charities.

SIR,—In the days gone by there were many persons—doubtless good-hearted and generous-minded persons, too—who made provision for the perpetuation of their memories by leaving money or property, the proceeds of which should be used for all time for the purpose of charity. The motive was good, and probably the charities at the time of their institution were in most cases beneficial. Some of them are now, but others are not, and I venture to say if the founders of the same were alive to-day they would make provision for their money to be put to different uses.

In the passing of years many charities have doubtless been lost, but many still exist, and in some cases I do not envy the persons who have the dispensing of the same. Such charities as were left for providing so many loaves of bread, small doles of money, clothing, and so on amongst certain persons supposed to be eligible, do very little lasting good, and they not infrequently cause jealousies, bickerings, and backbitings amongst the people who claim that they are entitled to the benefits. One cannot help thinking that if the proceeds from many of the useless charities could be used in the direction of assisting some scheme for providing old age pensions for the deserving poor, or if they were utilised for the benefit of hospital and medical institutions that are such blessings to the community, they would do a great deal more good.

I can imagine that some people will lift their hands in holy horror at such a suggestion and oppose tooth and nail any idea of utilising charity money for any other purpose than that which the donor left it for, but we must not forget the different conditions of life. I say again that if those charitable-minded persons were making their wills now, their bequests would be left in accordance with the needs of the age rather than in doles of bread and similar commodities to people who may or may not appreciate them. As a matter of fact, in these days there are many ways in which the proceeds of charities could be more beneficially employed than they are at present.

September 5, 1907. LUX.

Standard Weights for Corn.

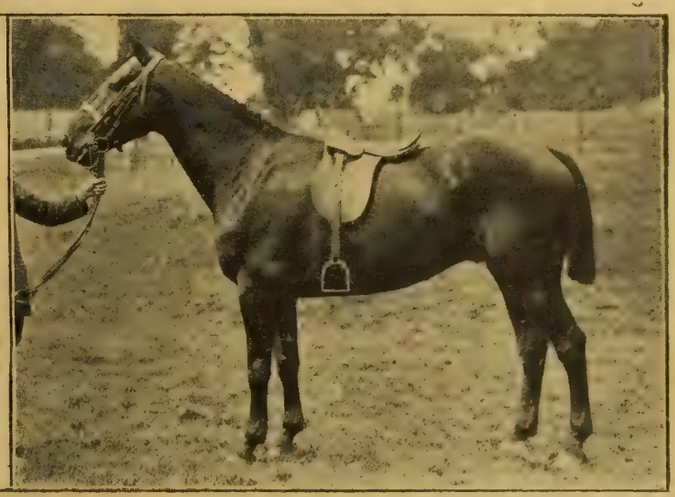
SIR,—It seems to me that it would be beneficial if there was a standard weight for all kinds of corn, and no sales to be legal otherwise—say, wheat 60 lb., barley 50 lb., and oats 40 lb. per bushel. I suggest round numbers for simplification.—Yours, &c., H. W.

September 4, 1907.

The Abortion Ravages.

SIR,—It is needless to dilate upon the enormous loss suffered by the dairying community of this country through the ravages of abortion. The subject has been aired in the Press over and over again, and yet we are constantly in conversation with men who have not yet discovered a remedy and who are still suffering great losses. I know men who have "tried everything," and who have taken the opinion and followed the advice of our most eminent professors of veterinary science—all without success.

We may help one another by giving our experiences of this insidious disease, and as I firmly believe I have thoroughly stamped it out on my farm, I propose, with your permission, to give details of the method by which this most satisfactory result has been attained. The herd comprises seventy-five head of cows, of which fifty (about) are carrying calves. Abortion appeared in the herd in September, 1903, and up to March, 1904, there were twenty-seven cases. Cows cast their calves in every grass field and in every shed on the farm, in spite of the most rigid precautions as to isolation and disinfection (of cows, sheds, and places in the fields where abortions took place), and cases once reached a total of four in a week.



Treatment began on Christmas Day, 1903, and has been strictly followed until now. The result is as follows:—Cases, March, 1904, to March, 1905, nineteen; March, 1905, to March, 1906, ten; March, 1906, to March, 1907, two; since then none. It has naturally involved a great deal of trouble to arrive at this result, but it is certain that only those who really stick to the treatment will attain success.

The treatment consists in giving to every in-calf cow or heifer on the place a dose twice weekly of a preparation which is the discovery of Mr. Alexander Levie, F.R.C.V.S., of Broad Street, Nottingham, and it contains ingredients of which he alone knows. Mr. Levie is Lecturer in Veterinary Surgery to the Midland Agricultural College, and his discovery is the result of a long and painstaking series of experiments on several dairy herds. His latest preparation, which I have used, has been successful wherever tried.

The medicine is easily given; it is mixed with water and sprinkled on the food with a watering-can. In-calf cows in the fields will take it readily if sprinkled in the same way on a little cake, which may be put down in little heaps on the grass.

For the first six months the vulva and underside of tail of every cow should be painted twice weekly with a solution of chinosol. This is easily and quickly done All the usual precautions as to

BATH HORSE SHOW.

Judging the Double Harness Horses | Mr. J. Drage's Midnight, winner of First Prize for Hunters to carry 15 stones and upwards.

isolation and disinfection should be carried out. Young cows and good milkers that one wishes to keep are almost certain to carry their calves, even if they have aborted once, provided they receive this treatment and are not served until two or three months after abortion. It is wise to use a separate bull on cows that have aborted.

I most strongly advise anybody who is troubled with this curse to adopt this treatment without delay, as I am fully convinced that it will be successful when properly applied.—Yours, &c.,

WILTON ALLSEBROOK.

Aspley Hall Farm, Nottingham,
August 19, 1907.

The Culture of Kohl Rabi.

SIR,—May I ask you through the medium of your valuable paper to give me some information as regards the growing of Kohl Rabi?

Our soil is a stiff clay, retaining moisture. Its analysis is :—

Nitrogen	0·250
Phosphoric acid	0·013
Potash	0·008
Lime	0·970

We have given about 8 tons of farmyard and 5 cwt. of basic slag (with seeds) per acre. Part of the land was limed previously. The crop was got in very late, and looks like coming to a very small crop indeed.

Can anything be done now, and what should we do in the future, as we are anxious to give "Koli" a good chance?—Yours, &c., KOHL RABI.

*** You do not mention the date when you sowed the Kohl Rabi, but you say that you got the seeds in very late, and this fact is quite sufficient explanation for the crop being poor, as the plant requires a long season of growth to come to maturity. The amount of manure you gave, including the basic slag, was sufficient to grow a fair crop of Kohl Rabi, but the crop in all probability has not derived the full benefit of the slag, as it is a slowly soluble fertiliser, and should be applied in the autumn, or at any rate some time before sowing. It is very likely that in your case the next crop will benefit more from the basic slag than the Kohl Rabi has done. For the successful culture of Kohl Rabi it is necessary to have the land in good heart, and the crop will stand very heavy manuring. There is nothing like forming a basis with farmyard dung and supplementing it with artificials suited to the land. In a stiff medium like yours basic slag is good, but it should be applied early, and kainit would also be beneficial, as the land is somewhat deficient in potash. There are two methods of growing Kohl Rabi, both of which have their advantages. The first is that of sowing the seeds on well-prepared seed beds in March, and transplanting as soon as the seedlings are large enough and the land is fit. The advantage of this method is that time is gained by transplanting and the crop matures early, and a greater weight is obtained from the land. I may add, however, that transplanting was more general when seed was dear and labour cheap, but this order has been reversed of late years, and the more general method now is to drill the seed in from the middle to the end of March, if conditions are favorable, and set out the plants in the rows like turnips. It is advisable, however, to have a reserve seed bed to draw from for the purpose of filling up blanks. As the season is now so far advanced I am afraid you cannot do much to improve your crop, but when the growth is backward at an early stage a top dressing of nitrate of soda at the rate of 2 cwt. to the acre is very beneficial.—RUSTICUS.

Edgworth Crop Prospects: News of Protection.

SIR,—In this district the hay harvest on the whole is not equal to last year in quantity, and I am afraid not of a quarter the value. The clover crops I should call very good; second crops are bad. Wheat is very good, what little we have in the Bolton district. I am afraid the coming winter will be the worst ever experienced by present-day farmers. Dairy farmers will require a penny per quart more for their milk to meet extra cost of every article used both in the homestead and for stock; also advance of labour, and rates and coming requirements of the people.

I am one of those who believe that the agricultural industry of this country should be protected, seeing that this industry has at least ten times more foreign competition to contend with than all other industries put together. I am willing to pay more for my milk, butter, and bread, believing as I do that nothing but Protection can ever bring people back to the land. Any Act of Parliament which does not cause reasonable advance in agricultural produce will neither bring them back or keep present farmers and labourers on the land.

Yet we have one article—fresh milk, used by everybody—up to now needs no protection, but owing to the stupid jealousy amongst farmers they continue to sell milk at the same price, although the cost of producing must be at least a halfpenny per quart more than it cost four years ago. If farmers continue to contract at the present price, it would be a good thing for landowners to combine and fix wholesale prices of milk. By doing so they would not only be the salvation of dairy farming, but would stop our young farmers from leaving their homes for foreign countries.

J. WHITEHEAD,
Secretary, Edgworth and District Agricultural Society.

Nottinghamshire Notes.

HARVEST operations are now in full swing in this county, and a great bulk of the corn has been cut and much of it got into the stack. The weather on Monday and Tuesday was wet, but towards evening on the latter day a drying breeze did much good, and many farmers were busy leading on Wednesday. Though sun is badly needed to ripen some of the corn agriculturists in this district do not complain, for conditions might be much worse.

PRICES of grain are increasing, and farmers eagerly scan the columns of the newspapers for the latest quotations. Fancy wheat making 36s. to 37s. per qr. again! It really seems too good to be true, yet at Newark yesterday a sample of old wheat actually fetched 37s. 6d. per qr., while new wheats made from 33s. 6d. to 34s. 6d. At the same market the trade in malting barley was started, three or four lots changing hands at 28s., and a couple of good bold, bright grain of the Chevalier type fetched 30s. It is thought, however, by one of the leading buyers for a large firm of maltsters, that in the course of a month the figures will reach 34s. to 36s., as a large quantity of the corn is sadly out of condition.

OATS, considering their plentitude in the Midlands, and the big yields that are being reported for the winter-sown varieties, are making good prices, up to 19s. 6d. being given by merchants. The straw, however, is not nearly so good as last year, owing to the crops being so badly storm broken.

ONE field of sixteen acres sown with winter oats at Linby, about eight miles to the north-west of Nottingham, has proved the most expensive crop to harvest that I have ever heard of. It is only about two miles from Hucknall Torkard, and the owner has the advantage of a free supply of night soil, and, what is more, actually carted to the field desired. This particular enclosure was given an extra special dressing last autumn, the oats were drilled in a good seed bed and looked remarkably well until July. But, alas! A thunderstorm of unusual severity burst over the district, and the whole crop laid as flat as though a roller had passed over the field.

HARVEST day arrived, and before the oats were really ready the farmer made an effort to cut them with a grass-mower, hoping to succeed by fetching them. After a few hours' work this was given up as impossible, and men with scythes set on. They started at so much an acre, but before the first day had passed struck work and demanded 5s. an acre extra pay. In this there was no option to the farmer but to grant it. The next day passed, and again a dispute. Eventually it was agreed to pay the men 6s. a day, with half-a-gallon of ale each, and after a week's hard work the crop is now to be seen in stook.

THERE will be an enormous stack so far as straw is concerned, but the oats will be few, and the straw is half rotten. The owner calculates that when all expenses are paid he will be out of pocket, and have to pay the rent in addition. The moral appears to be "Don't do your land too well even if your manure is cheap."

THE Midland Farmers' Co-operative Association, which has Nottingham for its headquarters, is beginning to do a brisk business again, and I understand that there are now 266 members Mr. Allsebrook, of Aspley Hall Farm, has resigned the position of manager and secretary, as he found that he was unable to spare sufficient time to devote to the society's business. In his place Mr. C. G. Bryant, well known in agricultural circles around Peterborough, has been elected, and a number of meetings are being arranged for the autumn in the various villages for explaining the aims and objects of the association.

A WEEK or two back I mentioned in these notes the fact that Mr. H. Heath, J.P., of Bestwood Park, was growing two fields of Austrian or Hanna barley. Mr. Heath informs me that he has received a letter from the Inspector of Agriculture at Malta to supply him with some for the Government's experimental farms there. He states that in Malta they endeavour to sow their barley in September before the autumnal rains fall. Mr. Kime, of Marcham-le-Fen, Lincs., has also grown some of the same variety, and speaks highly of its yielding capabilities, while it is ready for cutting fully a week, and sometimes a fortnight, earlier than some English barleys.

THE success of Mr. R. M. Knowles, of Colston Bassett, during the present year has been remarkable. His herd of Large White Yorkshires have come out well, as the following list of prizes testify :—Newark, sow first, sow with pigs at foot first, boars first, gilts first; Nottinghamshire Show at Retford, sow first and medal, sow second, gilt second; Royal Counties, sow first, sow reserve; Leicester, sow second; Bath and West, first and reserve for medal, boar reserve, two gilts first; Suffolk, sow second, two gilts first; Hereford and Worcester, sow first, sow third, boar second; Norfolk, sow first, sow second and silver medal, three gilts second; Royal, sow first, and champion and gold medal and special (given by Lincoln Agricultural Society); Highland, sow first and President's medal for best pig of any breed, two gilts third; Welsh National, sow first, sow reserve; Lancashire, sow second, gilt third; Yorkshire, sow first, sow second; Derbyshire, sow first, boar first, boar second, three gilts first.

MR. KNOWLES is now devoting a good deal of attention to Shorthorns, and during the past few weeks has purchased several beautiful cows and heifers at long prices.

MR. ARTHUR S. GIBSON, of the Elms, Ruddington, whose portrait was printed in these columns a short time back, has returned from Canada, where he acted as one of the judges at the Winnipeg show.

MR. A. W. HICKLING, of Adbolton, is now in the Argentine, where he has gone to judge at the Great Palermo Show.

THERE were nearly 9,000 visitors to the show of the Eastwood Agricultural Society, held at Moorgreen on Tuesday, and some capital animals were seen in both horse and cattle classes. Mr. A. W. Hickling's Hackneys, as was expected, carried all before them with the brood mare Luizan, a fine mover, which also secured the Hackney Society's medal, and also Adbolton Swell, having Luizan as dam. Mr. Wilkinson, of Edwinstowe, who has had a remarkably successful season, was again a first prize winner.

THE judges at the show were all local men, including Mr. W. Machin, Edwalton; Mr. J. W. Whitehurst, Markeaton, Derby; and Mr. W. H. Bradwell, Nottingham.

AMONG the judges at the Rutland Agricultural Society's Show held at Oakham to-day were several very well-known farmers. For cattle and sheep Mr. S. E. Dean, of Folkingham, near Bourne, and Mr. W. W. Wells, of Withern, near Alford. There are very few farmers who can beat the latter gentleman at feeding bullocks, and every year, at the Louth Christmas Fat Stock Market Mr. Wells has the best show. For Shire horses Mr. H. Smith, Cropwell Butler, and Mr. W. Horrell, Peterborough, awarded the ribbons; and the Hunter classes were decided by Mr. Hugh Owen, Market Harborough, and Mr. A. Britten, Northampton.

THERE were a number of gentlemen from the lace county at the show, and in the class for Shorthorn heifers under one year old Mr. H. Smith, of Cropwell Butler, was awarded third prize for a promising youngster named Cropwell Hayle Duchess. There was a decrease in the number of entries in the Shire horse classes, but in the cattle, sheep, and Hunter sections there was an increase. The attendance was interfered with owing to so many farmers and breeders being busy in the harvest field.

HARVEST was completed 100 years ago on September 3rd, and the following were the prices of corn at Nottingham on September 1, 1807 :—Wheat, 70s. to 75s. per qr.; oats, 28s. to 34s; rye, 40s. to 44s.; barley, 40s. to 45s.; beans, 52s. to 58s.

"SHOULD samples of corn be registered by a merchant immediately they have been purchased?" This was a question I asked a large miller and corn merchant on Wednesday. I explained the idea as propounded in the letter written by "H. W. P." in the MARK LANE EXPRESS a fortnight back, and after a few words

my friend replied: "Yes, it would be a very good idea. Farmers always allege when we refuse the delivery that it is because prices have gone down. If samples were registered we could then submit them to some person who knew nothing of the bargain and ask for his candid opinion. Personally I favour the idea. Last November I had occasion to throw up 75 qr of barley. The difference between the sample and the bulk represented a monetary consideration of at least 2s per qr. I drew the farmer's attention to this, but he averred that I had purposely mixed the sample with corn from a higher-class barley. It would save merchants endless trouble and worry."

AGAINST this I have a large and important farmer's opinion, which is as follows:—"We cannot afford to pay any big fees, but if samples could be registered for 2s. or 3s. and sealed down in the presence of both buyer and seller, it would often save a lot of trouble and ill-feeling. I usually see the corn and procure my own sample from the bulk, though I must admit that I have at times had trouble with merchants, especially on a falling market. Two years back I had a sample of peas which I sold for 53s. per quarter. They were refused, and rather than take 50s. for them I kept the lot, and eventually sold them at 45s. The merchant and myself never speak when we meet, and of course I never offer him my corn now. If that sample had been registered and the bulk was declared to be inferior to it by an independent judge I should readily have given in." The idea is worth considering, and the giving of a signed contract is a thorough practical suggestion.

September 5, 1907. R. K.

Northern Notes.

A FARMER of my acquaintance tells me a curious incident in connection with this year's cereal crops. His barley fields have ripened first. This he has never known in all his life's experience to have previously happened. His wheat area will be the last to be cut this year—it is generally the first. He occupies a farm on a plain, very near the Yorkshire Wolds.

THE writer was conversing with a practical maltster in the course of a railway journey in the same county, and he volunteered the statement, in answer to a general question about the state of the harvest fields, that in his opinion the Yorkshire farmer does not grow barley equal in quality to what it was ten or twelve years ago. He thought this was accounted for by the indifference to change of seed. The Goldthorpe variety, he believed, is played out in the locality. The results do not show a good robust malting sample, the grain being incomparably small to that produced a decade ago. Quality is sometimes sacrificed in the endeavour to produce quantity.

AFTER a fine week-end, rain fell without intermission on Monday, on which day harvest would have become general up here; and where the fields had already been invaded by the self-binder they were to be seen, scores of them in a day's journey, enveloped in tarpaulin to shield them from the merciless rain.

CORNFIELDS this year, in the districts where the rains have laid the crops, present to the view an uncommon sight. There is the reaper struggling to get through the tangle, while in the worst parts are the hand-reapers with their scythes mowing as best they may the fallen corn stalks. The reaper can only cut one way in many fields this year. This is obviously a disadvantage where the fields are large—20, 30, 50 acres, as some Yorkshire fields are—and means a lot of lost time and waste of horseflesh, and takes one back to the old days of hand labour.

ALL hopes were centred in a fine September. As it is, the augury is against us. The month made a bad beginning, and we have the melancholy fact before us that in Lancashire the hay harvest started in June and is not finished at the beginning of the ninth month. Whatever may be the quantity of the crop, the quality is very inferior, one experienced grass land farmer estimating it at one quarter of the average value, and he is moreover afraid the coming winter may be the worst ever experienced by present-day farmers.

THE same occupier says he is one of those who believe that the agricultural industry should be protected, because, he says, it has at least ten times more foreign competition to contend with than all other industries put together, and he believes that nothing but Protection can ever bring people back to the land. This is probably a feeling that is growing among the farming communities, where an almost entire absence of sympathy with the Manchester school of politics is paramount.

THE Earl of Carrington is expected to pay a visit to Scarborough shortly to talk over with the authorities of the North Riding the question of small holdings. At the same time his lordship may possibly visit the East Riding in the matter of the petition about the Swine Fever Orders, which document emanated from influential persons more or less interested in the pig. When his lordship wrote to the local member (Mr. Luke White) he intimated that the result of the proposed inquiry would be in his possession in about a fortnight. That time has just elapsed, and Mr. White and the officials of the market concerned have had no word from the Board of Agriculture.

AN inspector, it is stated, visited Driffield, where the hon. member for Buckrose resides, and met a member of the East Riding Cattle Plague Committee, talked the matter over with him across the tea table, and that is all that has been heard up to the present. It was hoped that witnesses would have been called before an inspector and evidence taken as to the disastrous results of the Orders. Any other course, unless the Board has at length made up its mind to withdraw the Orders, would hardly be satisfactory, and would fail to comply with the interpretation put upon Lord Carrington's letter to Mr. White by the public at large.

ADVERTING to the paragraph about barley, have any of your readers had the unfortunate experience of a great deficiency in the ears this year? Many "deaf" ones, and partially deaf, are to be found in this part of the country. The deficiency must amount in some instances to several bushels per acre.

THIS poverty in the yield may possibly be due to a disease which has not yet been diagnosed. The disease occurs among the comparatively new kinds of barleys, and seems to confirm in part my maltster friend's ideas. Lack of some agent of fertility in the soil or the ungenial summer may have something to do with the deficiency. Whatever be the cause—too much heat or too severe weather, or scarcity of plant food—the problem is one that might very well form the subject of experiment and research by the staffs of our agricultural colleges.

A VERY well-known North Yorks agriculturist, Mr. H. T. Allison, of Stanghow-in-Cleveland, has just been placed on the Commission of the Peace. Mr. Allison is a familiar figure in the North, and fills a great many honorary offices, which testifies to his popularity and business abilities. He is a breeder of Leicester sheep, and officiated as judge at the Lincoln meeting of the Royal Show. As a farmer always willing to adapt himself to the times, he has achieved a considerable measure of success.

September 6, 1907.

Lincolnshire Notes.

THERE seems far too much credit in being cheerful this disheartening harvest weather. Operations are greatly delayed by the heavy rains. There is still only a moderate amount of corn in stock. One farmer told me this week that he does not propose cutting for quite three weeks yet, for the simple reason that his crops are not ready. We look like having a busy October.

ALL reports point to a heavy harvest. An agricultural correspondent, who writes with some authority, states that the crops in the Lincolnshire Fens promise to be quite equal to those of last harvest—in fact, there will be more straw than twelve months ago. From Boston and Sleaford, and then on to Spalding via Bourne, the number of stooks is enormous. In some fields there are sixteen and twenty sheaves in a stook, which are exceptionally numerous. At Heckington one farmer has a wheat stack 6 yds. wide, 14 yds. long, and a good height, off twelve acres of land, which will provide plenty of work for one and a half days with the threshing machine. This is not an isolated instance by any means, and Mr. W. Daft and Mr. Bowser, two of the large farmers in the Fen district, admit that if the weather permits of the ingathering of the corn they will have what will, from present appearances, be a record harvest.

THE dispersal sale of the Baumber Park flock would have been quite one of the events of an ordinary week. For forty five years the Sharpe family have maintained and cultivated it, and they have helped to make some of the best traditions of the Lincolnshire rams. For instance, it was a shearling purchased from this flock which sired Mr. Henry Dudding's world famous 1,000 guinea ram, and Mr. Taylor Sharpe's sheep have for some years been prominent figures, both in the prize and in the price lists.

THE sale was a very successful one, and held in the presence of a big company. The best figures were made by the stud rams, seven of which made an average of £22 4s. Seventy three shearling lambs were sold, and made the aggregate of £723 9s., which is £9 18s. 2½d. each; 143 shearling ewes made an average of 78s. each, whilst 202 stock ewes fetched an average of 71s. 6d. The ram lambs numbered 107, and were sold at 3 guineas average, whilst 173 she lambs brought prices averaging 18s.

MR. TAYLOR SHARPE himself is retiring from farming. He takes a keen interest in the breeding of racehorses, and he intends devoting his skill and energy to the Turf.

THERE have been several shows this week. The Billingboro' and District Foal Show did not quite come up to that of the previous years in point of entry, the season not having been quite so good. But in other respects the show was a good one, and there were some splendid animals amongst the 135 entries. Billingboro' is keeping up its reputation for one of the best foal shows in the country.

THE annual sale in connection with the show brought between twenty to thirty Shire foals to the hammer, and they were knocked down at prices ranging from 12 guineas to 24 guineas. The best price was given by Mr. G. Balderston, of Mount Pleasant, near Boston, from Mr. A. E. Smith's (Surfleet) bay foal, which won third prize in the Cart colt class.

A SALE of sheep was also held in connection with the event. A well-selected lot of Hampshire Down ram lambs, from the flock of Lord Rothschild, at Tring Park, were sold at an average price of 6¼ guineas. The top figure—9 guineas—was given by Mr. George Redford, of Sempringham. Longwool rams were not much in demand, but theaves and lambs met with a good sale. Some very good pens of shearlings came under the hammer. The top price for shearlings was 62s. 6d., and for lambs as much as 42s. 6d. was realised.

DONINGTON foal show had a similar tale to tell. There was a smaller entry, but a very high standard of quality. The competition was keen both for the ordinary and the special classes, Mr. S. Leggatt, of Dogdyke, being the most successful exhibitor.

LAST week Messrs. Dickinson, Riggall, and Davy, acting upon instructions received from Mr. R. Botterill, offered for sale by auction a number of pure-bred Lincoln Longwool shearling rams on the premises of Tathwell Hall, near Louth. Some of the principal prices were as follows:—Ram by Tathwell Emperor 42nd, sold to Mr. J. Ward, Withcall, for 8 guineas; Emperor 38th to Mr. E. Ward for 13 guineas; Emperor 38th to Mr. E L. Stevenson, of South Thoresby, for 12½ guineas; Pillar Tathwell to Mr. J. E. Davy, of Tathwell, for 11½ guineas; Emperor 45th to Mr. C. B. Robson for 10 guineas; Emperor 39th to Mr. W. H. Hole Toder, of Louth, for 10 guineas. The sale realised 414 guineas.

SOME good prices for small estates were realised last week. Four lots at Wrangle, 12a. 1r. 24p. totalled £1,190; one lot of 2a. 1r. 1p., belonging to the Boston Charity Trustees, being sold for £230; and another lot of 3a. 3r. 38p., for £405. A Friskney estate, consisting of a house, buildings, and 9a. 1r. 9p., realised £950.

SMALL holdings are arousing trouble in South Lincolnshire. The people of Moulton Sea's End ward have sent to Earl Carrington a strongly-worded protest against the action of the Moulton Parish Council in setting out the land placed in their hands by the Crown authorities in Moulton Sea's End for small holdings, and praying that he would at once order an inquiry to be held; and, further, that he would endeavour to have the land set out so as to meet the needs of those who petitioned the Board of Agriculture in June last. They further request that the applicants for three acres and upwards be first considered, as at present only thirty acres is being set out for that purpose, the rest being let to those who have already several acres of land, and have no need for small holdings. The dispute is evidently a local one, and will doubtless be quickly settled by a local inquiry.

The annual sale of foals and sheep held at Billingborough took place on Wednesday, when between twenty and thirty Shire foals were offered, and prices ranged from 12 guineas to 24 guineas. A well-selected lot of Hampshire Down ram lambs from the flock of Lord Rothschild, Tring Park, were sold at an average price of 6¼ guineas. The top price for shearlings was 62s. 6d., and lambs realised 42s. 6d.

Plantation Reports.

Picking has actually commenced, and will be in full swing within the next few days. We have therefore passed out of the region of mere estimation, and are brought into contact with actual facts. But there is yet someroom for speculation as to the final issue of the crop, and this is expanded by the variations in weather and temperature recently experienced.

A week ago we were basking in sunshine, and calculating upon the beneficent action of the sun upon the cones. They would certainly be further developed and enriched, and the weight of the crop increased. Then came the searching winds and cold rains that for a few days made humanity shiver, and caused vegetation to shrink within itself. Down fell the faces of the experts, and the Borough was alarmed, most of the traders being disposed to yield to the adverse influence and to predict a very poor crop. Even the hopeful *Kentish Observer* has lowered the estimate to an average 8 cwt., giving a total of only 360,000 cwt. But as I write the outlook has again changed. Clear sunny skies are now above us and mild, warm airs around us. Although it is hardly possible that this more agreeable climate can now affect the hops to any great extent, we may take heart of grace and be thankful for the advantageous surroundings for the harvest. And from all I have heard during the last week I am not disposed to make any material alteration in my anticipations, but still hang on to a possible average of at least 9 cwt., with the chance of an approach to half a ton. I base my faith on the general improvement in all recent reports.

It is clear that the plantations were enriched by the sunshine and the warm rain, and I cannot think that any material damage was done by the two or three days and nights of cold weather, although it must be admitted they were very severe and trying. But there is vitality in the bine quite sufficient to resist such an attack. It has struggled through a succession of unpropitious conditions, and will pass from this temporary check without injury. There is some talk of the presence of red mould causing the necessity of some hops being picked prematurely, but I do not gather that there is any real ground for alarm in this direction.

With this exception all seems to be going quite as well as can be expected, and in many parishes the position is many degrees better than appeared possible earlier in the season. Several small lots of the new crop have made their appearance in the Borough. Their quality does not appear to be generally approved, but they cannot be accepted as fair samples of the crop, and we have every reason to believe that the bulk of the later growths will be satisfactory in every respect.

America.

In a letter just received from Messrs. Durst Brothers, of California, dated August 20, I am told that their picking would finish about August 27. Their crop comes out 2,500 bales short of last year, and they estimate that both Sacramento and Sonoma Counties will be considerably deficient. But it is anticipated that the quality will generally be very good. The reports from Oregon and Washington are conflicting, but their general tone points to the probability of a smaller crop than has hitherto been estimated. Mr. Durst points out the danger of the tightness of money, as many growers will be forced to contract at low prices to get funds. The stocks of 1906's being so heavy are depressing the outlook, but better times are hoped for.

Germany.

Experience, derived from the picking thus far, enables experts to declare that the quality of the crop will be exceptionally fine, and generally superior to the average of some years past. There are no definite reports yet available as to the coming down of the crop, but it is understood that growers are well satisfied, and are looking forward to a profitable season.

Burgundy.

Many gardens were severely attacked by blight during July, but the warmer weather in August cleared away the pests. Some of the hops still show the results of the attack, the remainder being vigorous and healthy, and promising a full average harvest. But, on the whole, the yield will not be heavy, probably hardly exceeding that of last year.

Bohemia.

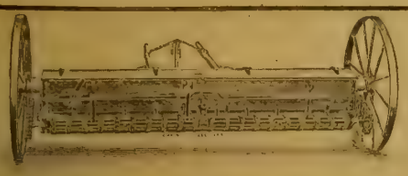
The cold weather prevailing during the period of the conclusion of the growth has caused the cones to close prematurely; they will therefore not develop further, and their weight will be decreased. Recent estimates are being reduced to the extent of at least 10 per cent. The crop thus far is coming down in excellent condition, and will as usual occupy the first position in the valution of Continental brewers.

Belgium.

A friend who has lately taken a tour through the hop-growing districts tells me that he has formed no extravagant estimate of the probable crop. His view is that Poperinghe will be deficient, and that Aloast, though promising better, will hardly be able to make up the shortage. He therefore estimates that the Belgian crop will hardly equal that of last year. In this respect my friend differs from my other correspondents, all of whom predict a crop from 15 to 20 per cent. heavier than 1906. We shall soon know which is most nearly correct.

Scientific Hop Curing.

It is clearly recognised that if our hop growers desire to satisfy the modern demands of their customers—the brewers, more exact attention than heretofore must be given to the theory and practice of the best methods of drying their produce. Brewers are now judging the value of hops not by appearance only, but by chemical tests, which investigate minutely many points that previously passed without notice. The slightest trace of impurity is sought for and detected, if existent, and the almost infinitesimal standard fixed by Government authority renders the acceptance of hops uncertain, and brings rejections within the range of frequent possibility. For all the annoying results of such rejections growers are alone responsible, as upon them rests the obligation to produce hops without any suspicion of taint or risk. As long as the cones hang upon the bine they are as Nature has formed them, natural and innocuous, but when the manufacturing or curing process commences the time arrives when they can either be made or marred. If treated carelessly they are speedily spoiled either by under or over drying, and if exposed to the fumes arising from the combustion of fuel, there may be imparted to them that noxious element, concerning which we have recently heard so much. This knowledge is inducing some brewers to refuse all hops that cannot be guaranteed as cured by pure heated air, and it may be foreseen that such conditions of purchase will be extended when the subject is more generally ventilated.



Our growers are, therefore, wisely looking round for the system that will most effectively and economically secure their hops from any of the dangers referred to. Mr. H. Wellband, of Otford Castle Farm, Kent, has installed Shew's patent Economic pure air plant in three of his kilns, and last week invited many of his fellow growers to inspect it. He very kindly included me, and I gladly responded by going down to Otford.

Being met by Mr. Wellband and the inventor of the system, we were shown the exterior of the oast, which are circular, and are not of modern construction. In the outer wall is fixed a fan 54 in. diameter, acted upon by an adjacent portable engine. From an inner air chamber three ducts direct the current of cold air to the furnaces, and shut-off valves are provided in case the whole of the kilns are not in use. Each kiln in a group can thus be worked independently of the others. Under the drying floor is fixed the air heater, which is constructed in cylindrical form of strong steel boiler plate. Upon the outer circumference of the fire-box is rivetted a series of cast iron gills which offer a very large heating surface to the air that is forced over and through them. The fire-door is closely fitted, and the only air admitted to the fire passes through the sliding openings in the ash door, enabling the draught to be regulated to a nicety. Slow and complete combustion, which means economy of fuel, is consequently secured. The heated gases from the furnace, pass into a chamber, where they are equally distributed through a set of eight radiating pipes made of cast iron, and fixed above the furnace in an angular and star-like arrangement. These being again united a little below the drying floor, a pipe is carried from them through the floor to the top of the kiln, whence the products of combustion, or at least what is left of them, are discharged. The jointings of the furnace and the pipes being all accurately made with asbestos, it is impossible for any of the fire fumes to come into contact with the hops, and the fire heat being practically absorbed and exhausted before it reaches the point of discharge, it is difficult to imagine a more economical plan. Under the conditions described, it will be understood that such fuel as costly anthracite is not required. Any fuel may be used, but gas coke is found to be preferable, at it is both inexpensive and smokeless, and also a good heat producer. The mechanical construction of the plant is strong and well designed in all its details, these and their durability being guaranteed by the makers, Messrs. Jones and Attwood, Heating Specialists, Stourbridge.

In working this apparatus, absolute control at every point is secured. The volume of cold air is regulated as already noted at the fan, it is then forced round the top of the furnace and through the gill plates, and travelling upward over the surface of the radiating pipes, passes through the load of hops at exactly such a temperature as may be desired. When the drying is completed, the opening of a door by the side of the furnace will admit a current of cold air, by which the temperature of the kiln will speedily be lowered and the hops cooled while resting on the hair cloth. Hops cured on this principle need not be turned during the drying and come off the floor whole and unbroken. With the assistance of a fan, such as we inspected, it is estimated that 40 pokes or 400 bushels can be thoroughly finished on a 15 ft. roundel in ten hours, the fuel required being about 15 cwt. per ton of dried hops.

Mr. Wellband and some forty other planters, who inspected the arrangement lately, expressed their complete confidence in its ultimate success, and Mr. Wellband desires me to add that he will be pleased for growers to examine the working of the system at any time during hop-picking. It has been adopted also by Mr. J. D. Large, of Goudhurst, and by several important growers in the Midlands, including Mr. W. F. Pudge, Bromyard; Mr. W. H. Gabb, Beauchamp Court; Messrs. Leeke, Bros., Malvern; Mr. C. Purser, Leigh; and others. The inventor's address is E. G. Shew, Cold Green, Bosbury, Ledbury.

A Foretaste of Winter.—Severe frost was experienced at Durham in the early hours of Wednesday, and wrought much damage to crops. This was not the only county that experienced such unusual weather, for in Cheshire two degrees of frost were registered, and in districts of North Shropshire and North Staffs a sharp frost was recorded in the morning, and did considerable damage to vegetation.

ARTIFICIAL MANURE
DISTRIBUTOR

will distribute Crushed Bones, Dissolved Bones, Nitrate of Soda, Superphosphate, Guano, Soot, Lime, Basic Slag, or any artificial manure in good condition.

ALL SCOTCH.

By this we mean that this BOOT is made in SCOTLAND on a SCOTCH LAST, and is of a special SCOTCH Tanned Leather.

14/6

Per Pair, Carriage paid.

Being thoroughly waterproof, it is admirably suited for THE FARMER. It is a Stitched Boot with outside counter, best hammered tackets, sole and insole waterproofed, and is made with that care necessary to ensure comfort and durability.

For work or pleasure we can recommend this Boot, and remember our experience of Farming Footwear extends over seventy years.

Send us a Postal Order for 14/6, stating size wanted, and by return of post you will receive a pair of our "ALL SCOTCH" Farmer's Boots.

E. BROWN & SON,
Farming Footwear Specialists,
313, ARGYLE STREET, GLASGOW.
Send for Price List, free on application.

SHOW GOSSIP.

We would remind intending exhibitors at the Frome Agricultural Society's forthcoming show that entries close on Wednesday next, the 11th inst. The secretary is Mr. T. C. Harding, auctioneer, Frome.

The Market Drayton and District Agricultural Society have arranged an attractive prize schedule for their eighth annual show to be held on Thursday, the 19th inst. Classes are provided for horses, cattle, sheep, pigs, leaping and turn-out competitions, butter, cheese, poultry, pigeons, and dogs, and in addition to liberal class prizes several specials are offered. The hon. secretary is Mr. T. Podmore, Market Drayton.

The Norfolk and Norwich Christmas Show Association have issued their prize schedule for the thirty-first annual fat cattle show, which is to be held at the Agricultural Hall, Norwich, on November 21, 22, and 23. The prize money offered comprises the following:—Eighteen classes for cattle, with prize money amounting to £304; champion and special prizes for cattle, £202; six classes for sheep, with prize money amounting to £84; champion and special prizes for sheep, £30; four classes for pigs, prize money £35 5s.; eight for roots and grain, £14; ten for dead poultry, £16; eighteen for butter, cheese, eggs, bread, &c., £38 12s. 6d.; for dinner table decorations, £5 15s. 6d.; sixteen classes for root prizes offered by various seedsmen, £45; or a total of £773 13s.

Increasing Expenditure for Local Government in Rural Districts.

The annual local taxation returns relating to rural district councils, parish councils, and other bodies entrusted with the duties of local government in rural areas, were published the other day in the form of a Blue Book. The report is a somewhat belated one, the return relating to the year ending April, 1905. They give, however, some indication of the extent and magnitude of the work being carried on by rural district councils. During the year under review there were 660 of these bodies, and the receipts (exclusive of borrowed money) amounted in the aggregate to £4,217,557, or an increase of £129,116 compared with the previous year. From rates £2,980,776 was obtained, grants under the Agricultural Rates Act amounted to £354,796, and other items made the aggregate mentioned above.

On the expenditure side the total was £4,201,787, or an increase of £158,597, the principal items being:—Maintenance, repair, and improvement of roads other than main roads, £2,164,767; maintenance, repair, and improvement of main roads, £445,085; other expenditure relating to highways, £158,896.

Altogether there were 101,844 miles of roads under the supervision of the rural district councils, the cost of maintenance per mile being—main roads, £62 12s.; ordinary highways, £22 1s.

The total expenditure defrayed out of loans during the year was £747,221, and during the year a sum of £813,959 was raised by rural district councils by means of loans. At March 31, 1905, the total amount of the outstanding balances of loans of rural district councils was £5,020,361.

The total receipts (other than from loans) of rural district councils during the year 1904-5 were greater than in any of the preceding four years, the total for 1904-5 being 23 per cent. in excess of that for 1900-1. The receipts from rates and from grants under the Agricultural Rates Act, 1896, which in 1900-1 amounted together to £2,670,784, and in 1904-5 to £3,335,572, show an increase of 25 per cent. The total expenditure, other than out of borrowed moneys, has increased year by year during the five years under review, and the total for the year 1904-5 exceeds by 21 per cent. that for 1900-1. By far the larger portion of the expenditure is in respect of highways. The amount expended on the actual maintenance, repair, and improvement of roads has increased continuously from £2,284,434 in 1900-1 to £2,592,087 in 1904-5, a total increase of 13 per cent.

Fertilisers and Feeding Stuffs.

Report of Principal Government Chemist.

The poor we have always with us, and so also are those traders who try to make an illegitimate profit by adulterating the articles which form the staple of their business. Fraudulent admixture no longer takes the simple old form of adding chalk and water to milk, but scientific processes are utilised. To keep in check this undesirable development the authorities have to employ quite an army of investigators. It is a case of diamond cut diamond, and the Government chemists have a difficult task to keep even with the fraudulent admixers.

During the year ending last March the total number of analyses and examinations made in the Government Laboratory was 173,606, against 158,939 for the preceding year.

For the information of the Board of Agriculture as many as 2,429 samples were examined in the Government Laboratory. Of these a large number were foreign butter samples; 937 samples were found to contain boron preservative, and 617 added colouring matter. In eighteen samples there was conclusive proof of adulteration with foreign fat, while eighteen other samples were of a very suspicious character. In thirty samples the butter contained water in excess of the legal limit. In forty-six cases proceedings were taken, and in thirty cases the importers were convicted and fined. The remaining cases were still *sub judice* when the report was issued. The result of these proceedings has been a great improvement in the character of the butter imported from certain parts of the Continent.

Butter.

Of the forty-two samples examined, the greater number consisted of prepared animal and vegetable fats to be used in the manufacture of margarine or for confectionery purposes. Two samples were ordinary margarine of commerce, and, being in packages not marked "margarine," proceedings were taken and penalties imposed.

Margarine.

Eighty-seven foreign samples were examined. Many of them had not been prepared from whole milk, but in the absence of any regulation as to the marking of cheese made from skimmed or impoverished milk, no proceedings could be taken.

Cheese.

Fifty samples of fresh milk, 131 samples of condensed milk, and eighty-three samples of cream from abroad were tested. Many samples of the condensed milk were found to have been prepared from skimmed or impoverished milk, without the packages being marked as required.

Milk.

Of the cream samples, fifty-six contained boron preservative, and forty-three also contained salicylic acid.

In view of the agitation some time ago on this subject, it is interesting to note that 1,268 samples of beer, wort, and materials used by brewers have been tested for the presence of arsenic. Of these forty-nine were found to contain it in exeess of the limits laid down by the Royal Commission on Arsenical Poisoning—namely, the equivalent of one-hundredth of a grain of arsenious oxide per pound in the case of solids, or per gallon in the case of liquids.

Arsenic in Beer.

Of the 132 samples of malt examined, two only exceeded the limit, the highest amount found being one-eightieth of a grain per pound. Of 711 samples of glucose, invert sugar, caramel, &c., only two exceeded the limit—namely, a sample of invert sugar which contained one-fiftieth, and one of caramel which contained one-seventieth of a grain per pound. The greatest amount found in any sample of wort or beer was one-thirty-sixth of a grain per gallon. The greatest amount found in any sample examined was one-fifth of a grain per pound, this quantity being present in an article intended for flavouring stout.

Under the provisions of the Fertilisers and Feeding Stuffs Acts, 1893, twelve samples have been examined—nine fertilisers and three feeding stuffs—and one sample of feeding stuff under the new Act of 1906. Of the fertilisers, three were basic slag, of which two were deficient as alleged, and one was not deficient; four were superphosphates, and in one case only was the sample equal to the guarantee; two were muriate of potash, and in neither case did we find the sample below the guarantee. The results in the case of the three feeding stuffs accord substantially with those of the past year's agricultural analyses. Under the new Act of 1906, which came into operation on January 1, 1907, the Board of Agriculture and Fisheries, as a precedent to giving consent to a local authority to take proceedings, submitted a sample of a feeding stuff which, according to the official agricultural analyst's figures, was much below the guarantee. Our results were in close agreement with those of the analyst.

Fertilisers and Feeding Stuffs.

Under the head of miscellaneous samples were some relating to materials used by a scientific butter adulterator. It is satisfactory to note that the importer was subsequently prosecuted and committed for trial on the charge of inciting to commit a felony. He failed to appear, and his bail of £800 was forfeited.

Miscellaneous.

Other samples of butter coming from a particular creamery were found to be adulterated. On the strength of evidence furnished by the Government Laboratory, search warrants were issued, and the entire process for the adulteration of butter was found in operation.

Manuring Seeds Hay.

A useful contribution to the literature on the best system of applying fertilisers to seeds hay has been made by the Edinburgh and East of Scotland College of Agriculture in the bulletin just issued. We extract the following:—

In manuring the hay crop, quantity alone must not be our sole object. In this we are often sharply reminded by the common query, Did you *nitre* it? In some districts, hay, if known to have received any nitrate of soda, is practically unsaleable. Undoubtedly, heavily nitrated hay has a diabetic tendency in animals, being specially harmful to horses. It is for this reason that purchasers of hay for town stables are afraid of hay that has received any nitrate of soda. It is well to remember that the quality of the hay is not affected by a moderate dressing of nitrate of soda. This quantity is variable, and will depend chiefly on the character of the soil, for, as a rule, the heavier the soil the more nitrate can be used without affecting the quality. Sulphate of ammonia has not the same forcing tendency on the crop, and consequently its use is not accompanied to the same extent by the evils mentioned above. By comparing the results we find little to choose between them in producing weight of crop. On the heavier soils nitrate of soda has usually given the better results, while on the lighter class of soils sulphate of ammonia has given the more satisfactory yields. The hay on plot 9A, which received 2½ cwt. of nitrate of soda per acre, was invariably inferior in quality, being soft and fibreless, while that on plot 9, which received just over 2½ cwt. per acre, showed also on the lighter soils a similar though less pronounced tendency. On the stronger soils no fault could be found with it. But our experience of the past three seasons' experiments is that the manuring of plot 7 is the one to be most recommended. It has consistently given good results. It has almost invariably been better than plot 2 (nitrate of soda) and plot 6 (sulphate of ammonia). It has the further advantage that the ingredients can all be mixed together and applied at one time, thereby saving the labour of a second application, as was considered advisable to be done in the case of plots, 2, 3, 4, 9, and 9A. The mixture sown on plot 7, as near as can be represented to the fraction of a cwt., is—

⅛ cwt. nitrate of soda.
⅝ cwt. sulphate of ammonia.
2½ cwt. superphosphate (30 per cent. soluble).
⅞ cwt. sulphate of potash (55 per cent. purity).

Generally this mixture has had a good aftermath, and in very few cases did it appear to have any injurious effect on the following year's grass. The small applications of nitrogen alone on plots 10 and 11 seemed to injuriously affect the aftermath more than that of any of the other plots, on which the accompaniment of phosphates and potash seemed to be a sufficient corrective, with the exception of plots 9 and 9A, which, it will be remembered, received very heavy dressings of nitrate of soda. This would indicate the advisability of sowing phosphates and potash along with the nitrogenous dressings, thereby preventing their exhausting effects. A further benefit derived from the use of a complete manure is the improved quality of the hay, which was generally quite apparent.

Summary.

1. This experiment in the manuring of seeds hay has been conducted for three consecutive seasons and at fifty-one centres.

2. The fertilising ingredient that has produced the largest weight of crop has been nitrogen.

3. Nitrogen, either in the form of nitrate of soda or of sulphate of ammonia, has given equally good results, and the best results from a mixture of the two.

4. The plots receiving the largest amount of nitrogen have given the heaviest crops, and, valuing their produce at the same rate as that grown on the other plots, they have given the best financial return. But generally it does not seem advisable to apply more than 2 cwt. of nitrate of soda, as the hay on plot 9 showed signs of deterioration in quality at a number of the centres, and that from plot 9A was inferior all round.

5. Phosphates and potash applied alone, and generally, too, in combination with nitrogen, have been remunerative. Their effect in preventing exhaustion of the soil, and in improving the quality of the hay, warrants their inclusion in any artificial dressing for this crop.

6. The mixture to be recommended as the one most likely to give general satisfaction is—

⅛ cwt. nitrate of soda (95 per cent. purity).
⅝ cwt. sulphate of ammonia (95 per cent purity).
2½ cwt. superphosphate (30 per cent. soluble).
⅞ cwt. sulphate of potash (55 per cent. purity)

Swede Manuring.

In some experiments on the application of fertilisers to the swede crop, conducted by the Cumberland and Westmorland Farm School, of which particulars are given in their eleventh annual report, it is shown that by far the best results are produced by a moderate complete mixture of artificials with a light dressing of dung, 8 loads = 6 tons to the acre.

The details of the application, in addition to the 6 tons of dung, are—

½ cwt. of nitrate of soda.
1 cwt. of kainit.
3 cwt. of superphosphate.

Costing 16s. per acre. This application produced 30½ tons' weight of crop.

Prices of Fertilisers.

The demand for fertilisers is now practically nil, and quotations merely nominal. But prices of the principal articles, such as nitrate of soda guano, superphosphate, basic slag, and bones remain on a firm level. The tendency of prices for some time has been on an upward direction, and this movement has not yet received a check.

Grass on Farms.

It is one of the most satisfactory signs of progress in the right direction that farmers are devoting much more attention to the proper cultivation of their pastures and meadows. These portions of the farm, too long treated with neglect, are now being managed in such a manner as to increase their valuable productive capacity.

Grass is indispensable on all well-regulated farms, and in its direct money value, and also in its collateral and indirect benefits, it is worth more to the world than all other cereal crops combined. Its direct is nothing to its indirect value in the influence it has in preserving the fertility of farms by its manurial wealth in many forms. No man can thrive on a farm, and no farm can be self-supporting, where grass is wholly neglected, or advantage is not taken of stock raised on grass farms. It is supposed by many that only such soil as is not fit for cultivation in the cereals or roots should be devoted to grass. This is a mistake. Farmers can afford to take their best soils for the production of this crop, and this is the real plan for bringing them up to the highest point of fertility.

In applying manure to the soil, aim to give the kind that the soil most requires. This may be known by careful observation of the kind and quality of the goods allowed the stock. The value of manure depends entirely on the materials of which it is composed. It is impossible to make rich manure from inferior feeding materials.

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in the first issue of each month.

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).

Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

June 1906.

Cakes and other Feeding Stuffs.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.		s. d.
Albuminoids	2 8	to	3 0
Oil or fat	2 8	,,	3 0
Carbohydrates	1 1	,,	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.			=	Feeding units.
Albuminoids	22·1	×	2½	=	55·2

FROM SLUM TO HOP GARDEN.

To go "'oppin dahn in Kent" means something to many a little gutter-bred youngster in the poor parts of the metropolis. It means a change and a holiday, which are, perhaps the first considerations of the young "hopper," but it means taking him into the fresh air, which puts a healthy tinge of colour into his pale face, and he is brought for a time into contact with a world that is natural, not artificial.

It is a strange mixed medley of humanity that journeys from London to Kent for the hop-picking in September, and one sees in it the influence that slum life has in depreciating human nature both physically and morally. The Eastender who goes into Kent for the hopping takes many of his vices with him, and the country folk are glad to be rid of him again; but he is not quite the same individual in the hop garden as he is in his native London alley. To begin with he must work, and he is under some kind of restraint, and days in the hop garden bring on a desire for sleep that he never appears to want at home.

In short, he is placed amid surroundings where the better side of him can be brought out if it is not entirely obliterated, and in speaking of the London hopper in these terms we do not refer to the quiet, respectable family who go down annually for the picking and come back better in health and pocket, but the material of the roughest order such as we have met in many a Kentish hop-garden.

THE CEREAL YEAR.

II.—FEEDING STUFFS.

British barley during the cereal year has averaged about £7 per ton, a price which it is difficult to regard as really profitable, seeing that scarcely any fields yield a full ton to the acre, and the straw is notoriously less serviceable than that of either wheat or oats. Barley-growing remains pretty nearly stationary with respect to the area occupied, but any substantial increase will need another 10s. on to the average price per ton to bring it about. The hope of attaining good malting quality and the need of barley for certain well-known crop rotations are the chief reasons why the area is about sustained. The idea that heavy manuring causes coarseness in the malting sample is by no means losing ground, in fact, the scientific grower is, if anything, coming into accord with the popular notion that barley land can easily be over-farmed.

Oats are now up to an average of £7 per ton, and as they yield more to the acre than barley, and the straw is more easily saleable, they should at this price pay their way. That farmers are more or less of this opinion is shown by the increased area under cultivation, but the increase is only 2½ per cent., and shows that the margin is not large or sufficient to bring poor land into the cereal area. The very low prices which were accepted for oats from September to January last had a depressing effect and a good deal was sown late, not indeed until the strong demand in March and early April had lent encouragement by forcing up prices.

Maize for the cereal year shows an average of about £5 10s. per ton, and closed the campaign with £6 per ton made at many of the inland markets. As the importer can usually keep for himself anything over a clear £5 per ton, the trade has been stimulated, and the imports of the twelvemonth have largely exceeded the need of 10,000,000 qr. The cheapness of the favourite small round variety has been a boon to poultry owners and to many others, but it is a cheapness which gives the Englishman's cheque to the Russian and Roumanian growers, people the least friendly to the English buyers. It is a pity that India does not grow maize for the English market more exclusively. Queensland, too, could grow enormous quantities, but the Labour Party in Australia is omnipotent at present and forbids the employment of coloured labour, while regarding field work by white men as rather beneath the dignity of the town loafer.

The foreign production of barley does not appear to be increasing, and Californian fine brewing barley has during the past twelvemonth crept gradually up in value until 30s. has been exceeded. The use of 3s. on the competing produce of the Pacific States is full of encouragement to English growers who can get their barley up to a fair malting standard. The great producing regions of Russia and

Roumania cannot grow barley above feeding quality, and India, Argentina, Australia, and New Zealand all keep outside the barley trade. The last two grow fine barley, and splendid samples may be seen at their London agencies, but either they use it all for their own beer-making, or else it is the product of a much smaller area than the public is allowed to know. The regions which could easily grow 10,000,000 qr. a year of bright and useful brewing and malting barley are Anatolia, Syria, and the North African Coast from Tripoli to Tangiers. All these regions are hopelessly hindered by the curse of Musulman ineptitude and business incapacity, but France is doing something for Tunis and Algeria.

The past year has thrown us very clear light upon the export surpluses of foreign oats, though the very small imports of the United Kingdom have been a main cause of maize selling so well, and have also led to the steady rise in the price of English oats during the last half of the cereal campaign. There seems to be no index to the price at which Russia and the United States, Canada and Argentina an profitably produce this cereal for ship-

London and the other English ports, though London remains the greatest buyer, doing nearly as large an import business in oats as all the other ports of the three kingdoms put together. The farmer in this juncture requires to keep his eye on one main fact. Only Canada seems able to grow 240 lb. oats at all, and the Canadians do not ship these oats in any quantity that can at all depress Mark Lane. The 304 lb. oats of America and Russia are poor feeding quality, and those of Argentine are even poorer than those from our other sources of supply.

The British grower, therefore, has only to get his oats up to 240 lb. level to be fairly safe as to value for them, while 336 lb. samples should never be at all unsaleable or need to be parted with under a fair price. All the talk about motor transport has only reduced our horses in number from 1,568,681 to 1,556,407, and all the investigations of experts in rations have only confirmed the truth that horseowners put in the oat as the very basis of stamina, the vital foundation upon which all equine dietary must depend for value.

Notes of the Week.

As sparks fly upward, so is man born to disappointments. When writing these notes last week, misled by a couple of days of sunshine, we vainly imagined that summer had come at last. Alas! it is autumn that has arrived.

It is not true that Mr. Roosevelt has offered to confer on Mr. Haldane, Secretary for State for the War Office, citizenship of the United States in recognition of his assistance to American industries.

Said Haldane, "To save is my creed,
And to put it in practice in deed,
I'll give Tommy a treat,
With Chicago canned meat,
And American shoes for his steed."

The continued advance in the price of coal and coke is causing much concern among the large number of horticulturists who supply the market with flowers and fruit grown in hot-houses.

For some years this class of trade has made enormous strides, but it will be hit hard this winter.

Will the love of this Government for parsimony prevent them from complying with the recommendation of the Royal Commission for a more liberal grant of money for the encouragement of horse breeding?

The Brazilian Government have expended during recent years considerable sums of money as bounties for rice cultivation. Result: instead of importing over 100,000 tons, the country now grows nearly all it requires.

This is very different from our important hop industry. During the last twenty years, as the result of foreign imports, 27,000 acres of hops have been grubbed up with a loss to British labour of about £500,000 a year.

The wet season has at least one compensation. The grass has grown so luxuriantly that good second crops of hay are being harvested.

Ichabod may be written over Barnet Fair. Its glory has departed from it.

In olden times it had a world-wide reputation, and horse dealers from all over Europe used to attend it.

It is a comfortable philosophy that every created thing has its uses. What is the use of wasps? The writer feels this subject acutely at present, having been stung by one of these pestilent insects.

Apropos of horseflesh, a morning paper writes: "We may confidently look to the substitution of tender colt for early lamb, and may yet appreciate a juicy joint of prime horseflesh in preference to stubs of beef."

For myself, I should feel almost like a cannibal, if I eat knowingly a piece of man's noblest friend.

The cry of Wolf, wolf, in Canada is too often a reality. In the far north-west regions they are becoming a scourge.

If caught in a thunderstorm, don't stand under a tree, but if a man should prefer the risk to getting drenched, select a birch tree and avoid an oak.

In some investigations made to test the proclivity of lightning for different trees, the result was—oaks 54 times, poplars 24, elms 14, firs 10, willows 6, beeches 6, but not a single birch.

Butchers, says a prominent health officer, should be compelled to place a mark on all frozen meat, so as to distinguish it from fresh meat.

In his opinion, frozen meat has one obvious disadvantage—in the process of thawing, water vapour and putrefactive bacteria may be deposited on the surface of the meat.

Sweet lavendar, sweet lavendar: all of us have a sentimental attachment to this sweet old plant. It is a pity that lavendar water and lavendar itself are going out of fashion, so that the growers on a large scale have fallen on hard times.

It is stated that 22,000 women, mostly the wives and daughters of farmers, have taken agricultural lessons at the New York State College of Agriculture.

Hop-pickers are now leaving London for the hop gardens in large quantities. It is to be feared they will have to rough it more than usual from the inclemency of the season and a poor crop.

Windmills are generally known to be of antiquated origin, but we wonder how many of our readers know that the earliest authoritative instance of a windmill in England was one which existed at Bury St. Edmunds in 1191.

Strolling into a grocer's shop the other day a little boy asked for half a pound of margarine. He was being served, and the shopman was about to wrap the margarine up in paper when he exclaimed:

"Please, sir, my muvver wants to know if you'll stamp a cow on it, 'cos we're having cump'ny!"

The Government of the Transvaal has commissioned M. B. Stilling Anderson, of Copenhagen, to organise an agricultural co-operative movement in South Africa on the lines of the Danish system. M. Stilling Anderson will leave for Pretoria shortly.

As a young bull from the show at Bingley Hall, Birmingham, was being put into a truck preparatory to being sent away, at New Street Station on Thursday afternoon, it broke loose and rushed at one of the porters, knocking him down and inflicting nasty injuries. The unfortunate man was removed to the General Hospital, where it was found he had received a scalp wound and other injuries to the chest, back, and arm. After being attended to he was removed in a cab to his home.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 10.—Hitchin Foa Show—Agricultural Shows at Buckingham, Ampleforth, and Woodstock—Sale at Wick Down, Marlborough—Fairs at Melton Mowbray, Wirkworth, and Ormskirk—Live Stock Sale at Maids one—Whitchurch Sale of Pedigree Berkshire Pigs—Sale of Farms at Romiley—Sending-in Day for the Frome, Ashbourne, and Southall Shows.

WEDNESDAY, SEPTEMBER 11.—Ripley Agricultural Show—Sale of Horses at Crewe—Agricultural Shows at Watton, Wolsingham, and Shaftesbury—Sale of Lord Gerard's Longhorn Cattle at Eastwell Park—Cardiff and Newark Horse Shows—Sale of Jerseys, Maidstone—Chichester Special Market—Fairs at Hindley and Bristol.

THURSDAY, SEPTEMBER 12.—Thame Agricultural Show—Fennington Live Stock Sale—Rotherfield Hall Sale of Pedigree Sussex Cattle and Southdown Sheep—Bellingham Show—Market Deeping Show—Brough and Warcop Show—Second Day of the Cardiff Horse Show—Montgomeryshire Annual Show at Welshpool—Great Sheep Sale, Lichfield—Great Sale of Leicester Sheep at Driffield.

SATURDAY, SEPTEMBER 14.—Tunstall Agricultural Land Sale, Norfolk—Sheep Sale, Caistor—Bowes Agricultural Show—Fairs at Reigate and Knighton—Sending-in Day for Shows at Pateley Bridge and Eggleston.

MONDAY, SEPTEMBER 16.—Holme Agricultural Show—Great Sheep Sale at Newton St. Boswells (Scots Border); 23 000 already entered—Fareham Great Market—Fairs at Gloucester, Boston, Newcastle-under-Lyme, and Hemel Hempstead.

Forthcoming Sales.

Messrs. Hy. Duke and Son, at Poundbury Fair, Dorchester, on September 26, will sell by auction 10,000 Dorset Horn and Dorset Down sheep. The drafts will consist of early-lambing ewes, as well as a good selection of flock sheep. Catalogues may be obtained of the auctioneers, Dorchester.

Messrs. W. and B. Hobbs will hold a sale of breeding ewes, tegs, and lambs at Newingreen, Kent (close to Westenhanger Station), on Wednesday next, the 11th inst., the catalogue consisting of 5,600 ewes, tegs, and lambs, including—2,149 Kent and half-bred lambs; 2,402 one, two, and three-lamb ewes; 465 Kent ewe tegs; 584 Kent wether and half-bred tegs. The sale will commence punctually at ten o'clock, and a good supply of trucks will be on hand, whilst every convenience will be made for the quick removal of the stock.

At Ashford, on Friday next, Messrs. W. and B. Hobbs will hold a sale of breeding ewes, tegs, and lambs at the Cattle Market field, the entries for this sale including 2,200 ewes, tegs, and lambs; 250 Kent and half-bred lambs; 1,000 one, two, and three-lamb ewes; 750 Kent ewe tegs; 200 Kent wether and half-bred tegs, including 360 capital Kent ewe tegs, for Mr. Robert Amos. Catalogues of the sale, which will commence punctually at 10.30, can be had of the auctioneers, Auction and Estate Offices, Ashford, Kent.

Seventy-five head of pedigree Aberdeen-Angus cattle will be offered for sale by auction without reserve at 50, Prussia Street, Dublin, on Thursday next, the 12th inst. The animals include the entire prize-winning herds belonging to the Marquis of Waterford, K.P., and Richard G. Nash, Esq., J.P. There will also be sold seven pedigree Hereford cows, heifers, and calves. Catalogues can be had on application to the auctioneer, Mr. Gavin Low, 50, Prussia Street, Dublin.

Two important sales of registered Hampshire Down sheep are announced by Messrs. Ferris and Puckridge to take place in the last week of this month.

On Wednesday the 25th at Maddington, near Amesbury, Wilts, the late Mr. H. E. C. Hooper's flock of 1,822 ewes and lambs, including 837 two, four, and sixteenth ewes and 900 Clulver and wether lambs, will be brought under the hammer, whilst on Friday the 27th at Eastridge, near Ramsbury, Wilts, Mr. G. L. Waldron, who has let the farm, 217 ewes of regular ages, and 111 Clulver lambs belonging to Mr. G. L. Waldron, will be offered in consequence of the farm being let.

Catalogues may be obtained of Messrs. Ferris and Puckridge, surveyors and auctioneers, Milton, Pewsey, Wilts; and 82, Queen Street, London, E.C.

LINCOLN SHEEP SALES

This was the twenty-second sale held by the Lincoln Sheep Society since these combination sales were instituted in 1892. The sale took place on Friday last, adjacent to the ground upon which the successful Royal Show was held last June, and its entry was full up to the allowed number, 400.

The consignors numbered thirty-nine, and represented as many, if not more flocks than at any previous sale. Amongst the more notable absentees were Messrs. H. Dudding, T. Casswell, and S. E. Dean and Sons, all of whom are, we understand, sold out of rams, and we believe it is the first occasion that Messrs. Dean have had no sheep on offer at this sale, a fact brought about by their having established an annual sale at home, the first of which took place last July.

Readers will be interested to note that the following have been the averages realised at these sales since they were established:—In 1892 it was £15 8s. 9d., in 1893 £13 13s. 2d., in 1894 £13 19s. 1d., in 1895 £19 6s. 1d., in 1896 £29 19s. 5d., in 1897 £23 1s. 3d., in 1898 £16 1s. 6d., in 1899 £14 11s. 1d., in 1900 £15 9s. 1d., in 1901 £11 4s. 3d., in 1902 £11 5s. 6d., in 1903 £19 15s. 6d., in 1904 £21 8s. 9d., in 1905 £19 7s. 5d., in 1906 £20 5s. 1d., and in 1907 £14 19s.

The arrangements of the sale were excellent, and right from start to finish no exception could be taken to the manner in which the several lots followed each other in the ring. The falling off in the average as compared with last year, when 376 head were sold against 351 this year, is a matter of regret, but in order that its true significance may not be misunderstood, we must state distinctly that more than half of the rams on offer were below the general average of merit found at these great annual sales. The best average of the sale, £42 14s., was realised by Mr. C E. Howard's, whose excellent lot of rams were in good request. The trio that were first in pen of three at the Great Yorkshire Show sold well—96 guineas to Mr. Hughes, 90 guineas to Mr. Aves, and 70 guineas to Mr. H. Casswell, a real good average. Messrs. Hughes also took two others at 40 and 29 guineas each. Another made 46 guineas to Mr. J. E. Casswell, followed by one at 41 guineas to Messrs. Tomlinson and Hayward. Mr. Waterhouse gave 35 guineas, and at 3 guineas less Mr. Tom Brocklebank secured a fine ram. Mr. R. Wright got one at 26 guineas, one at 25 guineas, and one at 16 guineas, whilst Mr. Drakes gave 25 guineas for another.

The Laughton twenty made an average of £32 17s. 3d. for Mr. J. E. Casswell, who is to be congratulated upon securing the top price of the sale, 155 guineas for his second ram, Messrs. Dean and Son were the purchasers, and Mr. R. Fisher the runner up. Another made 52 guineas, Mr. F. Ward getting him. Mr. R. Fisher's selection came well within its value at 44 guineas, Mr. Hurdman got one, a typical Laughton ram, at 35 guineas. Mr. S. Yarrad took one at 35 guineas also, whilst three made 26 guineas, to Messrs. A. A. Spilman, Jackson, and W. B. Swallow, who also gave 32 guineas for another. The average for the other twenty lot at this sale was £24 3s. 6d. This consignment was owned by Mr. J. Pears, the first ram of which was wanted by both Messrs. J. E. Casswell and P. and G. Hughes, but the former got him at 85 guineas, and a good ram it is. Mr. John Brocklebank gave 34 guineas, followed by one at 30 guineas to Mr. R. Fisher. A pair of fine stud rams, Mr. Allison's choice, cost him 26 guineas, that of Mr. G. Marris, 25 guineas. Mr. Cooper paid 24 guineas, and two went at 22 guineas to Messrs. J. Cartwright and T. Atkinson; 21 guineas was the price at which Messrs. Hughes got two, Mr. Searby gave 20 guineas, and the remainder ranged down to 8 guineas. Mr. W. B. Swallow's average for seven was £21 18s., prices ranging from 27 to 12 guineas, two made the first named price to Messrs. R. Dixon and Chatterton, and two others went at 24 guineas to Messrs. C. E. Howard and Jackson. Mr. W. Bayles sold ten at from 50 to 8½ guineas, making an average of £20 12s. 9d. The first mentioned sheep went to Mr. G. Spilman, another going to Mr. L. W. Stephenson at 30 guineas. Mr. T. Spinks' were a choice lot of seven and ranged from 33 to 12 guineas, with an average of £20 5s., Mr. Strickland taking one of the Royal winners at 28 guineas, but the highest priced ram was the last, which went at 33 guineas to Mr. F. Ward.

Messrs. Crowder and Sons' ranged in price from 32 to 10 guineas, giving in an average of 19 guineas, Mr. Fletcher taking the top-priced one. Mr. Yarrad's range of prices was from 22 guineas to 11 guineas, and average 18 guineas, two making the top price to Messrs. J. E. Casswell and Dean. Mr. Joseph Brocklebank realised an average of £16 10s. 6d., with average of prices from 33 to 8 guineas, Mr. James Cartwright paying the top price; two others made 23 guineas, Messrs. R. Chatterton and John Brocklebank being the buyers. Messrs. Needham's rams were in good demand; 61 guineas to Mr. F. Ward was the top price, Mr. J. Pears being the runner-up. From this figure the other ten ranged down to 7 guineas, making an average of 15 guineas. Mr. H. Goodyear averaged £14 11s. 6d. for eleven; Mr. R. M. Fletcher gave top price, 28 guineas, Mr. C. Clarke came next at 22 guineas, others made 17 guineas, &c., down to 8 guineas. The average for Mr. James Cartwright's fourteen was £14 8s. 9d., ranging from 22 to 10 guineas, Mr. Thurlby paying the first-named price. Mr. C. Featherstone averaged £14 6s., best price 17 guineas, to Major Pinder. Mr. C. M. Dickinson's eighteen were in good demand, and averaged £14 15s. 10d.; Mr. W. Ward was the principal buyer at from 24 guineas, the top price. Mr. R. Fletcher's lot averaged 13 guineas, his top price was 42 guineas to Messrs. Dean, of Buckingham. Mr. J. Brocklebank averaged for fourteen £13 2s. 6d., top price 23 guineas; Mr. Cecil Rudkin, for ten, £10 4s 9d., top price 17 guineas; Mr. G. Spilman, for seven, top price, 22 guineas; Mr. Charles Clarke, for fifteen, £9 7s. 7s., top price 11 guineas; Messrs. C. Hunsman, and Son, for twelve, £9 6s. 4d., top price 20 guineas; Mr. F. Smith, for seven, £9 4s. 6d., top price 13 guineas; Mr. Richard Richardson, for five, £8 17s. 3d.; Mr. John Blankley for seven, £8 9s. 6d.; Mr. John Blankley, jun., for five, £7 19s. 7d.; Mr. T. Campion for ten, £7 15s. 4d.; Mr. T. Crompton for five, £7 15s. 4d.; Mr. Tomlinson for seven, £7 13s.; Messrs. Watson for nine, £7 5s. 10d.; Mr. James Rudkin for six, £6 14s. 9d.; Sir J. H. Thorold, Bart., for seventeen, £6 12s. 2d.; Mr. C. N. Anderson for three, £5 19s. 1d.; Mrs. Wildsmith for seven, £5 18s. 8d.; Major-General Sir M. Wilson for seven, £5 17s.; the Exors. of R. Taylor for three, £5 15s. 6d.; Captain E. M. Grantham for four, £5 10s. 3d.; and Mr. E. Langdale for seven, £5 8s.

The general average of the sale being 351, sold for £5,258 17s., average of £14 19s. The auctioneers engaged were Messrs. Dickinson, Riggall, and Davy, Escritt and Barrell, T. B. Richardson and Son, Saul and J. E. Walter.

THE GIMMER SALE.

This was the first year in which the Lincoln Longwool Sheep Society had arranged for a sale of yearling ewes. The date fixed was Thursday last in the afternoon preceding the annual ram sale. The entry was not a large one, nor was the sale a success; it may be, if continued, the fixture will become a recognised one, but if this is to be so, a much larger number of entries must be secured and the sheep must be of that merit that will induce the breeders to come for them; unless this can be done it will be better to drop the sale entirely, rather than to make it one at which butchers can come and get registered yearling ewes at prices about on a par with those current in the fat stock markets.

Mrs. Wildsmith's consignment of twenty in four lots realised 63s. and 61s. to Messrs. Kent, and 63s. and 62s. to Mr. Rudkin. Thirty from Mr. G. Hoyles were of good merit, 97s. 6d. being paid by Messrs. Hughes for export for the first five, Mr. Kent giving 62s. for the next lot, and 57s. for the last lot, Mr. Morris taking two lots at 62s. and 61s., and Mr. Philips one at 60s. Twenty from Messrs. C. Hunsman sold as follows:—58s. and 54s. to Mr. Rudkin, 57s. to Mr. Kent, and 56s. to Mr. Gamble. Six from Mr. W. H. Pate's went to the Argentine, Messrs. Hughes giving 92s. for them. Twenty from Sir J. H. Thorold

The Southdown Ram shown above is the animal with which Mr. C. R. W. Adeane, Babraham Hall, near Cambridge, won the First Prize for two Shear Rams, and the Southdown Sheep Society's Special Prize for the best Southdown Ram or Ram Lamb, at the Bath and West Society's Show at Newport this year.

sold to Messrs. Else at 63s., Mr. Gamble at 61s., Mr. Wilmot at 64s., and Mr Gamble at 59s. Mr. S. Yarrad's two lots went to Mr. Pate at 73s. and to Mr. J. Redmore at 72s.

FAIRS AND SALES.

Bristol.

Bristol September Fair was held on Thursday, when a large number of ram lambs were offered by auction, and about 140 of these came under the hammer of Messrs. Geo. Nichols, Howes, Young, Alder, and Co. There was a large company of flockmasters from all parts of the West of England, and the prices realised were well up to the usual average.

The first lot offered comprised fifteen pure-bred Oxford Down shearling ram lambs from the well-known Crudwell flock, of Malmesbury, the property of Mr. J. H. Large. There was a fair competition, and the prices realised were from 6 to 9 guineas. The next lot offered comprised 50 Hampshire Down and cross-bred ram lambs from Mr. Jeffrey Matthews, of Crossley Farm, Winterbourne. The thirty-five cross-bred ram lambs made from 5 to 15½ guineas, whilst the Hampshire Down ram lambs made from 7 to 12 guineas, with an average of 8 guineas. For the forty-one cross-bred ram lambs from the Cleve Hill flock, belonging to Mr. Henry Bridgman, of Downend, there was good competition, all excepting one being sold at prices ranging from 4½ to 16 guineas. A lot of twenty Hampshire Down lambs was offered from the Burcombe Manor flock, the property of Mr. G. Cairnes Waters, and these made from 5 to 12 guineas.

Bury St. Edmunds.

The annual sheep fair at Bury St. Edmunds took place on Tuesday, when the numbers were quite up to the average, whilst there was a large attendance of buyers and a capital trade. Chief interest centred in the sale at Messrs. Simpson and Sons' Mart, where a good consignment of sheep was disposed of, including 320 Suffolk, Oxford Down, Cotswold, Lincoln, and South Down rams, and about 5,300 Suffolk and half-bred ewes and lambs The sale commenced with the Suffolk rams. From the Marquis of Bristol's flock, at Ickworth, seven lambs were put up. One was knocked down at 13 guineas, two others at 12½ guineas, one at 10 guineas, and the three others went for 9½ guineas, 9 guineas, and 6½ guineas. The first-named figure was the top price for the breed, and it was also obtained by Mr. R. Burrell, of Westley, for one of his lots; whilst other consignments of Suffolks made up to 11 guineas.

In a separate ring Mr. Salter sold a number of Southdowns, Oxford Downs, Cotswold, and Lincoln rams. Six Southdown shearling rams from the Earl of Cadogan averaged 4½ guineas each, the top price being 5½ guineas, whilst a ram lamb fetched 42s. 6d. Twenty-three Oxford Down ram lambs from the celebrated Kelmscott flock, the property of Messrs. R. W. Hobbs and Son, sold for 108½ guineas, the prices ranging from 6 guineas to 4 guineas. Four cross-bred ram lambs, by Oxford Down rams, from Hampshire ewes, were sold for 3½ guineas and 3 guineas each. Eight Cotswold lambs, bred by Mr. F. Craddock, of Eastington, were sold at prices ranging from 7½ guineas to 3 guineas, whilst seven shearling rams were knocked down at from 6 guineas to 4½ guineas, Mr. Baker purchasing the seventeen animals. Seventeen similar ram lambs, bred by Mr. Russell Levanwick, of the Royal Agricultural College Farm, Cirencester, fetched from 8 guineas to 4½ guineas, and three shearling rams from the same breeder sold for 3½ guineas. 4½ guineas, and 5 guineas. Fifteen Lincoln Longwool ram lambs, the property of Messrs. S. E. Dean and Sons, Dowsby Hall, Bourne, from the registered flock No. 47, were knocked down at prices ranging from 7 guineas to 4½ guineas, whilst four Lincoln shearlings, bred by Mr. Johnson, Morden, were sold at 7½ guineas and 8 guineas.

There was a good trade for the ewes and lambs; Mr. R. T. Simpson conducted the sale. Taken throughout, the shearling ewes were a very good lot. Of Suffolk shearling ewes, from the Marquis of Bristol's Home Farm, Ickworth, ten made 80s. per head, and three score made 73s., 71s., and 69s. per head. Mr. F. Cady, Long Melford, sent about eleven score shearlings, a very fine and level lot, most of which sold at from 78s. to 71s., the lowest pen making 66s., the average for the consignment being over 75s. Numerous other lots sold at prices up to 74s. A consignment of Southdown draft ewes, from the Earl of Cadogan, averaged 46s. Of the lambs, Suffolk ewes made up to 57s., half-breds to 48s., and crones to 48s. 6d.

Chichester September Sale.

On Wednesday last Messrs. Stride and Sons held their annual September sale of Southdown ewes, ewe lambs, rams, ram lambs, &c. The entry was a large one, and it was of unusual importance because included in it was the whole of the flock owned by Mr. F. Elmer Speed, at Goodnestone Park, Dover. The attendance at the sale was a very large and representative one, buyers being present from Nottinghamshire, North and South Wales, Cambridgeshire, Suffolk, and several of the Southern counties. The demand experienced for the ewes and ewe lambs was a particularly good one, whilst for the better class of rams and ram lambs it was satisfactory.

The result of the sale in the aggregate was that 2,115 head were disposed of, realising £5,277.

Turning to the details of the sale, we refer in the first place to that of the Knowleton Court Flock, and we find that the 61 yearling ewes averaged £3 9s. per head. The top price for a lot of ten was 100s., to the Duke of Devonshire, others making 65s., 62s., &c.

The four-tooth ewes averaged £3 12s., half of them going to Mr. Hall in Cambridgshire at 86s. The six-tooth ewes numbered twelve, and these went to Sir J. Wernher at £5. The full-mouth ewes, for which there was keen competition, averaged £3 1s., the Duke of Devonshire giving £5 15s. for the best pen.

The ewe lambs, which numbered ninety-five, made 39s. 10d. per head. Mr. Kenderdine paid 56s. for the best pen, to go to Mr. Fletcher's at Dale Park.

The stud rams averaged £6 0s. 9d., the yearling rams £8 11s., Mr. Street taking two of them at 13 guineas and 10 guineas.

The ram lambs were in request, and the twelve averaged £7 9s. 3d., Mr. Allan Cooper buying one at 13 guineas. Mr. Eversfield bought one at 12 guineas, and Mr. Twogood Parsons one at 10½ guineas.

The draft ewes entered by the various consignors other than the above numbered 583, and gave an average of £1 18s. The prices ranged from 53s. to 26s. 6d.

The four and six-tooth ewes numbered 463, and they averaged £2 10s. per head, a notably good average for so large a number. A pen from the Duke of Devonshire's made 65s.; others 59s., 56s., and so on down to 40s.

The yearling ewes numbered 119, and they averaged £2 15s. 1d. Another notably good average, individual pens making 65s., 60s., 56s., 52s., and 50s. The ewe lambs averaged £1 12s. 3d. for 180, the wether lambs £1 14s. 2d. for 220, and the wethers 33s. per head.

Turning to the ram sale, the number sold of yearling rams was sixty-four at an average of £6 9s. 3d. The best averages were:—Colonel A. F. Walter, eleven at £8 3s. 2d.; the Duke of Richmond, four at £7 7s.; the Duke of Devonshire, ten at £7 2s. 10d.; Mr. Allan Cooper, nine at £5 16s. 8d.; &c.

The fourteen stud rams, which ranged in price from 7 guineas, averaged £4 6s. 3d. The 106 ram lambs averaged £4 3s. 10d. Sir J. Wernher's ten sold well. They were a choice lot and averaged £6 7s 11d. Colonel Hammond's three averaged £6 16s. 6d.; Sir H. Audrey Fletcher averaged £4 11s. 10d. for four, the Duke of Devonshire £4 18s. for three, Mr. Stanford £4 19s. 9d. for six.

Amongst the other breeders who consigned rams or ram lambs were Messrs A. Heasman, T. W. Thorpe, O. H. Ellis, exors. of G. Peel, H. Paynter, P. Herrington, E. J. Reddaway, T. Bushby, &c.

Cirencester.

The September Sheep and Ram Fair at Cirencester took place in very wet weather on Monday, when there was a supply of about 4,000 sheep, which met a quick trade, and nearly all changed hands. Mr. A. F. Hobb's important consignments of Oxford Down ram lambs met with such another sale as in 1905, when all the rams were sold. Thirty from Messrs. R. W. Hobbs and Sons, Kelmscott, averaged £7 5s. 9d., the highest price being 10 guineas given by Mr. Hodgkins, Ireland, and others made 9, 8½, 8 guineas, &c. Fifteen from Mr. W. T. Stevens, Banbury, averaged £5 13s. 9d., one going to Mr. Robinson at 8 guineas; seventeen from Mr. W. J. P. Reading, of Langford, averaged £6 5s. 4d., top price 9 guineas, and twenty-five from Mr. William Arkell, of Kempsford, made an average of £5 18s. 7d., highest price 10 guineas. Twenty-five from Viscount St. Aldwyn, Williamstrip Park, averaged £7 10s., the highest price, 13½ guineas, being given by Mr. Howard Organ, of Cubberley, other buyers being Mr. Taylor, Easton Corsham, at 12½ guineas, Mr. Pike, Adderbury, Banbury, at 11½ guineas and 10 guineas, whilst twelve from Mr. Philip E. Frank, of Fulbrook, his first draft, averaged £5 9s. 6d.

Mr. James W. Tayler sold thirty six Oxford Down ram lambs, including twenty from Mr. James Horlick, Cowley Manor. These, being young lambs, met with a ready sale, and averaged £7 1s. 6d., whilst Mr. Akers, of Black Bourton, sent sixteen extraordinarily good strong lambs, which met with a keen competition and averaged £9 16s. 10d.

Mr. C. F. Moore also sold some good rams, the chief sales being as follow:—Fourteen Cotswold ram lambs from Mr. John Fowler, Aston Farm, Avening, average 5 guineas; Mr. Hugh Baker, of Manor Farm, Chedglow, twelve Oxfordshire Down ram lambs, average 4 guineas; Mr. J. H. Large, Crudwell Manor, ten Oxfordshire Down shearling rams, average 9 guineas (highest price was 12½ guineas); Mr. T. Rich, of Aldsworth, twenty-five Oxfordshire Down ram lambs, average £5 10s.

Hereford.

Messrs. A. and D. Edwards held the second of this season's sales of ram and stock ewes, in the Hereford Market on Wednesday, when there was a good attendance of buyers, and satisfactory prices were realised. Shropshire ewes made from 41s. to 56s., the best prices being made by Mr. A. P. Turner, The Leen, who sold ten yearling ewes at 55s., ten two-years at 56s., and ten three-years at 53s., to Mr. A. Hodgetts; Mr. B. Parry Jones, Lyde, who sold twenty three-years at 55s. to Mr. Meredith, Worcester, and the same number at a similar price to Captain Waters, Kingstone; whilst Mr. W. Allsopp sold ten three-and-four-year-olds at 55s to Major Parry, Harewood. The other breeds, Radnors, Kerry and cross-breds made from 23s. 6d. to 47s. 6d.

A large number of rams were also sold, the best priced lots being as follows:—Mr. P. Turner, The Leen; shearling rams—Mr. Newman, Wickton, 8½ guineas; Mr. Howells, Leinthall, 13 guineas; Sir John Cotterell, 9 guineas; Mr. J. Murch, Huntington, 12 guineas; Mr. Maddocks, Abergavenny, 11 guineas; Mr. P. H. Foley, Stoke Edith, 10 guineas; Mr. Williams, Garway, 8 guineas; Lord Llangattock, 9 guineas; and Sir John Cotterell (2) 9½ guineas and 9 guineas. Messrs. Jones and Moor, Henwood: shearling rams—Charles Goodwin, Burghill, 5½ guineas; Mr. Price, Crickhowell, 7 guineas; Mr. William Leake, Felton, 6 gs; Mr. Plevy, Westhope, 6 guineas; Mr. D. Edwards, 6 guineas; Mr. Like, Bishopstone. 6½ guineas; Mr. H R. Evans, Court of Noke: shearling rams, Mr. Ward, Much Marcle, 7 guineas; Mr. Ward, Mainstone, 6 guineas; Mr. Bishop, Tarrington, 7 guineas. Messrs. Jones and Moore: shearling rams, Mr. John Rogers, The Hill, 5 guineas; to Mrs. Hart, Moreton, 7 guineas; Mr. Partridge, Eardisley, 6 guineas; Mr. D. Edwards, 5 guineas; Mr. Morgan, 7 guineas; Mr. Roberts, Norton, 5½ guineas; Mr. G. Goodwin, 6 guineas; Mr. Pudge, 5 guineas.

Ipswich.

The second sale at Ipswich this season of Suffolk sheep from registered flocks took place on Friday at Gippeswyk Park, and notwithstanding the drizzling rain of the morning, there was a large attendance of buyers. The entries of ewes and ewe lambs were somewhat shorter than usual at this sale, but there was rather an increase in the number of rams, over 300 being penned. Nearly all of these were disposed of. Mr. R. Beaumont Bond opened the sale with the ewes, afterwards being assisted by Mr. Fred. G. Bond with the rams. The ewes sold remarkably well, Mr. Arthur Juby, of Brandeston, securing the highest price, viz., 107s. 6d. for a pen of two-shears, while Mr C. T. A. Robinson's went up to 102s 6d., a good average being maintained.

There was a good demand for the rams, considering the quantity entered. Those sent by Mr. J. W. Eagle, Walton-on-the-Naze, excited, as usual a good deal of attention. One made 16 guineas, another 10 guineas and a third 9 guineas. A nice ram lamb from Mr. S. R. Sherwood's flock, by Casseur, fetched 12 guineas, and two others 9½ guineas and 9 guineas. The bidding for the consignments from Mr. D. Abbot Green was very spirited, one going at 18, two at 15 each, a third at 14, and others from 11, 10, and 9½ guineas. Mr. Herbert E. Smith, Walton Grange, had a small lot, the prices realised being 13, 12, 10, and 9 guineas. The best of Mr. Alfred J. Smith's shearling rams ranged from 10 guineas downwards. Mr Thomas Goodchild, Great Yeldham Hall, sent some nice ram lambs, one (by Fingringhoe Grange I.), being knocked down at 14 guineas, whilst numerous other consignments sold at prices ranging up to the last mentioned figure.

Mr. G. Morris's Lincolns.

Some capital prices were realised at the sale of Lincoln shearling rams belonging to Mr. George Morris, Kirmington House, Brocklesby, on Wednesday. The best was 200 guineas realised for a typical specimen of the breed by Riby St. George, a sire of Mr. Henry Dudding's breeding, and it was to this gentleman that the animal was eventually sold, though there was keen competition. One of the second prize pens at the Royal Show at Lincoln was also in great demand, and was not sold until 68 guineas had been bid by Messrs. P. and G. Hughes, who were purchasing for the Argentine, and they secured, amongst others, another fine ram by the same sire as the 200 guineas animal, the price paid being 58 guineas. Yet another by Riby St. George went at 40 guineas to Mr. H. L. Barker Lambcroft, Mr. R Challerton gave 39 guineas for a son of Riby Jubilant, and other good sales were:—Mr. J. Atkinson, 30 guineas; Mr. Beachill, 20 guineas; and Messrs. C. and G. Hughes and Mr. H. L. Barker at 21 guineas each, the former buying two at this price. Others made up to 15 guineas, and the average per head for the ninety-eight shearling rams was the good one of £13 17s. Twelve shearling ewes were also offered and Mr. J. B. Nelson, Bigby, brought nine, six at

5 guineas each and three at 5½ guineas, whilst Mr. F. Ward took the other three at 4½ guineas apiece.

Mr. R. Botterill's Lincolns.

A number of choice pure-bred Lincoln Longwool shearling rams belonging to Mr. R. Botterill were sold byauction at Tathwell Hall, Louth, in the presence of a large company of buyers. The sale realised 414 guineas, the chief prices being as follow:—Ram by Tathwell Emperor 42nd, Mr. J. Ward, Withcall, 8 guineas; Emperor 41st, Mr. J. W. Ward, 13 guineas; Emperor 38th, Mr. E. L. Stephenson, South Thoresby, 12½ guineas; Pillar Tathwell, Mr. J. E. Davy, Tathwell, 11½ guineas: Emperor 45th, Mr. C. B. Robson, 10 guineas; Emperor 39th, Mr. W. H. Hole Toder, Louth, 10 guineas.

Peterborough.

Peterborough Ram Fair took place on Wednesday, when the numbers forward were smaller than usual, though exactly the same number of breeders were represented as last year. For good rams bidding was keen, but the poorer lots met with practically no demand. Hampshire Down rams were the most sought after, prices ranging from 5 guineas to 15 guineas. There were a few Oxford Downs and Lincolnshire Longwools, the latter ranging from 5 guineas to 10 guineas.

The chief consignments and prices realised were as follow:—

Mr. J. H. Dobben, Bishopston, Salisbury.—Mr. F. W. Griffin, Bore Fen, 15 guineas and 11½ guineas; Mr. J. Measures, 8 guineas and 7½ guineas; Mr. T. H. Vergette, 13½ guineas, and two at 8½ guineas; Mr. Newton, Grantham, 9½ guineas; Mr. Wiseman, Weston, 9½ guineas; and Mr. Bromhead, 10½ guineas and 8½ guineas. Others from this flock made up to 7½ guineas.

Mr. A. F. T. Drake, Dogdean, Salisbury.—Mr. T. H. Vergette, 5½ guineas, 11½ guineas, and 11 guineas; Mr. Neilson (for Lord Chesham), 8½ guineas and 7½ guineas; Mr. Bowser, 8½ guineas and 10½ guineas; E. Lord, Houghton-on-the-Hill, 11½ guineas; Mr. G. F. Rowley, St. Neots, 10 guineas; and others up to 5¾ guineas.

Mr. C. A. Scott Murray, Hambledon, Henley-on-Thames.—Mr. Baker, 6½ guineas; Mr. Harris, Tinwell, 7½ guineas; Mr. F. Holmes, 7½ guineas; Mr. John Hays, Warmington, 13½ guineas; Mr. V. H. Bettinson, Waternewton, 9 guineas; Mr. J. Fabling, Fotheringhay, 10½ guineas and 9½ guineas; Rev. W. Hopkinson, 11½ guineas and 9½ guineas; Mr. T. H. Vergette, 11 guineas; Mr. A. Whittome, 9½ guineas; and Mr. Milligan, 9½ guineas. Others up to 6½ guineas.

Mr. T. F. Buxton, Water's Place, Ware, Herts. Mr. E. Saunders, 7¾ guineas; Mr Greenfield, 11½ guineas and 9½ guineas; Mr. Wilders, Grantham, 10 guineas; Mr. Longstaff, 13 guineas; Mr. Lamming, 8 guineas; and Mr. Hampton, 9 guineas. Others up to 7 guineas.

Sir Richard Rycroft, Kempshott Park, Basingstoke.—Mr. E. Brand, two at 4½ guineas; Mr. W. Franks, three at 4 guineas; Mr. J. Whitsed, 5 guineas and 4¾ guineas; Mr. A. Wright, 4½ guineas; and Mr. J. Thurlby, Barton, 5 guineas and 4¾ guineas.

Sale of Southdowns.

The old-established herd of pure bred Southdown sheep, numbering 510 ewes and 410 ewe and wether lambs, belonging to Mr. E. G. King, North Stoke, Amberley, was disposed of by auction on Tuesday, together with 20 Southdown ram lambs from the registered flock of Mr. John Tompkins, Angmering. There was a good attendance of buyers, and bidding throughout was brisk. Shearling ewes averaged 59s. 10½d.; four-tooths, 62s. 8d.; six-tooths, 60s. 10½d.; full-mouthed, 53s. 8½d.; draft, 42s. 4d.; ewe lambs, 35s. 9d.; wether lambs, 36s. 9½d.; ram lambs, £7 7s. 7d.

Shrewsbury.

A successful sale of Shropshire sheep was held by Messrs. A. Mansell and Co. at Shrewsbury cattle market, about 1,500 rams and ewes being offered. There was a large attendance of breeders and flockmasters, and satisfactory prices for good rams were realised. One ram, the property of Mr. J. J. Brewin, realised 40 guineas to let for the season, whilst sales were effected at prices ranging up to 18½ guineas, the sales being as follow:—

Rams.—From Mr. C. Blatherwick, the Beam House, Ensdon, Montford, Shrewsbury, shearlings, 7 to 14 guineas; Sir Walter O. Corbet, Bart., Acton Reynold, shearlings, 5½ to 9½ guineas; Mr. J. E. Farmer, Felton, Ludlow, shearlings, 7 to 10 guineas; Mr. T. S. Minton, Montford, Shrewsbury, shearlings, 11 to 18½ guineas; Mr. T. G. Juckes, Tern, Wellington, shearlings, 7 to 10½ guineas; the Duke of Sutherland, Lilleshall, shearlings, 10 to 16 guineas; Mr. J. J. Brewin, Whitehouse, Barnston, near Birkenhead, 25 to 40 guineas (let); Mr. F. Bell, 5 to 19 guineas; Mr. P. Everall, 8 to 13 guineas; Mr. J. H. N. Walford, Ruyton Towers, ram lambs, 75s. to 80s.

Ewes.—From the representatives of the late Mr. W. Nevett, shearlings, 65s. to 90s.; Captain D. H. Mytton, Garth, Welshpool, shearlings, 51s. to 52s.; Sir Walter O. Corbet, shearlings, 95s. to 107s. 6d.; Messrs. C. and W. Kellock, Highfields, Audlem, shearlings, 77s. 6d. to 80s.; Mr. J. H. N. Walford, shearlings and stock ewes, 52s. 6d. to 59s.; Mr. F. Bell, 40s. to 54s.; Mr. E. J. Frank, shearlings, 57s. to 61s.

Truro.

A large number of registered South Devon rams were disposed of by auction at Truro Moor Field yesterday. There was a large attendance, and prices were very good.

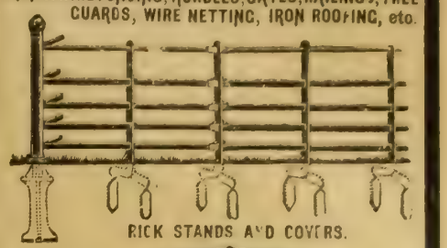
Messrs. M. L. Blamey and Son had the largest consignment, forty-six being offered under their hammer. No. 1 of the flock of Mr. G. A. Northey, Gwarnick, Truro, fetched £7 16s. 1d.; ten from the flock of Mr. W. Lanyon, Treludderow, Newlyn East, averaged £10 9s. 4d., the highest price 12¾ guineas; fourteen from Mr. F. Kendall, Bodrugan, Mevagissey, averaged £9 10s. 3d., the highest price being 11¾ guineas; and ten from Messrs. J. Jennings and Son, Treworrick, Mevagissey, averaged £8 10s., highest 10¼ guineas.

Mr. W. H. Brewer offered twenty-one as follow:—From Mr. R. H. Ward, Menna, Brighton, seven hog rams, average £6 15s.; Mr. J. C. Lawry, Tregarton, Gerran, eight hog rams, average £7 10s.; Mr. J. A. Spry, Tregamenna, Ruan High Lanes, six hog rams, average £9 2s. 6d.

Messrs. Henry Thomas, Son, and Co. disposed of thirty one. From the flock of Messrs. J. P. Matthews and Sons, Blerrick, Antony, four hog rams averaged £12 3s., the highest fetching 13 guineas; four ram lambs averaged £3 5s 6d, top price 4 guineas; from Mr. Antony Williams, Penberthy, St. Hilary, ten hog rams averaged £6 5s, top price 9 guineas; from Mr. Wm. Tippett, The Barton, North Petherwin, six hog rams averaged £5 7s. 1d., highest 5½ guineas; and from Mr. E. H. Roberts, Bodinnick, Grampound Road, seven ram lambs averaged 9 guineas.

The Duke of Richmond's Southdowns.

The Duke of Richmond and Gordon's Southdown hill flocks, comprising about 2,200 Southdown sheep, in regular flock ages as follow:—about 270 shearling ewes, 470 four teeth ewes, 360 six-teeth ewes, 530 full-mouthed ewes, 90 draft ewes, and 500 lambs, were brought under the hammer at the Manor Farm, Singleton, on Thursday, in the presence of a large company of buyers. All the animals were from the Singleton, Charlton, East Dean, Droke, and New House Farms, on the Goodwood Estate (these farms having now been let), and, as may be imagined, they were brought out in first-class condition. There was brisk bidding and very satisfactory prices were obtained throughout, the average prices working out as follow:—Shearling ewes, 58s. 10d.; four teeth ewes, 63s. 6d.; six-teeth ewes, 61s. 11d.; full-mouthed ewes, 51s. 6d.; draft ewes, 36s. 7d.; lambs, 33s. 2d. Shearling ewes made up to 65s, four-teeth ewes to 100s, six-teeth ewes to 71s., full-mouthed ewes to 65s., and draft ewes up to 42s. 6d, whilst the lambs fetched from 31s. to 32s. 6d.



The Baumber Lincolnshires.

The celebrated flock of Lincolnshire Long Wool sheep belonging to Mr. W. Taylor Sharpe, J.P., of Baumber Park, near Horncastle, was sold by auction on Tuesday. The flock has been in the possession of Mr. Sharpe for forty-five years, and had been bred by the Sharpe family for three generations. A shearling ram, purchased from the flock by Mr. Henry Dudding, sired his 1,000 guineas Royal champion ram at York, and Mr. Sharpe's rams have always met a ready sale in Lincolnshire fairs and markets. There was a very large attendance at the sale and good bidding, the result being that 173 ewe lambs averaged 48s. each; 143 shearling rams, 78s.; 202 stock ewes, 71s. 6d.; 107 ram lambs, 63s.; and 73 shearling rams over 9 guineas each. The chief prices for the rams were as follow:—Pedigree shearling rams: Mr. W. Wood, 12 guineas; Mr. G. C. Sharpe, 30 guineas; Mr. R. Botterill, 15 guineas; Mr. Robinson, Spilsby, 16 guineas; Mr. Cartwright, Keddington, 26 guineas; Mr. Smith, Coningsby, 12 guineas; Mr. Park, Westmorland, 15 guineas; Mr. J. B. Nelson, 31 guineas; Mr. F. Scorer, 17 guineas; Mr. J. H. Gaunt, Waddingworth, 16½ guineas and 15 guineas. Stud rams: Leconfield Return, which cost 85 guineas in 1906, Mr. G. C. Sharpe, 36 guineas; Arnold Return, which cost 45 guineas in 1906, Mr. R. Botterill, 14 guineas; Baumber Wholesale, Mr. G. Sharpe, 40 guineas; Baumber Duke, Mr. G. Langdale, 15 guineas; Dexthorpe Champion, Mr. G. Morriss, 26 guineas.

Sheep Worrying.—During the last week farmers in the Ousby district of Cumberland have suffered much loss owing to sheep worrying. Over thirty have been attacked within a small radius, and of these nineteen were killed. A peculiar feature of the case is that four of the carcases were found down an old mine shaft with soil thrown over them.

At the Chester Horse Fair on Thursday there was an average supply, with a smaller proportion of high-class animals. Harvest operations affected both supply and demand, and business proved irregular. Good horses realised the full prices of last month; trap horses, £14 to £30; good cart horses, £25 to £45; and best dray horses, £35 to £70 each.

Cattle consigned to Ireland's, Norwich, will be properly fed and carefully attended to.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.
Norwich, Norfolk.

By Messrs. HY. DUKE & SON.

10,000 DORSET HORN and DORSET DOWN SHEEP.

POUNDBURY FAIR, DORCHESTER.

MESSRS. HY. DUKE & SON will offer for SALE by AUCTION, on THURSDAY, SEPTEMBER 26, their usual IMPORTANT DRAFTS of

EARLY-LAMBING EWES,

as well as a good selection of

FLOCK SHEEP.

Catalogues may be obtained of the AUCTIONEERS, Dorchester, who undertake to act for distant purchasers.

By KENT SHEEP BREEDERS' ASSOCIATION.

REGISTERED KENT OR ROMNEY MARSH SHEEP.

THE Eleventh Annual SHOW and SALE of the Kent or Romney Marsh Sheep-Breeders' Association will take place at the Cattle Market, Ashford, Kent, on FRIDAY, SEPTEMBER 27, 1907, at 11 a.m. prompt.

The prizes offered for competition at this Sale include a Challenge Cup, presented by the Vice-President (Lord Harris), for the best Ram other than a Yearling; the L. Hardy Challenge Cup, presented by L. Hardy, Esq., M.P. (the President); the Cooper Challenge Cup for the best five Yearling Rams, presented by Sir R. P. Cooper, Bart.; and cash prizes presented by Capt. Somerset Webb (the President Elect) and Messrs. C. E. Gunther, J. Howard and F. Neame, and in addition to these there is also offered a Special Prize for the best Woolled Ram.

In consequence of the offering of these valuable prizes the entry this year is comprised of a large selection, numbering 500, representative of the best strains of blood, and it includes many of the leading Rams of the year, and represents the pick of thirty-seven Registered Flocks, owned by the undermentioned flock-owners:—

The Right Hon. Earl Sondes (12), the Right Hon. Earl of Verulam (16), the Hon. Lord Harris (25), Major Powell Cotton (4), Capt. Somerset Webb (10), Mr. E. Ascharson (8), Mr. A. Amos (28), Mr. J. P. Barnes (12), Mr. J. B. Blake (4), Mr. G. Buley (8), Mr. F. de B. Collard (9), the Exors. of the late W. Elvy (10), Mr. G. Farmer (21), Mr. Chas File (17), Mr. J. File (13), Mr. T. File (6), Mr. Arthur Finn (20), Messrs. L. H. and G. W. Finn (11), Mr. O. E. d'Avigdor Goldsmid (2), G. M. Goodson (6), Mr. E. Hambrook (5), Mr. L. Hardy, M.P. (9), Mr. J. H. Harvey (4), Mr. W. R. Harvey (9), Mr. G. E Hawkins (7), Mr. A. J. Hickman (6), Mr. S. Kingsnorth (9), Mr. W. E. Long (11), Mr. J. D. Maxted (15), Mr. W. Millen (30), Mr. F. Neame (24), Mr. J. B. Palmer (7), Mr. J. E. Quested (34), H. Rigden (50), Mr. G. C. Swindells (25), Mr. H. Walters (3), and Mr. T. Wotton (10).

The judging for the prizes will commence at 8.30 a.m. sharp, the first prize to be awarded being that for the best pen of five Yearling Rams, and the Sale will commence at 11 a.m. sharp, and proceed without intermission to its close.

Lunch and refreshments will be obtainable on the Show-ground, as usual.

Catalogues, when ready, can be obtained from Mr. W. W. CHAPMAN, the Secretary, Kent or Romney Marsh Sheep-Breeders' Association, 4, Mowbray House, Norfolk Street, Strand, London, W.C., to whom all enquiries in respect to this Show and Sale are to be addressed.

By Messrs. JOHN THORNTON & CO.

IMPORTANT SALES OF PURE-BRED STOCK.

JOHN THORNTON & CO. will SELL by AUCTION as follows:—

FRIDAY NEXT, SEPTEMBER 13.—About 100 SHORTHORNS, at Chipping Norton Junction, Oxfordshire.

WEDNESDAY, SEPTEMBER 18.—Mr. W. Arkell's SHORTHORNS, at Kempsford, Fairford, Glos.

WEDNESDAY, SEPTEMBER 18.—The Hon. Mrs. Howard's JERSEY CATTLE, BERKSHIRE PIGS, and SOUTHDOWN SHEEP, at Dutchlands, Great Missenden, Bucks.

FRIDAY, SEPTEMBER 20.—About fifty first-class SHORTHORNS, the property of Joseph Harris, Esq., at Brackenburgh Tower, Carlisle.

TUESDAY, SEPTEMBER 24.—Mr. R. Bruce Ward's JERSEYS, at Westwood Park, Droitwich, Worcestershire.

THURSDAY, SEPTEMBER 26.—Mr. J. A. Preece's SHORTHORNS, at Drayton Home Farm, Thrapston.

FRIDAY, SEPTEMBER 27.—Mr. F. J. Steward's SHORTHORNS, at Whitehall Farm, Brigstock, Thrapston.

TUESDAY, OCTOBER 1.—Mr. G. T. INMAN'S BERKSHIRE PIGS, at Highmoor Farm, Henley-on-Thames.

THURSDAY, OCTOBER 3.—Col. Tufnell's and Mr. W. Dannatt's POLLED ABERDEEN-ANGUS CATTLE, at Langleys, Chelmsford, Essex.

FRIDAY, OCTOBER 4.—Mr. R. Stratton's SHORTHORNS, at The Duffryn, Newport, Mon.

Catalogues may be had of JOHN THORNTON & Co., 7, Princes Street, Hanover Square, London, W., who will execute commissions.

By Messrs. FERRIS & PUCKRIDGE.

SALES OF REGISTERED HAMPSHIRE DOWN SHEEP,

BY

MESSRS. FERRIS & PUCKRIDGE, of MILTON, near PEWSEY, WILTS.

ON WEDNESDAY, SEPTEMBER 25.—At Maddington, near Amesbury, Wilts, the late Mr. H. E. C. Hooper's Flock of 1,822 EWES and LAMBS, including 837 two, four, and sixteenth EWES and 900 Clulver and Wether LAMBS.

ON FRIDAY, SEPTEMBER 27.—Eastridge, near Ramsbury, Wilts, by instructions of Mr. G. L. Waldron, who has let the farm, 217 EWES of regular ages, and 111 Clulver LAMBS.

ON MONDAY, OCTOBER 7.—Chute Lodge, near Andover, for A. Grant Meek, Esq., who has let the farm, 320 EWES of regular ages.

All the above sheep are registered in the Hampshire Down Flock Book, show much nobility of breed, and are generally of good size and quality.

Catalogues may be obtained of Messrs. FERRIS and PUCKRIDGE, Surveyors and Auctioneers, Milton, Pewsey, Wilts; and 82, Queen Street, London, E.C.

By Messrs. AMBROSE & FOSTER.

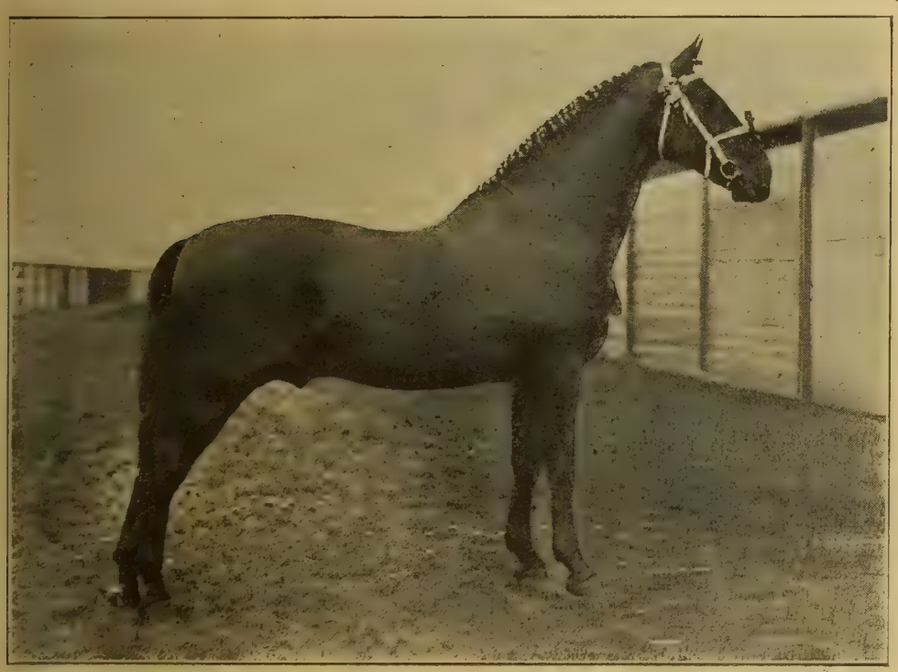
Catalogues on application to GAVIN LOW, 50, Prussia Street, Dublin.



The Royal Commission on Horse-Breeding

The Judges' Report—A Conference—The Weakness of the System—Expenses—Reputation—A Lost Stallion.

THE report of the Royal Commission on Horse Breeding has just been issued, and it affords very interesting reading. Whether it is altogether satisfactory or not may however be well questioned. It is stated that the interest in the show is as great as ever. This understates the case rather than otherwise. Allowing for the special attraction which a new departure always brings in its train, it may be fairly said that the interest in the show of Thoroughbred stallions increases year after year. I do not think that, in my time at any rate, there has ever been so much general interest shown in the breeding of light horses as there is at the present day. I would like to hope that this interest is increasing, and that it will continue to increase. And if this is the case, naturally the winners of the King's Premiums will attract more and more attention every year—and more criticism.

The Judges' Report.

IT is perhaps worth while to compare the reports of the judges last year and this. In 1906 the judges said that "taken as a whole the stallions showed great improvement over those shown in former years, and that a majority of the horses had more bone and substance and truer action than the horses of previous years." This year the judges were more guarded in their remarks, saying generally that the horses exhibited were of a good stamp in the majority of the classes. It is within the recollection of those who watched the proceedings carefully when the judging took place in the Agricultural Hall last March, that many of the classes were very uneven in character and that some of the Premium winners were very lucky indeed to get where they did, and that they were by no means the class of stallion that it is desirable to send round the country. Of course, with horses of such a long pedigree as Thoroughbreds it is always possible that a horse may sire good stock, even if he is not a very good-looking or desirable horse in himself; but, speaking broadly, it will certainly be surprising if some of the districts benefit much from the Premium horses sent into them this year.

The Coaching Stallion, Breaston Prince, sire Beacon Prince, dam Zuleika, winner of First Prize at the Yorkshire Agricultural Society's Show at Barnsley. It was exhibited by Mr. F. H. Stericker, Westgate House, Pickering, but was bred by Mr. Watson, Breaston, Derbyshire.

A Conference.

LAST year there was a conference between the Royal Commission on Horse Breeding and the Board of Agriculture. At the conference the Royal Commission pointed out that under present conditions horses had to cover too wide a district, and the consequence was that the result was not what it should be, and that many breeders were to all intents and purposes out of the reach of the Premium horses. Nothing has come of the conference. Horse breeding being of national importance it naturally gets put to one side, and the Royal Commission was sanguine indeed if it expected that the scheme would receive any useful enlargement at the hands of a modern Government. What we have to do is to make the most of the pittance that is allotted to us, and taking it on the whole I think it may fairly be said that this is done.

The Weakness of the System.

IT is not possible to devise a perfect system of subsidised stallions, and for the very obvious reason that the rights and even the prejudices of owners must be considered. All sorts of hard and fast rules—rules as immutable as the laws of the Medes and Persians—have been suggested. It has been urged that the horses should all be shown in one class, and that the twenty-eight best horses should be selected for the premiums and allotted to the different districts. I have heard this plan advocated with some heat, and perhaps it does not look well on paper. It may be said, and is said, that it is an anomaly that a horse should should take a premium that is not half as good as one that is passed over altogether in another class. There is some justice in the remark, and it is true enough that the twenty-eight premiums do not go to the twenty-eight best horses that are shown. But any hard-and-fast rule in this direction, or any rule which would place the horses entered at the disposal of the Royal Commission, would have only one result—no entries.

Expenses.

A GRAND old Yorkshireman of my acquaintance once said that if he wanted to ruin a man he would give him a Thoroughbred stallion and make him keep and travel him, and that if one did not prove sufficient for the purpose he would give him two. My friend's experiences with Thoroughbred stallions were certainly not of a satisfactory nature, but without going so far as he did, I would point out that for the owner of a Thoroughbred stallion that travels the country the expenses are certain and heavy, the receipts precarious, and the risk great. And the farther from home the horse has to travel the greater are the expenses. So it is not to be wondered at that many men who willingly enter their horses to travel in the Midlands, in Yorkshire or the home counties, or within reasonable distance of their own homes, would have a very serious objection to sending their horses and servants a long distance from home, even if the premium were considerably larger than it is at present.

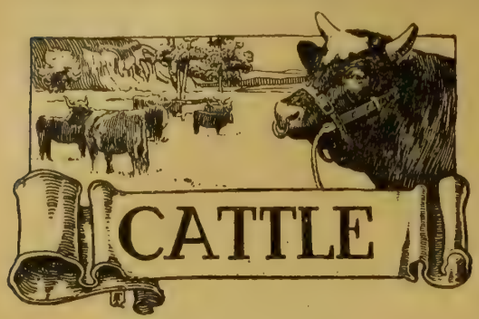
Reputation.

THERE is a circumstance which the owner of Thoroughbred stallions takes into serious consideration when he is making his entries which the general public is apt to overlook. And yet it is one of the greatest importance to the owner of the horse. I refer to the selection of a district where the horse is likely to make a reputation or to greatly enhance one that has already been made. A district in which high-class mares are to be found, and where the mares are more or less in the hands of men who are likely to show the produce if it is good enough, is naturally selected. A district, too, in which there is a chance of Thoroughbred mares is always favoured by the owner of stallions. A happy accident may at any time lift a horse from a two-guinea fee to a ten or twenty-guinea fee, or even more. Grey Leg was an exceptional case. It was only because of the Duke of Westminster's generosity that he ever came to be a King's Premium horse at all, and the same may be said of the generosity of other owners of exceptionally good King's Premium stallions. But the ordinary exhibitor wishes to make money of his horse, and he naturally wishes to make as much money as possible. And the more he is considered—the greater the opportunities that are afforded him of making the best of his horse, the larger the entries are likely to be and the better the class of horses shown. This is a fact which should be borne in mind by all who have to do with the Royal Commission on Horse Breeding.

A Lost Stallion.

A STALLION that was thrown away for the greater part of his life was Traveller by Partner, dam by Almanzor, grandam by Grey Hautboy. He was bred by Mr. Osbaldeston in 1735, and was the winner of several plates. Then, somehow—how history does not relate—he got into the hands of first one poor man and then another, and finally he drifted to Yarm-on-Tees. When there he served country mares at a fee of a few shillings, and no doubt put a good deal of quality into the Cleveland Bays of the day. Many Cleveland Bays trace their descent back to him; and had it not been for an accident he would have ended his days at Yarm, and been no more than a tradition amongst stallion horse grooms and a few breeders who might remember that their "sort" strained back to the old son of Partner. But it so happened that the Duke of Cleveland had been much impressed by the Hunters he had seen by him: so much so, that he went to see him, and finally decided on sending his fine mare Slighted by All to him. The result was Dainty Davy, who was foaled when his sire was seventeen years old. Dainty Davy was undoubtedly one of the best horses of his day, and drew attention to Traveller, who was afterwards the sire of several very good horses. I am not quite sure what became of him. I have an indistinct recollection of his having been sold for £200 or £300, but of this I cannot be quite sure.

THE LOOKER-ON.



Sale of American Harness Horses.

There was a capital attendance at a sale of American harness horses by Mr. Douglas H. Grand at Hendon on Tuesday, and a good trade. Mr. Withers paid the top price, 180 guineas, for a well-matched pair of bay geldings. Messrs. W. J. Smith and Co. secured two fine pairs for 140 and 110 guineas respectively. Messrs. Donay and Bartlett, of Paris, purchased several lots, including a handsome red roan gelding, which fetched 100 guineas; whilst a blue roan went to Mr. Megregor for 95 guineas.

Some smart harvesting work is reported to have been performed by a Great Bentley farmer. He sold a quantity of oats by sample to a Glasgow firm, as they were standing in shocks in the field. They were immediately carted to the machine and threshed, conveyed by barge to London, and before eight o'clock the next morning had been unloaded into a Carron steamer for Scotland.

Mr. T. W. Russell, M.P., Vice-President of the Irish Department of Agriculture, has appointed a committee to inquire into certain matters relating to the improvement of forestry in Ireland. The committee consists of Mr. P. Gill (chairman), Lord Castletown, Mr. William Redmond, M.P., the most Rev. Denis Kelly (Bishop of Ross), Mr. Hugh de Fallenburg Montgomery, Mr. Commissioner Bailey, Mr. William Rogers Fisher, M.A., and Professor John R. Campbell. The committee will commence its sittings in October.

The seventh congress of the International Co-operative Alliance is to meet from September 22 to September 25 at Cremona. The first subject to be discussed is "The National Organisation of Agriculture on a Co-operative Basis," to be introduced by the Danish Minister of State, M. Högsbro, and M. Raineri, president of the Union of Italian Agricultural Co-operative Societies. There will be another communication, emanating from the Executive Committee, on the general lines to be followed in agricultural organisation and on the relations to be cultivated between the agricultural and other forms of co-operation.

Notes and Jottings.

GENERALLY speaking, all classes of cattle are very healthy this season, but just at the present time that nasty scourge, hoose or husk, is rather playing havoc with the spring-reared calves, and those that are low in condition will in many cases have considerable difficulty to get over it. No time must be lost in administering some of the many remedies that are advertised and known, and every possible means must be taken to keep up the strength of the animals. A well-bedded open shed for them to go in at night is a capital thing, where they can have a pound each or so of linseed cake per day and a little sweet hay. Also the water supply should be pure and clean. If a good spring is available it is very helpful, but even then care is necessary that the animals are not allowed to foul it with their feet or droppings.

I BELIEVE the question of water supply is not often sufficiently considered where rearing young calves is concerned. I recollect many years ago reading an account of an Irish veterinary surgeon's views upon this disease, wherein considerable stress was laid upon the water supply, the writer of the article giving it as his opinion that impure water was a far more fruitful cause of the disease than any other circumstances, and I well recollect how, upon reading the article, I had a spring of pure water conducted into a trough in the field where my calves were, and ever afterwards that field was specially saved for the calves, and attacks of hoose were very rare afterwards, though prior to the improved arrangement for water a season rarely passed without giving a good deal of trouble and often loss.

ALL calves of the present year will need attention earlier than usual this season, whether hoose is prevalent or no. The coldness of the nights has been quite phenomenal, freezing point having been reached several times in some cold localities during the last three weeks. With healthy calves a yard to lie in and a little hay to pick at their option will be sufficient except where rapid growth is desired, in which case some good linseed cake or a little crushed oats and chop will assist greatly in pushing the animals forward.

THE announcement that our cattle census this year falls short of last year's numbers by some 98,000 head will cause considerable uneasiness in the minds of most people who are interested in this branch of the live-stock business. Many times we have urged upon farmers and breeders the advisability of rearing a certain number of well-bred calves each year, and thus keeping up a supply for their own needs as well as helping to keep up the national supply. If the calves cannot for any reason be bred upon the farm, they might easily be purchased from some of the best herds of general purpose dairy Shorthorns. These make excellent feeders, and can be brought up when home reared in a manner most suitable to the requirements of the farm upon which they are bred or reared.

IT is a very singular thing, but certainly true, that in many parts of the country the young stock that are available for purchase are of simply a wretched description, possessing neither quantity nor quality. Why this should be in these days of increased numbers of pedigree bulls in use is quite difficult to understand. Possibly the fact that a good number of the stock that are offered in the markets when a year old have been brought up by very small farmers who have purchased them at the local auctions for rearing, too often taking the lowest-priced ones on account of the initial outlay. This is a very bad policy to pursue. A well-bred, healthy, good-coloured calf, bought at anywhere between £2 and £3, will leave more for profit behind it than a mongrel purchased for £1.

THE great and continuous demand for milk in our villages, towns, and cities has no doubt a good deal to do with the falling off in the number of cattle. When all the milk is sold off a farm direct from the cows the difficulty in rearing calves is rather great to contend with, and though some people have proved very successful in rearing upon calf foods or other substitutes for milk, a good deal of care and trouble is necessary that some farmers rather begrudge or leave to their inexperienced men, or even when in the hands of experienced herdsmen these are often too much handicapped with having more work to attend to than they can do properly, and so the young calves, being to all appearances of less consequence than the other cattle, have to put up with a certain amount of neglect.

Birmingham Autumn Shorthorn Show and Sale.

The growing importance of the autumnal Shorthorn show and sale at Bingley Hall, Birmingham, was again evident last week, for instead of a one day fixture as it used to be, two days (Wednesday and Thursday) were necessary, the judging being completed and the cows and heifers sold on the first day, whilst the second was devoted to the sale of the bulls. The entry was 477—a record number for the autumn fixture—and of this number 202 were bulls, 275 cows and calves, whilst there were 63 cows with calves at foot. Nearly all the leading Shorthorn breeders were represented, and a feature of the sale was the inclusion of Mr. R. W. Hudson's well-known herd of fifty-one head from Danesfield, Marlow, Bucks. Mr. Hudson has been a very successful breeder and exhibitor of late years, but he has now decided to retire from the field, and the fact that he is letting his land has necessitated the dispersal of his herd. The high esteem in which it is held by breeders was proved by the animals from the herd making the best prices. There were good attendances of both home and foreign buyers on both days, and the event proved a most successful one. Details of the owners and prices obtained in the various classes follow:—

Cows and Heifers.

The cows and heifers were divided into four classes, and in each there was a capital entry both as regards numbers and quality. The best class was that for cows or heifers exceeding three years old, for these numbered 163, and included many animals of exceptional merit. The judges gave the first prize to Lord Sherborne's Florodora, a useful seven year old, but she sold cheaply, Mr. Beech giving only 57 guineas for her, and the best in the opinion of buyers was Mr. R. W. Hudson's Beauty Oxford, a beautiful roan heifer, three years old, and with an exceptionally long pedigree. For her bidding was particularly brisk, and it was not until Mr. Holford bid 180 guineas that she was knocked down to him. The second prize taken in this class was Primula 65th, a seven-year-old, the property of Mr. H Turner, Worcester, and she was sold to Colonel Beech at 37 guineas, whilst for 23 guineas Mr. Foljambe secured the third winner, Welcome Lady, also seven years old, shown by Mr. C H. Joliffe, Darlington. Much better prices were obtained for other animals in the class. For instance, Mr. Hudson sold Maisie 2nd, with her twin calves, for 148 guineas, Sir O. Mosley being the buyer, and for his reserve animal, Apple Blossom 9th, a red seven-year old, and her calf, he got 116 guineas, the purchaser being Sir R. P. Cooper. Mr. Hudson also sold the following amongst others in this class:—The commended Duchess of Barrington 55th, Mr. Hazell, 52 guineas; Hambledon Kirklevington Lady 3rd and her calf, Mr. Kellock, 85 guineas; Snow Queen and her calf, Mr. George, 95 guineas; Duchess of Barrington 70th and her calf, Mr. Dean, 70 guineas; Duchess of Kirklevington 2nd and her calf, Mr. H. M. Webb, 65 guineas; Lady Ruth 2nd and her calf, Sir O. Mosley, 66 guineas; whilst Lady Fedora Fawsley and her calf went to Mr. Dean for 99 guineas. Other animals entered in this class from various herds made up to 51 guineas.

The best of the thirty-three two-year-old heifers in the opinion of the judges was Dr. Vaughan Harley's Notlaw Bridesmaid, a beautiful roan, and she came in for keen competition at the sale, being eventually secured by Mr. Eccles at 105 guineas, but for the reserved animal, Mr. Hudson's well-bred Danesfield Lady Bates, Sir R. P. Cooper had to give 125 guineas. The second prize taker, Furbelow, shown by the exors. of Mr. John Naylor, Welshpool, fetched only 30 guineas (Mr. George) but Lord Calthorpe got 40 guineas for his Murthly Eliza, sold to Mr. Munro, and Mr. Hudson sold Danesfield Kirklevington Lady for 63 guineas to Mr. Scott Murray.

Yearling heifers numbered close on sixty, and made a splendid class. The first prize was given to Captain Clive Behrens for a pretty roan named Swinton Georgina, and she realised 52 guineas from Mr. Blundell, whilst second honours went to Mr. Hudson for Danesfield Barrington, who, at the sale, quickly ran up to 80 guineas, at which figure she fell to Mr. Dean. Mr. Hudson also sold Danesfield Barrington 2nd to Mr. Holford for 59 guineas, and Danesfield Kirklevington Lady 2nd to Mr. Kellock for 45 guineas, whilst Mr. Horlick got 47 guineas from Mr. Munro for Marigold.

The judges gave the first prize for heifer calves to Lord Sherborne's Fairy Footstep which was sold to Mr. Steward for 27 guineas, the second prize winner, Mr. Haley's Whitewall Ann 4th, going to Mr. Bass at 30 guineas, whilst Capt. W. B. Harrison got 40 guineas for his highly commended Allershaw Golden Duchess, but top price of the class was got by Mr. Hudson for Danesfield Bertha, Mr. Holcroft giving 46 guineas for her.

Bulls.

The prices obtained for the bulls did not rule so high as for the females, the demand being nothing like so good, and many bulls went very cheaply.

The top price in the class for bulls exceeding eighteen months old was 100 guineas, which was given by Mr. Duborg, a Danish buyer, for Mr. R. W. Hudson's third prize taker Earl of Yewden 16th, a roan son of Rotherfield Augustus, and calved in January, 1906. The first and second winners—Mr. John Handley's Cumberland-bred Silverspoon and Mr. C A. Hewitt's (Ledbury) Scotch-bred Guard well Duke—went for the insignificant sum of 26 guineas each Mr. Poels bought several good animals in this class for the Argentine. He gave 66 guineas for the Earl of Carnarvon's Prince Joseph 45th, and 48 guineas for Miss Alice de Rothschild's Waddesdon Cherry Startle. Mr. Bucha, a German representative, paid 61 guineas for the same exhibitor's reserved bull Waddesdon Seagull; Sir Richard Cooper purchased Brimming Measure, shown by Mr. R. H. Thompson, Penrith, for 50 guineas. Lord Lilford from the herd of the Hon. W. F. D. Smith, Greenlands, Henley-on Thames, for a like amount, and the highly-commended Lotherton King, an exhibit of Mr. T. Winter, Aberford, Leeds, for 56 guineas.

There was an entry of 118 in the class for bulls between twelve and eighteen months old, and the highest price was 130 guineas, paid by Mr. George Harrison for Mr. Hudson's second prize roan bull, Danesfield Storm King. The first prize winner, Fylde Lord, the property of R. Silcock and Son, Poulton-le-Fylde, was sold to Mr. Bucha for 45 guineas, and this gentleman bought several cheap bulls for Germany. The Hon. W. F. D. Smith's reserved bull, Duke of Buckingham 8th, went to Mr. Duborg for 53 guineas; Longley Count, which took fourth ticket for Mr. W. S. Dowding, Longney, Gloucester, to Mr. Watkin Jones for 41 guineas; Mr. Hudson's Danesfield Prince, to Mr. Rowlandson for 55 guineas; and Barton Norton, exhibited by the Rev. Le Gendre G. Horton, Bath, went to Mr. J W. Wheatley for 51 guineas.

The young bulls under twelve months old numbered twenty-nine, and the best both in the opinion of the judges and buyers was Colonel Sir Nigel Kingscote's useful-looking roan Kingscote Duke 31st, for whom the Marquis of Exeter gave 71 guineas. Mr. Haynes bought the second prize-taker, Hindlip Heir, from Mr. G. Gerrard, Hindlip, Worcester, at 46 guineas; the Earl of Camperdown, Shipston-on-Stour, sold Weston Veritas to Mr. Coxon for 41 guineas; and his lordship afterwards gave 32 guineas to Lord Fitzhardinge, Berkeley, for the commended Albany; whilst the reserve bull, Woodborough Commander, belonging to Mr. T. Potter, Nottingham, was sold to Mr. Tiemaine for 43 guineas.

The Duchess of Devonshire's Dexters.

A choice selection of Dexter cattle from the well-known herd belonging to the Duchess of Devonshire took place in the grounds of Compton Place, Eastbourne, on Thursday, and attracted a fairly large company of buyers, the excellence of the stock being well known. The Duke and Duchess of Devonshire were present during the sale, and they must have been disappointed with some of the prices realised, for several choice animals did not reach 10 guineas. The representative of H M. the King gave the top price of the sale, viz., 63 guineas, for the big prize-winner Daphne, whilst he also took Compton Dolly Varden (1902) at 47 guineas, and Compton Dolly Varden (1905) at 37 guineas. The last-named price was also given by Mr. F. B Bulley, Gloucester, for Compton Dorcas, Mr. Price gave 40 guineas for Compton Tiny, and Mr. Greensell Allen, Uxted, 31 guineas for Compton Deswa. Thanks to these good figures, the average for the sale worked out at about £19 per head.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

Athlone Fair, co Westmeath, was held on 3rd inst. Average supply of cattle; improved demand for animals with condition and quality; other sorts sold slowly:—Yearlings, 1st class, £8 10s.; 2nd class, £6 10s. to £7; 3rd class, £4 15s. to £5 10s.; two years old, 1st class, £11 5s. to £12 5s.; 2nd class, £8 to £10 5s.; 3rd class, £6 10s. to £7 2s. 6d.; three years old, 1st class, £14 to £15 10s.; 2nd class, £10 15s. to £13; 3rd class, £7 10s. to £9 10s.; springers, 1st class, £16 10s. to £18; 3rd class, £9 10s. to £10 15s.

At Bandon Fair, co. Cork, held on the 4th inst., there was an average supply of cattle, the demand being good. Yearlings, 1st class, £8 to £9 10s.; 2nd class, £6 to £7 5s.; 3rd class, £4 15s. to

£5 10s.; two years old, 1st class, £10 15s. to £12 10s.; 2nd class, £8 10s. to £10 5s.; 3rd class, £6 15s. to £7 10s.; three years old, 2nd class, £13 to £14; springers, 1st class, £14 to £15 15s.; 2nd class, £12 5s. to £13 5s.; 3rd class, £11. Average supply of sheep, and demand fair. Lambs, 1st class, 30s to 33s.; 2nd class, 25s. to 29s.; one-year-old and over, 2nd class, 38s. to 44s.

VETERINARY.

Advice of a Veterinary character, by a M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Colt.

SIR,—I wish to thank your M.R.C.V.S. for his instructive remarks in answer to my inquiry as to the prevention of milk-fever, and am pleased to see he intends continuing the same.

It will be in the remembrance of this gentleman that some little time ago I requested his opinion with regard to a ruptured colt (a Shire) at birth, which he designated as congenital scrotal hernia, and corroborated what I mentioned I had been told, that it would probably right itself in time.

The colt is now a yearling off, exceptionally big for his age, and in all other respects most promising. What I wish to know is (as it does not right itself, and the time has arrived that it ought soon to be castrated owing to natural propensities), would it be safe now to do so (of course by a skilled veterinary and a M.R.C.V.S.)? I should esteem the advice of your veterinary and his experience on this matter as a favour, as mine is nil, never having one like it before, neither has anyone else of my acquaintance.—Yours, &c.,

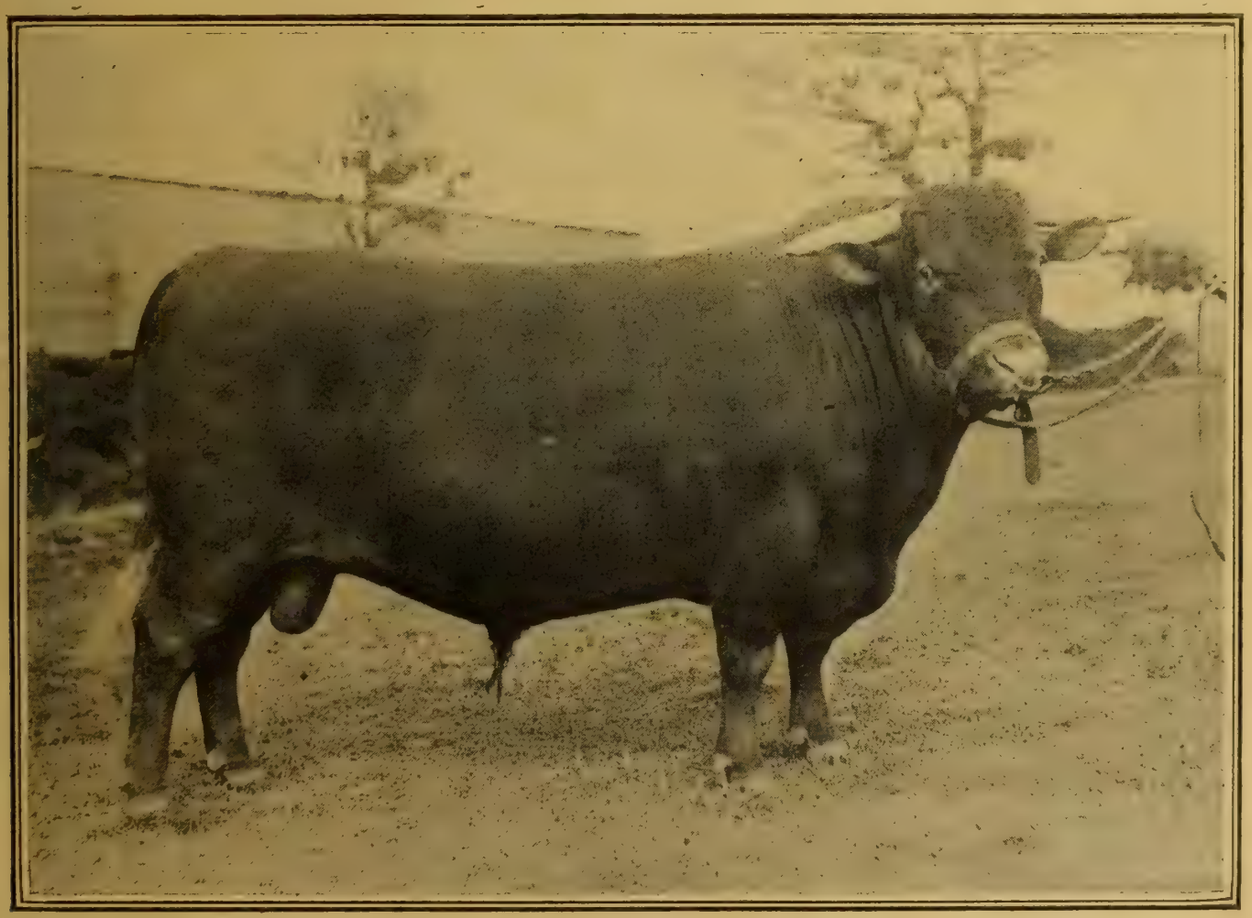
GLOUCESTERSHIRE.

*** The difficulty is that we do not "remember," and considering the number of cases with which we have to deal this is no disgrace. It is, however, of no particular moment, since what we have to consider is the case of a colt a year off suffering from congenital scrotal hernia, which as yet has not, as is generally the case, become spontaneously reduced—or, as you express it, "it does not right itself." So far as the lapse of time is concerned the case is not hopeless, and especially if there has been fluctuation from time to time in the volume of the swelling, since the hernia sometimes persists for over a year. Writing of congenital scrotal hernia, Williams says:—"This, the most frequent but the least dangerous species of hernia, is an attendant on birth, augmenting up to the third or sixth month, after that diminishing, and ultimately disappearing. Should it continue without lessening in volume for a year or eighteen months, it may be considered as, and has in fact become, a chronic or permanent scrotal hernia. In case the swelling, however, instead of being always the same, at intervals diminishes, and continues so to do, more sensibly as time advances, it will in the end recede altogether; and though it return again at times, still the relapses, growing less marked or frequent, at last the gut will enter the ring no more."

We do not know what has been happening from time to time in the matter of fluctuations in volume, or if the case must now be regarded as one of chronic or permanent scrotal hernia; but if there is any doubt, it seems that you might advantageously wait until the spring. In any case, you would hardly have the colt castrated so late in the year. It is, of course, usual to have the operation performed in the spring of the year succeeding the birth of the colt, the end of April or the beginning of May being the period generally fixed upon. This season of the year, when the east winds have ceased to blow, when the weather is neither too hot nor too cold, and there are few flies about to torment the animal, is the most suitable. If for any reason the operation is not performed when the animal is a yearling because of the presence of scrotal hernia, or because the colt is poor, thin, or ill furnished, it is usual to defer the operation until the following spring, and this we regard as preferable, unless the circumstances are exceptional, to operating in the autumn, when the pestilent British fly is particularly vicious, the weather uncertain, and the days short, and the nights long and cold. We advise you therefore to wait, if the animal can be controlled, until next spring. If the rupture persists, the colt will have to be castrated by what is termed the "covered operation," or by the inclusion of the scrotum and testicle, after returning the intestine into the abdomen, in a wooden clam. You recognise that the operation should be performed on your colt by a qualified veterinary surgeon of skill and experience, and thus it would be wise to consult the practitioner you propose to employ as to the time and method of operating.—M.R.C.V.S.

Ireland's Exports of Cattle, Horses, &c.

That Ireland is more than maintaining her most important branch of agriculture—the horse and cattle trade—is strikingly shown in the annual report on the administration of the Diseases of Animals Acts for 1906, for the figures given show that during that year the total number of animals (*i.e.*, cattle, sheep, swine, goats, horses, mules, asses) exported to Great Britain was 1,900,098, as against 1,848,327—being an increase of 51,771 animals. Particulars of the numbers of each class of animals are given as follows:—



Animals.	Year 1906	Increase.	Decrease.
Cattle	775,374	26,243	—
Sheep	657,413	—	43,213
Swine	429,430	65,607	—
Goats	2,417	126	—
Horses	33,816	3,093	—
Mules	11	1	—
Asses	1,637	—	86
Total	1,900,098	95,070	43,299

It will be seen that there was a decrease of 43,213 in the exports of sheep. This may be in part attributable to the fact that there were fewer sheep in the country in 1906 than in any previous year since 1888. There has been a marked decline in sheep breeding of recent years, the number having dropped from 4,386,876 in 1900 to 3,714,832 in 1906.

On the other hand, there was an increase of 26,243 in the number of cattle exported, and a very substantial increase of 65,607 in the number of swine exported. This may be accounted for partly by the fact that larger numbers of swine were bred in the country in 1906 than in 1905, the figures being:—1906, 1,244,193; 1905, 1,164,316.

The increased exports of swine can also be attributed to the removal by the Board of Agriculture and Fisheries from March 1, 1906, of the prohibition against the importation of store swine from Ireland into Great Britain which had been in force during the greater part of the year 1905. In 1905 only 1,032 store swine were exported to Great Britain, while in 1906, when the prohibitive order was relaxed, the exports of store swine rose to 19,920.

The exports of horses in 1906 were the largest for the past six years, numbering 33,816. The number of cattle imported into Ireland from Great Britain in 1906 for purposes of breeding or exhibition was 458, as against 631 in 1905, and of swine for similar purposes 71 in 1906, as against 23 in 1905.

The animal shown above is the Devon Bull, Pound Pink 'Un, winner of a First Prize and the Championship for Devon Bulls at the Royal Show at Lincoln. It was shown by the Hon. E. W. B. Portman, Hestercombe, Taunton, but was bred by the late Mr. A. C. Skinner, Pound Farm, Bishops Lydeard. Pound Pink 'Un was born January 4, 1903, sire Councillor, dam Pink 17th.

GEORGE HOYLES.

SKIDBY MANOR, HULL.

Breeder of Pure Lincoln Long Wool Sheep. Lustrous Fleeces. Good Constitutions.

SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

West Country Notes.

THE cheese trade in the West is just at an interesting stage now, when the June makes are beginning to come into the markets. It is therefore of practical value to learn that the sellers at the Cheese School, dissatisfied with an offer of 63s. from the firm who have for so many years taken the whole make, went to a fresh firm, Messrs. William Cary and Son, who have purchased at 66s. This is not far from the top price prevalent, though of course some exceptional dairies are making more. The cheese disposed of at the school comprised the May and June makes.

THERE appears to be a very good make of cheese for the year, and though a lot of "baby cheese" is coming forward, there is good to fo low where longer time can be allowed for maturing. The ripening is slow, and not enough cheese rooms are capable of being hurried or retarded.

WHETHER the presence of Irish exhibits, or some other cause, tended to the curious result, it is the fact that the championship of the Mid-Somerset Show for cheese went to the second in its class. The overlapping of rennet makers' prizes placed this as first in a special class. When the full bench of judges came to award the championship, both first and second came in, and the result was that by six to two the previous decision was reversed.

THE gentlemen responsible for the original award roundly declare that they were right on flavour, this being of the right nutty character desired, whilst the texture was more silky. The test for fat, to which the prize cheeses were submitted later, does not affect the judgment, but it showed that whilst the proportion in the champion lot was 35 per cent., that in its rival was only 32 per cent.

TWO hundred miles by motor car in two days was the task which Mr. Theodore Candy and Mr. Ernest Hill undertook for the purpose of judging on the farms where it was made some thirty lots of cheese made in ten consecutive days at the end of June and the first day or two in July. They were enthusiastic at the result of this novel method, and gave a very neat hint to some of the cheese makers of their impressions by awarding a special prize from their own pockets to the lady whose dairy and cheese room came best up to their ideal of what such places should be. The cheeses were identified by means of an impressed stamp, so that there was no possibility of their being changed.

THE Canadian Commissioner of Agriculture and Cold Storage has been busy in the West Country during the past week, and has been picking up what wrinkles he could, not only as to outlets for trade, but also as to English methods.

LAST year at this season a party from New Zealand were visiting old friends "on a holiday," as they said, but in reality, as I discovered, brought over by an enterprising West Countryman, who was able to place more of certain products on the market than he could command from home supplies. Not a few up-to-date ideas did these gentlemen—experts themselves before they had left England originally—pick up to carry back with them and adopt at the Antipodes.

ARE we in this country quite as ready to learn from others? I do not think we are. But that is no reason for assuming that we are being left behind. There is a West Country saying anent farming which is well remembered, "Follow the man who is successful."

LET a man achieve success in any line of farming and he will not merely be watched by his neighbours, but friends from far and near will renew acquaintance to learn what they can from him. If he is shrewd he makes them pay for his knowledge. Nor does it thwart their intentions, his making a charge for imparting his secrets. They are ready to give time, and money too, to learn what they can, and will do their best to put it into practice, either systematically or by rule of humb.

THE demand for visits from the peripatetic instructors of the county councils also show English farmers are willing to learn at home.

TO return to our cheese and the Canadian Commissioner. The amount of pressure applied in his opinion makes the great difference between the English and the Canadian Cheddar, whilst the factory system prevalent in his country produced the greater uniformity the make exhibits.

RIVALRY is encouraged amongst the various factories by a system of rewards on the average make, as demonstrated by the comparison of a certain proportion of the make from each factory. Here, too, the stamping, which was referred to last week, comes in.

IN Manitoba, I learn, the Devonians have banded themselves into a society, one of whose objects is to place at the disposal of new-comers from the home county their advice and experience, and the practical aid which will fit them for their new surroundings. They are also ready to give information as to the best centres for intending settlers.

WILTSHIRE men are very busy with the harvest, and some of the fairs are suffering from the effects of the uncertain weather. If it happens to be a fine day, unless he has some special business to transact, the farmer leaves pleasure alone to see to his corn, or even in some cases his hay. The results are that their business-like character tells above the pleasure element, and the proprietors of the itinerant shows are deprived of a profitable item, whilst they are suffering also from the weather themselves. I have some sympathy with these showmen. There are some generous-hearted and kindly natures amongst them who are very ready to help where they can.

AT one of the shows lately a man came purling off the roundabout at my feet, and lay there coolly smoking a pipe. He was undoubtedly in liquor, and though he had sustained a compound fracture of the leg he gave no indication for some time. The hospital which received him was in a town which the showman visited shortly after, and became for one day, as the showman told me with a gleam of humour to cover his real feelings, "sole proprietor of the roundabout," and took all the money that could be made from it.

An unusual number of foxes have been turned up during harvesting operations in South Devon. In two fields as many as eleven were aroused, but the farmer had given strict orders that none shou'd be shot, though they had done great damage to his crops.

Midland Notes.

THE Birmingham Autumnal Shorthorn Show passes from one success to another, and it is still growing. To get 477 entries together (as was done at last week's fixture) is really a remarkable achievement for September—or would certainly have been thought so when the show was started. But breeders recognise the attractions of an exhibition which enables him to hold on to a good beast all the summer show season, and then finds an excellent market for him at the end of it. Birmingham people as a whole care nothing for these spring and autumn Shorthorn shows, regarding them as very unimportant in comparison with the fat stock show in the same building in December. They would probably laugh if told that the profit from these minor fixtures enabled the big show to be carried on; but the statement would not be far from the truth.

THERE is more trouble over the American gooseberry mildew pest. It is but a week or so ago since growers in Worcestershire were vigorously cutting back infected bushes and burning the diseased shoots. They were then given to understand that this was all the Board would require; and they were prompt in doing all that was demanded of them, although attending to the gooseberry bushes just lately has meant loss of money by missing some of the best of the plum season.

SINCE then, however, the county council has been sending out postcards ordering pruning to cease because the Board insists upon the Act in its entirety being carried out. In other words, the pruned bushes are to be altogether burned. Meanwhile the petition asking for compensation is being circulated in many districts of the county, and the county council's reply is being awaited with some anxiety.

I HAVE had an opportunity of looking into the arrangements which the railways are making to cope with the temporary rush of traffic from the fruit districts. The impression created is that whatever may be the grievances of growers with regard to heavy rates, and whatever the hardships arising from occasional delay in delivery, the railway people are showing commendable energy, and a disposition to facilitate the traffic as much as possible. The Midland Company, for instance, have sent down a special staff from Birmingham to deal exclusively with the fruit consignments; and at Evesham a new departure has been made in the organisation of a temporary service of drays which distribute empties, and are loaded on Sundays while the rush lasts.

THE special fruit vans which were built a few years ago have been doing excellent service this year, though there is no such difficulty in keeping the produce cool this season as is often experienced. They carry the fruit in good condition, and are returned immediately full of empties. Just lately it has been no uncommon thing to find trains from the fruit districts so heavy and lengthy as to demand the services of additional engines; and the sight of the long row of vans reminds one of the enormous amount of dead weight which our railways have to haul in proportion to the merchandise they carry.

HOPS are late this year, but the pickers from Neales Owen, Old Hill, Rowley, Cradley Heath, and other parts of the Black Country, are already beginning to arrive in the Hereford and Worcester gardens. Yesterday the first special trains were run for their benefit, a large number of people travelling to Bromyard, Tenbury, Ledbury, and other districts. It is to be feared the work will be less pleasant this year than usual, for cool days and very chilly nights are the rule, even when rain holds off. But nowadays the hop-pickers are generally better accommodated than they used to be.

THE High Court of Justice has appointed Mr. H. J. Peart, a Birmingham accountant, as receiver and manager in the case of the Avondale Bread Company. The company mills English wheat at Evesham, has retail shops in several parts of Birmingham, deals in preserves made from local fruit and other farm products of the district, as well as in bread. I understand it is intended to re-establish the business as soon as possible upon a firmer basis, and that both debenture holders and creditors are showing every disposition to assist in a scheme of reconstitution, so that a trading concern which has been distinctly valuable to the district shall not be lost.

ONE generally hears of an accident or two during the harvesting season. The most serious I have learned of this year took place at Kersoe in Worcestershire last week, when a labourer fell from a load of hay on to the prongs of a hay-fork, which penetrated his left breast and came out at the back of the neck. The impact was powerful enough to drive the handle of the tool far into the ground—2 ft. down, it is declared—before breaking it off. One is glad to hear of the condition of the unlucky man described as "quite hopeful"—testimony to the strength of vitality induced by good plain living and healthy work in the open air.

September 4th, 1907.

"**Bad for the Cows.**"—A Manchester-to-Colne express, on the Lancashire and Yorkshire Railway, was on Monday night delayed by a remarkable mishap. When near Radcliffe the passengers experienced a slight shock, and great excitement prevailed until the train was brought to a standstill. It then transpired that a herd of cows had strayed on to the line, and that, dashing into them, the engine had killed three and maimed several others. It was half an hour before the train could proceed.

An illustrated catalogue of farm implements, comprising harness, ploughs, cultivators, rollers, manure distributors, pumps, &c., has just been issued by the Bon Accord Engineering Co., Ltd. (successors to Messrs. Ben Reid and Co.), Bon Accord Works, Aberdeen. Attention may be particularly drawn to the patent artificial manure distributor described in this catalogue, for it possesses many advantages, amongst which may be mentioned the following:—Its form of hopper prevents bridging, its delivery entirely prevents clogging, whilst the quantity can be varied instantly, and the delivery is continuous and regular.

Agents, Situations Wanted.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

Cash prices per roll of 50 yds. 3 in. mesh, 2 ft., 4s. 5d.; 3 ft., 6s. 1d.; 4 ft., 8s. 1d.; 2 in. mesh 2 ft., 5s. 8d.; 3 ft., 7s. 9d.; 4 ft., 10s. 8d.; 1 in. mesh, 2 ft., 9s. 5d.; 3 ft., 13s. 5d.; 4 ft., 17s. 10d. BEST GALVANISED SHEEP NETTING.—50 yard rolls, 3 ft. wide, 4 in. mesh, and centre strand, strong, 10s. 4d.; medium, 9s. 3d. per 50 yard roll. Strong Stakes, 6s. per dozen. Carriage paid on lots, netting or stakes, 70s. value

Iron and Steel Hurdles, Fences Gates.—Excellent quality; 6 ft. hurdles, 4 rails, 35s. 6d. per doz.; 5 bars, 38s. 9d. Steel fencing wire, 11s. per cwt.; galvanised wire strand, 17s. cwt.; galvanised barbed wire 15s. cwt., 590 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wire and iron posts, 8½d. per yard.

Splendid Galvanised Roofing.—Perfect quality; 5 ft., 1s. 6½d.; 6 ft., 1s. 10½d. 7 ft., 2s. 2½d.; 8 ft., 2s. 6d.; 9 ft., 2s. 10½d.; 10 ft., 3s. 3½d. Ridging, 2½d. per ft. Best Wire Nails, 11s. cwt

Galvanised Cisterns, corrugated steel, 30 gals., 9s; 50 gals, 13s. 3d.; 100 gals., 21s. Corn Bins; Sheep, Pig, and Cattle Troughs at very low prices. Lists free.

J. PRIEST & SON Ltd., Castle Iron Works, Victoria Road, Bristol.

GALVANISED WIRE SHEEP NETTING, from 5s. 9d. per 50 yard roll; all descriptions of Netting at low prices; Illustrated Catalogue free on application.—DAVID & Co., Taff Vale Iron Works, Dept. E., Cardiff.

CORRUGATED GALVANISED SHEETS, seconds and slightly defective; over 200 tons at bargain cash prices, quite suitable for outbuildings and fences; for immediate sale only; full details on application. New HAY BARNS from £22.—Dept. 3, JOHN ATTWOOD REEVE, Stony Stratford.

EARLY POTATOES.—Heavy croppers; no blight; "Epicures," "Sharpes' Express," 40s. railed; sacks included.—BUCHANAN, Cockerhurst, Shoreham, Kent.

MISCELLANEOUS.

BREWERS' GRAINS.—Dairy Farmers supplied by contract or otherwise.—Write for price to GEO. CRUTCHER, 195, Queen's Road, Peckham.

BASIC SLAG, all grades.—Kainit, Supers., Boiled and Dissolved Bones, etc. State quantities required and station, when prices, analyses, etc., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

BASIC SLAG.—Phosphates and fineness guaranteed. Write us to-day for pamphlet and special quotation. Autumn and spring delivery.—CANNOCK AGRICULTURAL CO., LTD., Cannock, Staffs.

POWDER for DESTROYING LICE in CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless. 1s. per lb., over 3 lbs. post free. E. RUMSEY & CO., Rhuddallt Fawr, Carnarvon.

POTATOES! POTATOES!! Edward England, Cardiff, Ltd. Importers and Exporters of potatoes. Head Office, West Dock, Cardiff; also Bath Street, Bristol, and North Dock, Swansea.

EDWARD ENGLAND, Cardiff, Limited.—Are always buyers of good English potatoes, for cash on rails.—Address, Head Office, West Dock, Cardiff.

SEEDS OF GILLIES' celebrated STOCKS, warranted first-class.—Early Large Yorks, Lates or Drumheads, Savoys, Curled Greens, Imperial Early M'Ewan, also selected Brussels Sprouts, 12s per stone, £4 per cwt.; Lates or Drumheads, £37 10s. per half ton; £70 per ton. Prepayment or banker's reference from new customers.—GILLIES, Northfield, Prestonpans. Largest Cabbage plant grower in the world; largest market gardener in Scotland

GALVANISED CORRUGATED SHEETS, all warranted sound: 3ft., 9d.; 4ft., 1s.; 5ft., 1s. 3d.; 6ft., 1s 6d.; 7ft., 1s. 9d.; 8ft., 2s; 9ft., 2s. 5d.; 10ft., 2s. 8d. each; ridging, 3d. per foot; spouting, 3½d. per foot. BARBED FENCING WIRE, in half cwt. reels, 224 yards, 7s. per reel; plain galvanised wire, in 1 cwt. bundles, 700 yards, 12s. per cwt.; wrought iron standards, 1s 3d each. "M" Dept.—BUTLER, Bell Works, Wolverhampton. Est. 1828

POTATO BAGS, Second-hand, to hold one cwt, 3d. each.—FIRMIN & Co., Handford Works, Ipswich.

MILK! MILK!! MILK!!!—WELFORD & SONS' DAIRY COMPANY, LTD., can always entertain offers of reliable Dairies of well-cooled MILK. Full supply of brass-plated CHURNS PROVIDED. Cheques weekly. Call, or write full particulars to THE SECRETARY of the Company, Chief Dairy and Offices, Elgin Avenue, London, W.

OIL ENGINES.—Simple and reliable. Prices from 10 guineas. No lamps after starting. Lists free; no fancy prices.—CLIFFE OIL ENGINE WORKS, Morton Bingley.

PEDICURA, for Horses' Feet, produces a sound, healthy growth; also cures Thrush, Seedy, Brittle, Shelly Hoof, Corns, Cracked, Greasy Heels, Foul Smell of Feet, Itchy Mane, Tail, or Legs, Mangy Skin in all Animals.—Tins 2/6, of agents, or post free.—GREGORY & Co., Temple, Bristol.

HARICOT BEANS, about 20 tons, for feeding, for Sale at a low price.—Apply to B. P., 590, Haasenstein and Vogler, A/G, Hambourg.

TRIFOLIUM SEED, good, carr. paid, 22s. per cwt., cash with order.—WYARD PAUL, Bradford-Abbas, Sherborne, Dorset.

MILK, wanted about 40 to 50 barn gallons daily; well cooled and delivered to Southall Station, G.W.Ry., payments weekly; write quoting price, or call personally, KEEVIL, 90, High Street, Southall.

HAY FOR SALE. A quantity of first-class old mixture and meadow for sale.—H. M. SIMMONS, Amberstone Grange, Hailsham.

"ARTIFICIAL MANURES."—1/- post free, 1/2½.—W. A. MAY, "Mark Lane Express" Office, 3, Wellington Street, Strand, W.C.

Seasonable Topics.

September. ALL through this disappointing summer we have been waiting for the clerk of the weather to redeem his reputation, and at last—in the second week of the harvest month—he appears to be making an attempt in the above direction. With the bitter experience of what should have been the summer months so fresh in the memory we cannot feel much confidence in the future; but how delightful are these harvest days, and how welcome is the sunshine for drying the straggling remnants of the hay crop, ripening up the corn, and helping along the roots! Our thoughts now turn southward and westward to the counties where thousands of busy fingers are engaged in the work of hop-picking, and "hoppers," like the rest of us, have reason to feel thankful for this late attempt on the part of old Sol to triumph over dull and gloomy skies. Will it last? we ask ourselves as we write; but we are afraid to offer an answer to our question, as we have hoped so often and in vain, but now that conditions have improved we must take advantage of every real harvest day for getting the storm-beaten corn into the stack.

Second Crop Seeds. IN some catchy seasons we can remember the best hay of the summer was made from the second crop of seeds in September, but it is doubtful whether such will be the case this year. Never, we think, do we remember such a muddling, wearying, overlapping, and topsy-turvy harvest time, and it looks as if this sort of thing was going on to the end of the chapter. The other day we called on a farmer friend who was taking advantage of a brief spell of sunshine and doing his best to finish up his hay harvest proper, pick up a second crop of seeds, and carry his winter oats all at the same time. You need not ask, reader, whether the man was worried. Probably you have been in a similar plight yourself, and if so you know. But as for second crop seeds, some farmers have given up to them so far as any idea of hay is concerned, and though they have kept off ensilage hitherto, they have resorted to this method of disposing of the second cutting from the clover fields. Nor do we think it a bad plan, because when we get well into September, be the climatic conditions ever so favourable, the mists in the early evening, which hang till late the following day, are by no means favourable for haymaking. In short, September is the month for corn-harvesting rather than making hay.

Footpaths. IT is very nice when walking along a dusty road on a hot summer's day (we have had these, by the way, in the past) to be able to turn aside, mount a stile, and a take footpath across a field, and arrive at the place one wants to get to with springy turf beneath one's feet, and the knowledge that one is reducing the distance as well as increasing comfort by taking the short cut. It is something to know that motor cars have not yet taken possession of footpaths, and the pedestrian choked with dust and half suffocated with the stench of petrol feels that when he gets off the motor's highway (king's is no longer a proper term to use here) on to a footpath crossing a field that he has still one privilege left to him. And what do farmers think? Through the successive generations of agriculture footpaths have been thorns in their sides which cannot be removed. These roads, made by right of custom, cut through the best fields, upset the privacy of farms, and often pursue an aggravating course where they are no advantage to anybody, and the way across the farmer's field is further than going round by the road. Common sense says shut up these useless footpaths, at any rate; but Mr. British Public says no. They are his heritage, and he guards them with a jealousy which borders on stupidity; but he is not quite fair in his views, for whereas he will oppose, tooth and nail, any proposal to close a footpath, he will never hesitate about making a fresh one if he is allowed to do so.

By permission of ["*Vanity Fair.*"

"SMALL HOLDINGS."

(Earl Carrington, President of the Board of Agriculture).

Old Toasts. IT was the custom in the old days far more than it is now for farmers at market dinners, rent dinners, club dinners, and other convivial gatherings to propose toasts, and the phrases were guarded with a certain amount of jealousy by those who treated them as their own property. It would have been a great breach of etiquette for one man to knowingly propose another man's toast, and even after the death of an individual his toast was not given without quoting the name of the departed, as one would a famous author. Here is an example of a toast given by an old farmer at many a festive board:—"Here's health, wealth, long life, happiness and prosperity: good crop of corn, good price for your wool, more friends and less need of them." The phrasing of the above suggests an era of agriculture belonging to the past, but what could one wish for more? Quaintly constructed and often amusing were the old toasts which our grandfathers used to give, and though some of them have been handed down, many others have been lost to memory in the passing of years. What one regrets more than this, however, is that there was a jovial spirit of good fellowship amongst farmers in the old days which is by no means so apparent now.

The Grubbing of Hops. WE learn from the annual report of Messrs. W. H. and H. Le May, the well-known hop factors, that there are 1,784 acres less than were in cultivation last year, and whereas thirty-one years ago there were over 72,000 acres of hops in the country, now the acreage is only 44,938. According to the report as far back as 1819 there were 51,014 acres of hops when the consumption of beer was not more than one-fifth of what it is to day. What is the reason of this? The question is our own, and

the answer is culled from the factors' report :—"There is only one reason for this grubbing of hops in England—they don't pay the producer. Free imports are killing this industry as they have many others." It is not cheering to hear of this serious reduction in the acreage of hops and the decline of a time-honoured agricultural industry, and when we think of the consumption of Britain's national beverage—beer, this sort of thing ought not to be. We accept Messrs. Le May's explanation here without comment, but wonder at the same time how much of the beer, so-called, consumed at the present day is brewed without hops.

Education and the Imperial Exchequer.

NOW that there is no Education Bill to provide food for argument, and passive resisters are less notorious, various local bodies are devoting their energies in the direction of passing resolutions to the effect that the cost of education should come out of the national purse. To relieve the rates of the burden is the idea, and a very good idea too, but these good people seem to forget that if the burden were lifted off the rates it would fall somewhere else, and we should still have to pay for education. That education is costly now every ratepayer will agree, but if the change were made would things be managed more economically, and would there be the same local control? We have an idea that some of the individuals who sit at board meetings and support resolutions that the cost of education should be a national charge, do so under the impression that it would be an easy means of getting out of paying, but do not let us make any error about this. We are not arguing here, for or against; but there are two sides to every question, and it is well to examine both of them

Sport in the Cornfield.

MOST of us at some time in our lives have shared the excitement which prevails when corn is being cut and frightened rabbits, wondering, doubtless, at the cause of the disturbance, bolt out as the area of cover gets smaller and smaller. As we know from experience shooting rabbits as they bolt out from the corn is not bad sport, but unless one is fairly handy with a gun it is not wise to take part in it, for bolting rabbits can move at a fair pace, and to make a series of misses is not the way to win the admiration of the harvesters, who treat the rabbits killed in the light of perquisites. Further, there is a certain amount of risk attending rabbit shooting in a cornfield, because harvesters have a knack of losing their heads and getting excited, particularly when the rabbits bolt quickly from the last patch of standing corn. The men, forgetful of the guns, will rush across the line of fire, wildly attempting to knock over the rabbits with sticks, and it was this imprudence which recently led to a youth losing an eye and another getting his lower limbs riddled with small shot.

Big Potatoes.

THE average housewife when she purchases potatoes from the greengrocer prefers tubers of medium size rather than very large ones, and on the grounds of quality we certainly agree with her. In the same way the judges at vegetable shows frequently pass over large tubers in favour of medium-sized specimens, and they do so on the grounds that they wish to encourage quality rather than size. Quite right; but in commercial potato culture there is considerable demand for big tubers, and if they are not quite up to the mark when viewed from a standpoint of quality this does not make any difference. It is for the chipper that the demand has arisen for big potatoes, and it is surprising how many people eat chipped potatoes in these days. Long, oval tubers are the best for chipping purposes, and there is a market for anything big so long as the potatoes are of fair shape and not too deep in the eyes. As a matter of fact we have heard inquiries made for a really big potato, such as we should in the ordinary way term a cattle potato, to supply the demand for chips. King Edward VII. seems to meet the requirement as well as anything up to the present, which is probably the reason why this variety is grown to such a large extent.

Agricultural Politics.

BY A LOBBYIST.

Cider must be made from Fruit.

Of course, the matter is not one of vital moment to the whole agricultural community, but it is one of significance as revealing the trend of events—as revealing the anxiety of officialdom to secure purity of food. I am, of course, alluding to the campaign which has been successfully initiated in the West of England on behalf of pure cider. That initiation means that if a beverage is heralded as "cider on draught," it is a false description if, generally speaking, that beverage is not made from the juice of the apple. In this instance analysis failed to admit the presence of a single drop of apple juice. I applaud the timely intervention of the Board of Agriculture, at whose instance the proceedings were taken. This intervention is in harmony with the purpose of the Butter Act.

* * *

Suggestions to the Chambers.

If this policy be only the policy of Protection with the large P, why was it not resorted to by the last Government with its undeniably Protectionist sympathies? No, it is not Protection in the conventionally-economic sense. This Government in this sense does not deserve to be accused of arraying itself from the economic wardrobe of its rivals. The purpose in this is to secure absolute purity of food, and this has no more to do with Free Trade and Protection than with the sands o' Dee or with the monoliths of Stonehenge. Ministers deserve credit for their courage in pursuing a policy their predecessors, the traditional friends of agriculture, had not the strength or inclination to pursue. Will Messieurs the Chambers of Agriculture ask that this policy should be completed and continued? There are other avenues in which it might well be applied. There is, for instance, legislation still required in connection with the supply of milk. No dispassionate man can have read the recent pitiful and tragic revelations as to the manner in which chemical and obnoxious milk substitutes—I am thinking in particular of the report of the medical officer of that throbbing centre of Metropolitan life, Battersea—are a dire and fecund parent of infant mortality. To insist on the banishment of the milk fraud is to create a healthier childhood. Let not any Chamber be discouraged because its sphere is not a great apple centre, or because the local milk trade is not a profitable one. Sympathetic agitation in this matter is a duty it owes to the whole agrarian community.

* * *

A Scientific Point of Interest.

There is another phase of this question—a quasi-scientific phase—which is deserving of the thought of those politicians and organisations who may be seeking to influence the character of the regulations to be imposed under the Foods Regulations Act. This Act, I emphasise, is designed with the intention of preventing the importation of putrescent foods. Now, the greater bacteriologists of this generation, men as eminent as the late Professor Koch and the present Swedish authority, Professor Kellog, have asserted definitely that meat juice is a distinct conveyer of germs. Whilst fruit juice is the enemy of all forms of bacteria, meat juice may be described as a kind of pathological ally and friend. Now, this fact should induce the politicians and organisations to whom I have referred to insist that, if there is to be any differentiated treatment under those regulations, it should be in favour of fruit. There must be no loophole permitted for the contaminated imported meat. As I say, this is a scientific matter, and partly beyond my province. However, the machinery under which the scientific anxiety can be realised is brought under the ægis of Parliament. To make the insistence I have suggested is in the direct interest of British food-producers. Will Messieurs of the Chambers of Agriculture heed?

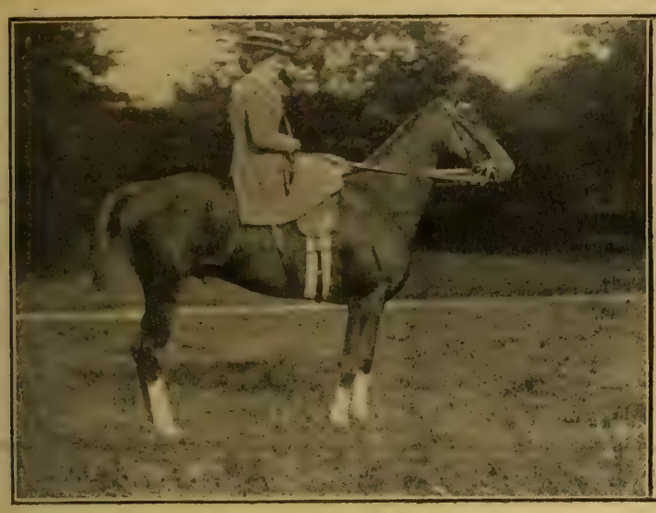
* * *

An Interesting Recruit to Toryism.

The ordinary politician will not, perhaps, attach the significance which is its due to the secession of Mr. Mark Beaufoy, J.P., from the Liberal party. Mr. Beaufoy is usually regarded in his industrial character as one of the most distinctive manufacturers of popular beverages in the metropolitan area. However, Mr. Beaufoy—a man, by the way, of great charm of manner, grace of speech and undeniable intellectuality—has another character. As the squire of that delightful Wiltshire retreat, Donhead St. Mary, he is a considerable influence in the agrarian politics of Wilts and Dorset. As a fact, he made the announcement of his secession from the Liberal party at the Shaftesbury agricultural dinner. When Mr. Beaufoy first went to Wiltshire he carried with him the distinction of being one of the rising members of the House of Commons, and the local Liberals assiduously sought his aid, although, as a consequence of the tyrannous attempt at coercion by the extreme teetotalers of his constituency, Mr. Beaufoy's Parliamentary career was interrupted, his connection with the Liberal Association still continued. As a fact, he was the right-hand man of that genial cavalryman and old-fashioned Liberal, Sir Thomas Fraser Grove, during the time he sat for the Wilton division. Mr. Beaufoy would scarcely have made this announcement in the public manner he did had he not designed to return to the Parliamentary arena. Will he be an urban or a rural candidate? Mr. Beaufoy's tastes are rural, despite his metropolitan associations. A sportsman, a fine follower of the hunt, a lover of all animals, a keen shot, something more than an amateur farmer, his natural bent would be to a rural constituency. Well, whether the Dorsetshire or the Wiltshire Unionists secure him—and naturally the Unionists of the Shaftesbury division comprehend that his winning personality would be an asset of theirs in a contest—Mr. Beaufoy would carry into a fight an admirable equipment for a renewed Parliamentary career. Few men between 1899 and 1905 more impressed the House than did he; and the old-time rural Parliamentarians—I am in particular thinking of Mr. Henry Chaplin—would cordially welcome his re-appearance. What is the Liberal loss is assuredly the Conservative gain.

* * *

In that Greatness be Fair.



I am bound to say that the claim of certain Conservative Members is rather hard on the Liberal Government. They declare that because Mr. Harcourt promised that the Commissioners under the Small Holdings Act should not be partisans, they ought to be Conservative. Is this fair? Would Conservatives be non-partisan? The Small Holdings Act, after all, embodies principles of which the Conservatives as a body disapprove. Should antagonists of that policy be inevitably made the dictators of that policy? I only put it to my readers. I do not say that a Conservative should not be appointed. I only say that the Act is a Liberal measure embodying principles of which the Conservatives generally disagree, and that it is a little unkind to insist that both the executive officers should be Conservative. Let at least one be a Liberal.

Dr. Fream Memorial.

Under the Presidency of the Right Hon. the Earl of Jersey, P.C., a meeting of the general committee of the Dr. Fream Memorial Fund will take place at the Agricultural Hall, Islington, on October 8 next, at 12.30, in a room on the right-hand side of the Barford Street entrance (by kind permission of the council of the British Dairy Farmers' Association), when the reports of the executive committee and the hon. treasurer will be presented, with a recommendation that the following resolution passed at a recent meeting be confirmed :—

"That the Fream Memorial Fund shall be invested in the name of the Board of Agriculture and Fisheries or of an official trustee selected by the Board, and shall be administered by the Board of Agriculture and Fisheries, and that the income shall be applied by way of a Fream Memorial Prize of books, to be competed for in each year by students in the science of agriculture, and so that as long as an examination is held by the National Agricultural Examination Board for the National Diploma in Agriculture the prize shall be awarded to the person who obtains the highest marks in such examination."

The above resolution has been communicated to Sir Thomas Elliott, Secretary to the Board of Agriculture, who has intimated that that Department is prepared to accept the responsibility which would devolve upon the Board of Agriculture in the event of this resolution being carried by the general committee.

CARDIFF HORSE SHOW.

Mr. W. J. Tatem's Penylan Minister (ridden by Mrs. Tatem), winner of First Prize for Covert or Lady's Hack.

Judging the Champion Harness Mare or Gelding Class, in which Mr. Hoffman's Riot won First Prize.

CARDIFF HORSE SHOW.

THE Cardiff Horse Show last week celebrated its silver jubilee; it was fitting that the weather should be all that could be desired on both days —Wednesday and Thursday—that the attendance of visitors should be practically a record one, and that the entries should also be the best on record. The total was nearly 600, or 100 more than last year, and the quality all round was excellent. There were, however, two regrettable incidents which somewhat marred the proceedings. On the first day Mrs. Hartley Batt, who, as usual, was most successful, was showing Heathfield Squire in harness when some unevenness in the ground caused her to lurch against a groom who was seated behind her, and who was thrown out. Mrs. Batt lost the reins, and the horse careered off madly. Doubling back the animal scattered the judges, and things were looking serious when the groom, who had in the meantime recovered his feet, luckily seized the horse by the head and brought it to a standstill.

The second incident was unhappily of a more serious nature. Whilst the judging was taking place in the Hunter class on the second day, Mr. Evans's Sarah got beyond the control of her rider, and, galloping at the fence surrounding the ring, broke through it, and jumped into the midst of a crowd of spectators. About half a dozen persons were knocked down and injured, and one, a Treherbert grocer named Roberts, was taken to Cardiff Infirmary in a critical condition, and on Friday succumbed to his injuries, the base of his skull having been fractured. The animal and her rider were unhurt.

FIRST DAY.

There was an attractive programme for each day. On the first the judging began with the yearling Hunters, of which there were ten—a really good lot. The principal award went to Whitesocks, a promising chesnut gelding, the property of Mr. A. E. Bowen, of Hockley Heath; the second prize being won by Mr. H. L. Woods, of Pembroke, and the third by Mr. J. W. Olver, of Duloe, Cornwall. In the two-year old class Mr. J. L. Nicksson won with his good-looking chesnut gelding Ensign, a worthy son of Yard Arm; whilst the second and third prizes went to Mr. Arthur Masters, of Llantrissant, and Miss E. L. Clay. The three-year-olds were a strong lot, Mr. J. Harold Watson, of Kidderminster, supplying the winner with Juggler. Thirteen entries were received for the four-year old class, and the most successful competitor was Mr. J. H. Stokes, of Market Harborough, who provided the first and third winners in Broadwood and Ladybird, these being divided by Mr. Drage's Best Man. The light-weight Hunters were fully up to the average, and Mr. W. J. Tatem scored a popular victory with his chesnut gelding Penylan Minister, beating Mr. J. H. Stokes's Beau, whilst Mrs. D. F. Lewis, of Llandrysil, took off the third prize. In the middle-weights it was once again a battle between Messrs. Stokes and Drage, and eventually the former won with a beautiful brown gelding named Lyons Mail, though Mr. Drage's Pytchley was not far off, and Mr. G. Robinson, of Northampton, was a meritorious third. In the heavy-weight class Mr. Drage won with Midnight, who thus followed up his success at Bath, Mr. J. H. Stokes's second prize animal being Masterpiece.

The harness classes were excellent, many well-known winners, and particularly some of those who figured in the recent Dublin Show prize list, being forward. Riot made up for his defeat at Bath by winning the event for mare or gelding exceeding 15 hands 2 in. A Liverpool gelding named Morocco, with nice action, belonging to Miss Dora Schintz, was second, and Miss Lynch, of the Manor House, Wylye, Wilts, third. In the next class, for horses exceeding 14 hands 2 in. and not above 15 hands 2 in., some noted prizewinners entered the ring. Mr. Kerr's splendid five-year-old bay gelding, Loudwater Gongelt, added to his many successes, with an old rival in Mrs. Batt's Heathfield Squire second. Mr. Howard Frank was anious to win the event for the 13 hands 2 in. and not above 14 hands 2 in., and had entered his famous pair, Tissington Kitcat and Tissington Cock Robin. The unbeaten mare continued her winning career, but her partner could only get third prize, Mr. William Foster's Mel Valley Veronique dividing them.

Only two tandems came out, but they were beautifully-matched pairs. Mr. A. Butcher drove Mr. W. Foster's Mel Valley Veronique and Mel Valley Three Star against Mr. Howard Frank with his browns, Tissington Kitcat and Tissington Cock Robin, the latter winning. The double harness class evoked more competition, and noted ring performers were prominent. Mr. Paul Hoffman's chesnuts, Riot and Rapid, were given the red ribbon, the Bath winners, Loudwater Gongelt and Loudwater Grangelt, coming next, and Mrs. Hartley Batt's bays third.

A finer collection of Hackneys has probably never been seen at Cardiff. In the class for mares or geldings exceeding 14 hands 2 in. and not above 15 hands 2in., Newton Swell, exhibited by Mr. Henry Watson, of Tadcaster, was first, Mr. Albert G. Verrier, of Bristol, being second. The class for Hackneys exceeding 13 hands 2 in. and not above 14 hands 2 in. produced nine entries, and the contest for first position lay between Ashton Dorothy Derby, Dr. Fuller's well-known mare, and Vanity Fair, which Mr. H. Le Marchant sent from Kent. The local competitor had to give way to the Kentishman. There were eight entries in the brood mare class, and Mr. R. P. Evans's Pollinaris was placed first, but all the others were such good animals that the judges could not withhold a commending card for the worst among them. In the next class, also for Hackney brood mares exceeding 14 hands 2 in., but confined to residents in South Wales, Mr. James Howell's Brown Colleen took first, the same exhibitor also being second with Campanula, but as the same mare had won a first prize last year he handed over the second prize now won to Mr. Idris J. Davies, Caerau, Bridgend, whose Lady Eva was placed third by the judges. The Hackney foals were a wonderfully good lot, Mr. James Howell's filly by Hywel's Royal Danegelt, out of Campanula, was first. Perhaps the Hackney yearling colts were not quite such a good class, but the fillies, although not a large class, included one or two very useful animals, Mr. James Howell's exhibit by Athil, out of Lady Kate Cadet, being placed first.

The Hackney ponies were among the strongest classes in the show, the entries totalling sixteen. A number of recent winners were present, including Mr. William Foster's Mel Valley Spring Chicken, which got first, Mr. George Griffiths' Lady Go Bang, which was third, and Mr. John H. Tate's Monafly, who divided the two. Polo ponies made a good show, some well-known exhibitors being represented.

The cart horse classes were a distinct feature of the show, the display comparing favourably with that of any previous year. Notably was this the case in regard to the drays, for, although only five animals put into the ring, the quality was superb, more particularly the fine grey gelding, Hope I., of Mr. Thomas Skeats, Whitchurch. This animal has never been beaten where exhibited, and was once again an easy first. And another local firm of exhibitors, Messrs. J. Moon and Sons, Cardiff, were placed second with their chesnut gelding Denmark Squire. Mr. F. E. Muntz, of Umberslade, Warwick, was, as usual, amongst the successful exhibitors, taking three firsts in the cart classes with Aldeby Lady Jameson, Maori Jameson, and King Forrest. Sir Alexander Henderson, of Buscot Park, also had a fine collection of animals on show, taking second with Buscot Shrew in the yearling cart filly class, and third in each of the cart mare or gelding and colt or filly classes with Ivy Fashion and Buscot Victor.

There were two jumping events, and these were watched with keen interest by the large company round the ring.

SECOND DAY.

The Hunter championships proved an attractive item of the second day's proceedings. In the class for heavy-weight champions the battle that has gone on for practically the whole of this season between Chatterbox and Whisky was renewed, whilst competing against both was Mr. J. H. Stokes's Axiom, a winner at Olympia, and reserve champion at Bath. The judges took some time to make up their minds, but they eventually placed the horses in the order named. In the champion light-weight class Mr. J. H. Stokes sent his winning mare Radiance, and on this occasion her most serious competitor was Mr. John Drage's All Gold. The mare got the first prize, with Mr. Drage's gelding next; while Broadwood, a good-quality gelding belonging to Mr. J. H. Stokes, came in for a third prize. The Hunters' Improvement Society's gold medal was won by Mr. C. W. Rees Stokes, of Tenby, with the Belle of Dee, a five-year old brown mare. The reserve for the medal was Mr. J. W. John, a Welsh competitor. The silver medal offered by the Hunters' Improvement Society for fillies was won by Mr. A. E. Bowen's Sparkle.

The result of champion Hackneys only realised expectations, for the chesnut Pole Chain, one of a pair that were reserve in double harness, won the premier award for Mr. H. Le Marchant, Mr. H. Watson's stylish Newton Swell being second. Seventeen entries were received for the covert or lady's Hack class, and a popular victory was obtained by Mrs. Tatem, who rode her husband's Penylan Perfection. The win was a notable one, for Mrs. W. C. N. Chapman's Miss Trix could only obtain second prize, with Mrs. Price's Adonis third. A medal for Hackney brood mares was won by Mr. R. P. Evans, of Reigate, and the same competitor also won another medal for his two-year-old colt, Kingsway.

The harness events were of the same high level of excellence that characterised the previous day. Mel Valley Spring Chicken followed up his success of the previous day by getting another first in the Pony class, Mr. R. Gill taking second prize to Cornwall with Lady Falmouth, whilst only three turned out for the champion Harness class. The first winner of the previous day, Mr. P. Hoffman's Riot, took off the championship, Loudwater Gongett, Mr. Kerr's noted bay gelding, being second. The two local Harness classes were so good that the judges gave all the animals an award. The local ponies were highly

creditable, as were also the tradesmen's turnouts, while the two jumping contests proved as interesting as usual.

The medal offered for Polo ponies was won by Mr. John Drage's Lady Dorothy, which was first in her class the previous day, whilst the Keynsham Stud Company, with White Witch, were given the medal offered for Polo pony brood mares.

Yeovil.

Despite the fact that it clashed with the Okehampton Show, the Yeovil Agricultural Society's exhibition at Yeovil on Thursday was one of the best held by the society, for, to begin with, there was a record entry—394, then the weather was most favourable, and, finally, the attendance was most satisfactory. The horse classes produced keen competition. In the open classes for Hunters, first place was secured by Mr. J. R. Burrington's Gay Boy. Mr. Burrington was also first in the weight class with the same horse which took first at Exeter, second at Bath, and second at the recent Mid-Somerset Show. In the light-weight class premier honours fell to Mr. W. J. Taylor's horse Flaxman, who was also first at the Bath Show. The harness horse class was won by Miss Burston. Lady Theodora Guest's horse was first in the cart stallion class. Cattle were a nice lot, and produced good competition. The Devons were of greater weight than usual. The bull clrss was a remarkable one, and Mr. Chafyn Groves's Shorthorn was an easy winner. In the sheep classes, Down rams were a useful lot, and there were good entries. Butter and cheese were about an average, considering the season, but the prize-winning entries were far above the others.

Sir Edward Strachey, speaking at the luncheon held in connection with the show, said he would shortly be attending the International Dairy Conference, at The Hague, to see if by co-operation something could be done to stop bad and adulterated produce being brought into the country. In Holland they had a marvellous way of producing milk in good condition, and to see how this was done was one of his objects in going there. He wanted to see how Dutch farmers housed their cattle, but did not expect to find much difference between them and English farmers. On the question of farmers being liable after milk had left their hands, he had suggested that a Departmental Committee should go into the matter. He regretted that the Royal Show and the Bath and West Show had done nothing in the matter of bringing this great question before the Government.

North Tyne.

The annual show of the North Tyne and Redesdale Agricultural Society was held at Bellingham on Thursday in delightful weather, and the attendance was one of the largest that has been seen here, while the entries also showed a great advance, numbering nearly a thousand, exclusive of the flower show section, which was a very good one, and there were besides exhibits of poultry, dogs, and cats. In the cattle section there were some good animals shown, Mr. George Harrison, of Gainford, being a notable winner. He won in the old bull and under two-year classes with Elvetham Sweetheart and Pride of Tees respectively, two well-known winners; in the cow class he secured first prize with Ursula Raglan, a Royal winner, and one of the best known cows in the country, was successful for heifers above two years with Montrave Wondrous, and with Gainford Fragrance, a Highland, Durham, and Northumberland prize taker, he secured the first prize for yearling heifers. Galloways made one of the best displays ever seen at Bellingham, and in this section the Countess of Carlisle was the chief prizewinner.

There were some of the noted sheep breeders on the ground, and the prizes went largely to gentlemen whose names figure in the chief shows of the year. Blackfaces and Cheviots were the leading sections. Mr. John Robson's old tup, which won in his class, was first and champion at the Northumberland, and his successful shearling was a winner at Carlisle, Hexham, Yorkshire, Durham, and other places. The Newton tup lamb repeated his success at Carlisle. Among the Cheviots Mr. Jacob Robson's old Cheviot was first at the Northumberland Show, and his second sheep was a first Royal winner.

The horses were chiefly local in character. There was a good useful show of saddle horses, and some good Hunters, whilst the draught and saddle classes were very creditable.

Okehampton.

The Okehampton and District Agricultural Association's seventeenth annual show, held in Major General Holley's beautiful grounds at Okehampton on Thursday in fine weather, was a successful one. The entries, 997, were not quite so numerous as last year, due chiefly to a big falling off in the poultry and pigeon sections, for horses numbered twenty more than last year—194, as compared with 174; cattle numbered twenty-eight as against twenty-four, whilst of sheep there were no fewer than seventy entries, whereas last year the total was but thirty-six. The classes for Hunters were well filled, and some excellent animals entered the ring, the judges having no little difficulty in awarding premier honours. Mr. E. P. Northey, of Okehampton, did exceedingly well in the open Hunter classes, winning two firsts with animals shown in the pink of condition. The local Hunter and hack classes provided keen competition, the silver challenge cup going to Mr. E. P. Northey. In the open competition for ponies, Mr. W. E. Horton, Plymouth, with Ranter kept up his winning sequence, this animal having now won thirteen prizes in eleven attempts. Cattle and sheep made a good show, while the jumping and driving classes were well up to the average, whilst there were interesting displays of butter and cream, eggs, honey, garden produce, &c.

Wolsingham.

The Wolsingham Agricultural Society's annual show was held in delightful weather on Wednesday, where there was a record meeting, the total number reaching 1,387; 85 in excess of the Durham County Agricultural Society's number at their show at Wolsingham last year, and an increase of 158 over the previous show of the Wolsingham Society held in 1905. The greatest advance was in dogs, which numbered 50 per cent. more than in 1905; while increases were also recorded in sheep, poultry, pigeons, rabbits, cavies, and in the leaping and pony scamper classes. Perhaps the chief feature was trials for which liberal prizes were offered, and twelve animals were entered for the open competition, while nine belonged to local owners. The sheep section was particularly well represented, while in the horse department some of the finest animals in the county were to be seen, notably the Royal Show winners of Messrs. Thos. Boddy, Bishop Auckland, and G. W. Dalston, Kirby Stephen. Cattle also made a nice display, and the show may be written down as a complete success.

Bury St. Edmunds.

The animal colt and foal show at Bury St. Edmunds took place on Wednesday, when in consequence of the harvest operations prevailing in many parts of the district the entries in some of the classes were somewhat shorter than usual. The show, however, was generally pronounced to be a very good one, the foals, especially Suffolks, being particularly noteworthy; in fact, the exhibition of Suffolk foals, both as regards quantity and quality, was the best ever witnessed in connection with the show. The challenge cup, presented by Mr. C. S. Wentworth Reeve, of Livermere Park, for the best Suffolk foal, eligible for the Stud Book, the condition being that the foal should have been bred as well as owned by a resident in West Suffolk, was awarded to Mr. R. Edgar, of Cockfield, for his colt foal, War Whoop, whose sire was War Cry and dam Lucky; whilst the challenge cup for a filly foal, other than Suffolk, bred and owned by a resident in West Suffolk, was awarded to Mr. J. Orbell, of Nowton, whose bay colt foal, Bravo, won easily. At a sale held in connection with the show about 140 animals were brought under the hammer, and they sold at prices up to 50 guineas.

Beaufort Hunt.

The Beaufort Hunt Farmers' Club's forty-seventh annual show fully maintained its reputation as the prettiest exhibition in the county. The interest which the Duke of Beaufort takes in the show is well known, and it is not limited to supplying a splendid site at Badminton for the show, but he entered some of his celebrated Hunters, and threw open the gardens for the inspection of the visitors, whilst he, with the Duchess and a distinguished party, made a lengthy stay at the show. The entries were well up to the average with regard to the cattle, and the horse events were exceptionally strong, some of the prize-winners at Bath being forward; whilst there was a good display of sheep, which, with other attractions, made the exhibition an altogether interesting one.

Mashamshire.

The Mashamshire Agricultural Society were fortunate enough to have brilliantly fine weather for their show, and the result was a very large attendance and a good gate, which should give a fresh lease of life to a deserving society. There was a slight drop in entries compared with a year ago, but the show itself was as good as ever. Seventy-seven cattle faced the judges, as compared with ninety-two last year; 106 sheep, as against ninety one; and 115 horses, or five less than a year ago, while the number of pigs exhibited declined from eighteen to nine. The other departments, such as farm and dairy produce, might be described as well up to the average.

The district is noted for its sheep, and in this section there was some keen competition among local breeders. This year the radius was reduced from ten to five miles, which had the effect of arousing keener local interest. The feature was the twice crossed breeds, but the Wensleydales also formed a strong section. Among the cattle were some exceptionally good beasts, and a credit to the neighbourhood.

Some excellent horses of the cart horse type were exhibited, the brood mares being an especially fine lot. Hackneys, too, were quite up to the average, but the yearlings and two-year olds were weak.

Woodstock.

The Woodstock Agricultural and Horticultural Association's Show reached its jubilee on Tuesday, and it is satisfactory to be able to record that the weather was all that could be desired, and the entries much larger than last year—1,204, or an increase of 200—so that the show's jubilee was fittingly celebrated. The exhibition was comprehensive in character, including horses, dogs, poultry, pigeons, cage birds, rabbits, cats, and agricultural and horticultural productions, whilst a great attraction were the band contests. There were, however, no cattle or sheep, and the chief section of the agricultural portion of the show was that for horses. The entries showed an increase on those of last year, and amongt the animals were several promising colts and filly foals. The Oxford Corporation secured the first prize of £3 in the class for colt foals, while Mr. Clement Keevil secured the premier award in the classes for filly foals and mares respectively. Mr. F. C. Taylor, of Church Farm, Radley, with Nuneham Diamond carried off the first prize in the class for four-year-old geldings or mares, and also the Shire Horse Society's silver medal for the best Shire mare, filly or filly foal, registered, or eligible for registration in the stud-book. He was also successful in gaining two other firsts in the classes for two-year-old and three-year-old geldings or mares. The horticultural display was a very good one, whilst the sections for dogs, poultry, rabbits, &c., were well supported, and proved interesting features to the visitors.

Thame.

The Thame Agricultural Society's Show, held on Thursday, was noticeable for a marked improvement both in number and quality of the exhibits, and the weather being favourable there was a large attendance, so that the show, as it deserved to be, was a most successful one. The live-stock entries numbered about 500, the entries for roots, &c., over 300, and the total number, including the classes for ploughmen, shepherds, &c., came to over 1,000. As usual, considerable interest was evinced in the classes for horses, and the judges had a by no means easy task to select the winners. Cart horses were an excellent lot, more especially in the older classes. The older gelding and mare classes showed very good entries, and there were some good specimens of the breed. There were two or three notable exhibits in each class from the two-year-old stage onwards, and the winner of the silver medal presented by the Shire Horse Society for the best Shire mare, filly, or filly foal in the show was a heavy short-legged mare, the property of Messrs. W. C. and A. J. Flowers, which showed a good deal of the Shire quality. As regards cattle, here again the entries were good, and some capital animals were present. Sheep were not particularly numerous, but very good, as were also the poultry and roots.

Chiltern Hills and Southern Bucks.

The annual exhibition of the Chiltern Hills and Southern Bucks Agricultural Association was held under the presidency of Earl Carrington in Daws Hill Park, High Wycombe, on Wednesday. Glorious weather prevailed, and the show was very largely attended. The entries numbered in the aggregate 554, against 472 last year. Of roots and corn there were 177, agricultural horses 55, Hunters and nags, including jumping, driving, &c., 142, Polo ponies 10, horned stock, 54, sheep 12, butter 32, dead poultry and eggs 23, honey 27, pony races 22. The pig classes were cancelled owing to the swine fever regulations. The show as a whole was one of the best ever held under the auspices of the society. The roots were of good size and quality, being the largest collection ever known at this show. There was also a creditable display of corn, especially of winter oats. The show of agricultural horses was an exceedingly good one, and in several classes the judges had considerable trouble in arriving at their decisions. The Hunters and nags also formed an interesting feature, and there was some capital jumping. The driving classes and tradesmen's turn-outs had attracted excellent entries, and the competition was very keen. The horned stock classes were well filled, the Shorthorns being a particularly good lot, and including some very fine animals. The sheep were few in number but of good quality, and there were some nice specimens of butter, dead poultry, and honey.

Buckingham.

The annual exhibition of the Buckingham Agricultural Association was held in the grounds of Mr. R. S. Budgett on Tuesday, when the weather was all that could be desired, and with a record number of entries in the various departments and a large attendance of visitors the show was a highly successful one. Horses were the chief feature. In the agricultural classes, Mr. C. E. B. Fry gained champion honours with his noted Mollington Manners, Mr. F. W. Lester being reserved with his Botolph Fashion. Other premier awards went to Mr. A. Lepper, Mr. F. J. Roper, Mr. W. C. Flowers, Mr. N. Coates, and Mr. T. F. Perry. The Hunters were an exceptionally fine lot. In the open Hunter class, Mr. J. H. Stokes was first with his celebrated Mustard, Mr. W. H. Norris being second with The Clown In the open driving class, Mr. B. Robins was first with his noted prizetaker, Sterling, with Mr. W. Kelvey's Bouncing Girl second. Other winners were Mr. W. R Monk, Mr. J. W. King, Mr. C. M. Prior, Mr. W. Manning, Mr. T. Stacey, Mr. B. W. Millington, Mr. O. Bartlett, Mr N. McCorquodale, Mr. B G Bishop, and Mr. C. Thompson.

In the cattle and sheep classes the chief prizetakers were Mr. J. L Shirley, Mr. A. J. Roberts, Mr. T. Culley, Mr. A. Lepper, Mr. Markham, Mr. T. Oxley, Mr. Stacey, Mr. R. Dickins, Mr. W. L. Waters, Mr. J. T. Smith, and Mr. Slater Harrison.

Wardle.

The Wardle Agricultural Society, the oldest in Lancashire, held its show on Wednesday, and was favoured with brilliant weather, a good attendance of visitors, and good entries, though the latter were somewhat below last year, but this is easily accounted for by the late season. Horses totalled 100, cattle 57, dogs 111, poultry 154, and pigeons 220. Though numbers were comparatively small, quality was high, particularly in the cattle section. Of sheep there were only 15, but these were of a good representative kind for this district. In the section for dogs there was a good deal of variety, and some particularly fine specimens were seen. Classes for poultry, rabbits, cats, vegetables, and dairy produce made up an interesting programme In the light horse section Mr. John Makeague, of Manchester, carried off the silver challenge cup for the best turnout, and Mr. Henry Whittles secured the Hackney Horse Society's silver medal for the best Hackney or Pony mare, filly, or filly foal registered or eligible for the Hackney Stud Book.

SHOW GOSSIP.

The balance-sheet of the Gloucestershire Agricultural Society, covering the Stroud Show, shows receipts to the amount of £2,247 3s. 5d., comprising balance brought forward, £127 10s. 8d.; subscriptions and arrears, £349 19s.; donations to prize fund, £292 15s.; entry fees, £379 6s. 6d.; Stroud local committee, £200; Stroud local committee local prizes, £26; gate money, £663 13s.; grand stand, £92 13s. 6d.; interest on deposit account, £18 5s. 9d.; premiums and contracts, £97.

The principal items of expenditure were:—Prizes, £804 1s.; advertising, £68 9s.; bills and posting, £95 1s. 6d.; stationery, printing, &c., £111 15s. 3d.; shedding for stock, implements, offices, stands, &c., £511 14s; special preparation of show ground, £16 10s. 7d.; Stroud local committee (cost of flower show tent and staging), £30; band, £55; ticket clerks, &c., £19 19s. 6d.; straw, £25; judges', stewards', and officials' expenses, £85 10s. 7d.; medals for forestry and nature study, £11 17s.; petty disbursements, including secretary's travelling expenses, £31 17s. 7d.; and secretary's salary, £100. £150 was placed to deposit account, and the balance at the bank is £98 6s. 9d. There is now £300 in cash on deposit, and the society holds £589 9s. 6d. in consols (purchased at a cost of £500).

The showground on Newcastle Town Moor for the show of the Royal Agricultural Society next year was recently inspected by the local committee and representatives of the society. The site, which has already been staked off, includes 110 acres, one of the largest enclosures ever devoted to the show, and exceeding by 20 acres the 1887 site. A certain amount of levelling has to be done, and arrangements have been made for this to be carried out before the winter, while a number of erections are already on the ground, and thousands of tons of timber are in readiness for further work.

In the afternoon a meeting of the local committee was held, the Lord Mayor (Mr. J. M. Oubridge) presiding. The question of allotting tickets, in accordance with subscriptions, as an inducement to subscribers, was considered, but eventually it was decided to appoint a committee similar to the one twenty years ago to collect subscriptions.

Sir Joseph Ellis offered a prize of 50 guineas for dairy farms, and Sir Gilbert Greenall, who was one of the representatives of the Royal Society, then remarked that the whole question of farm prizes would have to be considered by the council in London. The prizes were not a matter of so much importance as the judging, which cost £700 for farm prizes alone on the last occasion. There was no doubt farm prizes were of the greatest benefit to the show, as they were a splendid advertisement. Referring to the site, Sir Gilbert said it was one of the finest the society had had, being high and well drained.

SHOW SECRETARIES.

Mr. H. CROSSLEY,
Wetherby Agricultural Society.

The East Berks Horse Show Society has just issued the prize schedules for their next foal futurity classes, a feature which, though of recent introduction by this society, has become exceedingly popular with breeders of Hunters and Shires, who recognised it as being an excellent scheme for encouraging the retention of good mares in this country. The society offer between £150 to £170 as well as two champion silver cups for competition, the entries being confined to the produce of Hunter and Shire mares covered in 1907. The preliminary entries close on October 1 next with the hon. secretary, Mr. C. H. W. Dixon, 4, Henrietta Street, Covent Garden, W.C., from whom schedules, entry forms, &c., can be had.

CORRESPONDENCE.

Thatching and Thatching.

SIR,—In your issue of September 2 a paragraph on thatching concludes with the words: "We observe that in one or two counties requests are being made for more education money to be spent in giving instruction in this important work."

It may interest some of your readers to know that one such request to the Board of Education made by the managers of the Burgh and Billockby School (Fleggburgh), and kindly supported by the chairman of the local education committee, was in time acceded to, but under somewhat onerous conditions.

We received permission to include thatching in our time-table, but we were not successful in securing that "more education money be spent in giving instruction."

So far from it, the permission was only given on the distinct understanding that we should be responsible for all expenses—*i.e.*, for the instructor's payments (a duly qualified thatcher), tools, and materials. These terms were accepted by my brother managers.

Writing from memory, the lessons were for one hour a week, beginning in May and continuing till the school closed for the summer holidays—about twelve boys in the class for this the first course.

We had the honour of being inspected during that time by Mr. Dinmond, agricultural expert to the Board of Education, and our own H.M.I.

These gentlemen much encouraged us by expressing verbally their satisfaction at what they had seen, and their very favourable opinion of the thatching-instructor. Other visits are, I believe, to be made before any definite decision will be arrived at as to whether the present admittedly tentative experiment is to be further encouraged or not.

The immediate practical result so far is this:—One of the lads, who showed considerable interest and aptitude in his work in the class, has found remunerative employment during the holidays under his thatcher instructor.

I am emboldened, therefore, to hope that not a few of our boys will leave school ready and willing to keep "on the land," on having at least "elementary" knowledge of a rural handicraft with a money value; better, at all events, than being fit only to "scare birds," "mind sheep," or even lead the trace horse in a drill!—Yours, &c.,

GEO. C. FISHER,
(One time Bishop of Ipswich).

Burgh House, Fleggburgh, Norfolk,
September 9.

Harvesting in East Norfolk.

SIR,—The harvest is progressing slowly, and the greater bulk of it is secured in good condition.

I do not think any harm has been done beyond the delay; the wet weather we have had has not been of sufficient volume to injure anything, quite an absence of heavy storms. I consider we have suffered most through the lack of sunshine, and the cold nights especially through July and August.

Wheat, generally speaking, is a fair crop, though the acreage grown has sadly diminished. Barley is very variable; some places it has done very well, and there should be a satisfactory yield upon the whole, though not so good in quality as last year.

Oats are certainly the best crop, and I think will prove the most satisfactory crop grown, and as the last few days have been fine, good progress has been made in securing them in capital condition. Beans generally are good.

Roots.—Our mangolds are very good and full of growth generally, and look very promising for a heavy yield. Swedes vary very much, and in many places are in a poor way; mildew is frequent, and on the lighter soils rain is needed. I do not think this crop will be nearly so good as at

SOCIETY ANNOUNCEMENTS.

EAST BERKS HORSE SHOW SOCIETY.

12TH ANNUAL SHOW, AUGUST, 1908.

Foal Futurity Classes for Hunter and Shire Brood Mares.

First Instalment of Entry Fees due on or before 1st October, 1907.

Schedules and full particulars of the Hon. Sec., C. H. W. DIXON, 4, Henrietta Street, Covent Garden, London, W.C.

CLYDESDALE HORSE SOCIETY.

STUD BOOK VOL. XXX.

Entries now being received at 50 per cent. additional on ordinary fees. No Schedules issued after October 1.

ARCHD. MACNEILAGE, Secretary,
93, Hope Street, Glasgow.

GRANSDEN AND DISTRICT, at GREAT GRANSDEN.
SEPTEMBER 18, 1907.
Entries closed September 10.
H. J. KISBY, Secretary.
Great Gransden, Sandy, Beds

THAME AGRICULTURAL ASSOCIATION.

Show will be held on THURSDAY, SEPTEMBER 12, 1907.

Entries close as follows:—Dry Sheep, Class 8, March 5; Wet Sheep, Class 5, 6 and 7, April 16; Hedging, Classes 9 and 10, March 26; Servitude and Ploughing Classes, August 31; Horses, Cattle and Sheep, Roots, Honey, Poultry, Butter and Eggs, August 31; Rick Building and Thatching, September 16.

J. BUSH, Secretary.

SOUTHDOWN FLOCK BOOK.

NOTICE is hereby given that the Southdown Flock Book will be definitely closed to unregistered flocks on December 31 next, after which date no sheep from unregistered flocks will be accepted under any conditions whatever.

Owners who have not yet registered their flocks are earnestly requested to write for full information respecting the Southdown Sheep Society to

W. J. WICKISON,
Secretary.

12, Hanover Square,
London, W.

one time was expected, they laid stagnant in their growth so long there seemed no warmth in the soil to bring them on.

Generally speaking, there will be plenty of keep for winter stock, though I do not consider the quality will be equal to last year.—Yours, &c.,

September 12, 1907. T. K.

Harvesting on Salisbury Plain—Sheep Dipping Orders.

SIR,—Harvest was finished on most farms the early part of week. Wheat, a lot of straw, but corn inferior, more seconds than usual; it stood up well. Carter's White Stand-up and Scholey's Squarehead. Barley (Archer's Stiff Straw) stood well, above average crop. Oats the best crop—Garton's Rival and Abundance and Webb's Prolific Black Tartars. Sheep still sell well. Hampshire Down off-going ewes, 50s. to 60s.; lambs, 35s. to 60s.

I think the Board of Agriculture and Fisheries have given themselves, the farmers, and county police a great deal of unnecessary trouble in the Sheep Dipping Order, 1907. I fully concur in the compulsory dipping of all sheep, but surely one day's notice to the police ought to be quite sufficient in this changeable climate instead of three days' notice as at present required. The Board made an order that all sheep sent to a fair required a licence. This was revoked the last week in August, and they then made another order that sheep exposed for sale at an open fair, although previously dipped this summer, must be dipped again within 14 days. Results: Great trouble and expense to buyers and injury to sheep. This order is also revoked I believe. Such orders make it very hard on the county police, taking up most of their time to the great detriment of their civil duties.—Yours, &c., W. S. CLEVERLEY.

September 13, 1907.

Sowing, Lucerne, Sainfoin, and Cabbage.

SIR,—Will you kindly say through your columns whether lucerne and sainfoin would do if sown on suitable land in September, or whether the present time is suitable to sow cabbage and Brussels seed for planting out in March? The crop would be for a sheep feed in August next.—Yours, &c., A. G.

September 6.

*** The early spring is by far the best time to sow lucerne, and the operation may be performed from the middle of March to the end of April. There is an advantage in late sowing, inasmuch as the young plants, which are somewhat tender, are less liable to be injured by frost. If one has a perfectly clean seed bed the seed can be sown broadcast, and weeds are more effectually kept down than if drilling is adopted. On the other hand, by sowing in close drills about 8 in. apart the plants support each other and do not trail on the ground. March is the best month to sow sainfoin either by itself or drilled across the rows with a barley crop. This crop requires a clean seed bed, and it is a valuable forage plant for growing on dry or sandy soils. It is rather too late now to sow cabbage for spring planting, as it is doubtful whether the plants would grow big enough for the time you require them. As a rule, about the second week in August is the best time to sow cabbage for spring planting, and in these circumstances I think your best plan would be to buy plants in March. The Enfield Market type is good for feeding in August, and to make a succession the Drumhead is perhaps the best type, as these follow the Enfield and are fit for feeding in September, lasting till Christmas. By "Brussels" I take it that you refer to Brussels sprouts, and here again you are too late, because if sown now the plants would be very small, even if they managed to survive the winter. To get good specimens for spring planting the seed of Brussels sprouts should be sown in August about the same time as cabbage, as the plant needs a long season of growth. If a good seed bed is prepared in a favourable position in the early spring, and seeds are sown at the end of March or early in April, early plants of Brussels sprouts can be obtained. These, if put out as early as possible on well-manured land, will be fully grown by the autumn, but hardly by the time you require them.—RUSTICUS.

Some good prices were obtained at the Perth Ram Society's show and sale last week. Mr. R. M Buchanan got £90 for a shearling ram, bought by Mr. Scott, Cros-flatt, and at £5 less Messrs. Cadzow Bros. sold an animal of great substance to Mr. Fraser, Balnakettle. One of the pen with which Messrs. Cadzow gained third prize at the Highland Show was included, and after keen competition made £60, the buyer being Mr. Paterson, of Midcrosswood. Other outstanding prices for shearling rams were—Mr. J. Archibald, £65; Mr. R. Sandilands, £52; Mr. M. G. Hamilton, £50; and Mr. M. P. Fraser, £48. The highest average was £15 3s. for five sold by Mr. P. Campbell, Kennemore, whose top price was £31; Messrs. Cadzow sold sixty at £10 14s. 2d. apiece, and Mr. Buchanan forty at £12 5s. 6d. each.

DAIRY.

Pasteurisation.

The essential aim in pasteurising milk is to increase the keeping power of the milk by destroying as completely as possible the bacteria whose presence causes fermentative and other processes to be set up. If milk were a simple liquid, this freedom from bacteria could be obtained by merely raising the temperature to a degree varying from 145 to 170 deg. Fahr. and allowing it to stay under this condition for some minutes. The higher the temperature the less the time necessary to complete the process. All actively growing germs are destroyed, and there only remain the spores, which are capable of resisting a much higher temperature than this. Their growth, however, is delayed if, after heating, the milk is rapidly cooled, and this is the next step in the ordinary process of pasteurisation. The effect on the keeping quality of this cooling process is shown by experiments made in cooling to different temperatures after pasteurisation and noting the time during which the milk then remained sweet. When cooled to 86 deg. Fahr. the pasteurised milk remained sweet seven hours longer than raw milk. When cooled to 58 deg. Fahr. it remained sweet sixty hours longer than the raw milk. At intermediate temperatures to these it was found that the time of keeping increased in proportion to the lowering of the temperature.

The simplicity of the process and the results are, however, much complicated in practice by the other effects produced on the milk by the heating, all of which have to be considered in estimating the true value of the process.

Digestibility.

With regard to the digestibility of pasteurised milk, there is among medical men a difference of opinion. Results have been obtained by experimenters, and some of these are quite contradictory, though it is generally admitted that the digestibility of milk is not improved by the heating, the real point at issue being whether it is actually made less digestible or left unaltered. There is strong evidence that if the milk be highly heated its effect on children consuming it is to cause an increase in the amount of scurvy and rickets noticeable. Yet these effects are certainly not serious, even if they are in existence at all, if the milk be heated only to the low temperature necessary for pasteurisation as above stated.

The "Cooked" Taste.

A second objection raised to the process is that it produces the so called "cooked" taste, which renders it unpalatable to some persons. This taste is usually explained as being due to a change produced in the nitrogenous elements present in the milk, especially in the albumen. Yet Thoerner, the German experimenter, has shown there is a close connection between the formation of the cooked taste and the loss of certain of the gases which are expelled by heating. He discovered that if the heating takes place in a closed vessel from which the gases are not expelled the cooked flavour is much less marked than when heated in an open vessel in the ordinary way. The true cause of the change of taste must be admitted to be yet undiscovered. The "skin" which appears on the surface of milk when heated is said to be composed of albumen which has undergone the change mentioned above, but there is evidence which tends to show that it is casein modified by the rapid evaporation of the serum of the milk, which takes place most rapidly at the surface where the skin is formed.

Thinner Milk and Cream.

A third effect resulting from the heating is one which is more markedly shown in cream than in milk, but its effect does exist even in milk. Milk and cream are found when heated above 140 deg. Fahr. to lose consistency and become thinner in appearance, though there is no real loss of fat which this change suggests. An examination of the cream under the microscope shows clearly the cause of this. In unheated cream the globules of fat are connected in clusters or groups, but when the temperature is raised to the above-mentioned degree the clusters break up and are more evenly distributed throughout the whole, so that the cream appears to be considerably more liquid or less clotty than before, and this at first glance suggests that a less proportion of fat is present. This would be a drawback for market use, but a simple and ingenious remedy has been discovered for it. It is found that if a strong solution of cane sugar is added to freshly-slaked lime a clear liquid can be obtained by allowing the mixture to stand. In adding this to the cream, the globules are found to cluster again in small groups as before, and the old consistency reappears, though in neither the defect nor its remedy has the quantity of fat present been either lessened or increased.

General Advantage.

Of the general advantage of pasteurised milk over unpasteurised from the point of view of health considerations it is needless to speak.

The drop in the death rate of infant mortality in the poorer quarters of towns where pasteurised milk has been substituted is an unquestionable indication of the effectiveness of the method, not merely in lessening the spread of the well-known diseases whose germs are understood to be conveyed by milk, but also in diminishing infant mortality from general diarrhœal disturbances.

An examination of the milk pasteurised commercially was recently made in connection with the Wisconsin Dairy School. It was conclusively proved that 99·8 per cent. of the bacteria was destroyed by keeping the milk for twenty minutes at 155 deg. Fahr.

This is vividly shown diagrammatically by a square on a line 2 in long. If this square be taken to represent the original bacteria present in the milk before pasteurisation, the number left after the process is represented by a tiny square on a base only one-twelfth of an inch long.

LACTISSIMA.

International Dairy Congress.

The third International Dairy Congress, the purpose of which is the promotion of the scientific and technical interests of dairy work, is being held at the Hague—Scheveningen, opening yesterday and extending until the 20th inst.

European countries generally, as well as the United States of America, are represented, and the delegates include many well-known dairy experts.

The questions to be discussed are uniformity of methods for the control of milk and all milk products in the places where they are produced and in the market; dairy control; conditions to be imposed on the sale of milk; conditions to which milk must conform if intended for use, specially as food for children; the "pasteurisation" and sterilisation of milk, the sanitation of stables used in connection with the production of milk; the danger of milk from tuberculous cows; the causes which influence the proportion of water in butter, &c.

Whitchurch Cheese Fair.

At Whitchurch Cheese Fair on Wednesday there was a pitch of 70 tons. The market opened with a good inquiry, and there being a large attendance of buyers a rapid clearance was made at the following prices:—Best, 58s. to 62s. 6d., down to 50s. The corresponding fair last year shows 67 tons pitched, and prices 63s. to 67s. 6d.

Lancaster Cheese Fair.

The September Cheese Fair at Lancaster was held on Tuesday, and was largely attended. The pitch comprised seventy-eight dairies (1,381 cheese), as compared with ninety-nine dairies (1,729 cheese) at the corresponding fair last year. There was a good demand, and a 5s. advance resulted. Best cheese averaged about 67s. per cwt., medium 65s., and common 60s., whilst an exceptional lot of two brought 70s.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended September 7, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (13,420), 6,614; sheep and lambs (1,152), 654; horses (367), 564.

Fresh meat:—Beef (112,159 cwts.), 143,831; Mutton (70,271), 89,422; pork (5,844), 9,941.

Salted or preserved meat:—Bacon (99,761 cwt.), 110,210; beef (2,334), 3,120; hams (22,744), 27,248; pork (5,323), 6,490; meat (7,381), fresh, 11,651; salted 1,052; meat, preserved (5,174), 6,319.

Dairy produce and substitutes:—Butter (87,161 cwt.), 71,732; margarine (21,837), 15,029; cheese (65,032), 56,759; milk, fresh in cans or drums (160), —; cream (77), 24; milk, condensed (17,927), 15,105; milk, preserved (351), 64.

Eggs (great hundreds):—(431,340), 366,194; poultry (value £3,502), £2,369; game (value £1,043), £1,423; rabbits, dead (not tinned), (47,979 cwt.), 20,088; lard (27,933 cwt.), 35,418.

Corn, grain, meal, and flour:—Wheat (2,849,400 cwt.), 1,812,800; wheat meal and flour (241,900), 245,000; barley (1,008,600), 661,800; oats (255,700), 122,800; peas (26,010), 12,040; beans (136,760) 9,370; maize or Indian corn (1,519,600), 904,800.

Fruit (raw):—Apples (15,629 cwt.), 12,702; grapes (23,511 cwt.), 37,449; pears (33,925 cwt.), 45,615; plums (114,581 cwt.), 25,585.

Hay (1,991 tons), 1,632; straw (1,032 tons), 1,198; moss litter (933 tons), 1,723; hops (1,656 cwt.), 386.

Fig. 1.—Magnified fungus. It grows grey only in colour upon raw potato, but is green upon cooked tubers. In the second circle are two tufts from the first, still further magnified in order to show the spores—or sporules—in chains, and then breaking away. Each spore is capable of setting up a mycelium bed.

POTATO FUNGI.

THE enormous value of the potato as an article of food should render all contributions bearing on the study of its diseases welcome to all those most concerned in its cultivation. The vegetable seems to be especially liable to extremely objectionable attacks of fungi in both tuber and haulm, and the pernicious results must often discourage growers. I propose, as some slight help towards elucidating some of its weaknesses, to describe some impressions dealing with the subject, which may have a tendency towards leading interested readers to give fuller consideration to it.

Suppose we cut a raw potato into slices and place them in a clean box for a few days We will also cook a skinned potato and slice that up as well, putting the layers in another receptacle. Examine both kinds from day to day, and before the elapse of a week the cooked specimens will be found densely covered with a grey, mouse-like fur, whereas the raw one will have turned brownish and hard on its starchy surfaces, resembling the skin, and show very faint traces of a whitish or faint grey fluff.

Before I go more fully into my theories it will be preferable to detail the results of the experiments. Incidentally my references and illustrations will give some idea of the curiosities of fungi to those who suffer from their effects, and who hear and read a lot concerning the vile growths in ignorance of their exact character. I will omit scientific names as far as possible, chiefly because they are useless to the general mass of readers, and also because various names are attached to the same things by different fungologists striving to get their own definitions accepted by the abolition of other appellations. My simple experiments can be repeated, and anyone can follow me with full comprehension, especially with the assistance of a strong lens or microscope.

The raw potato will disclose, when magnified, very, very tiny tufts of fungus, the whole giving a mere tinge to the skin and severed surfaces. This fungus consists of stalks, on the upper extremities of which necklaces of spores radiate from a common centre, and with low powers roughly resemble palm leaves (see No. 1). Each of the practically invisible beads is a spore, and consequently an inch of affected surface would contain myriads of them. Now, every one of these spores is capable of setting up complications on its own behalf. But it is necessary to say that it does not always follow that a spore will at once reproduce a *facsimile* of its parent plant. We must not expect for certain that this spore would reproduce palmate fungi, because much depends on the possibilities of impregnation allowed to the spores. Notwithstanding the great advances made in the study of microscopic fungi, we still grope in the dark in respect to the whole mysteries of their life cycles. So many of the species display a double system of fruiting, which is so difficult to follow on account of their minuteness — if we could handle the spores as we do seeds the problems would be quickly settled—that we are left to guess at many phases, and found our impressions thereon, varying them if our expectations are not realised. It may seem to be bewildering to speak of fungi having two totally different styles of fruiting; yet the potato plant itself will best explain the complication. In the latter, either the tubers or the seeds are capable of reproducing the parent. Imagine the plant to be a microscopic one, not affording facilities of being handled, and the berries and their contents, in addition to the tubers, always blown about by winds and draughts, and you will perceive the perplexity which would confront anyone striving to discover the precise actions of the tubers and the seeds.

Bear the preceding facts in mind while we proceed to magnify the slice of cooked potato. The first sign of fungus consists of white fibres of irregular lengths. Soon, glistening, glass-like balls appear among their bases right against the potato flesh, and become slowly lifted up on flimsy stalks, meantime turning to a dark grey colour. They continue to be elevated until they are ripe and almost black, at which period each is really a hollow shell crammed full of spores, which are discharged in all directions by the bursting of the receptacles. (See Nos. 2, 3, and 4)

The significance of the phenomena is intensified because the hosts of spores do not appear to solely reproduce the black-ball fungus. While new balls certainly do succeed the initially split ones, I believe they do not arise from the ejected contents, but from the mycelium—thread-roots—which started the first balls into existence. This opinion is derived from the fact that the grey fur is soon replaced by a green fungus (partially or wholly, according to the dry or moist condition of the slice), which generally begins as a bright spot within a white circle upon the grey. It is strange that this green fungus is shaped very similarly to the drab one which coats the slice of uncooked potato. It is palmate, consisting of rows of spores stretching out from the tips of the stalks. While it has a different name to the other fan-like species, there is no real proof that both appearances are not stages in the same species—the colour, and the absence of it, being respectively due to the different conditions of the foundation plants.

Two questions arise from these results. Why does not the raw potato develop either the black-ball or green fan fungus, whereas the cooked one exhibits both? It should be pointed out that the two latter kinds are to be found also on decaying kinds of vegetation; but so far as I can learn, underground tuberous growths are not susceptible to them until decay by heat and moisture sets in. This brings me to the consideration of another necessary phase of the problem. Although it seems difficult for the majority of people to grasp the full purport of the statement, it is none the less true that operations which go on in the soil — and above ground, for that matter—are the equivalents to boiling processes, as understood ordinarily by us. A very prosaic example will show what I mean. We take two separate pints of water. One we warm continuously in a kettle, and the other we place in a glass and leave for some time undisturbed. In the first case the water will boil away to steam and entirely disappear; the second lot will also quite vanish if time is allowed. Now in both instances similar processes have been at work—one quick and one slow. In each case the water has reverted to its original constituents, oxygen and hydrogen. If we could gather together the whole amount of the unnoticeable warmth which had caused the glass of water to evaporate, I daresay it would approximate to that concentrated together when the pint of water was boiled to gases. In both experiments the water has decayed or decomposed—the two terms are synonymous.

(To be concluded).

At a meeting of dairy farmers at Kirkstall on Thursday it was decided to recommend that from October 1 the wholesale price for milk should be raised 1d. per gallon. This is in consequence of it having been decided to raise the price of milk in Leeds.

At a meeting of the Cornwall County Dairy Show Committee at Truro on Wednesday, March 17 and 18 next were selected as the provisional dates for the first show at Truro. The Hon. John Boscawen, who presided, said he could not see how the show could be started on less than £200. As the objects of the show were largely of a technical educational character, he hoped the County Education Committee would be able to give a grant. The lectures would be on a higher grade than those given by the travelling dairy school. If they could collect £200, and get £30 in entrance money on the two days of the show, he thought they could cover expenses A finance committee was appointed to arrange for the issue of an appeal for financial support.

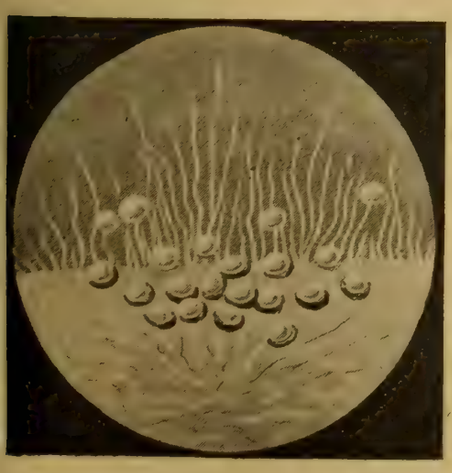


Fig. 2.—The beginning of the blackball fungus on a cooked potato. In this illustration and in figs. 3 and 4 the potato edge is the middle line in the circle, and the view is from the top. (Magnified).

Fig. 3.—Intermediate stage of the blackball fungus growing on a cooked potato. (Magnified.)

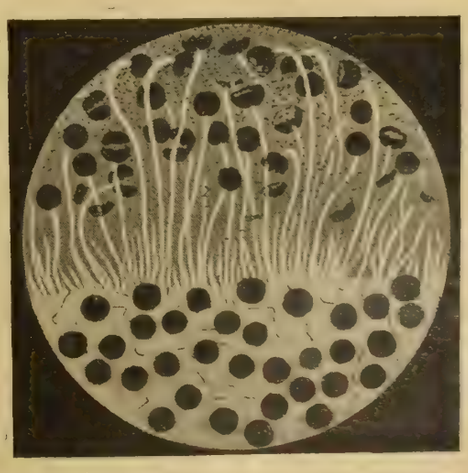

Fig. 4.—Final condition of the blackball fungus, in which the balls are splitting open and scattering their spores. (Magnified.)

West Country Notes.

THROUGHOUT the West there is rejoicing at the welcome arrival of the long-delayed summer. Every kind of harvest work is beginning to regain the lost ground, and the prospects for the threshing of such grain as there is have greatly improved in the last week.

THE beans are now coming in for attention, and hands are fully occupied in all branches of field work.

FROM the reports on the root crops there is plenty of bulk, and evidently a great many people are feeling that if they have not been able to save their hay as well as they would have liked, there is still one thing in the way of winter feed which may stand them well.

DEALERS in fodder are buying shrewdly and warily, but they are not letting many chances slip where a bit of good hay can be obtained. They are bidding very fair prices, and where it is at all worth their attention, there is a quiet giving of some little concessions which make a deal sure.

FROM the Devonshire moors comes a poor account of one branch of their autumn trade, that in the native ponies, which year by year are said to be growing less and less profitable, on account of the rate prices are going down. It has for some time been noticeable that droves of the wild shaggy creatures, fresh from the summer pasture, have been moving further from their moorland homes to find a market, and curious tales are told of the price at which a buyer can secure most useful workers and fast trotters in remote corners. Things are hardly likely to get so bad as to strike a serious blow at a pretty branch of Western agriculture, but some improvement would be gladly welcomed.

THE preliminary statistics for the country of the live stock returns are to hand this week. Some weeks ago I forecast that there would probably be found to be a diminution in the numbers of cattle. The shortage is more surprising even than anticipated, for it amounts in the six western counties to just upon 25,000 decrease since last year. Throughout the country, except in a very few instances, the decrease is to be noted, but it appears to be especially keen in the West.

THE decrease extends to horses and sheep; except in Cornwall in the case of horses, and Cornwall and Devon for sheep. Curiously enough in every county of the six, the numbers of pigs have increased, so that the porcine population has gone up by 54,000 in the year.

IT is somewhat difficult to find out the cause of such a remarkable change, and the fuller details which give the analysis of the returns into the various sections will be awaited with some curiosity.

THE crop reports are variable from the official estimators, but those true barometers of the present condition of the kinds upon which farmers depend for their feeding cattle—the cake merchants—agree that from their point of view there is too much grass about.

THE hay acreage far exceeds last year in the West, both where rotation and permanent grass is concerned. But the actual yield of "hay," in spite of the great growth, is very much below previous years, and never, perhaps, before has ensilage been so largely resorted to as it has been in many districts this year. This fodder is still being put up, and mowing continues; in many cases second cuttings taking place where such a practice is almost unknown.

THE round of one day shows in the West has had a very fortunate time so far as weather is concerned, and in most cases the results are favourable, though not extraordinary, for people engaged in harvesting cannot afford to give the time to pleasure that they would have done under other circumstances.

September 13, 1907.

A serious fire occurred at Messrs. Stanley, Earle and Co.'s oil refinery, Kirkby Street, Hull, on Thursday morning. The brigade had two steamers on the spot, but before the fire could be got under the offices, a two-storey building, were gutted. Tanks, casks, and drums containing linseed, cotton oil, &c., fed the flames for some time, and in this respect much damage was done.

Northern Notes.

IN Lancashire the promoters of harvest festivals are "taking time by the forelock," and these services of thanksgiving are already being held, although the harvest was not completed at the time, and scarcely any cereals were cut, much less "safely gathered in," to use the words of a familiar hymn that would no doubt be rendered by the choirs and congregations. There is a strange incongruity in these pre-arranged services, which come off with the regularity of clockwork, something after the plan of those methodical housekeepers who religiously refrain from lighting a fire after a certain date in the spring until winter comes round again with its chilling blasts.

IT is a good thing to offer thanks for yearly mercies, and perhaps if some people delayed their offerings they might forget all about their indebtedness for the promise of and the fulfilment of harvest. Without wishing to be too dogmatic, we confess that more pleasure would be ours if less of selfishness were shown in the matter of harvest thanksgivings. Are we always really sincere in these services? Are not the funds too frequently "devoted," as the announcements say, to some object of improvement in church or chapel, making merely for the increased comfort of the worshipper, rather than to some charitable purpose? Thankfulness should mean sacrifice, the giving of something in return for the blessings received in the form of bodily sustenance as represented in the fruits of the earth.

A FARMER and ram breeder said the other day to the writer, "I'm tired of these fairs, I shall sell my shearlings this year on an ordinary market day." True it is that people are getting tired of fairs, and it is an incontestable fact that fairs are declining in many parts of the country. The more prominent fairs of the South, the Midlands, and the North, which have a national reputation for size and importance, may be holding their own. In the Uplands of Yorkshire the fairs, too, are on a big scale, and flockowners are beginning to prepare for the disposal of their yearly crops of lambs which gradually find their way in October and November to the markets for lean stock all over the county, being sought after for putting on the turnip flats and fattening off for the spring dispersals as finished mutton.

BUT the fairs the farmer said he was tired of are the little fairs which are so-called chartered fairs that are held far outside a market town, and to reach them involves an expenditure of time, and time to dealers and others means money. It is astonishing, however, how people will cling tenaciously to old traditions and practices, and submit to inconveniences in doing so.

THE Irish harvester has been so little in evidence this year as to cause wonder what can have become of Pat. How familiar they used to be with their sickles and scythes—the blades carefully enwrapped with bands of straw; and with their bundles on their shoulders. Pat requires no other luggage now than his bundle, which contains perhaps a change of linen. We have seen hundreds in a market; now they may be counted in the same place on the fingers of two hands.

IN Yorkshire great progress has been made with the cereal harvest. Not a stalk of grain is left standing in some quarters, and the carting began in earnest this week, in splendid weather. Further north many fields of corn are almost green as grass, and the ripening of more forward crops is very uneven. The "laid" corn may ripen, but will be an inferior sample, and clean cutting will be an impossibility. In Northumberland wheat is given the credit of being the leading crop; on wet lands oats are poor; and barley has suffered from slow maturation.

A NUMBER of pure-bred Leicester shearling rams have lately been exported by members of the L.S.B.A. to New Zealand and elsewhere. The Leicester is a favourite with New Zealanders, and occupies a good position in the flocks there; and a Colonial paper just to hand says the prize for the best pen of freezers at the great Australasian show at Christchurch was awarded to a pen of handy weights from a Leicester ewe by a Southdown ram. The English Leicester Society gave a silver challenge cup at this show. Leicesters were the most numerous of any sheep exhibited there. The home breeders have a fine class of sheep, which have come to a great size, but they are endowed with too much modesty, and make far too little noise in the world to attain that amount of success which would otherwise be within their reach.

AS a commentary upon the immoderate nature of the restrictions upon the movement of swine in Yorkshire, it is stated that at one of the chief centres this week not a single pig of any description was penned—an unprecedented occurrence.

THE cattle market at Penistone, in Yorkshire, continues to be held in the open street, under an "extended" licence from the Board of Agriculture, pending the formulation and adoption of one scheme or another to obviate the continuation of the existing conditions under which cattle are exposed. The market has the sanction of long established custom, and the objections to it are more of a sentimental character than otherwise. The innkeepers and tradespeople do not favour its abolition, as may well be imagined, as its removal would be detrimental to their several businesses.

AT York, apart from the splendid covered premises there used for sheep and cattle and wool, "pens" are erected in the street, beneath the ancient city walls, and these are used by cattle dealers for store stock. When the vendors wish to show the cattle to better advantage the animals are driven from the pens into the open street. Nobody seems to raise any objection to this street market. It certainly is not lacking in picturesqueness on a busy day.

September 13, 1907.

Cider without Apples: Two Bristol Manufacturers Fined.

Two important prosecutions in connection with the movement on behalf of the sale of pure cider were heard at the Bristol police court on Thursday by Major Ramsey and Mr. E. J. Thatcher, and considerable interest was taken in the cases. The first heard was that in which Messrs. King and Co., of York Street, were prosecuted by the Board of Agriculture for selling a beverage to which a false trade description had been applied, and in stating his case the prosecuting counsel, Mr. Wansbrough, said that the charge was made under a provision of the Merchandise Marks Act, which read that anyone applying a false description to goods, or who sold goods to which a false description was applied, was liable on conviction to imprisonment or heavy fine. The case concerned the beverage called cider. He understood that the defence would concur that cider was "the fermented juice of the apple," but in the concoction sold by the defendants the magistrates would learn that there was not one drop of juice of the apple, but was made out of chemicals and colourings, sugar and flavourings, and an analyst from Somerset House, found that besides the essences and flavourings there was in the concoction in question a considerable quantity of aniline dyes, which was very objectionable, and some saponin, which was highly dangerous, and had been forbidden by the Inland Revenue authorities for use in the manufacture of beer. Owing to complaints of a liquor being sold as cider which was not genuine, certain steps were taken, and on June 6 a Mr. Smith, who kept a general shop at 151, Easton Road, wrote to the defendant firm for a two-gallon jar of cider, and some mineral waters. On the following day a messenger from the defendant's brought the jar of liquid to Mr. Smith, and it was received by him in company with Inspector Simpson, of the Food and Drugs Act department, the latter at once taking a sample for analysis. Mr. Simpson sent the samples for analysis, and when the result of the analysis was known a search warrant was issued and the premises of the defendant company were examined, and a large quantity of chemicals was found, but no cider mill or apples.

Witnesses were then called to bear out Mr. Wansbrough's statement.

The first was Mr. James Smith, who deposed to ordering a two gallon jar of cider from the defendants.

Mr. F. W. Simpson, Food and Drugs Act inspector, said that he received samples of the liquor Mr. Smith purchased, and, after sealing them, sent them for Government analysis.

Mr. Stubbs, an analyst from Somerset House, said that, in conjunction with Mr. Robbins, he examined the samples sent by Mr. Simpson, and found them to be a sugar solution, with chemicals, flavouring essences, and colouring matter. There was not a trace of apple juice in its composition.

Dr. Cook deposed that saponin, which had been found in the liquor, was harmful in any degree whatever, while aniline dyes were objectionable.

Mr. J. Cornelius, on behalf of the Board of Agriculture, said that he instituted the proceedings against defendants, and was present when a search was made of their premises. There were neither materials nor apparatus for making cider there. Mr. King raised no objection to the search, but aided them in every possible way.

Mr. Robbins, a Government analyst, stated that amongst the chemicals seized and produced in court were concentrated essence of sparkling ciderette, salicylic acid, aniline dye, tartaric acid, commercial phosphoric acid, caramel, and saponin. Some of these were far from harmful, but others were much condemned. He could not say that the sample of "cider" sold contained all, but

most of them were present, though not in a dangerous degree.

Mr. Gilmore, for the defence, submitted that Messrs. King had been manufacturing from the same recipe for the last fifteen years. They made cider from these chemicals as an accepted trade preparation before the proper apple juice cider had grown in popular demand. There was no intent to defraud, because it was plain that people expecting the proper apple juice cider would not go to a mineral water manufacturer for it. He would call witnesses in the mineral water trade to show that it had been the custom for many years to make a chemical preparation known as cider for public consumption. It was not an attempted imitation of the proper thing, but quite another beverage. It had been carefully made, and was in no way harmful; but, if necessary, they would give an undertaking not to manufacture any more of it.

Mr. C. King gave evidence in support of what Mr. Gilmore had stated; and Mr. Beavis, another mineral water manufacturer, agreed that it was an acknowledged practice in their trade for very many years to make "cyder" by that recipe. He had heard of cider being made from apple juice.

There was a summons against Messrs. R. F. Hansford and Co., of Grosvenor Road, for a like offence, and the magistrates said they would hear the facts before inflicting a fine, as they intended to do.

Mr. Gilmore said they were satisfied to let the ruling of the first case apply to the second.

Mr. Wansbrough said that in Hansford's case there was no saponin or aniline dye found.

The bench fined each defendant £5 and £20 costs.

The New Crops.

England.

The crops have arrived, no further progress in growth is possible, and we are now waiting only for the completion of the harvest, in hope that all the cones at present hanging on the bine will be gathered into the cribs, and duly cured and bagged in good merchantable condition. Concerning this desirable consummation there seems to be some doubt, as it is thought that the delay in the commencement of picking may possibly cause the abandonment of some of the later growths, thus reducing the total yield by an appreciable quantity. The weather is perhaps the most important factor in this matter, and experts are debating if the cool misty nights and sunny days we are now experiencing are likely to be favourable or otherwise to the final results. The weaker grounds will be not unlikely to suffer from such climatic extremes, but the stronger plants will doubtless hold their own as long as is necessary. Personal observation leads me to anticipate a general satisfactory finish. The bine has hitherto come through the trials of the past months in a wonderful manner, and is so far accustomed to a changeable climate that we are almost assured of its present safety. I am therefore hopeful that we shall not be disappointed, but that our yield will fulfil our reasonable expectations.

With regard to the actural quantity to be brought to market, opinions differ. The general tone of the Borough favours reduction of previous estimates, and this line of thought appears to be supported by the reports of the yield of the early pickings. We are told that the hops are coming down light in many places, owing to the small size of the cones. On the other hand, it must be remembered that, with some exceptions only, the earliest and weakest pieces have been handled. Most of the heavily laden gardens, of which there are not a few, are yet untouched, and I am prepared to hear that if the weather continues favourable the yield of such grounds will be fully up to the estimated mark. However, I am quite willing to be persuaded that the English crop will not exceed 400,000 cwt. We do not require more, and we may hope that, if we do not pass this figure, our growers will realise more satisfactory prices, and at least some profit upon their outlay.

America—Reduced Estimates.

I am pleased to be able to report that the previous anticipations of a heavy crop in the United States are now considerably modified. In a letter dated August 24, received by me a few days ago, it was confidently asserted that the American crop would be approximately 365,000 bales, and such an estimate has been generally confirmed by others. Since the harvest has commenced reports of deficiencies of output in various sections have been published. Messrs. Durst Bros. write me this week that they were completing their picking, and that their crop would not exceed 5,500 bales, in place of 8,000 bales last year. They state that shortage in similar proportion exists throughout California, and express their belief that Oregon and Washington will not yield anything like the quantity estimated. To-day I have received a cable message from a most reliable source in Washington, saying that both in Oregon and New York the crop is being seriously injured by mould, that it will be much smaller than was expected, and is not now estimated to exceed 290,000 bales. Thus we have a falling off to the extent of 75,000 bales, or over 20 per cent. This is good news for English growers, and will I trust be established by subsequent knowledge.

Austria.

The hop harvest is practically completed by this time, and the yield appears to be about 15 per cent. under expectation. The quality and condition are considered to be excellent, and growers are anticipating satisfactory prices.

Belgium.

The crop in Poperinghe is being rapidly picked, and, the yield being only moderate, the harvest will soon be over. Picking is just about commencing in Alost. It is now estimated that the Belgian crop will hardly exceed that of last year, and possibly may not equal it.

The Markets.

London.

I am happy to be able to write once more something about business in the Borough, as with the arrival of the early samples of the new crop some interest is being aroused. It is not very keen just yet, because the general average of quality is not too attractive. But a few sales are being made at prices proportionate to quality, and I am told to day by factors that a range of 40s. to 65s. may be taken as representative of present values. I have heard of a few choice Bramblings realising 70s. and also of some poor stuff being offered at 35s. But the market has hardly opened yet, and the trade will not be developed until further supplies come forward. By the time I make my next report business will have begun to get into tangible form, and will be influenced largely by further definite knowledge of the crop, and by the confirmation of present information concerning the position of foreign markets.

Brussels.

Owing to the somwhat unfavourable reports concerning probable results of the new crop the market has become rather stronger, and contracts for October-November delivery have advanced a few francs.

America.

My correspondents say in a recent letter:—"Growers are offering to contract at 8 cents, but there is not a single dealer, up to present writing, willing to operate at this figure. All the information we can get indicates that brewers have never been more heavily stocked than they are at this time. The indifference shown by them when they refuse to purchase choice hops of the coming crop at 10 to 11 cents is an indication of how they feel towards the future of the market." Mr. Durst also writes:—"There is no demand here for contracts for new crop, or for old hops at any price. Up to this time no one has tried to buy a bale of our new crop; at this time last season they were offering us 15 to 16 cents." Probably this dull condition of affairs will be altered if the declared shortage of the 1907 crop is confirmed.

Imports and Exports.

The Board of Trade returns for last month show that we have received during August from America 10,451 cwt. of hops, and from other countries 2,562 cwt., making a total of 13,013 cwt. Against this quantity we have exported 239 cwt. of English and 304 cwt. of foreign hops. The balance of overweight upon our market for the month is therefore 12,470 cwt.

Having now arrived at the conclusion of our hop trading year, it will be interesting to ascertain to what extent our foreign trade has affected us. The United States of America have sent us during the past twelve months no less than 148,684 cwt., which I think will be found to be a record quantity. Other countries have also favoured us with 84,875 cwt., so that our total receipts present the big figure of 233,559 cwt.

Our exports during this period are much below the average, indicating that our customers are either getting their supplies from other sources, or are increasing their own plantations.

Of English hops we have only shipped during the past year 9,415 cwt., and 2,650 cwt. of foreign growth, making our total exports only amounting to 12,065 cwt. Deducting this figure from that of our imports given above, we are left with the exceptional balance of 221,494 cwt., which has been pressing heavily upon our trade throughout the whole of the past season.

Remembering that English growers have been losing ground in lines that may be described as almost parallel to the course of our import business, which fact is demonstrated by the regular annual reduction of our acreage, it is not only desirable but imperative that the attention of the Government should be given to the position, and although the prospect of such intervention is at present almost hopeless, I am still hopeful that the day is not far distant when English planters will be aroused to take steps for their own defence in a more practical manner than has yet been done.

The Use of English Hops.

A strong plea on behalf of English hops is made in their annual circular by Messrs. Wests, Jones and Co., the well-known factors of the Borough. In recording a further reduction in the English acreage they admit that a lowering in the standard of quality of some beer has undoubtedly caused a reduction in the consumption of English hops, but contend that the present depressed state of the industry could not have been brought about had it not been for the unfair competition of foreign surpluses. The worst feature of the situation is that the English grower is powerless to help himself or his industry. Under-production at home is the direct result of over-production abroad; and, according to this firm's estimate of the English yield, it is only equal to about seven months' consumption. The Continental crop, as a whole, though not a very heavy one, is considerably lager than last year's, and while American reports point to a large yield, it will be substantially less than that of last season, and rumour indicates that the quality may again be indifferent.

Some brewers, the circular declares, have shown an increasing antagonism to paying English growers fair and remunerative prices, and, by the adoption of "waiting" tactics in regard to the purchase of English hops, they have done their best to crush this essentially national industry out of existence. "We would urge brewers to consider this point seriously," the circular goes on, "and to decide if it would not be wise policy as well as more patriotic to support those who support them. It is not to foreigners that they sell their beer, but to their own countrymen, and when presently their property is threatened, it will be to their own countrymen that they will look for support."

Less controversial, perhaps, is the statement that the quality and flavour of English hops are unsurpassable, and there seems to be cogency in the argument that, if the money now sent abroad for foreign hops is kept and circulated at home, much of it which is lost to the country would inevitably find its way back to the brewers' own pockets.

Lincolnshire Notes.

WHAT a magnificent Sunday, I wondered as I saw the fields of glorious corn a week ago. I thought of the number of fine Sundays we have had in the last month or two, and I found myself asking the question whether Sunday observance does not go a bit too far when it suspends beneficial harvest operations. Why should not the farmer save his produce as well as pull his ox out of the pit on the Lord's Day? Why should he not gather in his corn just as much as he allows his domestics to cook the dinner or perform the other duties of the household? Some day we shall have to discuss this question in earnest if the fickle climate holds.

I WROTE this on Monday, little expecting the week of ideal harvest weather which has followed it. We are now really beginning to realise the fruits of the harvest. Considerably more than half the corn is out, and the fruits of the season are being won in earnest. On Friday there was a good deal of corn in Lincoln market. And whilst it does not come up to the ideal quality of last year, it is fetching anything up to 6s. per quarter more.

MR. CHRISTOPHER TURNOR had a very enthusiastic home-coming to Stoke Rocheford on Monday. "Make this your home" was the appeal of the villagers, artistically expressed on one of the numerous streamers. I am not going to emphasise the appeal. I am satisfied to know that Mr. Turnor has made his home in Lincolnshire. I am still more pleased to believe that the interest in agriculture and its development on modern lines is still going to be his principal concern and industry.

MR WM. STENNETT, of Billingborough, whose remains were interred on Thursday, was a well-known Lincolnshire agriculturist. He had many friends both in agricultural and religious circles, and his funeral was a striking manifestation of esteem.

WHY not make jam? The Gainsborough Guardians are adopting Mr. Gladstone's advice. They have instructed the master to purchase as much fruit as possible and start making jam. For consumption, not for sale, I presume. Careful householders who have children to nourish and please might well adopt the suggestion.

WITH the sunshine here at last, the root crops and mongolds are beginning to assume large dimensions. Swedes and common turnips are also doing wonderfully well, and abundant keep is already assured for the sheep during the coming winter. In the Lincolnshire Fens mangolds and swedes are growing rapidly, but it is to be feared that the sun has come too late to save the potatoes, which are now beyond doubt badly diseased.

INDEED, there are fears that the potato harvest is already ruined. A large grower in South Lincolnshire is very pessimistic. He writes:—"The wretched weather experienced during July and August will mean nearly ruination to many of the smaller farmers in this district, who largely depend upon the success of their potato crops for a living. Personally, I have over twenty acres of tubers, which are all more or less affected with disease. The plants show that they are suffering with blight, and on walking across two fields this week I noticed that the haulm was dying, which is a sure sign. To make sure, however, I dug up a number of roots, and some were so bad that they had actually commenced to rot. If this is the case in August, what are we to expect at the end of September, when we want to raise them?" What, indeed!

MR. T. H. B. FRESHNEY, of South Somercotes, shipped from Grimsby last week per s.s. *Leicester* sixteen Shire fillies and one stallion for Germany. These were bought by Mr. C. von Drathen chiefly in the Marsh district of Lincolnshire. They were a grand selection, being sired by such noted horses as Girton Charmer, Blythwood Conqueror, Lockinge Tug-of-War, and Rodney Stone. This is the third consignment which has been purchased by Herr von Drathen from the home of Lincolnshire Shires.

THE annual sale from Mr. Fred Ward's fine Quarrington flock quite eclipsed even the sale of the Lincolnshire Longwool Society the previous day. Mr. Ward did not make his splendid average of 1904, which amounted to £24 7s., but he beat all his other records, coming out with 116 rams sold for £2,495, or an average of £21 10s. 3d. each. Mr. J. E. Casswell, of Laughton, paid the highest price of 200 guineas, for which he obtained a ram by Dowsby Quality, which is described as almost perfect. There were some other respectable prices, Mr. J. Pears, of Mere, putting down 115 guineas for a son of Nocton. There were also some good family averages made. The six sons of Pointon Standpoint made £39 14s. 6d., eleven of Dowsby Quality reached an average of £31 17s. 6½d, and eighteen rams by Nocton Lincoln an average of £27 0s. 9d. As usual, some of the best sheep will go abroad, Mr. J. Truman, of Whittlesea, securing a dozen or so purchases at 38 guineas to 135 guineas, whilst Mr. C. A. Leonard, of Monte Video, was a large purchaser.

THE dinner which followed the sale was chiefly notable for a speech by Mr. A. W. Dean, J.P. Mr. Dean talked about two things—small holdings and stock breeding. On the former subject his views are sympathetic. But he pointed out that there was not a Government in the world in which small holdings are prosperous unless they are "protected" by the Government, and personally he will never support a scheme which will impose expense on the ratepayers. On the subject of stock, Mr. Dean spoke with more authority. Whilst he argues that it rests largely with the farmer as to how long he is to remain the universal provider for foreign flocks, he believes that England has still many natural advantages which will give her the command of the breeding for many a long day.

AT the behest of the Midland Corn and Agricultural Trades' Association, Ltd., the Midland Railway have provided a special market train, which will leave Nottingham at 10.30 a.m., Newark at 10.53, and arrive in Lincoln at 11.15.

THE tragic death of Mr. Gourley, late of Torksey, has been much regretted in the county of Lincolnshire, where he was well known. Mr. Gourley was thrown from a dogcart by the horse suddenly jerking round, and he fell on his head, fracturing his skull. He died three hours later without recovering consciousness. Mr. Gourley was fifty-nine years of age.

September 13, 1907.

Nottinghamshire Notes.

DECREASED entries in horses, cattle, sheep, and pigs marked the Ilkeston Agricultural Society's show this afternoon. The former number 185, against 211 last year; cattle tottalled 49, against 71 a year ago; sheep 30, as compared with 36; and pigs 31, against 43. In the butter and cheese classes the number of entries showed an increase, and the same remark applies to the classes for bread, there being 143 entries, against 33 a year ago.

FOR three years in succession the day on which this attractive show has been held proved wet, therefore it was a delightful change to-day, for the weather was all that could be desired. There was a huge attendance, and Mr. T. H. Richardson, the secretary, was inclined to the belief that the crowd would prove a record since the society was established ten years back. There were some capital animals on view, and without doubt this is one of the shows which has done much to create rivalry among local farmers as to who can breed the best stock. It is purely a tenant farmer's show, especially in the cattle classes.

MR. A. W. HICKLING, of Adbolton, carried all before him in the Hackney classes. In the filly foal class Adbolton Queen won the first and reserve special; for colt foals the first and special was awarded to Adbolton Performer; in the yearling colt or filly class Adbolton Lady Cooke was an easy winner; and in the two-year-old gelding or filly class Adbolton Royal was placed at the top. Four firsts and two specials to four Hackneys is not a bad day's work.

JUDGES were all well-known agriculturists in the district, including Mr. W. Machin, Edwalton, and Mr. J. W. Chappell, Alvaston, Derby, for Shires; Mr. R. Ford, of Duffield, for Hackneys; Mr. A. Payne-Gallwey, Bakewell (the Duke of Rutland's agent), and Mr. W. Richardson, Mackworth, Derby, for Hunters and Hacks; Mr. A. Stretton, Sibthorpe, Newark, and Mr. G. Chamberlain, Ridding's Farm, Alfreton, for cattle; and Mr. H. Smith, jun., Cropwell Butler, for pigs and sheep.

THE local show, which was held at Ripley yesterday was well attended. Until this year the exhibition had been an Easter fixture, but so bad has the weather been for several years that the committee decided to try the month of September for a change, and they will have good reason to be pleased for themselves. The entries were more numerous, and visitors rolled up in strong force. It is another of those societies which is doing a lot of good for farmers resident within a seven mile radius, and is well backed up by many influential farmers around Ripley.

DAMAGING growing crops in and about the townships of the county has long been one of the pastimes of irresponsible youths, and I have been surprised that farmers have not taken the trouble to bring the offenders to justice, as the havoc wrought in some instances is considerable. A field of wheat between Nottingham and Wollaton was so badly damaged through youths and the younger generation in general running amongst it and pulling the ears off the stems that two or three acres was not worth cutting. At Mansfield, to-day, however, six boys hailing from Selston and Warsop Vale had each to pay from 5s. to 10s. at the police-court for doing damage to two fields of wheat at Selston and Soukholme.

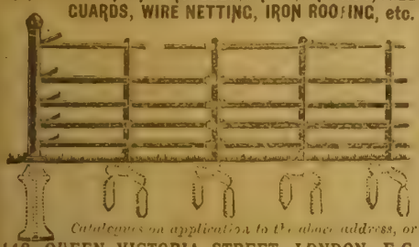
OWING to the great increase in the price of wheat and the consequent higher charges for flour, the Nottingham master bakers have raised the price of bread by 2d. per stone, the quartern loaf now selling at 5½d.

THOUGH we have had some heavy fogs in the county during the present week, the sun has more than made up for this, and a large amount of barley, wheat, peas, and nearly all the oats have been carted between Newark and Nottingham, and from the latter city to Loughborough good progress is being made. There are still odd fields of both barley and wheat which are green, and to the north of Nottingham, and around Mansfield, harvest has only just got going. Another week's fine weather will see "harvest home" on the majority of the farms, which is actually an accomplished fact with odd agriculturists.

MR. W. F. FAULCONBRIDGE, of Bulwell, near Nottingham, has kept a record of dates for forty-nine consecutive years when he began and finished harvesting. This year his first field of corn was cut on August 26, while last year he had actually finished harvesting on August 29. In 1859, the first crop was cut on July 12, and "harvest home" was celebrated on August 27. In 1860, however, the corn was not ready for cutting until September 6, while October 2 was the day on which the last load was taken into the homestead. The record for lateness since 1859 was October 20, 1892, when harvest was safely gathered in, while the earliest date for "harvest home" was in 1868, when cutting commenced on July 13 and finished on August 14.

SWALLOWS disappeared from this neighbourhood about the middle of August, and though I kept a keen look-out, not a single bird could I see for over a fortnight. However, large numbers of them are now to be seen hovering about, so that they must have returned once again.

THE unusual sight of a swarm of bees was to be seen at Normanton-on-Trent, near Newark, this week, and what is more they were kept at home and safely housed. Honey looks like being scarce this year, as the bees have been unable to get out owing to the wretched weather.



ROOT crops are forging ahead, and there is now no fear as to a scarcity of turnips for the sheep during the coming winter. It is truly surprising how rapidly mangolds have grown of late, and given a few more days of warm sunshine they will assume dimensions comparing favourably with many of the best grown last year.

FARMERS are beginning to prepare for wheat sowing, already a large acreage of seed land having been ploughed over. On Tuesday morning I was on a large farm near Newark at Hawton and six teams were out in one field ploughing up bean stubbles for wheat. Just before midday they took their horses home, and in the afternoon were busy leading barley, which was then in splendid trim. The heavy fog in the morning had made the stook on the outside as wet as though a heavy shower had fallen

ENGLISH corn was a trifle cheaper at Newark yesterday and again at Bourne to-day. Farmers are very eager to get a turn with the threshing machine in order to share in the high price of wheat at the present time. Speaking to a proprietor of three sets of threshing machines on Monday, he told me that he had never known a year when corn was in such bad condition as that which he has threshed this year. Farmers have been too anxious, and led the crops before they were ready. A stack of barley with a good proportion of clover in the straw had to be pulled to pieces last Sunday, near Bottesford, owing to it heating, the farmer being afraid of it firing.

PREPARATIONS are being made, both in Leicestershire at Belvoir and in Derbyshire, at Haddon Hall, for celebrating the coming of age next week of the Marquis of Granby, the Duke of Rutland's eldest son. The tenants are making a present to the Marquis, and they in turn are being entertained to dinner by the Duke and Duchess.

F. WALKER, Tilbby, Notts

LORD MIDDLETON, of Birdsall House, Yorks, and Wollaton Hall, near Nottingham, has given permission to the civic authorities in the lace city to hold a pageant in Wollaton Park, the site of the Bath and West Show three years back. The date has been provisionally fixed for the week commencing Monday, July 13, 1908.

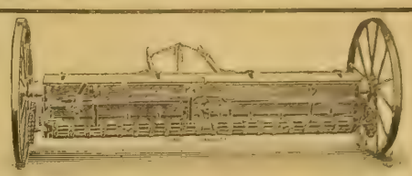
PLAYING in a novel cricket match at Nottingham on Wednesday between Indian Mutiny and Crimean Veterans and a team of local ladies, Miss Hickling, daughter of Mr. A. W. Hickling, of Adbolton, of Hackney and Shorthorn fame, succeeded in making the top score on her side with 24, and Miss Hickling also secured the dismissal of Private M. Holland, Nottingham's sole survivor of the Balaclava charge, for a "duck," bowling him with a delivery that curled in. The ladies proved the winners by 106 runs to the veterans' only 83. The Sheriff of Nottingham and Mr. A. O. Jones were the umpires, and there was a very large number of spectators present from the country districts.

FOXES appear to be plentiful around Newark, as farmers are loud in their complaints about Reynard, who has paid a visit to a number of hen roosts in the district. From one farm over thirty fowls have been taken in a fortnight. R. K.
September 12, 1907.

FARM.

Flour and Bread-Making.

At the Bakers' Exhibition, which is taking place in London, one naturally heard a great deal about the different grades of flour and bread-making. Mr. W. A. Vernon, of Messrs. Vernon and Sons, communicated some interesting intelligence on the position of the trade. He described himself an apostle of white bread. He believed that for general English consumption white bread was the best and the purest, and that it contained all that was necessary for those who ate meat and butter. If one lived on bread and water only, then brown bread would be the best.



Between the highest and lowest grades of flour there was a difference of 14s. per sack; a penny increase on the price of a loaf was about 8s. per sack. When he began milling it was thought necessary to make the grain produce 78 per cent. of flour, but now the finest flour was produced the grain only yielded 60 per cent., but from that product all impurities had been eliminated, together with the fibre and bran. In the best harvested wheat there was bound to be some dirt, and this was more noticeable in the wheat that came from India. By careful milling the dirt and the husk were removed, and the flour which resulted was a creamy white. Recently there had been a great deal of bleaching of flour, which meant they had it of any whiteness they liked. There was nothing very detrimental in it, but the process took away that creamy look which was to be found in the best harvested wheat. Bleaching took away the rawness from the flour.

In a short reference to the price of bread, Mr. Vernon said, from the point of view of economy, the poorest man could afford to have good bread. It was foolish economy to buy cheap bread, and no other article of diet varied so little in price; if the poorest quality was 4d. or 5d. per 4 lb. loaf, the very best was only 6d. or 7d., and he submitted that quality and not price should be the point round which competition should move. At the present time there was a great importation of foreign low-grade flour, which was used by bakers because of the greater profit it yielded, and that low-grade flour was sent here because it was unsaleable in the countries which produced it. The milling industry of the country, which had always been an important one, was being ruined by the cry for cheap bread. In New York bread was 8d. and 9d. per quartern loaf, but only the very best flour was used; yet if the heavy protective duties were removed, English milled flour could successfully compete with that produced in the United States.

The English millers did not object to the best flours of America and Canada coming into England at an equivalent price to their own, but they did object to those countries sending in an article which was shillings below the best flours of this country. It would never find a market if the public knew the difference between the high and low-grade flours.

The Hardwick Hall Estate, near Castle Eden, county Durham, comprising a manor, two farms, and a temperance hotel, was offered for sale at West Hartlepool on Thursday by Messrs. Mabbett and Edge, London. The estate comprises 684 acres, and the annual rental is £716. The property was withdrawn at £15,000, but was subsequently purchased for Colonel Burdon, of Castle Eden, and the Horden Colliery Company for £15,400.

Fertilisers and Feeding Stuffs.

Experience with Green Manuring.

As the result of a good deal of experience both in ordinary farming and at experimental stations with green manuring, Dr. Schneidewind considers that roots can make good use of a green manure. Taking the average of a number of years, peas and beans ploughed under produced an extra yield of roots per acre of 2½ tons.

Oats also availed themselves of the nitrogen in the greenstuff, in fact to such an extent that in wet seasons the crop was laid and the advantage gained by the extra fertility was lost.

As regards the best form of green manuring, peas and beans, according to the doctor's experiments, answered fairly well, but clover produced the best results. Last season's experiment was an interesting one. The following green crops were sown :—(1) Peas and beans after summer barley ; (2) clover ; (3) seradella with wheat. The following crops were afterwards grown on the plots :—Oats, potatoes, and beetroots. The oats on the clover plot developed most luxuriantly, but unfortunately were laid by a severe storm, so that the result of that plot could not be calculated.

The yields of the potatoes and roots calculated out per acre were :—

	Potatoes. Tons.	Roots. Tons.
Plot without green manure ...	5½	14
,, after seradella not inoculated	6	13½
,, after seradella inoculated	7	15
,, after peas and beans.....	7	16½
,, after clover	8	17

So that the clover proved the best system, especially as it costs considerably less than the peas and beans. It is interesting to note that the inoculated seradella did well, and it may be expected that on good soil the result would have been better.

The professor remarks that mustard is not a plant which should be used for the purpose of green manuring, although it is widely employed in some districts. In his opinion it is a practice which should certainly cease, as other plants give results so much superior.

Old Orchards Need Fertilisers.

In the case of orchards of some age, or on thin land, we regard the application of fertilisers as very important, says E. F. Stephens, who is an authority on the subject. Whoever saw a fat calf troubled with vermin? It is the poor, thin, scrawny animal that suffers. Likewise, it is our belief that orchard trees that are properly nourished and in full vigour can endure fungous diseases better than those trees which are in an impoverished condition on exhausted land. With this thought in mind we are at this time hauling 40 tons of stable litter weekly from three and a half to four miles to our orchards. We are applying 400 lb. of stable litter to each tree. If the litter is very coarse, we apply it under the branches along the rows out of the way of cultivation. If the manure is fine and can be worked in the ground with a disc, then we prefer to scatter over the entire area.

An experiment conducted along this line some years ago in these same orchards indicates that stable litter applied to bearing orchards was worth 5s. per load the first year, and its beneficial effects were apparent for a number of years. In one orchard, and on one variety, where we made very heavy application of stable litter, under bearing trees, we secured an annual yield three years in succession at the rate of 1,500 bushels of apples per acre. This return was secured in one of our closely planted orchards, where the apple trees stood 12½ by 20 ft., giving each tree 250 ft. of space, or at the rate of 174 trees per acre. This excessive production, however, seemed to weaken the trees, and they have not proved to be as long-lived as the same variety planted where they had more room and less exhaustive over-bearing.

We are also hauling 300 loads of straw into our orchards. We use this as a mulch 8 ft. in width in the row under the branches. We will continue to cultivate the middle of the rows. On side hills, liable to wash when under cultivation, cover the entire area, and thus shut off the tendency to loss of surface soil.

Appearance of Bone Manure.

The presence of bits of bone or partly dissolved bone in a manure is no evidence of the excellence of the manure ; but, on the other hand, should rather be regarded with suspicion, as perhaps indicating a wish on the part of the manufacturer to make his goods attractive by appearance. A properly dissolved bone manure should be in a fine condition, so that it can be spread evenly and each plant get its fair share of the nourishment supplied in the manure.

Cottonseed Oil Extraction.

The Acting British Consul at Savannah (Mr. A. Harkness) reports that he has received information from Atlanta, Georgia, to the effect that the State chemist has completed a chemical demonstration in the analysis of cottonseed meal which it is thought will be of interest to dealers and farmers, as it bids fair to change greatly the present method of extracting oil from cottonseed. Instead of applying the usual tests of such experiments, that of using ether mixed with cottonseed meal, he applied carbon tetrachloride, which is much less expensive, and found upon analysis that the weight of the oil extracted by this process was greater than by ether, and far less costly. This question has been the subject of tests also by the State chemist of Mississippi, who is said to have obtained similarly successful results, and who is a supporter of the theory that by its use more oil will be extracted from the seed. It is estimated that under the present system at least 10 per cent. of the oil is left in the meal, and as this oil is useless as a fertiliser, most of it is lost.

Fight against Weeds.

The farmer's struggle against weeds is a continuous one, and this wet season having encouraged their growth to an exceptional extent, his task in keeping them under during the coming months will be harder than usual. May we venture to impress upon him the following rules, and if everyone in a district were to follow them, the success would be more satisfactory :—

1. Select for sowing seeds free from weeds. Seeds intended for sowing should be examined for purity and freedom from weeds.
2. The sweepings from barns and other places which may have weed-seeds among the litter should not be fed, and should not be put on the manure or compost heap without the germinating power of the seeds being first destroyed.
3. All weeds growing on roadsides, ditches, and uncultivated places should be carefully destroyed before they seed.
4. Lands holding too much water should be drained.
5. Plenty of phosphate of lime and potash supplied to the cultivated crops enable them to suppress the weeds.
6. A suitable rotation of crops with alternations of cereal and root crops is very useful.
7. By a thorough cultivation of the soil before the crop seed is put in, a mass of weeds can be destroyed.
8. In the spring the growing weeds must be cut down, harrowed in, or destroyed in other ways.
9. During the growth of the crop the fight against the weeds must be incessant.
10. Charlock must be got rid of by spraying with sulphate of copper or sulphate of iron.
11. Meadows full of weeds should be ploughed up and sown with good grasses.
12. When arable land is infected with weeds it is necessary to fallow it, so that it may be thoroughly cultivated and cleaned.

Lawes' Chemical Manure Meeting.

The annual meeting of this well known company took place on the 3rd inst. Mr. E. G. Cubitt, who presided, said that as a result of the year's operations they had paid off £2,500 of the redeemable debentures, and had set aside £1,000 to reserve and £500 for bad and doubtful debts. The dividends for the year were 7 per cent. on the Preference shares and 7s. 6d. per share on the Ordinary shares.

In the past year there had been a rise in the prices they obtained for their products, but that had been somewhat counteracted by an unprecedentedly sharp increase in the price of raw materials.

Mr. W. B. van Haansbergen, a director, said that as they had laid in large stocks of raw material at prices considerably below the present figures, the outlook for the future might be considered as fairly good. This year their output of manufactured manures was the largest on record.

"How to Manure at a Profit."

This series of useful articles, combining the practice and science of "How to Manure at a Profit," is now finished. As many of our readers would like to have the articles in a form convenient for reference, we intend shortly to publish them in a small pamphlet.

Due notice will be given when the pamphlet is ready for issue, and price.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Hay Grown Cheaply.

The experiments in grass cultivation which have been carried on for several years by Mr. Parke, of Kineton, under the expert advice of Dr. Dyer, have again produced some interesting results. The sixth hay crop, which, like most of the hay this year, was late, amounted when the land—a poor Warwickshire clay—was left to itself to 14 cwt. per acre in one field and 17 cwt. per acre in the other. In the former field a portion treated annually with 3 cwt. per acre of superphosphate gave 38 cwt. per acre of hay, and a portion treated with nitrate of soda only at the rate of 1¼ cwt. per acre gave 36½ cwt. When the two dressings (superphosphate and nitrate) were combined, the crop was 46 cwt. per acre, being an increase of 32 cwt. over the yield of the unmanured land. In the other field, where the natural yield was 17 cwt. per acre, basic slag alone (5 cwt. per acre yearly) gave 41 cwt., and nitrate of soda alone gave 39 cwt. per acre, while the two combined gave 46½ cwt. per acre, being nearly 30 cwt. more than the unmanured yield. Potash salts did not materially increase the crop. The use of superphosphate in one case and slag in the other is owing to differences in the soil. The average increase from phosphates and nitrate together in the two fields is over 1½ tons of hay per acre, and as the average cost of the manures is well under 30s., it follows that the additional yield costs under 20s. per ton to grow. The herbage on the various plots varies considerably, the best quality—a good mixture of grasses and clovers—being that found where the mixed manures are used. After the hay is gathered the whole of each field is promiscuously grazed every year, with the result that the unmanured portions (which are not fenced off) are, by natural means, sharing some of the improvement due to the richness of the manured portion. In the earlier years of the experiments these only yielded from a quarter to half a ton of hay per acre. Mr. Parke considers, therefore, that the difference in present yield between the dressed and the undressed land does not indicate the full value of the improvement effected by the fertilisers.

Sugar Industry in Germany.

The number of factories in operation is 376 ; the quantity of beets treated last season was 15,733,478 tons (metric), and the quantity of sugar produced was 2,314,779 tons (metric). The British Consul reports :—

The campaign of 1905 06 witnessed a material growth of the activity of German sugar factories within the German customs frontiers as compared with the previous year. The meagre beetroot crop of 1904 was followed by an exuberant yield of beets, and the year of minimum production of sugar was succeeded by one in which sugar manufactures attained hitherto unprecedented dimensions ; during the last financial year the beet crop showed an increase of 5,700,000 tons in round figures, and the production of sugar a rise of, roughly, 800,000 tons.

Increase of Weeds.

The enormous increase which results from allowing weeds to seed may be seen from the following short list, showing the number of seeds each of the weeds named is capable of producing in a single season :—

	No. of seeds on a single plant.
Groundsel	6,500
Corn cockle.....	2,590
Red poppy	50,000
Charlock	4,000
Sow thistle	19,000
Blackhead	3,000
Shepherd's purse	4,500
Cow parsnip	5,000
Stinking camomile	40,000
Ox-eye daisy	13,500
Burdock	24,520
Common dock.....	13,000
Dandelion	2,040

Prices of Fertilisers.

There is apparently going to be a fairly brisk demand for fertilisers suitable for autumn application, especially for basic slag, superphosphate, and kainit. Merchants are already booking orders freely at prices which have a tendency to move upward.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, in the paper.

Approximate Unit Cost of the Nutritive Constituents in Feeding Cakes and Meals.

Cakes and other Feeding Stuffs.—In order to be able to form a correct opinion of their value, it is necessary to know the relative cost of the different nutritive constituents. The following note, by an eminent authority, supplies this information. By reference to it, a farmer can calculate out the approximate commercial value of a cake or meal, and then use his judgment as to which is most suitable for his special requirements.

	s. d.		s. d.
Albuminoids	2 8	to	3 0
Oil or fat	2 8	,,	3 0
Carbohydrates	1 1	,,	1 2

NOTE.—Most authorities in England are agreed that the value of each per cent. or unit of albuminoids and of oil is at least 2½ times that of 1 per cent. or unit carbohydrates. If, therefore, the percentages of albuminoids and oil in a feeding stuff be respectively multiplied by 2½ and added to the percentage of carbohydrates, the total feeding units contained in the article are obtained. The cost of the feeding stuff divided by this total of feeding units gives the price per unit. Example: A cotton cake contained

	Per cent.			Feeding units.
Albuminoids	22·1	×	2½	= 55·2
Oil	5·2	×	2½	= 13·0
Carbohydrates	33·2	×	1	= 33·2
Total feeding units				101·4

The price of the cake being £5 7s. 6d., the cost per feeding unit was just about 1s.

MODERN AUCTION SALES AND OLD TIME FAIRS.

The growth of the special shows for young stock in late years is remarkable, and the enterprising auctioneers who for the most part run these events in connection with a sale have evidently hit upon something which is of service to the agriculturist; and have been able to encourage breeding to some extent by providing inducements to go in for a little better class of stock, and by finding a market for it which accords with modern views of dealing better than does the old fair, which has been so largely superseded by the auction sales.

The number of these old fairs which have dwindled to a shadow of their former greatness is enormous. Their character, too, has altered in a remarkable way. Some months ago the pupils of a school built on the site of a fair which formerly lasted a week—and which we saw the last of when about a score of yearlings represented all the stock offered—found a curiosity in the grounds which puzzled the staff to explain.

It proved on its being referred to an old drover to be one of the shoes with which oxen and milch cows alike were shod when travelling over the rough and tedious roads from fair to fair. Very few are left who can distinctly recollect when all animals had to be shod to travel, and these relics of a bye-gone age are very interesting when they do turn up.

SHEEP EXPORTS AND IMPORTS.

During the month of August sheep to the value of £20,811 have been exported. This amount of declared value represents the sum realised by the sale for export of 2,042 sheep, which gives an average of £10 3s. 9d. per sheep, a very satisfactory month's demand. It is, however, not so satisfactory as was the case twelve months previously, for we find that during August, 1906, 2,217 head were exported, which gave an average of £18 4s. 3d.

Despite the very satisfactory demand experienced at the present time for the home-grown mutton, we find that the quantity of mutton imported during the past month was 454,252 cwt., or 6 99 per cent. more than during the same period of the previous year, and it is worthy of note that last month's mutton importations were the highest on record for that month during the past thirteen years.

The declared value of the sheep and mutton imported during the past month was £849,271, or 7 86 per cent. more than for the same period of the year 1906.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

A Drainage Question.

Sir,—I shall be glad if, through your columns, you will give an answer to the following questions I happen to live in a village near to which a colliery has been sunk during recent years, and this has caused a big inrush of population into the village, which, of course, has no sanitary arrangements equal to what is now required. The surveyor to the Rural District Council has a scheme which would entail an expenditure of over £2,000, besides the cost of maintenance. This of course would mean a ruinous burden on a small village, even if money be borrowed at moderate interest. And in order to put off this big scheme in the hope that the village, which has grown considerably, may yet still further increase in rateable value (thus making the expense more to'erable), they have resorted to several tinkering expedients which have at last involved the lower end of our home croft in a perfect bog of sewage. The main part of the village is on elevated ground, which falls away for a matter of, perhaps, 400 or 500 yards, then rises again on the other side of the brook. The surveyor's big scheme is to pipe sewage from both ends of the village along bottom of valley to some large sewage disposal works. At present he has made a drain which is to be part of permanent scheme across field adjoining ours, and then dug a hole about 7 ft. deep out of which he professed to expect sewage would filter into the soil, a thing which is altogether impossible, as the land has a good deal of moisture in it. The consequence has been (as the farmer to whom the field belonged said) that the tank has swum over, the whole being made ten times worse by overflowing of the brook (during rainy weather) and finding its way through the wall, has deprived us of about 3 roods of land. But this is apparently not enough, for I now find that a grip has been cut from the tank at the other end of the village down by the side of the hedge and conducted into another of our fields. The consequence is that another bog of sewage is being formed there, and this has been done without mentioning a word to us—in fact it had been going on for several weeks before we found it. I am aware that by Act of Parliament suitable land can be compulsorily acquired for sewage works, but can the council stand by such a high-handed and unbusiness-like appropriation of a person's land for their temporary convenience, to danger of cattle grazing in the fields?

I shall be glad if you will tell me how the law stands with regard to a case like the above, and what you consider would be the best course for us to take.—Yours, &c. South Yorkshire.

*** I am of opinion that the council are acting improperly in what they are doing, and you could obtain an injunction restraining them and claiming damages. The best course for you to adopt is to place the matter in the hands of a solicitor, who will write to the local authority on the subject, for the matter you complain of constitutes a very serious nuisance.—Barrister-at Law.

A Record Harvesting Feat.

A remarkable harvesting feat was given in Lincolnshire on Thursday. The demonstration took place on one of the largest farms in the kingdom, that of Messrs. Dennis Brothers, of Kirton and London, potato growers and merchants. The feat of obtaining baked bread from corn which had just before been standing in the fields was accomplished in about four hours. More remarkable still was the full amount of the work done in so short a time. An acre of standing corn was marked out in the cornfield. This was cut, bound, threshed, and ground by the motive power of an agricultural tractor working with a petrol engine. An acre of ground was also ploughed, cultivated, drilled, harrowed, and sown with a new crop within seven and a-half hours.

This constitutes a world's "record"; and it is to the credit of the country that not only the tractor, but also the thresher, drum, mill, cultivator, drill, and harrow were all British. The harvesting machine came from Canada, so that the feat is, therefore, an Imperial one. The tractor is of 50 horse-power, and was built by Saundersons, of Bedford.

At 11.35 the tractor started its work by taking the threshing drum into the cornfield. Five minutes later it began to draw two Merseyharris harvesters through the corn. These not only cut the corn, but also bind it. Half a dozen men walking behind stacked it, and in exactly fifteen minutes what had been an acre of growing crop was standing on the field, cut and stacked ready to be placed on the cart which the tractor proceeded to draw round the field. By one o'clock the corn was lying at the side of the threshing drum The tractor then got into position to drive the thresher by means of a belt. At ten minutes past one a halt was called for luncheon. As soon as the threshing had begun, the flour was seen to come out of the mill, which was being worked off a pulley on the threshing drum.

A move was then made to another field for the ploughing It took an hour to take the plough down, and almost punctually at 3 the ploughing began, with a three-blade plough cutting three furrows 2 in. wide and 7 in. deep. Owing to an overheated bearing a halt of half an hour had to be made, and the ploughing was not, therefore, finished until 4.45.

A cultivator and a drill were then hooked on behind, and at 5.30 the acre was ready for the harrow, which had completed its work by 6 45, thus bringing to an end a most remarkable harvesting feat. After the deduction of the interval for luncheon and the stop due to the overheated bearing, the net time was six hours forty minutes.

Notes of the Week.

We have grumbled so often about the weather during the past few months, that it is a pleasant change to be able to compliment it on its good behaviour. It is making quite a brilliant stay.

This is the sort of weather when, after a good tramp in the country, one longs for a draught of thirst-quenching cider. Pity it is that so seldom can one get it genuine.

"O, bid the cider flow,
In ploughing and in sowing;
The healthiest drink I know
In reaping and in mowing."

Success to the efforts of the National Fruit and Cider Institute to get a legal standard for purity fixed by the legislature.

Are we growing madder? is the subject of correspondence in a London morning paper. Our impression is that most of the madder used in this country is grown in Holland. Our farmers are not so mad as to try and grow madder.

Coal continues to ascend in three ways:—
From the bottom of the pit to the top,
From the fireplace up the chimney,
And unfortunately in price.

Farmer to little boy: "What are you getting up that apple tree for?" "Stommickache, sir."

It is very evident, remarks the *Tailor and Cutter*, that the fair sex are adopting the ride astride style without hesitation. This style makes a good show in the parks, has been in evidence at horse shows, and it is expected that a large number of ride-astride ladies will be seen at the various hunts.

"It should be generally known," said a doctor at a recent inquest, "that mushrooms grown under elm trees are poisonous."

Is there any foundation for this statement?

The outlook for the small peasant farmers in the West of Ireland is described as very gloomy. The potato crop is practically a failure, and the poor people are also face to face with a fuel famine

The natives of Morocco, who are causing so much trouble just at present, follow patriarchal pastoral pursuits, except when occupied in cutting the throats of foreigners.

They export a large number of oxen and sheep, and do a big trade in skins and hides.

The number of pigs has increased in Germany from 7,725,601 in 1892, to 15,334,762 in 1906.

In spite of this increase, the price of pork has advanced within the last couple of years by 3d. per lb.

Within the same period the number of sheep has dropped from 10,109,594 to 5,432,851.

Foreigners are said to be casting longing eyes on Sussex cattle, and there are signs, says Sir Lindsay Hogg, that before long there will be a great boom in the breed.

A process has been discovered in America for making gas from straw. It is said that this discovery will bring down the price of coal gas. We fear the reporter was only, what is termed, gassing.

We are glad to hear that a movement is on foot to give expression to the appreciation felt for the distinguished services of Sir Horace Plunkett to Ireland.

The subscriptions will probably be devoted to the foundation of a "Plunkett Bureau of Rural Social Economy," for which he did so much during his term of office.

What's the difference, asks *Judy*, between a farmer and a thief? The one "till's the land," and the other "lands the till."

There were 10,000 fewer foals bred this year than last. It looks as if the mares were following the example of ladies in fashionable society.

A young man whose love of flowers and all things green and growing compelled him to establish his home in the country invited his old chum, Brown, to spend Sunday with him.

Brown was received with all appropriate honours, and all the attractions were duly displayed to his polite, but not overkeen gaze, for he was somewhat deficient in that primal passion for a garden which had come down through the generations from Adam.

At each meal he listened courteously to eulogies of "our own make" viands. He bore patiently "our own milk, lettuce from that frame you saw, peas off that lot at the back," and so on. But at last it got to this:—

"Harry, I can recommend this chicken especially. I raised it myself."

Then the worm turned—after the first mouthful of chicken—and with a sad smile remarked:—

"No, Will, I cannot believe that. You've only been here a little over two years."

Kent or Romney Marsh Sheep Breeders' Association.

At the last meeting of the Council of the Kent or Romney Marsh Sheep Breeders' Association the entries for the annual ram show and sale were considered and it was decided that as the number of rams entered exceeded that fixed for the total of the sale, the number of rams so entered should be reduced in proportion to the number of ewes owned by those who entered them. It was resolved that 4 per cent. be adopted as the basis for the allotment of the proportion of rams entered by each consignor, and that the overplus be divided among the next four largest entries.

The secretary's report stated that since the last meeting 144 export certificates for rams had been issued, and 124 for ewes, and he had applications for 19 more export certificates.

The adjudicators to judge the class for the best woolled ram at the Ashford Show and Sale, to be held September 27 next, were selected as follows, subject to their being able to act:—Messrs. C. E. Elgar (New Zealand), W. M. Dean (Patagonia), and Mr. Murray (New Zealand).

Forthcoming Sales.

The annual sale of pedigree Clydesdales, Hackneys and Hackney ponies, store cattle, &c., the property of the Seaham Harbour Stud Company, will take place at Seaham Harbour, near Sunderland, on Wednesday next, the 18th inst., when Messrs. A. T. and E. A. Crow will bring under the hammer over sixty Clydesdales, consisting of eight filly foals, twelve colt foals, four one-year-old fillies, one one year-old colt, six two-year-old fillies, six three-year-old fillies, nineteen brood mares, and six two-year-old geldings, whilst there will be offered six Hackneys and Hackney ponies. The chief feature of the sale will naturally be the Clydesdales, and these will be found to maintain the high reputation of the stud. The principal stud horse, Silver Cup, has won the highest honours in the national showyards of the United Kingdom, and year by year his reputation as a breeder is enhanced. His stock at the Northumberland and Durham county shows this year carried all before them, winning seventeen first prizes, seven seconds, and six thirds, and at the Royal Show at Lincoln the four animals exhibited by him were awarded one first, two seconds, one he, and the reserve championship of the section. The foals are a splendid lot; seven of them have been exhibited, and have each won one or more first prizes. The cattle are well bred and forward in condition, some of them being quite fit for the butcher, while all can easily be finished for the Christmas markets. They include five beautiful Highland heifers with calves at foot by a Shorthorn bull. The sale will commence at eleven o'clock prompt.

A conference of members of the Scottish Chamber of Agriculture and delegates from associated societies throughout Scotland is to be held in Glasgow on Wednesday, October 23, when the President of the Board of Agriculture and Fisheries will be present. The magistrates of the city have resolved to extend the hospitality of the municipality to the members attending the conference.

On Monday the Stockton police authorities received a message that some sheep in a field at Newtown were being worried by dogs, so Sergeant Fraser and two constables went to the field and there saw a rough haired fox terrier and a cross-bred bull and fox terrier chasing the sheep round the field and making ferocious attacks upon them. When the police tried to get the dogs off, the rough haired terrier sprang at the sergeant and bit him in three places on the hand and arm. While the sergeant was choking the dog off, the other dog hung on to his clothing. Sergeant Fraser succeeded in securing one of the dogs by a piece of rope, and the other bolted out of field, and was followed to its home. The sheep were subsequently examined, and found to be only slightly bitten, but a considerable quantity of wool was torn off them.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 17.—Leighton Buzzard Foal Show — Templecombe and Compton Horse and Foal Show — Show and Sale of Live Stock at Evercreech, Somerset—Holbeach Horse Fair—Market Drayton Cattle Fair—Ottery St. Mary and Ware Agricultural Fairs—Sale of Farms at Binstead, Hants—Sale of Farms at Lynn.

WEDNESDAY, SEPTEMBER 18.—Loughborough Agricultural Show—Easingwold Agricultural Show—Shap Agricultural Show—Brecon Agricultural Show—Bury Fair—Horse and Cattle Fair at Congleton—Newton Abbot Agricultural Fair—Thornton's Sale of Cattle, Sheep, and Pigs at Great Missenden—March Fair—Sale of the Seaham Harbour Stud—Partney Ram and Sheep Fair—Sending-in Day for the Dorchester, Ripon, and Byfield Shows.

THURSDAY, SEPTEMBER 19.—Abingdon Show—Stokesley Agricultural Show—Royston Horse and Foal Show—Horse Sale, Crewe—September Sheep Fair at Northampton—Annual Sheep Fair at Worcester—Farm Stock Sale at Writtle—Horse Sale at Southminster—Farm Stock Sale at Grays.

FRIDAY, SEPTEMBER 20.—Special Sale of Lincoln Red Shorthorns at Spalding—Reading Hop Fair—Horse Fair at Downham, Norfolk—Corwen Agricultural Show—Northallerton Agricultural Show—Sale of Dairy Farm at Whitchurch, Shropshire—Shorthorn Sale at Brackenbury Towers, near Carlisle—Warwickshire Hunt Horse Show at Kineton.

SATURDAY, SEPTEMBER 21.—Eggleston Agricultural Show—Alston Ram Fair—Alnwick, Lewes, and Egremont Agricultural Fairs—Pedigree Shorthorn Sale at Penrith.

MONDAY, SEPTEMBER 23.—Pateley Bridge Agricultural Show—Fairs at Swindon and Stevenage—Rugby Cattle Fair—Agricultural Contracts to be sent in to the War Office not later than this day.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Sept. 10, 1907:—

NOTE.—The figures for the current year are approximate only.

Mr. William Russell Stewart-Freeman, J.P., D.L., of The Old Manor House, Wingrave, Bucks, and formerly of 12, Elvaston Place, South Kensington, S.W., proprietor of the famous Aldridge's Horse Repository, which he had controlled for nearly forty years, who died on July 10 last, left estate valued at £114,084 gross, and probate of his will has been granted to his widow, Mrs. Mary Stewart-Freeman, of The Old Manor House, Wingrave. Mr. Stewart-Freeman left handsome bequests to clerks and servants

HORSE NOTES AND JOTTINGS.

The Horned Horse—Modern Instances—Traces of Horns in Thoroughbreds —The Latest Horned Horse—The Foal Show—A Great Evil of Early Showing—Showing Brood Mares.

The Horned Horse.

"NOW I will believe," says Sebastian when Propero serves him with the Magic Banquet, "that there be unicorns." Certainly the old stories about horses with horns, which it was the fashion for so long to look upon as merely "traveller's tales"—inexactitudes, to use the modern euphemism, would seem to be true, for I have had no fewer than four horned horses brought to my ken within the last three or four years. Darwin showed that hornlike projections were not infrequently found in horses, and other writers have also drawn attention to the fact. Azara, an eminent Spanish naturalist, who flourished in the latter end of the eighteenth and the beginning of the nineteenth century, and whose researches in South America were of great value to the scientific world, speaks of a couple of horses in which the projections were 3 in. or 4 in. in length. The frequency with which these cases of horses with horns have been discovered in recent years at any rate, affords presumption that the travellers in the days of old had some grounds for the wonderful statements they made about horned horses.

Modern Instances

THE earliest case which came under my notice was that of a Thoroughbred horse, which was bred and owned by Col. Meysey Thompson at Nunthorpe Hall, near York. The horse in question showed considerable promise as a two-year-old, and was tried well. He had two protuberances on his forehead some couple of inches long, and of a horny nature. Mr. A. Day, the well-known trainer, also had a horse with horns, and at the same time as these cases were brought to my notice a gentleman wrote me from the West of England telling me of another case. This was a Thoroughbred Hunter.

Traces of Horns in Thoroughbreds.

TRACES of rudimentary horns had been found in several Thoroughbred horses after death, and in many of them were slight traces of the lachrymal depression which we find in deer. Hence it came to be a theory that the horse with horns was always one that was either of Eastern blood or directly descended from Eastern horses, the Eastern horse being supposed to be a direct descendant of a prehistoric breed of horses in which the horn and lachrymal depression were to be found. And there seemed good grounds for the theory, for the traces of the rudimentary horn in the skeleton of the Thoroughbred and Arab were fairly frequent.

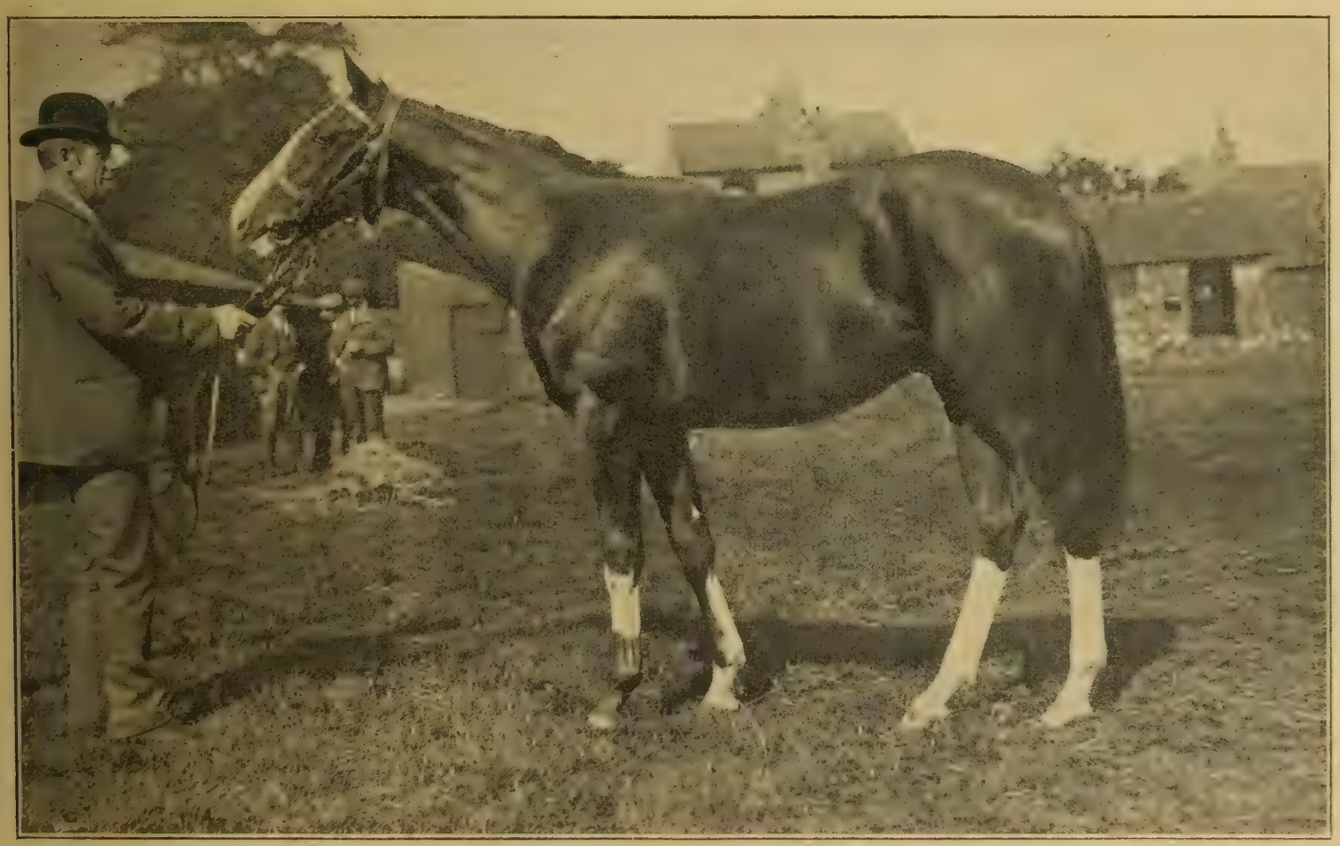
The Latest Horned Horse.

AND now there comes to hand an instance which at first sight seems to demolish the theories already advanced. The other day I had a photograph sent me of the latest known horse with horns. He is a half bred cart-horse, and is working regularly in the Midlands. There are a pair of small bony frontal prominences about a fifth of the way from his ears to his nose. So far as I am able to judge from the photograph, they appear to be about a couple of inches long. In every other respect the horse is normal, and his head, though not showing exceptional quality, is a fairly good one. I have not yet been able to ascertain his pedigree, but he certainly does not show much of the Thoroughbred or Eastern character, with the exception, of course, of the frontal prominences. It is, of course, possible that his horn-like growths may be inherited from Eastern ancestors. It is possible that there may be a good deal of Eastern blood on both sides, though certainly the photograph would not lead one to think that such is the case.

The Foal Show.

OF late years foal shows held in the back part of the summer have increased in popularity, and they are becoming quite a function nowadays. And a capital thing they are if they are conducted on the right lines. They are an improvement on the old system for many reasons. To begin with, it is by no means desirable that foals should be shown early in the season. The mares and the foals as well will thrive much better if there is no premature forcing for show purposes. It is all very well for agricultural societies to lay down rules to the effect that in all breeding classes the exhibits shall be shown in natural condition. These rules are amongst the lot that are made to be broken. Men who are keen about showing will force their stock; they know what importance the judges attach to growth and size, and one of the consequences of early showing is that forcing which results in a majority of cases in horses with tops too big for their legs.

A Great Evil of Early Showing.



ANOTHER very serious evil which early showing brings about is shoeing. If a foal is shown in May, and then runs the round of the shows for the rest of the summer, he has to have something put on his feet to prevent them breaking. Euphemistically these are called tips. Generally, however, tips are only another word for shoes. It stands to reason that any interference with the feet of a young animal like the foal can only be attended with injury to that animal. Shoeing the young foal then is only the choice of a couple of evils, neither of which would have come into being if he had been living his natural life with his dam in his native pastures. I am speaking from experience, for I had a very good horse indeed ruined by having been shod when a foal. He won me some prizes, but it had been better for me if I had never seen them.

Showing Brood Mares.

IT will doubtless be urged by some that brood mares cannot be shown without their foals, and that to show the foals with their dams is as bad for them as to show them in a class by themselves. This is so, but only to a limited extent. For example, it does not hurt a foal so much to run at his dam's heels as to be swung and led and set on his legs and generally "pulled about" to make him handy in the ring; and so a foal with moderately good feet can do very well without any artificial protection for them if shown running at his dam's heels. But at many shows of late years there have been no classes for brood mares at the early summer shows, the brood mare classes being taken at the autumn foal shows. This is as it should be. The brood mare in the early part of the season is all the better for being kept quietly at home, instead of being knocked about from show to show; and taken on the whole she looks better in the autumn than she does earlier in the year, except perhaps just before she foals. When a mare is knocked about on the railway or taken a long journey on the road her milk becomes heated, and it is surely unnecessary to point out the deleterious effects which heated milk has upon a foal. When a mare is worked at home precautions can be taken to ensure her foal receiving no harm from the heated milk. At a show this, of course, is impossible. And therefore I think it an admirable plan to have the brood mare show in the autumn at the same time as the foal show.

Economic Reasons for the Autumn Foal Show.

THERE is another very sound reason for the autumn foal show; and that is, that it provides such a fair market for those who have foals to sell. There are many farmers who are ready and anxious to buy a few foals to graze. Either some of their own mares have been barren, and consequently they are short of numbers; or they lay themselves out to buy and graze a certain number of foals every year. It is palpable that an autumn foal show is the best place for these gentlemen to find what they

The Thoroughbred Colt shown above was sold at the Doncaster Blood Stock Sales last week for 2,100 gs., the purchaser being Mr. S. B. Joel. It is by Gallinule out of Little Eva, and was the property of Sir Tatton Sykes.

require. They see a lot of good foals together; they are much better able to judge of what they are likely to grow to in September than in any other month in the year; and the expense of looking for them is comparatively trifling. There is a choice, and when there is a choice there is always a market and a market price. Another advantage, and not the least advantage of the system, is that horse breeding is encouraged thereby. There are plenty of small farmers who would gladly breed a foal or two if they could dispose of them without much trouble and ensure getting a market price. The autumn foal show comes in to answer these requirements, and it seems to be within the range of possibility that the autumn foal show will be still further developed in the not very distant future. THE LOOKER ON.

PIGS.

Fulwood Herd of Large White Pedigree Pigs.

Mr. E. G. Hothersall of the Auction Mart, Preston, conducted a successful sale of Large White pigs at Fulwood Hall Farm, Preston, for Mr. R. R. Rothwell on Friday the 6th inst. There was a representative gathering of breeders from all parts of the country, and satisfactory prices resulted. Of 74 lots catalogued 67 were forward and 63 lots were sold at an average of £8 5s. 6d. each. The only lot withdrawn was the young boar second at the R.A.S.E, Lincoln, bid to 25 guineas. The highest price obtained was 35 guineas for the yearling boar Fulwood Lancastrian purchased by Messrs. Wherry. With the exception of this boar and about a dozen gilts a year old, all the pigs were farrowed in 1907. Twenty boars of this year averaged £9 12s., and 49 pigs of this year £8 2s. The following were the principal prices and buyers:—

Boars.—Messrs. Wherry, 35 guineas; the Earl of Derby, 10½ guineas; Mr. J. S. Smith, 10 guineas; Mr. D. W. Gunn (Edinburgh), 10½ guineas; Mr. White (Spalding), 9½ guineas; Mr. J. Leek, 9 guineas; Mr. J. Kay, 10 guineas; Mr. T. G. Parton, 8 guineas; Mr. J. Wood, 8 guineas; Mr. Duxbury, 7½ guineas; Mr. Hough, 9½ guineas.

Gilts.—Mr. R. Walker (Edinburgh), 11½ guineas; the Earl of Derby, 9½ guineas three times and 7½ guineas; Mr. D. W. Gunn, 10½ guineas; Mr. Henson, 10 guineas; Mr. J. Wylie, 10½ guineas and 9 guineas; Mr. D. Howsin, 11 guineas and 7 guineas; Mr. R. Ainscough, 10½ guineas; Hon. J. S. Tufton (Kent), 7 guineas; Mr. White, 10 guineas and 9 guineas; Mr. Duxbury, 9½ guineas; Mr. Hewitt, 8 guineas; Mr. Dixon, 8 guineas.

Sale of Walton Hall Pigs.

A choice selection of about 100 Large and Middle White pigs from Sir Gilbert Greenall's famous herd were offered for sale by auction at Walton Hall, Warrington, on the 5th inst., and as may be imagined there was a large company of buyers, and an eager demand for such excellent stock. The total realised by the pigs was over 800 guineas, individual prices ranging up to 20 guineas. This sum was given by Mr. Carter for Walton Beauty 5th, whilst at half a guinea less. Walton Fairy 5th was secured by Mr. Newton. Other chief prices were:—Walton Sarah 13th, Mr. Clarke, 15 guineas; Large White boar, Mr. Brown, 15 guineas; Combination 2nd, Duke of Portland, 13 guineas; Walton Sunlight 5th, Mr. Purvis, 14 guineas; Middle White boar, Mr. Tysak, 14 guineas; Large White sows, Mr. Philips and Mr. Livesey, 12½ guineas and 12 guineas respectively; Large White gilt, Mr. Frost, 12½ guineas; and others up to 11½ guineas.

Included in the sale were a number of choice Kerry cows and heifers which averaged 10 guineas per head.

Speaking at the luncheon held in connection with the Chilton Hills and Southern Bucks Agricultural Association on Wednesday, Earl Carrington referred to the decrease in foals as shown by the recent agricultural returns, and said he hoped before long to be able to make some practical proposals on the subject to try to arrest a state of things which, if it continued, would be a danger to the country. Referring to the Small Holdings question, his lordship said there was a satisfactory demand at the present time for land. Not many farms, he thought, were now being given up, and there was difficulty in getting them. A farm in North Buckinghamshire, which was lately to let, was eagerly applied for, and an increased rent was obtained. There was great eagerness to obtain small portions of land on the Crown properties; in fact, though a few months ago 3,494 acres were in hand, there were now only 400 acres to let, and he was in hopes that that farm might be let that day. The land was let in small portions, and the great complaint was that there was not enough land to go round. When the 400 acres were let the Crown would not have a single acre on hand. In spite of croakers and prophets of evil, British agriculturists, including the landlords, were by no means yet played out.

SHEEP NOTES AND JOTTINGS.

NO more striking instance of the increased interest taken by flockmasters in the different breeds of sheep of this country can be given than the very large amount of space given to the reports of sales and meetings held by the various sheep societies.

LOOKING back over a period of ten or fifteen years, and comparing the reports of those days with the present, the difference is astounding. As to why this is the case, one has only to refer to the proceedings reported from time to time in connection with sheep matters during that period to find that the main cause of this increased interest arises from the fact that flockmasters have gradually but surely realised the one great factor necessary for them to secure a share of the export trade has been to form themselves into different sheep societies. It is in effect the combination of individual interests that has been the mainspring from whence has arisen this enormous increase in the breeding of stud sheep.

FOR instance, one may quote the South Devon Sheep Society, a breed that has been known for generations and much appreciated in its own locality, but a breed that up to the time of its representatives forming a breed society was scarcely known beyond its own locality. Now, owing to the formation of the breed society, the breed is one that is known over a much wider area. Its exhibits have been seen and admired by flockmasters from different parts of the world, and from information that we have been favoured with there have been purchased during the present season a considerable selection of ewes and rams from some of the leading breeders for export to New Zealand.

WE are not aware whether or not this is the first instance of the South Devon sheep being taken to New Zealand, but it is eminently satisfactory to note that, owing to the progressive policy of the council of that association in advertising the breed as widely as its funds will allow, the result has been that some two or three breeders have been able to secure, after personal inspection of their flocks, a sale of these hardy and thrifty sheep to the Colony mentioned above.

THEN, again, one turns to the Exmoor Horn Sheep Society's work, and it is found in the report of their first show and sale that the result was to bring together a very large number of breeders interested in the breed, to engender, by means of the prizes, friendly rivalry between the different breeders, and at the same time to afford the public an opportunity of seeing together in one central place an assemblage of these sheep such as rarely occurs. So far as one can judge from the sale report, there were no sheep sold for export; but the fact that the breed has now established an annual sale at which a large and representative entry has been secured, makes it more than probable that in future years this annual meeting will attract buyers from districts far beyond the present confines of the breed.

THE result mentioned in the last sentence has been that which has been secured by the association's sales held by the Kent or Romney Marsh Sheep Society at Ashford, by the Lincoln Long Wool Sheep Society at Lincoln, and also by Messrs. Stride and Sons' annual sales at Chichester; each of these fixtures secures a thoroughly representative entry from many of the leading breeders of the different breeds; and buyers, both home and export, know that this is the case, and consequently they make these fixtures the particular fixtures to which they resort to purchase rams. The reason of this choice is a simple one—*i.e.*, that the number of rams entered is large, as is also the number of flocks represented, so that they are able to have a very wide field of selection, to compare one lot of sheep with another, and to purchase at such prices as may be the market value of the day without fear of being, owing to the small number offered, run to exceptionally high prices.

ANOTHER breed which we may mention that has already secured greatly increased notoriety owing to the combination of its interests into a Flock Book Association is the Kerry Hill sheep. This is a breed that is recognised by all who know it as being a very valuable breed for many purposes, and in a good many districts the breed has long been recognised as a breed, and round its own locality it reigns supreme; but until their efforts were combined by the formation of the society, it was impossible for the individual breeders to secure that publicity which they have been able to secure through the efforts of the society.

NO stronger instance of the truth of this is needed than to refer the reader to that notably fine and typical entry made by this breed at the late Royal Show at Lincoln.

THE above notes refer to the formation and to the result of the work of Sheep Breeders' Associations. They have also a direct interest upon the success of the flockmasters' interest in this country. It may be said, as it often has been, that the stud sheep business is a matter that benefits comparatively few breeders, but this statement is one that is not correct. Much evidence of an indisputable character could be quoted to prove that such is not the case; for instance, the increased demand of any particular breed of sheep for export or for home consumption without question raises the market value of that breed as a whole. It is better not to individualise or to specialise as to particular breeds, but there have been reported in the public Press during the past few weeks many notable examples of the increased price that the ordinary flockmasters have received for their draft ewes and yearling ewes not required for their own flocks in several breeds, simply because of the increased demand occasioned by the higher range of prices that such sheep of that breed have been realising.

A REFERENCE to the sale reports at this time of the year shows that there are scores of breeders at the present day owning registered flocks and selling stud and other sheep that twelve or fifteen years ago were not known outside their own immediate locality. These flockmasters have undoubtedly received great benefit from the formation of sheep societies; and then, if one inquires still further, it will be found that right through the whole of the different breeds there has been a material rise in the value of all sheep that are eligible for registration in the flock book.

THE great danger that faces one in connection with this increased interest and demand for stud sheep is that so very many men commence the moment they become owners of registered sheep to breed rams, thinking that the business of ram breeding is one that needs no special training, and the result is a larger supply of that class of sheep for which the demand is smaller than the supply. It is true the evil will cure itself, but while the cure is being effected all those who are breeding stud sheep of high merit, quality, and character are being compelled to take a lower price than they would be if the over-supply of inferior rams were non-existent.

FAIRS AND SALES.

Battle.

About 3,000 sheep and rams were penned at Battle Sheep Fair, which took place in wet weather, and this to some extent affected the attendance, but under the circumstances it was well attended and bidding was brisk at the following range of prices:—Lambs from 19s. to 36s. 6d.; ewes from 26s. to 47s.; tegs from 42s. to 45s. 6d.; rams from 15s. to £4.

Buckingham.

Buckingham Great Sheep Fair was held on the 7th inst., when some thousands of sheep were penned. There was a large attendance of farmers and dealers, and trade was very brisk, and good prices were realised. Sheaves made 70s. and ewes 40s. to 55s., lambs 30s. to 40s., ram lambs £4 to £7.

Glynde.

The seventeenth annual sale of Southdown sheep at Glynde took place in inclement weather, which affected the attendance of buyers, but there was a fair company present, and the numerous rams and ram lambs offered—they were from various well-known flocks—met a good trade. Ram lambs averaged £4 12s, shearling rams £6, four-teeth rams £5, and six-teeth rams, £3 7s. The best price for ram lambs was 8½ guineas, given by Mr. L. Martin, Westham, for one of Mr. R. H. Warren's, Angmering; Mr. J. Tompkins, also of Angmering, got the top price for shearling rams, viz., 12 guineas; whilst Mr. T. Strong, Worthing, secured the best price for four-teeth rams, 9½ guineas.

Kerry Hill Flock Book Society.

The Kerry Hill Flock Book Society's tenth annual show and sale took place at Kerry on the 6th inst., and proved the most successful of the series. Over 6,000 animals were penned, or 1,000

more than last year, and a capital clearance was effected, prices being well sustained throughout the sale. Prizes amounting to nearly £50 were offered, and were spread over eleven classes, and there was good competition in each.

The first class was for the best pen of thirty ewes, a very level lot, and it was doubtful whether the Graig ewes or Mr. John Anwyl's pen would be put top. The judges preferred the former ewes, and for the third year in succession Mr. Jones carried off the blue rosette. The pen were subsequently sold at 58s. to Lord Joicey, but Mr. Anwyl's pen made 58s each, Mr. John Adams being the purchaser. The highest price of the sale was paid for four yearling ewes from Mr. Anwyl. Three had won premier position at the Lincoln Royal, and Mr. Owen, Penybont, gave 85s. apiece for them. The Brompton ewes realised 55s., and eight show ewes from the same farm as much as 60s. Class 2, for the best fifty ewes, brought a large and meritorious entry. The draft from Gwernygoe, as in the past, occupied first place, and were sold to Mr. Matthew Darlington at 55s. There was little to choose between the ewes from Pentrenant, Glanmiheli, and Penygelly. The judge placed them in this order, and they were bought at 52s., 51s. 6d., and 50s. respectively by Mr. Newbould, Daventry, Mr. John Adams, and Mr. W. F. S. Humphreys. Mr. Jones, of Great Weston, preferred to divide his fifty ewes, but the same buyer, Mr. Peter Coats, took the lot at the one price, viz, 56s., other lots making up to 52s.

A class containing a lot of merit was that for the best pen of twenty ewes, the Cwmmule group, which last year occupied second place, and here were promoted to the leading position. Mr. John Lewis, Trwstllewelyn, was the buyer at 53s. 6d. Mr. Pugh, the Cloddia, sent a matchy pen, which obtained second prize, and were secured by Sir Powlett Milbank, Bart., at 51s, whilst the highly commended pen from the New House were much fancied, and realised 53s. to Colonel Wood.

The upper district class was headed by a fine pen of hardy ewes from Mr. Lewis, Glascoed. They fell to the bid of Mr. Bache, The Farm, at 54s., the second pen from Dolfor Hall realising 44s. 6d. to Mr. Evans, Neensolars.

Class 5 was for the best pen of unregistered ewes, not less than forty, a new competition, which brought forward some very useful sheep. Mr. Howard, Gwarthlow, was placed first with a good pen, which made 50s. to Mr. Frank Lloyd. The second prize pen from the Goitre realised 49s., and the reserve pen from Dudston 47s. 6d. Class 6, for the best twenty unregistered ewes, was also an innovation, and here the competition was keen, some forty lots being exhibited. A pen from the Rock stood first, and made 46s. to Mr. Henry Jones, whilst 45s. was paid for the second prize group from the Red House, and the reserve pen, which came from the Drewen, realised the same money to Mr. Hulme, Chelford.

The Upper Aldress pen, however, made 47s., the Bolboro draft 48s., the Penybank ewes 47s., the Lake pen 48s., and many others 45s. and 46s.

For the best fifty yearling wethers some ripe sheep from the Goitre stood first, and made 49s. to Mr. John Adams, but a pen from Glanmeheli realised 53s. to the same buyer. In Class 8, for the best twenty wethers, Mr. John Venables had an easy win, his sheep making 66s. to Mr. Maurice Powell, whilst the reserve pen from Mr. W. Alderson realised 52s.

Class 7 produced an entry of 87 shearling rams, the best of which was judged to be that shown by Mr. Beavan, the Graig. It was a thick set ram on short legs possessing immense scale, and Mr. Davies, Newchurch, bought him at 40 guineas after a hard contest with Mr. John Lewis. The second ram, Mr. T. Kinsey's exhibit, found equal favour with the public, and after spirited bidding he went to the Gwernygoe flock at 40 guineas. Another good ram from this draft was placed reserve, and realised 30 guineas to Mr. Price, Cwmearl. Mr. Kinsey's five rams averaged £22 3s. The third prize ram came from Penygelly, and was transferred to Mr. Frank Lloyd at 15½ guineas. Mr. Venables' eight rams averaged just under £9 each. Messrs. James, Brompton Hall, supplied the fourth prize ram, and Lord Joicey took him at 10½ guineas. The eight rams from Pentrenant were readily sold at an average of £10 10s. Mr. Morris, Gwernygoe, sent twelve nice typical rams, hardly so big as usual; they met a ready sale and averaged £9 each. The four rams from Glanmeheli were very good, and realised respectively 19 guineas to Mr. John Hamer, 24 guineas to Mr. J. R. Bache, 21 guineas to Mr. Evan Kinsey, and 8 guineas to Lord Joicey.

In the old ram class there were fifty-one entries, and here the blue ribbon was given to Mr. T. Jones's exhibit, a three-shear ram bred by Mr. Law on Moore. Mr. Hamar, Bicton, paid 12½ guineas for him. The second prize was awarded to a two-shear ram shown by Mr. Jones, Graig; whilst a four-shear ram, Marlow Samson, from Maesmawr was placed third, and realised 18 guineas to Messrs. Phillips, Llwynybrain. Mr. Price, Cwmearl, sent two good two-shear rams which made 17 guineas and 15 guineas to Mr. Evans, Bahaillon, and a three-shear exhibited by Mr. John Anwyl realised 21½ guineas to Mr. Owen, Penybont.

The ram lambs numbered 122, and included some promising youngsters. The winner was in Mr. Jones' (Graig) draft and he fetched 11 guineas, but the second prize lamb was shown by Mr. James, Upper Hall, and made 16 guineas, Mr. John Anwyl being the buyer; whilst a ram from Great Weston was awarded third position and fell to Mr. Gittins' bid at 13 guineas. Mr. T. Kinsey's four lambs averaged £8 5s. 6d., the top price being 12½ guineas. The seven lambs from Mr. John Anwyl averaged £9 4s. 6d., the highest price being 13½ guineas, to Mr. John Beavan. One hundred and twenty of the rams and ram lambs actually sold realised upwards of £1,200, or an average of upwards of £10 each. This was much better than any former year.

Kidderminster.

Messrs. Nock and Joseland's annual sheep sale at Kidderminster attracted a record entry in all classes, the total head of stock numbering nearly 7,000. The rams and ram lambs, which have been such a prominent feature at these sales, were a most varied and attractive lot, and included entries from many prize-winning flocks at the Royal and other shows. Six shearling Shropshire rams from Mr. A. S. Berry (Lichfield) reached 11 guineas each; sixteen, Mr. G. Gerard (Offerton), 10 guineas; twelve, Mr. J. W. Dee (Pershore), 8 guineas; seven, Sir H. F. Grey (Enville), 6 guineas.

Twelve Oxford shearlings from the noted Ryne Hill flock of Mr. Treweeke made up to 10½ guineas; and twenty grand lambs from the same breeder realised 14 guineas (to go to Leicester), and averaged nearly 7½ guineas.

Twelve Oxford shearlings from Mr. James Horlick (Cowley Manor) made up to 12 guineas, and averaged 8½ guineas; six from Mr. J. Phipps Smith (Evesham) up to 6½ guineas; fourteen ram lambs from Mr. G. Corbishley (Pershore) 7 guineas; ten, Mr. H. C. Bladder (Studley) 4 guineas.

Seven Ryeland rams from the well-known flock of Mr. W. T. Barneby (Saltmarshe) reached 8 guineas, and averaged £6 5s., and ten from Mr. W. H. Davies (Claston) up to 3 guineas.

The Hampshire Down class were represented from flocks of the most fashionable blood in the breed, and were fully appreciated, as not a single Hampshire lamb was unsold. Fifteen bred by Mr. A. C. Hall (Chipping Norton) made up to 10½ guineas, and averaged over £6; 20 lambs from the flock of Mr. H. C Stephens (Salisbury)

The Shearling Oxford Down Ram shown above is the animal with which Mr. J. T. Hobbs, Maisey Hampton, Fairford, Gloucestershire, won a First Prize at the Royal Agricultural Society's Show at Lincoln this year.

realised excellent prices; 15 bred by Lord Rothschild up to 9½ guineas, average £6, and 15 from Mr. A. Edwards (Salisbury) up to 4 guineas.

A consignment of six Border Leicester ram lambs from Cumberland, bred by Mr. Armstrong, reached 5½ guineas, whilst various other lots made up to 4½ guineas. The breeding ewes, which were of the usual high standard in quality seen at this sale, made up to 63s. 6d.; the store lambs, over 2,000 in number, made up to 42s, whilst store wethers met a ready sale at prices up to 50s. 6d.

Lanark.

The annual show and sale of Blackfaced rams at Lanark took place on Tuesday, 517 shearlings and 738 lambs being forward. In the pens of five shearlings, Messrs. Cadzow Brothers, Borland, were placed first; Mr. Hamilton, Woolfords, second; and Mr. Fraser, Rankinston, third; for single shearlings, Mr. Hamilton, Nether Wellwood, was first; Mr. Hamilton, South Cumberhead, second and third; and Mr. Craig, Kinnon, fourth; for aged sheep, Messrs. Cadzow were first; Mr. Anderson, Over Whitehaugh, second; and Mr. Hamilton, Woolfords, third; whilst in the lamb

section, Mr. Hamilton, Woolfords, was first; Mr. Clark, Auchinlongford, second; and Mr. Cadzow, Weston, third. In both sections there was a distinct improvement on the quality from last year.

There was an extra large attendance of breeders of Blackfaced sheep from both sides of the Border and Ireland, and the sale was one of the most successful ever held here. The bidding was very active in both rings, and continued so to the very close, and any animal showing quality anything over the average was very keenly competed for, while the ordinary class met a strong, good selling demand, at quite satisfactory prices. Mr. Anderson, Colzium, gave £140 for one of the Borland lot, which was the top price of the day. Mr. Scott, Bogside, had also one of this lot at £115; Mr. Calder, Ledlanet, and Colonel Mackenzie, Muirhouses, one each at £100; while one of the Glenbuck lot went to Mr. Stobart, Blackhalls, Kirkwhelpington, at £115; and one of the Lagg lot at £103 to Mr. H N. Mitchell, Kirkland. In the lamb section, Mr. Cameron, Dalmally, gave £30 each for two animals from the Mid-Crosswood lot, whilst for one of this lot Mr. Wilson, Wester Mosshat, gave £20. Other consignments made up to £30. Details of the highest prices, &c., are appended :—

Mr. Fallon's Hampshire Downs.

The sale of the registered flock of Hampshire Down sheep belonging to Mr. Jno. Fallon, the well-known trainer and owner of racehorses, who is giving up sheep farming, attracted a good company of breeders to Homanton Farm, Winterbourne Stoke, and a satisfactory sale resulted. 170 two-tooth ewes made 69s., 67s., 62s., 61s. (twice), 60s. (thrice), 59s., 58s., and 57s., average 60s. 6d.; 119 four-tooth ewes made 67s., 65s., 64s., 62s., 61s., 60s., 59s. (twice), and 58s., average 61s.; 90 six-tooth ewes made 63s., 61s. (twice), 59s. (twice), and 58s. (twice), average 59s. 6d.; 100 r.d. ewes, 57s., 56s. (thrice), and 54s., average 55s. 9d.; 97 over-yeared ewes, fit for breeding, 52s., 51s, and 50s. (thrice), average 50s. 6d.; 22 grazing ewes, 41s; 200 ewe lambs fetched 53s., 51s., 48s. (thrice), 47s., 46s. (twice), 44s. (twice), 43s., and 42s., average 45s. 6d.; 100 wether lambs in two fifties, 47s. 6d. and 46s.; ram lambs, 4½ guineas singly, and 6 guineas to 9¼ guineas per pair; shearling rams, 4 guineas, 4½ guineas, and 5 guineas each. Some horned stock and poultry were also sold at satisfactory prices.

Mr. W. S. Ferguson's Leicesters.

The annual sale of Leicester sheep from Mr. W. S. Ferguson's famous Pictstonhill flock took place on Tuesday at Pictstonhill, Perth, and as usual was largely attended. The rams submitted were of rather more than the ordinary Pictstonhill scale, but a third or so of the lot were of an excellent size for hill use, and all were up to the usual standard in coats and activity. Thirty gimmers, representing a fair pick from the female crop, were also catalogued, and these had a brisk disposal. The first lot was a big, lengthy, good coated ram which has been winning locally. Set off at £10, this shearling passed out at £15 10s. to Mr. Murray, Belfast. No. 3, a nicely-coated ram, was sold to Mr. Mackenzie, of Earlshall, at £12; Dr. Shirra Gibb paid a pound more for No. 5, a prettily-balanced ram, which appeared in nice form; whilst a smart, compact, well ribbed shearling was knocked down at £15 to the Hon. A. D. Murray, Scones Lethendy. These were the best figures. Later on some promising rams were going at £8 to £11. For sixty-one shearlings the result was £464 10s., an average of £7 12s. 3d., against £8 15s. 1d. last year and £9 14s. 10d. in 1905; and for thirty gimmers the total realised was £111 7s. 6d., average £3 14s. 3d., against £3 14s. 8d. last year and £3 19s. 4d. in 1905.

Mr. Draycott's Lincolns.

In consequence of the death of the owner (the late Mr. J. G. Draycott) Messrs. Saul and Hodgkinson dispersed by auction at Folkingham, yesterday, a valuable flock of Lincoln Longwool sheep. Included in the sale were 40 Longwool shearling rams sired by sheep from the Laughton, Scopwick, Quarrington, and Riby flocks. The top price, 13 guineas, was given by Mr. E A. M. T. Fisher, Welby Warren, Grantham. Other prices were :—11½ guineas, by Lord Willoughby de Eresby, M.P.; 11 guineas, Mr. Wherry, Bourne; 10 guineas, Mr. J. Barnes, Howell; 9 guineas, Mr. W. F. Atkinson, Dunsby; 8½ guineas, Mr. T. Baker, Osbournby; and 7½ guineas, Mr. Sardeson, Heydour. The average price was about £7 5s. 6d. Ewes made up to 61s., theaves 64s 6d., lambs 46s. 6d., and ram lambs 40s. 6d.

Lord Alington's Southdowns.

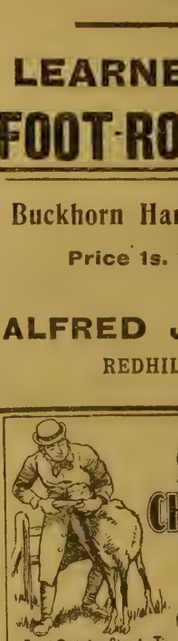
A portion of the old-established pure-bred registered Southdown flock, the property of Lord Alington, Crichel, was offered for sale by auction at the recent Blandford Fair. This flock was established about 1834 from the best strains of blood obtainable in Sussex, and rams from the following noted breeders have been used, viz. :—The Duke of Richmond, Colonel Sir Nigel Kingscote, Mr. Hugh Gorringe, Mr. Heasman, Mr. W. Toop, and the late Mr. John Ford, and latterly from Mr. Adeane, in addition to which high-class ewes have been purchased from the Sandringham and Goodwood flocks of his Majesty the King. The sheep were in bare working order, and were disposed of in a separate ring set apart for the occasion, and a good sale may be recorded. Two-teeth ewes made 57s. (thrice), 55s., 54s., 52s. (thrice), and 50s. —average 54s. Four-teeth ewes, 54s, 50s. (twice), 48s (five times) average 49s. 3d. Six-teeth ewes, 57s., 54s., 53s., 52s., 51s. (twice)—average 53s. Full-mouth ewes, 52s., 50s., 49s., 48s., 47s., 46s. (twice), 45s., 44s., and 43s.—average 47s. Rams made 3½ to 5½ guineas.

The Quarrington Lincolns.

There was a large and influential gathering of breeders and farmers, as well as foreign buyers, at the sale of the noted flock of Lincoln shearling rams at Quarrington, near Sleaford; 120 grand shearling rams were offered, and 117 were sold at an average of £21 8s. 2d. each. In 1904 the average was £24 7s., in 1905 £20 2s. 4d., and 1906 £20 4s. 8½d. One of the Dowsby progeny, which took prizes at the Royal Show, Lincoln, and in Yorkshire, was, after a keen competition, secured by Mr. J. E. Casswell, Laughton, for 200 guineas. Another fine ram, which was commended at the Royal Show, was bought by Mr. J. Pears, The Mere, for 115 guineas; whilst the other principal buyers were Mr. F. Money, Silk Willoughby, 80 guineas; Messrs. Dean, Dowsby, 70 guineas; Mr. C. E. Howard, Nocton, 52 guineas; Mr. Crewe (for the Argentine), 52 guineas; Messrs. Cooper, Berkhamstead, 40 guineas; Mr. Truman, Whittlesea, 46 guineas.

Mr. Tanner's Shropshires.

Breeders from all parts of England, and some from Ireland, attended the annual sale of Shropshire sheep at Shrawardine, near Shrewsbury, on Saturday last, when Mr. A. Tanner offered about forty pure-bred rams for sale. The Shrawardine flock is one of the best well known in the country, for as far back as 1858 animals from the flock took honours in the principal showyards, so that no description is needed here. Shrawardine Dream, a fine type of shearling ram, was withdrawn at 90 guineas, but Mr. Chandler gave 38 guineas for a shearling ram, Mr. Slater 18 guineas, Mr. Eare 14 guineas, Mr. Humphreys 17 guineas; whilst the chief prices for pasture rangers were—Captain Townshend 26 guineas, Mr. A. P. Turner 20 guineas, Mr. E. Frank 20 guineas, Mr. W. Nunneley 23 guineas, Mr. Humphreys 22 guineas, Mr. Tom Jones 31 guineas, and others down to 5½ guineas.



Dr. Wall's Shropshires.

The well known prize-winning flock of registered Shropshire sheep so long maintained by Dr. Bernard Wall at the Priory Farm, Shustoke, near Birmingham, was dispersed by auction on Tuesday in consequence of Dr. Wall's intention to give up the farm. A large company of buyers attended the sale, and it proved very successful, the ewes making unusually good prices. The prices realised were as follows :—Rams (pasture rangers), two shear, 8 guineas, Captain Townshend; shearlings, 9 guineas, Mr. Lovatt, 6, 17 guineas; Colonel Burne, 8, 8, 5½ guineas. Ram lambs, 5 guineas, Rev. E. R O. Bridgeman; 3, 3½ guineas, Mr. Coxon; 4, 3, 2½, 4½, 4, 3½, 4½ guineas, Mr. Bretherton; 3½, 3, 4 guineas, Mr. Burman; shearling ewes, pens of five, 6 guineas, Mr. T. Simon; 7 guineas, Mr. Bliss; and 3½ guineas, Mr. Bliss. Two-shear ewes, 5½ guineas, Hon. Victor Cavendish; 4 guineas, Mr. C. Coxon; 3½ guineas, Mr. Bliss; 3½ guineas, Mr. Vickers. Young stock ewes, 6¾ guineas, Hon. Victor Cavendish; 6½ guineas, Mr. T. Simon; 3¾ guineas, Mr. Fowler; 3½ and 3½ guineas, Mr. A. Bradburne; 5 and 4½ guineas, Duke of Westminster; 3½ guineas, Mr. Vickers. Ewe lambs, 4, 2¾, 2¾ guineas, &c.

By KENT SHEEP BREEDERS' ASSOCIATION.

REGISTERED KENT OR ROMNEY MARSH SHEEP.

THE Eleventh Annual SHOW and SALE of the Kent or Romney Marsh Sheep-Breeders' Association will take place at the Cattle Market, Ashford, Kent, on FRIDAY, SEPTEMBER 27, 1907, at 11 a.m. prompt.

The prizes offered for competition at this Sale include a Challenge Cup, presented by the Vice-President (Lord Harris), for the best Ram other than a Yearling; the L. Hardy Challenge Cup, presented by L. Hardy, Esq., M.P. (the President); the Cooper Challenge Cup for the best five Yearling Rams, presented by Sir R. P. Cooper, Bart.; and cash prizes presented by Capt. Somerset Webb (the President Elect) and Messrs. C. E. Gunther, J. Howard and F. Neame, and in addition to these there is also offered a Special Prize for the best Woolled Ram.

In consequence of the offering of these valuable prizes the entry this year is comprised of a large selection, numbering 500, representative of the best strains of blood, and it includes many of the leading Rams of the year, and represents the pick of thirty-seven Registered Flocks, owned by the undermentioned flock-owners:—

The Right Hon. Earl Sondes (12), the Right Hon. Earl of Verulam (16), the Hon. Lord Harris (25), Major Powell Cotton (4), Capt. Somerset Webb (10), Mr. E. Ascharson (8), Mr. A. Amos (28), Mr. J. P. Barnes (12), Mr. J. B. Blake (4), Mr. G. Buley (8), Mr. F. de B. Collard (9), the Exors. of the late W. Elvy (10), Mr. G. Farmer (21), Mr. Chas. File (17), Mr. J. File (13), Mr. T. File (6), Mr. Arthur Finn (20), Messrs. L. H. and G. W. Finn (11), Mr. O. E. d'Avigdor Goldsmid (2), G. M. Goodson (6), Mr. E. Hambrook (5), Mr. L. Hardy, M.P. (9), Mr. J. H. Harvey (4), Mr. W. R. Harvey (9), Mr. G. E. Hawkins (7), Mr. A. J. Hickman (6), Mr. S. Kingsnorth (9), Mr. W. E. Long (11), Mr. J. D. Maxted (15), Mr. W. Millen (30), Mr. F. Neame (24), Mr. J. B. Palmer (7), Mr. J. E. Quested (34), H. Rigden (50), Mr. G. C. Swindells (25), Mr. H. Walters (3), and Mr. T. Wotton (10).

The judging for the prizes will commence at 8.30 a.m. sharp, the first prize to be awarded being that for the best pen of five Yearling Rams, and the Sale will commence at 11 a.m. sharp, and proceed without intermission to its close.

Lunch and refreshments will be obtainable on the Show-ground, as usual.

Catalogues, when ready, can be obtained from Mr. W. W. CHAPMAN, the Secretary, Kent or Romney Marsh Sheep-Breeders' Association, 4, Mowbray House, Norfolk Street, Strand, London, W.C., to whom all enquiries in respect to this Show and Sale are to be addressed.

By Messrs. JOHN THORNTON & CO.

Auction and Valuation Offices, 7, Kirkgate, Newark.

By Messrs. AMBROSE & FOSTER.

THE LEEDS CASTLE FLOCK OF REGISTERED KENT SHEEP.

MESSRS. AMBROSE & FOSTER beg to announce that they are favoured with instructions from C. P. Wykeham-Martin, Esq., J.P., to SELL by AUCTION, at Greenway Forstal Farm, Hollingbourne, Kent, on

WEDNESDAY, the 25th DAY of SEPTEMBER, 1907,

At 11.30 o'clock a.m. (in consequence of the death of the late Mr. Thos. Powell),

The Whole of the

CELEBRATED LEEDS CASTLE FLOCK

OF

REGISTERED KENT SHEEP,

Comprising 584 Head, as follows:—

102
EWE TEGS,
55
ONE-LAMB EWES,
45
TWO LAMB EWES,
62
THREE-LAMB EWES,
40
FOUR-LAMB EWES,
126
EWE LAMBS,
40
SHEARLING RAMS,
3
STUD RAMS,
35
RAM LAMBS,
76
WETHER LAMBS.

This Flock (Registered No. 32 in the Flock Book) will be found to possess to the full that excellence and uniformity for which it has always been noted. It represents one of the oldest flocks in the county, a large number of the late Mr. T. Powell's well-known flock having been purchased in 1894.

The place of sale is about one mile from Harrietsham Station (S.E. and C. Railway), and conveyances will meet trains.

Catalogues (when ready) may be obtained at the Place of Sale; the principal Inns in the neighbourhood; and of the AUCTIONEERS, 3, Market Buildings, Maidstone.

(Continued on next page.)

AUCTION SALES.

By JOHN THORNBORROW & CO.

PENRITH, CUMBERLAND.

JOHN THORNBORROW & CO. will SELL by AUCTION, on SATURDAY, SEPTEMBER 21, 1907, at 11 o'clock (the day following Mr. Harris' Sale at Brackenburgh Tower), at the AUCTION MART, PENRITH (one minute's walk from the Station), about

80 PURE-BRED SHORTHORNS,

comprising a number of select animals of good families from the Herds of Lord Brougham and Vaux, Brougham; Lord Barnard, Raby Castle; Lord Polwarth, Mertoun; Exors. late J. Naylor, Leighton Park Farm; Messrs. R. Heywood Thompson, Nunwick Hall; Wm. Graham, Eden Grove; D. Bragg, Aikton; John Hewson, Parton; John Gill, Stainton; W. Kendall, Natland Park; and other noted Northern Breeders.

The animals include about 40 Young Cows and Heifers in calf or with calves at foot, and the remainder are smart good coloured Young Bulls, the majority of them fit for service.

Catalogues may be had of JOHN THORNBORROW & CO., St. Andrew's Churchyard, Penrith, who will execute Commissions.

By Messrs. T. BANNISTER & CO.

TO DAIRY FARMERS AND OTHERS.

POYNINGS MANOR, POYNINGS, SUSSEX, About 1 mile from the Railway Station at the Dyke, 4 miles from Hassocks and Henfield, and 6 from Brighton.

MESSRS. T. BANNISTER & CO. are favoured with instructions from Messrs. C. and E. ROBINSON, to SELL by AUCTION, upon the premises as above,

ON MONDAY, SEPTEMBER 30, 1907,

THEIR VALUABLE HERDS OF HEAVY MILKING YOUNG DAIRY-SHORTHORN AND DUTCH COWS AND HEIFERS, mostly down Calving or with Calves by side, kept on their Poynings Manor and Perching Sands Farms, where they are discontinuing Dairy Farming, having given up a Milk Contract they have held for 13 years. The Herd consist of

71 SHORTHORN COWS AND HEIFERS, in Calf or with Calves by side,
10 DITTO HEIFERS AND 1 BULL, about 20 months old,
38 DUTCH COWS AND HEIFERS, in Calf or with Calves by side,
12 DITTO HEIFERS, about 20 months old,
1 DITTO BULL, about 2 years old.

The Dutch Cattle are descended from three exceptionally Heavy Milking Imported Cows, one of which yielded 32 Quarts of Milk per day for several seasons.

Also will be included, 5 POWERFUL ACTIVE CART and 3 VAN HORSES, BLACK WEIGHT-CARRYING GELDING, 5 years old, about 15.1 hands high, quiet to ride and drive and a good hunter, Milk Vans, Churns, Refrigerators, Pails, Sets of Harness, &c, 12 PEDIGREE LARGE BLACK PIGS, 140 SOUTHDOWN WETHER LAMBS, and some Handsome Young Rabbit Beagles.

Luncheon at 12 o'clock, Tickets 1s. 6d. each.

Sale to commence at 12.30.

Catalogues may be obtained of the AUCTIONEERS, Market Place, Haywards Heath (Tel. No. 7).

Messrs. FREDERICK ELLEN & SON.

STEVENTON MANOR FARM, HANTS, Three miles from Oakley and four from Micheldever Railway Stations (L. and S.W. Railway).

IMPORTANT and genuine Sale of the very old-established HAMPSHIRE DOWN BREEDING FLOCK (entered in Vol. 1 of the H.D.F. Book) comprising

1,040 EWES and LAMBS.

This Flock was established very many years ago by the late Rev. John Digweed, and was purchased upwards of 30 years since by the late H. Harris, Esq. The Flock will be found to possess plenty of size, with symmetry, good wool, and every other characteristic required in first-class Hampshire Down Sheep.

55 HEAD CHOICE HORNED CATTLE,

Swine, Poultry, together with the whole of the AGRICULTURAL IMPLEMENTS and MACHINERY, including an 8 h.p. FOWLER'S TRACTION ENGINE, &c., which Messrs. FREDERICK ELLEN & SON are favoured with instructions from H. Harris, Esq. (in consequence of the farm being let) to sell by AUCTION on the Premises on

THURSDAY, SEPTEMBER 26, 1907.

Sale to commence at 10.30 o'clock, and catalogues may be obtained of the AUCTIONEERS, The Mart, Andover, Hants.

Kelso.

The annual show and sale of rams under the auspices of the Border Union Agricultural Society took place at Kelso on Friday, and proved the most successful of the series, for there were record entries and record prices. Oxford Downs were well shown, but Border Leicesters still retained the fashionable lead, as prices eventually showed. The record price for these sales of £280 was paid by Mr. Wood, Carnoustie, for a very handsome sheep out of Messrs. Smith's Leaston lot, and this sheep is for exportation to New Zealand. Mr. Templeton, Sandyknowe, who headed the sale last year, sold one at £160 to Mr. Cark, Old Hamstocks, and two at £105, and secured the highest average of the sale—viz., £40 6s. The Sunnyside consignment sold up to £140, which sum was paid by Mr. Elliot, Nisbet Hill, and one from Barrelwell made £105, being bought by Mr. Taylor, Pitlievie. The highest price for Oxford Downs was £38 got for one of the Kipton lot, and Messrs. Massey, Hampton, and Lyne sold at £35 each, whilst the half-bred section was headed by the Deuchrie consignment at £25, bought by Mr. Porter, Doddington.

Ashford.

At Ashford Market on Tuesday Messrs. W. and B. Hobbs disposed of a consignment of Southdown ram tegs from Colonel W. W. Hammond's noted flock. Of these Mr. R. Strouts took two at £7 each, Mr. F. Uden one at £6 10s. and two at £7, and one at £6, and Mr. W. Pledge one at £7 5s.

Bridgnorth.

On Monday Messrs. Nock, Deighton, and Kirkby conducted their annual sheep sale in the Smithfield at Bridgnorth, when they had a record sale and were favoured with a large company of buyers. There were about 7,000 ewes, wethers, rams, and ram lambs entered and a capital trade was experienced. Ewes made up to 63s, wethers 48s 6d; ewe and wether lambs realised 40s. There was a useful lot of rams and ram lambs offered, rams making up to 12 guineas and ram lambs up to 6¼ guineas.

Newingreen.

A most successful sale of breeding ewes, tegs, and lambs was held at Newingreen, Kent, on Wednesday, about 6,000 animals being sold. Of the lambs Mr. W. Smith's 120 Kent ewes sold at 32s. 6d., 30s., and 27s. 6d.; seventy of Mr. D. Dryland's Kent lambs (mixed) fetched 30s; forty of Mr. Heritage's Kent ewe lambs, 32s; Mr. W. E. Grieve's Kent ewe lambs made 37s, his wethers 34s. 6d., and a mixed pen 27s. 6d.; while some Kent ewe lambs of Mr. W. Brice's made 34s. 6d. These were the superior lots, average lots realising round about 25s per head. Breeding ewes sold remarkably well. Mr. A. E. Dadds' seventy-five Kent three-lamb ewes made 42s., 45s., 48s 6d.; of eighty Kent three-lamb ewes of Mr. A. Blaxland's twenty sold at 44s., and the remainder made 46s.; Mr. A. Amos's one-lamb ewes fetched 57s., his two-lamb ewes 48s. 6d. and his three lamb ewes 44s., and a run of 220 three-lamb ewes of Mr. F. Hobbs realised from 39s. 6d. to 44s. Some crossbred two-lamb ewes, from the flock of the exors. of the late Mr. W. Long, fetched 52s. and 46s. Kent ewe tegs also sold well. A run of 125 from the exors. of Mr. Long fetched from 42s. to 46s; fifty of Mr. M. Seath's made 50s., and forty five realised 47s. 6d.; two pens of Mr. T. Pilcher's sold at 52s. and 53s.; and the great majority ranged round about 46s. Kent wether and crossbred tegs realised up to 47s. 6d.

Irish Ram Breeders' Association.

On Thursday, Mr. Low conducted the second sale of pedigree ewes and lambs for members of the Irish Ram-Breeding Association, at 50, Prussia Street, Dublin. Trade was animated from start to finish, and practically all the 100 lots catalogued were sold. The first of the rams to enter the ring was a typical upstanding shearling Lincoln from Mr. R. G. Carden, J.P., D.L., Fishmoyne, Templemore, which was sold at 9½ guineas to Mr Delaney. Other rams from the flock made up to 7½ guineas. Border Leicester rams were headed by a couple of nice shearlings from Sir Algernon Coote, Bart., H.M.L., Ballyfin, Mountrath, one being purchased by Colonel Tottenham at 9 guineas, and the other by Mr. Greaves at the same price. Oxford Downs were numerous, and the first lot to enter the ring came from the flock of Captain Longworth Dames, at Greenhill, Edenderry. These ranged in value from 4½ to 4¾ guineas, the buyers being Messrs. J. Coleman and Mooney. Mr. J. G. Evans had a nice well-bred lot, which were knocked down at from 6 to 7 guineas, the buyers being Messrs. McCloughry, Bobbett, Souhan, Hannon. Symes, and Burke. The shearling Shrops from Lady Margaret Charteris, Cahir Park, Cahir, were a useful lot, and sold as follows:—Hon. C. Trench, 7½ and 7 guineas; Mr. J. C. Kieran, Rathbrist, 8 and 5½ guineas; Mr. Dove, Athboy, 7 guineas; Mr. Aigie, 6¾ guineas; Mr. Hannon, 5½ guineas; Mr. H. L. King, 5½ and 5½ guineas; while a Shrop ram was sold to the Marquis of Ormonde at 7 guineas. Sir A. Coote's Cheviot ram brought 7 guineas from Major Casement.

Sir J. Duke's Aberdeen-Angus.

The sale of Sir James Duke's Laughton herd of Aberdeen-Angus cattle at Lewes Cattle Market on Tuesday was attended by a large company of buyers, and a satisfactory sale resulted.

Many prize winning cattle have been bred in this herd, including several first and second prize bulls at the Royal shows and prize winning cattle at Smithfield, including Brunhilde, the champion heifer at Birmingham and Smithfield fat stock show, and Mr. Cridlan's champion steer at Birmingham and Smithfield; Jester, first and reserve at Smithfield; Marmaduke and Marmion, besides prize winning bulls at Dublin and other shows.

Bidding was brisk, and no difficulty was experienced in finding purchasers. The top price was 84 guineas, which sum Mr. Sandemann, Achwell, Herts, gave for Eolanthe, born January 27, 1904; whilst for her cow calf Mr. Whyte, Hayton, Forfar, gave 31 guineas. Elba of Knockanbuie, calved March 6, 1904, realised 60 guineas from Mr. H. Hardy, Hildenborough; Mr. Whyte gave 30 guineas for Rosette of Laughton, calved February 17, 1902; whilst other cows sold up to 24 guineas. Two-year-old heifers made from 16½ to 35 guineas, the latter figure being given by Mr. Buncombe for Winnie of Butterstocks; yearling heifers realised from 12½ to 21 guineas; whilst the two bulls, Bugler and Earl Eloquent, were sold for 22 and 19 guineas to Mr. Findlay (for Count Munster) and Mr. G. Hemsley respectively.

Sale of Mr. F. Brown's Milch Cows.

In consequence of a recent disastrous fire Mr. F. Brown, of Court Lodge, Chipstead, decided to dispose of his well-known herd of dairy Shorthorn and Dutch cows. The sale took place on Monday, and as was expected, drew a large company of buyers from all parts. The herd had gained a widespread reputation for its milk records, one cow, Bessie, having given 1,388 gallons in forty-five weeks, and its dispersal is much to be regretted. The animals met a ready trade, and sold at an all-round average of £20 5s., the chief sales being as follows:—

Ena, Mr. Innes, Wa'dron, £20; Frances, Mr. Benson, Upper Gatton Park, £27; Dutch half-bred, Mr. Innes, £26; Evelyn, Mr. Hatch, Croydon, £20; Susie, Mr. Benson, £27; Grace, Mr. Bodel, Bexhill, £25; Empress, half-bred Dutch, Mr. Fox, Tonbridge, £30; Lilly, Mr. Benson, £26 10s; Bride, Mr. Benson, £36 10s.; Ruby, Mr. Trevor, Bromley, £21 10s.; Dutch, Mr. Fox, £24 10s.; Cherry, Mr. Whittington, £20 10s.; Poppy, Mr. Whittington, £22; Dutch, Mr. Ford, Selby, Yorkshire, £30 10s.; Queen, Mr. H. Faure Walker, J.P., £21; Jessie, Mr. Whittington, £21 10s; Countess, Mr. Whittington, £22; Diamond, Mr. Skinner, Sutton, £23 10s.; Tulip, Mr. Fox, £25 10s.; Rover, Mr. Whittington, £20; Maud, Mr. Benson, £31; Dutch, Mr. Straker, Richmond, Yorkshire, £30 10s.; bull, Mr. Wilson, Richmond, Surrey, £20.

Lord Gerard's Longhorns.

Lord Gerard having let off the park and most of his grass land, it became necessary to very considerably reduce the well-known herd of Longhorn cattle which, for some years past, has been located at Eastwell, and on Wednesday the greater portion of the herd was brought under the hammer at Eastwell. Founded by extensive purchases from the very best blood, animals from Eastwell have won many prizes and high honours in the showyard in competition with the most noted beasts of the day; in fact, the herd has never yet been represented at a show without securing a first prize—probably a record in the annuals of pedigree cattle breeding. Of the 1907 winners the heifers were included in the sale. Prices were very moderate, the highest figure realised for the breeding stock being only 20 guineas, which was paid by the Hon. FitzRoy for Grace 11th, the handsome two and a-half years old heifer which won first prize at the Lincoln Royal. Mr. Parsons, of Coventry, gave 19½ guineas for Eastwell Empress, the two years old heifer which won second prize at the Royal and took a yearling bull, Eastwell Exquisite, for 13 guineas; while Mr. W. Bean, who is taking the park grazing, made many purchases at prices ranging up to 17 guineas.

The total amount realised for the breeding stock was £368 0s. 6d., which works out at an average of £12 5s. 4d. per head for beasts of all ages, from under a week old to cows of over twelve years. In addition some steers and heifers, mostly cross-breds, were offered and cleared out. A massive three years old Longhorn steer was purchased by Mr. R. Foord Thorpe for 24½ guineas; and other Longhorn steers made up to 23½ guineas. Cross-breds ranged from 6 guineas to 14½ guineas per head.

The Sale of Diseased Cattle.

The Local Government Board has sent the following letter to the councils of Metropolitan and other boroughs and of urban and rural districts:—

"I am directed by the Local Government Board to state that they have had under consideration various representations with respect to the sale for human food of diseased cattle, and especially of cows suffering from tuberculosis or other wasting disease. The Board understand that it is the practice of some dealers, though aware of the diseased condition of animals coming into their hands, so to dispose of them or of their carcases, that there is risk that they will be used as food for the poorer classes in London and other large towns.

"The Board have reason to believe that the practice in question obtains to a considerable extent; and accordingly they are desirous of drawing the attention of local authorities to the matter, in order that they may as far as possible exercise supervision over the cattle in their districts with a view to anticipating, and so averting, possible or intended infringement of the law.

"With this object, the local authority should instruct such of their officers as are engaged in administering the provisions of the Dairies, Cow-sheds, and Milkshops Orders, to observe particularly the condition of the cows which come under their notice, and, where any animal is clearly diseased and presumably unfit for food, to take such steps as are practicable to ensure that, in the event of the animal being slaughtered, the carcase is disposed of properly.

"The Board would also suggest that the sanitary or other suitable officers of the local authority should be instructed to watch closely the cattle markets, slaughter-houses, and knackers' yards in the district, with the view of satisfying themselves that no animal, the condition of which appears to render it unfit for human consumption, is disposed of in such a manner that it is likely to be used for this purpose.

Produce Stakes for Jerseys and Shorthorns.

The success of the Open Sussex Produce Stakes, introduced by the Tunbridge Wells and South-Eastern Counties Agricultural Society—over eighty-eight entries have been received—has induced the Society to extend this new and interesting feature to the Shorthorn and Jersey breeds. The stakes are of 10s. each, the only forfeit to the fund, for ewes or heifers to be entered and their produce to be shown on certain conditions.

The stakes will be divided as follows between the produce of the entered cows or heifers which shall be born:—(1st half) Between January 1 and June 30, 1908, inclusive (the entry for this half of the stakes closes on December 31, 1907), and (2nd half) between July 1 and December 31, 1908, inclusive (the entry for this half closes on March 31, 1908). The competition will take place at the summer show of the Tunbridge Wells and South-Eastern Counties Agricultural Society in 1909.

If there are sufficient entries bulls and heifers will not compete against each other, and separate classification will be provided for each sex. The money will be divided *pro rata* between the two sexes, less the entrance fee when shown, and will be awarded to the absolutely best of either sex.

Any of the produce shown for this stake will be able to compete also in their respective classes at the show for which they are eligible, by paying the usual fee for such class or classes, and it will therefore be seen that a single animal could carry away a considerable amount in money and prizes. The conditions and rules of these stakes include the following:—

Any number of Shorthorn cows or heifers, the property of the same owner, may be entered for the stake. Cows or heifers shall only be eligible for entry in respect of produce, to be born between the above-mentioned dates. Entries may be made at any time before the closing of the stake. One entry shall only cover one calf.

Within six weeks from the birth of the calf of any cow or heifer entered for the stake, the owner shall forward to the secretary of the Tunbridge Wells and South Eastern Counties Agricultural Society, a certificate, signed by himself and one witness, stating the date of birth, exact markings, sex, with name (and number if entered) of the dam and sire—but the acceptance of such description shall be left to the discretion of the council or their representatives, and every owner must prove the correctness of his entry to the satisfaction of the council, if called upon to do so.

Entrance fee 10s., to be paid on entering the cow or heifer, the only liability in case of forfeit; the remaining £1 to become due and to be paid if and when the owner accepts by nominating for the stake, the date for which will be in 1909, and announced.

A calf is eligible to compete under one subscription, provided that, if the breeder shall have sold or otherwise parted from it, no other person shall accept by nominating for the stakes, unless he also pay £1 for such acceptance, and forward to the secretary a certificate from the late owner, properly identifying, with exact markings and colour, to the satisfaction of the secretary of the council, the produce in question.

All communications respecting these stakes should be made to Mr. W. Roper, secretary Tunbridge Wells and South Eastern Counties Agricultural Society, Kentish Buildings, Tunbridge Wells.

Sale of Aberdeen-Angus at Dublin.

The herds of Aberdeen Angus cattle belonging to the Marquis of Waterford, K.P., from Curraghmore, Portlaw, and Mr. R. G. Nash, J.P., Finnstown, Lucan, were dispersed at Dublin on Thursday, together with a few stock of the same breed from the herds of Messrs. W. J. Cotton, Humphreystown, Blessington; Mr. R. Vesey Stoney, Knockadoo, Boyle, and others. For the best pedigree stock there was keen competition, but, as will be seen from the list appended, the prices did not rule particularly high, the best being 50 guineas given by Mr. Hume, Bland, for one of Mr. Nash's animals. The following is a list of the sales at 25 guineas and over:—

Cows and Calves.	Gs.
Egestas, bull calf, Lucan Equal Marquis of Ormonde	27
Necklet Second of Drogh (Mr. Nash's) Mr. E. M. Archdale	32
Ermine of St. Wolstans (Mr. Nash's) Mr. Beaumont Nesbitt	48

VETERINARY.

Advice of a Veterinary character, by a M.R.C.V.S., is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

DISEASES OF FARM ANIMALS.

Bloody and Discoloured Milk.

We are reminded by a recent complaint by a querist concerning a cow said to be yielding bloody milk from one of her quarters that this trouble is of very common occurrence in milking herds throughout the country, and that it is a cause of no small amount of annoyance and loss to the dairyman, though the health of the cow is not generally in any way affected. There is, however, every reason to believe, as pointed out in reply to the querist referred to, that in many cases where there is a demand for a recipe for the cure of bloody milk the trouble is not always exactly of this character.

Causss and Symptoms.

The complaint is invariably that the cow is giving bloody milk, but it is necessary to distinguish between red milk and bloody milk, or between milk of bloody colour and milk containing blood as blood, for they are by no means the same thing, or of equal importance. The occurrnce of bright red blood, blood that clots, and which invariably comes with the strippings, is quite a different matter to a case in which discoloured fluid is yielded throughout the milking.

One or more quarters may yield milk of a reddish tint, or milk on standing a few hours may deposit a red sediment, and this is generally described as blood. It is really nothing of the kind, but may be due to blood-colouring matter, or perhaps colouring matter derived from the food.

Law says that "milk may have a red sediment from feeding madder, logwood, and other agents," but madder and logwood are not common cow foods in this country, and we do not think that the consumption of acrid plants—ranunculus, hydropiper, resinous shoots, &c.—which he also says causes red milk, have much to do with it. The change very often occurs subsequent to the removal of the milk from the cow, and is as much a bacterial change as scouring, viscidity, ropiness, bitterness, &c.

Smith ("Veterinary Hygiene") says:—"Alterations in milk affecting its colour are known to result from organisms; thus blue milk results from the action of the *Bacillus cyanogenus*, a change which occurs in milk on standing, and in which the presence of lactic acid is an essential Red milk may be due to *Micrococcus prodigiosus* or other pigment-forming bacteria. Yellow-milk is caused by the *Bacillus synxanthus*. In addition, green and violet pigments are found in milk as the result of bacterial action. None of these organisms exist in the milk when drawn from the body, but are the result of subsequent contamination." These cases of discoloured milk, or of milk that deposits a red sediment on standing, are often most puzzling to the cowkeeper and dairyman, and defy elucidation, but we have often known the administration of a saline laxative—Epsom or Glauber's salts—followed by a cordial drench, to result in cessation of the discolouration. More frequently still does improvement follow on a course of small doses of hyposulphite of soda. Hyposulphite of soda ranks high as an antiseptic and deodoriser, and destroyed ferments and bacteria, and its presence in the milk may go a long way to prevent, or delay, bacterial changes that take place subsequent to the removal of the milk from the cow.

On the other hand, we have known this and other medicinal treatment to be quite ineffective, and the trouble to persist until the cow is dried off.

When blood as blood is drawn from the udder it generally makes its appearance towards the end of the milking, that is, it comes with the strippings.

The cause is weakness of the capillary vessels, which ramify through the udder. Normally these vessels have very thin walls, and readily exude their contents—indeed, it is part of their function to do so, in order to supply nutrition to the parts. These cases are often very difficult to deal with, owing to the necessity for clean stripping at each milking period precluding any possibility of rest.

Further, the trouble often reappears again and again in the same animal after it has been cured, or has ceased spontaneously. In many cases cows that give bloody milk are "stale," that is, they have been too long in milk and need drying off. Any cow whose near approach to calving, or long period in milk, suggests this origin of the trouble, should be promptly dried off, and the bother of treatment saved. It is generally found that after the usual period of rest there is no trouble at the next calving.

When the cow giving discoloured or bloody milk has yet a long time to run, something must, of course, be tried to remedy the defect The food supply, though rarely in any way responsible, should be overhauled, and such changes made in the diet as the results of the investigation suggest to be desirable.

Treatment.

As to treatment, local bathing with cold water, after clean stripping, is sometimes recommended as calculated to give tone to the weak blood-vessels, but where this is practical the udder should afterwards be very carefully dried with a soft cloth, and then gently massaged or rubbed with a little camphorated oil to prevent the animal taking cold in the gland. The best results are obtained in cases of bloody milk from treatment which includes the prolonged administration of tonic medicine containing iron.

A laxative drench of Epsom or Glauber's salts should be given, and followed twice a day with 1 oz., or one-sixteenth part, of a mixture of 4 oz. each of carbonate of iron, common salt, and powdered aniseed and gentian. This powder should be stored in a covered tin and given in the food, or as a drench in a quart of ale or thin gruel. In cases of discoloured milk it is often useful to give a drench of:—Nitrate of potash, 1 oz; powdered ginger, ½ oz.; Epsom salts, 12 oz.; ale 1 quart, and follow it twice a day with 1 oz. of hyposulphate of soda, dissolved in a quart of warm water. The milk from the quarters, the product of which is normal, should be kept separate, and the discoloured and bloody milk received into a different vessel. There is a superstition among cow-men that any abnormal milk should be stripped on to the ground. This certainly secures that it shall not be used for human consumption, or spoil the bulk, but milk so distributed taints the premises and furnishes a breeding-ground for germs that cause putrefaction and decay, if not for pathogenic organisms.

Generally there is no risk whatever in giving bloody or discoloured milk to pigs. They appreciate it none the less on account of its appearance; but, in any case, it is better received into a vessel, even if eventually thrown down the drain, than milked on the floor of the cowshed.

In those cases where blood, as blood, comes with the strippings, the milking should be conducted as gently as possible: but clean stripping

must not be omitted because the milk is bloody, or there may be worse trouble in the shape of mammary inflammation from retention of the milk, or the cow will go dry. M.R.C.V.S.

Midland Notes.

THESE are busy times indeed. We are in the thick of sheep sales, foal shows, farm dispersions, and such like autumn fixtures; but they have to share attention with the harvest, which is still busily proceeding, if not exactly merrily. Even now—almost the middle of September—it is the exception to see a farm totally cleared, and the ingathering of the straw crops, so badly laid and twisted as they are, is an expensive and a tedious business.

EVEN the hay is still giving ground for anxiety in some cases. Within the last few days I have seen not a few fields on which the cut grass still lies badly damaged, but intended to be saved when opportunity offers; and meanwhile the aftermath is growing thick and plentiful among it. Potato disease is spreading, encouraged by recent warm and muggy days. As a result, the heads are being cut off, though as this expedient puts an immediate end to the growth of the tubers it represents only the lesser of two evils. But roots and pastures thrive wonderfully; and the result is evident in the trade at the sheep sales. The Craven Arms sale is a conspicuous example. A rise of 6s. to 7s. per head on last year's prices is a big one indeed in the case of stock so inexpensive as ewes; and even at these rates the 16,000 odd sheep penned at this big Shropshire fixture were insufficient to go round. Store cattle, on the other hand, are making very ordinary prices.

A PROSECUTION of a Northfield farmer on Wednesday is typical of others which seem likely to be heard of in the near future. In this case a fine of £3 and costs was imposed by the King's Heath magistrates for the offence of keeping manure from a cowhouse piled in a pit closely adjacent to the house itself. The defendant had been previously warned by the local sanitary inspector, but explained by way of defence that he had nowhere else to deposit the manure.

THERE are indications that actions and warnings of this kind are likely to increase in number, for our urban and suburban councils have been told so much about bacterial disease that they are growing uneasy about very harmless incidents of rural life; and it is worth notice that the driving force behind them is supplied in not a few cases by "progressive" members, who are avowedly anxious to see the trade of milk production taken out of private hands altogether. In the particular instance referred to, the evidence of the local medical officer of health was to the effect that the presence of the manure (in the open air) was "likely to render the milk vessels unclean," and that contaminated milk "was considered to be one of the chief causes of summer diarrhœa and cholera among children."

WE are all very tired of the mildew muddle, as it has come to be called; but apparently we are very far indeed from being at the end of it. The County Council of Worcestershire had the business under consideration on Tuesday, and approved the steps which have been taken. These, of course, include the burning of diseased bushes, and of those likely to become infested; and (where burning is not practicable) the spraying with a strong solution of copper sulphate, this wash having been substituted for the obviously unsuitable sulphuric acid which was tried at first.

AND in addition to these precautions we have an order which prohibits the removal of gooseberry bushes, or any part thereof, without the leave and licence of the County Council. "It is a second swine fever campaign," was the expression of one grower when receiving this notice; the consolation is that nobody often wants to move a gooseberry bush. But meanwhile the mildew is officially said to be increasing, so that inconveniences are suffered willingly in the hope that the precautionary and extirpative measures may justify themselves.

THE same council has taken another step towards remedying the deficiency of country cottages in the country. Four months ago an inquiry was undertaken as to the need of cottages in the Evesham district. Now Lord Lifford, Messrs. Willis Bund, Henry Howard, and F. Impey have formally brought it to the knowledge of the council that a scarcity of cottages exists; they add that it seems likely to increase, and that it is helping to drive young people into the town, and to prevent the land being fully cultivated in small farms or holdings.

THEIR complaint that it "compels the system of farms, as against gardening, to continue" does not seem very happily worded; but it implies no antipathy to large and medium-sized farms as such. The Vale of Evesham, however, is an exceptional district, since on its rich and sheltered lands there is still room for large extension of fruit and market garden enterprise, and this branch of farming finds occupation for more labour and livings for more families per square mile than any other. The next move rests with the local district council; but it is understood that if the district council fails to prepare an adequate scheme within a reasonable time, the larger authority will be prepared to act independently. It is understood also that other agricultural districts in the country are to be similarly reported on, and dealt with in turn. This is good hearing for the smaller folk, but larger ratepayers are asking rather anxiously where the money for carrying out these schemes is coming from.

September 12, 1907.

Agricultural Machinery in Italy.

The following remarks on the opportunities for British agricultural machinery in Italy are extracted from the report of Mr. E. H Godfrey, juror for the agricultural machinery section of the International Exhibition at Milan, contained in the report of the British Royal Commission:—

"In regard to heavy articles such as steam engines and threshing machines, solidity and durability are essential. In these cases the question of draught is not so important because the engine is available for transportation. The heavy hay crops of Italy necessitate a substantial build in hay-making machinery and rakes; here the desideratum is strength and durability combined. On the other hand, in descriptions of implements such as ploughs, drills, and harvesters, lightness of draught and cheapness of cost are all-important. It is also important that agricultural machinery should be exported in large quantities at a time. If truck loads are sent not so much packing is necessary, and it should be remembered that freight and duty have to be paid on the packing as well as on the machines. Possibly more co-operation between British exporters might lead to economy in forwarding goods to the same country.

Ploughs.

"There is a great demand in Italy for ploughs, but the plough trade is at present almost entirely in the hands of Germany, whose makers have studied the exact requirements of Italian agriculturists, and have taken pains to meet them. English ploughs, so far as Italy is concerned, are too well made and cost too much. They are too heavy, and are not the shape required for Italian agriculture. Many of the Italian ploughs are required to turn the furrows to the left, and they must be capable of suiting not only ordinary arable cultivation, but also of turning the soil in preparation for the crops peculiar to the climate of Italy and other Southern countries. A ploughing depth of 12 in. is quite an ordinary one, and sometimes for vine culture the depth required is as much as 28 in, and occasionally 23½ in. Mould boards, too, are different in different provinces. Oxen are invariably used for draught purposes, and as a general rule two pairs of oxen are yoked to each plough. The average life of a plough, as used in Italy, is about two years, and Italian agriculturists find it more economical to purchase cheap ploughs of light draught and renew them at short intervals than to get more expensive implements the draught of which is too heavy for oxen, however solid in construction and durable in character they may prove to be. The ploughs used are generally made of wrought iron, and when worn out are readily disposed of to the local blacksmiths, who use the iron for many other purposes. Foreign ploughs are imported into Italy by car loads of 5 and 10 tons, usually the latter. Germany has doubtless an advantage in being able to send goods by train without reloading, but the facilities of manufacture enjoyed by British firms should enable them to compete successfully with German makers. The careful study of local requirements by agents acquainted with the language is, however, an essential preliminary to success.

Drills.

"These, too, are in large demand, being used for the sowing of wheat, barley, oats, rice, maize, and clover. This trade also is almost entirely in the hands of Germany, though a very few are of American manufacture. Lightness of construction and draught are also demanded for drills. They are used in great variety, and English makers should be able to obtain their fair share in the supply of an implement that is essentially an English invention.

Harvesting Machinery.

"Again, the Italian demand is for light machines. Horses in Italy are largely fed on chopped straw. Compared with our own equine stock, the animals are undersized and of inferior strength. Reapers and binders must therefore be suited to their capacity, for this appears to be more practicable than attempting to fit the horse to the machine. The trade in self-binders has up to the present been entirely in the hands of manufacturers in the United States; but Canada is now becoming a competitor, and Germany, too, is just commencing the manufacture of harvesting machinery for Italy. The American machines are generally too large. English mowers and reapers are of excellent construction, but are too heavy and dear for use in Italy, where the demand is for a light, cheap binder, capable of being drawn by comparatively inferior horses. . . . The following considerations apply to manufacturers in this connection:—(1) More frequent renewal means more continuous profits; (2) freight and duty are cheaper for lighter goods; (3) both maker and user are able to take more frequent advantage of the latest improvements as they are effected.

"At the risk of repetition, I would emphasise the necessity for studying Italian local requirements, and for adapting English agricultural machinery thereto. In this respect the example of English makers of heavy machinery may well be followed by other classes of manufacturers."

Seasonable Topics.

Summer at Last.

WONDERFUL to relate, we have had a whole fine week. Since our last notes were written we have had glorious sunshine every day, and never has the warmth of Old Sol's rays been more appreciated. We may go so far as to say that the situation is saved, for had the rain and the gloom lasted into September the results must have been serious, if not disastrous. The harvest is, of course, late, and cutting has been an expensive item, but the hauling in of the corn is going on apace, and the outlook is better than it has been for some time past. And after the dreary, disappointing summer how delightful it is to have this beautiful September weather, and how one hopes that it may last! We feel that this is our last chance, and we want to make the most of it, for when the break comes winter will soon be upon us. The man in the street rejoices over the fine spell, and how much more reason has the farmer to do so, for to him the Indian summer means so much.

A Poor Partridge Season.

WE ventured some weeks ago to prophecy that sportsmen would have a poor time amongst the partridges this year, and this is just how matters are turning out. Owing to the backward state of the harvest very little shooting was done at the beginning of the month, and now that stubble is more general than standing corn more guns are out, but generally speaking, the filling of bags is a difficult matter. We tramped all through one hot day last week and got little else but tired limbs and voracious appetites, for coveys were exceedingly small and scarce, and the birds we saw were mostly old ones. This seems to be the general order, and when we think of the unfavourable weather at breeding time, it is not surprising that the sport is so poor. When birds are fairly plentiful we know of no sport more delightful than partridge shooting, but to tramp for hours over stubble and through roots under a hot September sun without getting a shot or even seeing a feather is rather wearying, to say the least of it.

Through Force of Circumstances.

ONE of the most regrettable things in the agriculture of late years is the dropping out of the names and families of farmers who once occupied leading positions in the districts where they lived. It was in the palmy days of agriculture that they flourished, and they are remembered still as being good farmers, good neighbours, and good sportsmen. These men could afford to take life fairly easy when prices were up and wages were low, but it was difficult for them to change their habits when agriculture grew less profitable, and this in many cases explains the reason why good old families have dropped out of the ranks of farmers. We frequently meet the sons of men who in their day were known as "gentlemen" farmers, occupying in some cases positions as stewards and bailiffs, and in others farming for themselves, but on a different scale to what they were brought up to, and one cannot help feeling sorry that fortune has dealt hardly with them, though, sweeping sentiment on one side, the bare fact remains that things might have been different had many prosperous farmers of a past decade faced the music with the changing of conditions, instead of drifting on in the old way until it was too late.

Harvest Beer or Extra Pay.

THERE can be no doubt that the harvest season of 1907, beginning with the hay and concluding with the corn, will be remembered as the most expensive of recent years, and when the reckoning day comes it would be interesting to know who are the best off, the farmers who stick to the old custom of providing beer for the men in harvest time or those who give extra money instead. We think that though old customs die hard, the practice of giving extra money instead of beer at harvest time is becoming more general, and most people who have adopted it are satisfied with the results. It is characteristic of the average labourer to want as much beer as he can get when the liquor is supplied by his master, but when he receives an extra 6d. a day instead, he remembers things that the money will buy, and consequently does with less beer. Another question naturally arises which concerns the farmer more—does he get more work done in the harvest when he provides beer as when he pays extra wages? Opinions may differ on this point, but we were discussing the question with a farmer the other day and he assured us that through dropping the beer and giving money instead, he has been saved a considerable amount of trouble and bother, has done the thing cheaper, with no falling off in the work, and the men were well satisfied with the change. It is sometimes urged that beer helps to keep up the energy of a man during a long day's work in the harvest field, and it may up to a certain point, but thirsts are powerful under hot sunshine, and we know of no greater nuisance in a hay or cornfield than a maudling labourer who is three sheets in the wind.

Harvest Festivals.

IN many ways the season has been an unsatisfactory one, but this does not affect the spirit of harvest festivals, and thanksgiving services will be the general order for the next few weeks in churches and chapels all over the country. When we consider that without the fruits of the earth the world would be immediately at a standstill we realise how appropriate the annual thanksgiving is, and though perhaps as individuals we may feel that Providence has not dealt with us this season quite as we would have wished, yet taking a broader view of the harvests of the world, history cannot record one instance of the breaking of the divine promise, "that so long as the earth remaineth seed time and harvest shall not fail." There is something homely, beautiful, and truly English about the harvest festival, be it held in church or chapel, and if we mistake not, the thoughts of many an Englishman harvesting in those far-off lands which now provide the old country with corn turn lovingly to the little church in his native village, which he sees in imagination, beautified with the products of field, orchard, garden, and woodland, and he fancies he hears the singing of the dear old harvest hymns which are loved by Britons in all parts of the world. Thus, though we may not think of it in this way, the festival at home voices the thanksgiving of England's sons in all parts of the world.

Peculiarities of Supply and Demand.

IT is one of the peculiarities of the British public to want things when they are dear, and neglect commodities that are cheap and plentiful. At the moment of writing plums are a glut on the market, and the heavy crop is credited with being the cause of it, but it is possible that the above characteristic has also got something to do with it. As we said before, plums are so plentiful and cheap that one would think the British public would not trouble about any other fruit so long as they lasted. But in accordance with the peculiarities of supply and demand, this is not the case, for people want apples, and this being a thin crop, they are not very plentiful, and are fetching good prices. Indeed, while plums are being neglected owing to the quantity, or people have got tired of them, the demand for apples is quite keen, and it seems to bear out the suggestion that things will sell when they are dear. It is the same with other commodities, and we have noticed that when sheep are dear everybody wants to eat mutton, and, on the other hand, when beef and pork are dear, demand is at its keenest. One can hardly understand why it should be—but there it is!

Autumn's Grass.

A YEAR ago grass land in most districts was dried up and burnt brown, and farmers were complaining about the shortage

of keep. This year the boot is on the other leg, for meadows have thrown up a good aftermath, and in many pastures there is more grass than the stock can possibly keep down. Indeed, in many fields there is more grass than one cares to see so late in the season, and in cases where the herbage is coarse, it has become sour, and stock are reluctant to eat it. Some farmers, luckier than their neighbours in getting through the harvest proper, have turned their attention to mowing in the pastures where the grass is long and coarse under the hedgerows and other places, and though this material is not first-class, it can be used later on as rough fodder, whereas it could never be of any use if left standing.

Agricultural Politics.

BY A LOBBYIST.

Farmers' Societies and the Southampton Platform.

An interesting question has arisen in Dorsetshire—a question which concerns the very character of agricultural societies. Mr. A. W. Wills, the Liberal M.P. for North Dorset, refused to subscribe to the excellent Shaftesbury Agricultural Association, because, as he averred, it had become a partisan organisation. His accusation was, he held, justified by the fact that it had accepted the Tariff resolution passed by the delegates at the now famous Southampton conference. Now, I will not for the moment inquire whether it was wise on the part of the Shaftesbury society to associate itself with what I may describe as the Southampton platform; but, for the life of me, I cannot see how a dispassionate man could altogether expect a Liberal Member to contribute to the funds of a body adopting that position. It is urged that the formal acceptance of the Southampton platform was not indicated until after the hon. member's refusal to subscribe. This simply meant that the Liberal M.P. had the gift of intelligent prescience, and was able to perceive the trend of the society's sympathies. It must not be forgotten—Conservatives cannot forget it—that Free Trade is the proclaimed sheet-anchor of the Liberal party. Relinquishment of it by any individual Liberal means his releasing himself from the party moorings. Even a suspicion of association with the Chamberlainite faith would render tepid the local Radical loyalty. Of course, it may be fairly urged that the use to which subscriptions to the Shaftesbury Society are mostly put—the offering of prizes in connection with matters deliberately affecting the farm and the prosperity of agriculture—has no more to do with this Southampton platform than it has with the pool of Siloam. It may be replied that the same might be said of the subscriptions to the sports at a Primrose League fête.

* * *

Let the Position be Made Clear.

I am not in any sense assailing the right of the Shaftesbury Society and of similar societies to adopt this position. It is well, however, to know exactly where we are. How far are we in our organised character determined to ally ourself with one school of economic thought, and thus to deliberately antagonise one of the historic parties in the State, with its Labour allies? How far, too, are we prepared to antagonise those politicians (including many farmers) to whom all-round Protection is a logical policy, but to whom colonial preference—the opening free of our markets to the deliberately encouraged competition of Australasia and Canada, who only export to us agrarian products, and who must thus be the rivals of the British farmer — is fraught with menace to British agriculture? The resolution of these local societies may even be wise—I repeat I do not argue this. They must, however, be prepared to accept the entire fruits of that resolution. Let us say what we will—the acceptance of the Southampton platform means to the Liberal an antagonistic declaration towards Liberalism. It may be that we are prepared to accept this interpretation. In that event let the situation, I reiterate, be made absolutely clear.

* * *

Questions by a Liberal Farmer.

Of course, there are still Liberal farmers as there are Liberal landowners. One of these Liberal farmers has sent me a number of papers published in the three counties of Wilts, Hants, and Dorset. These journals contain long reports of agricultural dinners and the like. "Now" (writes my correspondent) "where do you find in those reports any expression of gratitude for what the Liberal Government has, in its twenty months' existence, done for the farmers? What are those achievements? The first is the Dogs Act, long promised by the last two Conservative Governments and never conceded. The second was the Butter Act, long promised by the last Conservative Government, but which sedulously refused every opportunity to pass it into law. The third is the Foods Regulation Act, whose aim is to prevent all foreign or colonial producers of food—and, after all, farmers are only producers of food—sending their putrescent and foul tinned and other products into this country to oust by their cheapness the honest Britisher from those markets which should be his? This measure affects every kind of food—even to the cheap jams, which are often made with glucose and coloured by aniline dye—and every kind of drink, even to cider and beer. Where, too, can you find any expression of gratification at Mr. Asquith's intention to place a heavier tax on motors in his next budget, presumably with the intention of relieving us of a part of the terrible cost of the maintenance of our roads? Of course, we may not be all in favour of the Small Holdings Act, and certainly we must all deplore the suspicion of the county councils which it showed possesses this Liberal Government; but, all the same, that measure received the benediction of Mr. Chaplin and Mr. Jesse Collings, who, whilst lamenting certain incidents of it, acclaimed its purpose. Where do you find a compliment to the authors of this measure?"

* * *

Frankness Again Demanded.

I refrain from pointing the moral upon which this Liberal farmer insists. It may be—at least, in the bold garb he gives it—unjustified. To say that what in the Conservative is a holy achievement in the Liberal only deserves scorn is a sentiment, I am sure, does not possess these societies. Still it would be idle to deny that this reticence of any appreciation on the part of these societies of the work the Government has done in at least three instances cannot altogether appear as ill-omened to politicians like Mr. Wills. The question thus again presents itself—are we all prepared to subscribe to the Shaftesbury position? If we are, let us say so. Open avowel would be in harmony with the frank character of the British farmer.

* * *

Let us Accept any Gifts.

The man who intervenes in a dispute invites buffets against himself. In intervening in this matter I am foredoomed to be victimised by misconception. I already know what it is to be dubbed by my critics a prejudiced Tory and an arrogant Churchman. I now perceive myself hailed a rabid Radical. Fearful of my fate, I yet pursue my course. Does not this incident to which I have alluded emphasise and illustrate anew the wisdom of establishing an Agricultural Party—a party which, permitting its members freedom of thought and even freedom of prejudice on general politics, would be above and beyond partisanism on all agrarian matters, a party which would accept the gifts of the gods, whether they wear the red guise of Liberalism or are apparelled in the sea-green incorruptibility of Conservatism? The carrying of the Dogs Bill and the Butter Bill into law would have been, had they formulated a programme, an object dear to the heart of every farmers' organisation on the eve of the general election. The purpose of the Foods Regulation Act—which is penetrated by a ruthless antagonism to those foreign vendors of putrescent foods who must inevitably be the rivals of the British farmer—would assuredly have evoked their sympathy. Why should we fail to be grateful to the authors of the new laws because their general political views do not harmonise with ours? Why should we harness ourselves formally and inevitably to the car of a set of statesmen who, with all their rural sympathies, withheld opportunities to pass the first two measures into law? Let us not forget, too, that Mr. Balfour had so little an anxiety to conciliate agrarianism when he formed his second Ministry that he did not think it necessary to include in it Mr. Henry Chaplin, the British farmers' most distinctive and most honoured spokesman.

* * *

A Farmers' Party must be Formed.

These declarations will persuade certain of my critics that I have gone over, body and soul, to the enemy. Well, despite the fact that, notwithstanding its brief existence, the Government has passed these measures—plus a measure conceding something like the Three F's to British tenant-farmers—the ambitions of Liberalism will be ever urban rather than rural. It draws its strength and vitality from the towns, and to the towns will its activities be devoted. We must not—it would be crass folly—depend on Liberalism, with its crude and stupid suspicions of the farmer and its inherent and bitter distaste of the squire, and with its rapid development of revolutionary views on landlordism and property. But does this mean we must formally associate ourselves with Conservatism, sympathetic though its professions be, and accept the full responsibility of that alliance? A Farmers' Party—that is the real objective. And the Lincolnshire example means that this ambition is nearer realisation than some of us have thought it.

* * *

Compulsory Arbitration v. Strikes.

A railway strike will be a grim penalty to the countryside. We may deplore the height of railway rates, but an infinitely greater evil would be a paralysed or impotent railway system. I do not go so far as to suggest with Lord Brassey that the ominous character of this very menace is in itself a justification for nationalising the railways of Great Britain. The idea, however, does not, with my knowledge of the working of the nationalised systems of the Continent, altogether affrighten me. What I do say is that the possibility of this cruel affliction—an affliction all the more cruel in view of the fact that the sections of the community who would be really punished by it have done naught to deserve it—should bring nearer a State-compulsory arbitration in all industrial disputes. A strike is simply a war—and a war all the wickeder in view of the fact that by its means a passion-possessed and infinitesimal minority of the community may be able to paralyse or inconvenience the whole of that community. We summon conferences at the Hague in the hope that we may by their means soon usher in that halcyon day when murder-conflict shall give place to the cool judgment of the judicial tribunal. Why should we not have such a tribunal to deal in compulsory fashion with industrial conflicts? Then the soul of the British farmer would not be possessed by the fear which the present ominous industrial situation must have bred in him.

* * *

A Few Words to Liberals.

Now, there is one point I would put to politicians like my Liberal correspondent whom I have quoted. Is it not worth while seeking to conciliate the farmers and the landed classes? Or, rather, is it necessary to affrighten them by over-indulgence in the Socialistic visions and anti-landlord prophecies to which so many of them are prone? Is it necessary to paint the farmer—and this inartistic business was indulged in during the debates on the Small Holdings Act—as being possessed by a double dose of ineradicable antagonism towards the labourer, and particularly towards that labourer who is desirous of evolving himself into the small holder? Let me put another question—is not this attitude in a measure responsible for the policy of organisations like the Shaftesbury society? Must it not inevitably impel farmers to seek sympathy and friendship elsewhere? My Liberal correspondent seems to be possessed by the belief that the additional motor tax will be partially applied to the maintenance of the highways. Wherein does he find ground for his assurance? Does he find it in the declaration of the ordinary Liberal M.P.? Frankly, I cannot discover it. That Liberal M.P. is, generally speaking, possessed by other anxieties than the relief of the county rate.

THE WEATHER AND THE HARVEST

The following reports on the present agricultural outlook received from our correspondents in various parts of the country show that the recent spell of fine weather has been general, and that it has had a most beneficial effect on the crops, or, as one of our correspondents remarks, "It has saved the situation."

Devon.

Harvest is now nearly completed in this district. The corn crops have been good and harvested without damage. Wheat is an average crop in straw, but opinions vary as to its being an average yield, as there was not enough sunshine at blossoming time. Barley not much grown, but a fair crop in suitable soil.

Oats very Good.

Oats are very good, being very heavy in the straw, and also an abundant yield when threshed out. Owing to fine weather the steam thresher has been early employed.

Roots and Grass.

The roots are good taken altogether, but in some localities they seem to want moisture. Grass has been very plentiful all the season, and still continues so; hay was a heavy crop, and the bulk was saved well.

The potato crop is not up to the average. Apples are a very poor crop, and not much cider will be made; there is a quantity of old cider left on hand.

Live stock is healthy, with abundance of keep.

September 17, 1907. L. J.

Hampshire.

The harvest of 1907 has been an anxious time; the weather was very unfavourable at the commencement, no sun, and it seemed as if the corn would not ripen.

Corn Stacked before Fit.

Then came a week of bright sun which was all that could be desired, and haste was made to secure what corn was ready, but much too soon showers and gloomy days came, and the farmers stacked corn which was really not fit, the consequence of which will be that it will not be fit to thrash for some time, even if the sample is not spoilt as well. If they had known that the past week or two would have been so bright, it would have been better to have left it out.

Corn Crops.

The wheat crops round here are good, oats on the average, barley good straw, but grain slightly damaged in most cases with rain. If the weather had been favourable, I think the harvest crops of 1907 would have been much above the average of former years. H. G. B.

September 18, 1907.

Northumberland (North).

Good Harvest Weather.

Harvesting general. Barley mostly cut. Oats harvest commencing.

The last week has been good harvest weather, with hot sun by day and a touch of frost at night. Grain somewhat shaken by wind two days ago, but general conditions and outlook for harvest favourable.

Roots Backward

Roots, having been late sown, are backward, with some exceptions, and below the average for the time of year. E. M.

September 18, 1907.

Nottinghamshire (North).

The week's splendid weather has enabled farmers to harvest their corn in grand condition, and a general impression seems to prevail that most of the crops are a fair average except barley, which leaves a little to be desired.

Increased Cost of Harvests.

The cost of the ingathering will be considerably enhanced in too many places because the heavy sou ing rains laid the crops badly, and they have had to be invariably cut by hand. In many pieces the reapers would only work one way in a satisfactory manner, hence this drawback delayed the progress of reaping.

With a continuance of fine weather the bulk of the harvest will soon be secured in good condition. The rather heavy dews are retarding leading in the early part of the day, but the bright and glorious sunshine has enabled farmers to make capital progress; in fact, the weather has really been of an ideal character, for which all ought to be doubly thankful.

Oats Best—Barley Lacking.

Oats are probably the best crop after all, but wheat and barley are generally a fair average; but barley will doubtless be lacking in colour and quality, owing to the great absence of sunshine during the early ripening period.

A HARVEST SCENE.

Better Outlook.

However, crops are turning out in some cases better than was at one time anticipated, and farmers regard the present prospects cheerfully.

Thrashing Results.

Not much thrashing has yet been attempted, and where done has been attended with moderate results, owing to the moist, soft state of the grain. However, the yield has been fairly good, especially oats, for 6 to 8 qr. per acre and even more has been produced. It is fully expected that wheat and barley will be very indifferent in the sample, and the yield will be disappointing to many, there being a prevailing deficiency in the ear.

Stacked too Early.

Then, again, farmers have been far too anxious, and have led their corn before being ready, hence not a few stacks have been pulled in pieces and restacked owing to heating, many fields being overrun with weeds and a profusion of young clover. The grain really required more field-room to enable it to dry well.

The marked autumnal feeling in the air has slackened the activity of the green crops and moderated the growth of the grass.

The Root Crops.

Mangolds still look well and prosperous, but the same cannot be said of swedes, for they are attacked by mildew, but common turnips are doing much better so far.

Potatoes the Poorest Crop of the Year.

The potato crop is not satisfactory, but growers are anxiously hoping that the tubers will be less diseased than already reported, but there is little of a reassuring nature. The prospects are neither better nor worse, however there is a consensus of opinion that the tubers are the poorest crop of the year.

Some say a small yield often pays far better than a bountiful return, as prices fluctuate in sympathy with the supply and demand.

Live Stock.

The lamb trade seems to be fairly brisk, as well as sheep. The live stock generally are reported to be healthy, and grazing beasts have done very well this season, leaving a nice margin of profit. The foal trade is not over brisk, only for tip-top animals.

The Heavy Plum Crop.

The heavy crop of Victoria plums is now engrossing attention, and there is a steady demand at rather a low price. There is a glut in plums, and they fetch as low as 4d. per stone, 1s. seems to be the general run. There will be a poor crop of honey this year.

The farming outlook is not bad, taken all round.

September 18, 1907. AGRESTIC.

Hunts.

The past fortnight of grand harvest weather has effected a marvellous change in the appearance of the arable land in this county.

Results of the Fine Weather.

The immediate results include the following important ones:—

The corn on the uplands is mainly in the stack, and much of it secured against rain.

The horses and men are freed sooner than was for one moment anticipated to prepare for seeding the autumn crops in the form of manuring and ploughing the land.

The almost certain loss sustained from a protracted harvest, especially should it be a late one, is saved and the condition of the corn has been vastly improved even if the quality be not very much better than it would otherwise have been.

The Wheat Outlook.

Farmers will now be able to thresh their corn at any time, but so far they have certainly not made as much use of the threshing machine as is usual during and immediately succeeding harvest. This we may take as a proof of their belief in at least a continuance, if not an advance on, the recently-improved values of cereals, due not so much to the shortage of our own crops, but even in this the reduced area has some effect, associated as it is with a promised yield of not over an average—as to the poor harvests in those countries which are forced to ship their surplus to our country to be sold at just what it will fetch or the bears and bulls will allow.

The Fen lands have given better returns of late seasons than the high lands, owing to really good crops of corn and the growth of potatoes, celery, &c. This year the yield of corn in that district will be poor, with quality below the average. There have been complaints also of the potato crop, whether groundless or not remains to be proved. This splendid weather is in favour of the crop. S. S.

September 18, 1907.

Monmouthshire.

The weather of the last fortnight has "saved the situation," which had become extremely critical. Now most of the corn has been secured in good condition. Oats are a big crop and the quality good. Wheat average bulk, quality fair, not equal to last year. Barley perhaps average quantity, but inferior quality.

Hay Lacking in Feeding Value.

A considerable amount of hay has also been secured recently in bright condition, but there is, of course, little "feeding" value in it, though it will be useful for wintering store stock.

Roots an Average Crop.

Roots are an average crop, but far from clean. Grass abundant, and stock of all kinds should fully maintain their price. R. S.

September 19, 1907.

Somerset.

This season seems to be a month in arrear, and I do not think it can recover itself. The springtime was constant changes, attended with wet, cloudy, chilly coldness and but little sun and much easterly wind, which has been the chief cause no doubt.

Corn Harvest Completed.

Our corn harvest is just completed, and this month has been most favourable with good weather, certainly more bright days than any other month. Corn, wheat, barley, and oats nearly an average crop; hay three quarters.

Roots Below Average.

Roots a plant, but are wanting rain, and cannot make up to an average unless we get an exceptional mild and growing time.

Apple Failure.

The apple crop, which promised to be good at first, failed to hold, and will not be more than one-third of a crop.

Grass is shrinking, but as yet live stock are healthy and doing well.

September 18, 1907. A. B.

Suffolk (West).

We commenced cutting winter oats on August 12. The weather was very stormy for the first ten days; since then we have had good weather.

Wheat Light, Oats Good.

The wheat is a light crop and not an average. Oats are good and over an average. Winter beans are a fair crop, but will not yield according to bulk of straw—about an average.

Barley Spoiled by the Weather.

Barley is the principal crop. We had a fine season for sowing. Weather good till May, then we had between two and three inches of rain in less than ten days, which completely destroyed some fields on the mixed soiled land. The cold weather—no sun and frosty nights—has made the quality bad, and very little good malting barley in this neighbourhood. This crop is much under an average. It has taken a deal of time and patience to get into stack, as there was so much clover in the sheaves. Most of the barley is now carried, but it will take another week to get in the harvest. G. M.

September 18, 1907.

Sussex

At the commencement of harvest we had unfavourable weather. No large amount of rain, but often sufficient to stop harvest operations, and very little sun. In fact, the absence of sun and drying winds has been our great difficulty.

Corn Yield.

As to yield it is early days to speak, but I do not fancy the wheat is going to yield well. On this farm I have a very good crop of oats and very long straw; but I hear that on the Weald, on the stiff clays, the straw is short.

Peas are a fair crop; beans will not yield well. Roots are suffering from want of rain.

Sheep (especially lambs) are fetching fancy prices, and there does not seem room for much margin when they are sold.

Rain Wanted.

Rain is wanted to enable us to get on with ploughing. H. R.

September, 18, 1907.

Scotland (Inverness, Ross, Nairn, and Elgin).

The crop of barley and oats are very heavy ones this season, especially in Rossshire, double the bulk of straw on last year; very little wheat grown. The hay crop a heavy one and secured, the turnip crop not so heavy as last year, but an average and daily improving.

The Potato Crop.

Not so heavy as last season, but about Inverness an average one, quality excellent and no disease, but in some parts of the country the crops were partly destroyed by early frost and hindered the growth of the late varieties. Aberdeenshire was the worst county with the effect of frost.

Prospects of Heavy Grain.

The weather here is everything desirable for harvesting, fine dry winds and also sun shining daily. There is very little of the crop secured as yet, but the work is going ahead cutting the crop. The fields of oats and barley look lovely all over, and the grain full and plump, so that the grain will be sure to weigh heavy this season.

A great deal of the crops are lodged on account of the bulk of straw, and scythes are more required than usual upon the whole. As far as I can see from my own eye witness there is more than an average crop of both grain and straw this season in all the northern counties of Scotland. If the present fine weather continues most of the crops in the lowlands will be secured, but before the crops on the highlands and late districts are ripe and secured it will take the month of October before the whole crop is under cover.

In reference to live stock, yesterday's sales here (Inverness) were very dull, and prices for both cattle and sheep were back in price, but prime stock for butchers were high. Young pigs, four to six weeks old, were sold from 5s. 6d. to 13s. each; large pigs very high. Fowls very high. Eggs: Local pens, 1s. 6d. per dozen. Butter, 1s. 2d. and 1s. 3d. per lb. at Inverness Market on Thursday.

A Weather Prediction,

I must state that our growers have no reason to complain of the crops this season, and as far as my experience of the weather for the last fifty years can lead me, we are to have good weather up to January, 1908. J. C.

September 18, 1907.

Lincolnshire Notes.

THE Lincolnshire Farmers' Union has a somewhat ticklish job on. It is investigating the case of a farmer who has been given notice to quit for no apparent reason. His rent is regularly paid and his holding well cultivated, and there is nothing he can suggest to which his landlord might reasonably take exception. The Union will, of course, thoroughly inquire into all the circumstances by taking action, and, in any event, the problem by them is one of considerable delicacy. But if, as is very likely, the question turns out to be a mere misunderstanding between occupier and landlord, their intervention as arbitrators should be of great value to both sides.

THE Wilton Rural Council has always been on the track of the motor. It is now trying to stir up the county council to a crusade. It has resolved unanimously to call the attention of the Kesteven County authority to the dust caused on and the injury done to the roads by the motor traffic, and also to the inactivity of the police in the matter. What steps the council will take remains to be seen. The rural councils convictions on the matter are very strong. In the picturesque language of Mr. E. W. Howard they assert that the roads are being turned from the King's highway into a "fools' paradise." Also that the fast running tyres do more damage to the roads than a four-ton wagon. It is possible I hope that the county council will take up the challenge.

THE Board of Agriculture's return as to land under cultivation shows the following figures as to the county of Lincolnshire:—

	1907. Acres.	1906. Acres.	1905. Acres.
Wheat.....	156,453	171,407	176,771
Barley.....	197,681	201,694	189,798
Oats.....	133,711	126,651	127,576
Potatoes...	62,297	65,136	79,564

THIS county heads the list in regard to all four commodities, and the figures are not nearly so eloquent of decreasing cultivation as we have been led to expect.

COMPARED with the figures of the whole country some interesting percentages are revealed:—

	Lincoln. Per cent.	Gt. Britain. Per cent.
Wheat	—8·7	—7·4
Barley	—1 9	—2·2
Oats	x5·5	x2 6
Potatoes	—4·3	—3·0

x increase over 1906, — decrease from 1906.

AS to the live stock, there are 73,664 horses in the county, which is about 1,200 less than last year. This figure also tops the list, Norfolk coming next with 66,539, and the West Riding with 61,284. In the matter of cattle the West Riding leads with 278,478; Devon follows with 296,965, Lincoln coming next with 250,574, or 5,000 less than twelve months ago. In sheep, Northumberland (1,122,180) is far and away first, Lincoln running second with 990,664, which is a little over 3,000 below last year. The land of pork is Suffolk (158,101 pigs), with Somerset (128,266) next, and Lincoln (166,323) third. But the Lincoln total figure reveals a very satisfactory increase, last year's total being 99,752.

THE newly-formed Lincolnshire Hay Dealers' Association has had its first encounter. At a committee meeting held on Friday Mr. W. H. Brown, the secretary, read the reply of the railway companies to the association's complaint in regard to demurrage charges on trucks standing under load. The companies refuse to budge. Having regard to the unreasonable detentions which they have had to suffer, the regulation, they say, is their last and only alternative. The association's next move is an application to the Board of Trade. A wiser decision, it seems to me, was also arrived at later. The committee agreed to meet again and discuss terms of compromise.

A WELL-KNOWN agriculturist and a mighty hunter passed away on Thursday in the person of Mr. Christopher Bell Robson, of Cawkwell Manor, near Louth. Mr. Robson was one of the pioneers in the establishment of the Lincolnshire Red Shorthorn breed and a successful breeder of the Long Wools. He was a regular follower of the Southwold hounds, a puppy walker, and a judge at the hunt steeplechases. He was known throughout the kingdom as a judge of Hackneys and Hunters.

THERE were fair prices made at the Lincoln September ram sales. The highest average for ewes was 93s., which was made by Mr. J. H. Headland, of Potterhanworth. In gimmers Mr. G. W. Stephenson, of South Thoresby, carried off the highest price of 13½ guineas, eight of his sheep averaging £9. The top priced ram belonged to Mr. John Brocklebank, of Bassingham, who made 16 guineas for it. Prices of 15½ and 15 guineas ruled fairly common during the fair.

THE harvest is confounding the prophets. In some parts of the country the yield is said to be equal even to that of last year. One farmer in the Bourne district talks of 500 quarters from one field, which is the biggest harvest he has ever had. And, generally, farmers are finding that the threshing machine is bringing them the most delightful surprises.

IN spite of a bad breeding year, there was a good entry for the Boston and District Foal Show. The quality, too, was an improvement on several previous years. Messrs. Drewery and Sons, of Dorrington, carried off the Shire Horse Society's silver medal for the best Shire mare filly or foal eligible for the stud book.

A NOVEL incident occurred last week in a remote part of the parish of Pinchbeck, says a South Lincolnshire paper. A well-known farmer had let the cutting of a field of oats at per acre The men who took the work found it so badly laid that it promised to be a less remunerative bargain than they anticipated. The farmer declined to vary his contract, and the men refused to cut the oats. The farmer determined not to be beaten. On the following Monday three new reapers drawn by twelve magnificent horses, accompanied by half a score of men, with the farmer in his trap in the rear, entered the field of several acres.

IT was a perplexing task, and every now and again the reapers broke under the strain. The farmer held on, however, sometimes taking a hand at driving a reaper himself. Ere dusk arrived, the whole of the field had been cut; the long procession of splendid Shires, reapers, and workmen, with the employer again in his trap in the rear, returned home in very high spirits. The farmer determined not to be beaten; and he conquered under conditions which were probably unique in this district.

At Howden September horse fair on Monday there was one of the poorest displays of animals known for many years past. There was a fair attendance of dealers, but the animals on parade did not exceed fifty, and they were chiefly of an inferior class. Business was consequently very slow, and very few changed hands. Three Cart horses made £40 to £65 each, and a few Coachers realised £35 to £40.

Unique Harvest Festival.—The vicar and churchwardens of All Hallows, Barking, by the Tower—the parish church of Mark Lane and the Corn Exchange—are inviting parishioners connected with the Corn Exchange and others to join in a short, simple service of thanksgiving for the harvest on Monday, October 14, at 1.15 p.m. The Archdeacon of London has promised to preach. The collection will be for the Corn Exchange Benevolent Society.

The September Fair at Iron Acton was well attended, but the supply was not up to the average either in quantity or quality, and trade was somewhat dull, foals being in chief demand. Good useful sucking colts realised from £12 to £16 each, whilst others of the same class fetched from £5 to £10 each. A few cart horses of useful description were on offer, about £40 being the highest figure secured, whilst the majority were put at prices much below this sum, and in many instances failed to find a purchaser. For inferior animals sales were very sluggish and figures low. Of hacks there was a limited supply, and scarcely any noteworthy prices were obtained. The supply of store cattle was also somewhat small, and comprised principally a batch of Irish yearlings, of which only about a fifth were sold, notwithstanding the abundance of keep in the neighbourhood. The few pens of sheep in the fair commanded a brisk sale, two-tooths selling up to 54s. 6d. per head, ewes making 46s. 6d., and lambs 25s. 6d. per head.

POTATO FUNGI.

(*Continued from page 335.*)

Thus, when we cook a potato we break down its component parts and permit quicker decomposition. But when we slice a raw potato, the starch evidently counteracts the possibility of the same thing occurring until a very long time has elapsed. The germs of disaster would, or might, however, be contained within it, only awaiting opportunities for spreading its exertions. At this juncture I can emphasise the point I am driving at. If, when planting potatoes, the seeds or "eyes" are divided we have an exposed surface of flesh, disclosing its cells and starch granules in direct contact with the soil. A reference to No 5 will be useful at this stage. The continued heat and moisture—sun, soil-warmth, and rain—would little by little put the flesh into almost the same condition as if it had been boiled, and by decomposing the starch and cellulose tissue permit spores washed against it to ramify through it and impregnate its growing sprouts. Spores from the grey fan fungus with which potato skins are densely covered, unless it is removed purposely, might get among the cells; but being prevented from developing into a black-ball form by the pressure of soil grains, would have some other mysterious and dangerous influence. Thus I desire to show the folly of cutting seed potatoes when planting; and that this is not a mere useless presumption on my part I will prove by referring to the series of valuable and extensive experiments undertaken by Messrs. Sutton and Sons in October, 1906. Their 48 page illustrated booklet would be found of inestimable use to all growers; but I must content myself on this occasion with basing my discourse on one text only, or at least chiefly.

A stock of Magnum Bonum was grown continuously from 1876—thirty years—on one estate in North Devon, and was reproduced successfully by Messrs. Sutton and Sons. To quote fully from page 38 of the booklet referred to will be best.

"The case . . . . is especially remarkable in that our client, who kindly supplied the seed, states that no deterioration whatever has taken place since he procured the stock originally, and that he attributes his success to the fact that (1) he always raised his crop before it became thoroughly ripe, and (2) he has never cut his seed, but always planted whole sets."

To me, as a microscopist, the remark bracketted (2) is of immense importance; and before I go further I should state that the Board of Agriculture (leaflet No. 117) dealing with advice concerning black-leg or potato stem-rot, says:—"Potato 'sets' must not be cut, but the tubers should be planted entire."

Could anything more authoritative be required—advice and practical demonstration? I do but endeavour to explain why such courses are desirable.

Although the skin of a potato may be covered with the grey-fan fungus, if planted whole the toughness of the coat will not allow either the spores from it or any other fungus to enter the flesh; and if kept outside the store all fungi are as helpless as thieves outside a strong-room. Provide them with but one weak spot, though, and in they go, stealthily inflicting damage wherever they touch. But the entire skin allows the sprouts to extend within their own coverlets, or epidermis, without giving access to invading germs.

An experiment which would, on bare surface reflections, seem to discount the value of these statements, is contained in the announcement that the same firm planted potatoes contaminated—only slightly though—with the beastly disease *phytophthora infestans* (*see* Board of Agriculture Leaflet No. 23 for this disease), and yet raised good crops therefrom. A few important points, however, should be borne in mind. Such excellent and eminently practical gardeners as they are would doubtless have thoroughly well-prepared soil ready to receive the tubers, and thus possibly—I say possibly—the germs would be destroyed. On the other hand, the inherent vigour of the stock might have been sufficient to grow away from its contamination, just as a strong man will resist microbial attack better than a weak one receiving the same degree of onslaught. Or, the germs may have required the addition of some additional and sympathetic atoms—as the seed embryo of a flower needs pollen—before it could continue its activity. Or they may be lying dormant in that soil ready to attack a succeeding crop, not, perhaps, having had an opportunity of getting matured. It is not possible, in the present state of our knowledge, to speak dogmatically on these things. We can only each add our own ideas, making collectively a grand total of experience and research.

Experiments made with tubers having brown streaks and brown spots in them yielded comparatively poor results. As these diseases are, however, believed to be hardly fungoidal in basis, I will not discuss the experiment except to say that there is no reason to suppose that germs or bacteria might not imitate a malformation of vascular bundles, without actually reproducing themselves. In speaking of the black-leg or stem-rot, the Board of Agriculture says (leaflet No. 117):—"The disease is primarily caused by a bacterium; but as decay proceeds, various kinds of fungi—*i.e.*, moulds, &c, assist in the completion of the work." In fact, the whole series of diseases is instituted by Nature for the purpose of decomposing substances which have become weak through our ignorance of some vital principle or another. In our haste we may unduly force one feature to the detriment of another. We must remember that in a wild state the potato plant would produce mature seed to distribute its species, and hold its tubers in reserve as a precaution against possible extinction. I am approaching a very vexed phase of the problem here, which must be postponed until some other time before it can receive adequate attention.

What I have already said, backed up as it is by the expressions of the authorities named, should be sufficient to discourage the cutting of tubers for planting, even when no signs of disease are about. Crossing comes under a different head altogether. Inasmuch that the spores of the grey-fan fungus must be expected to adhere to most potatoes, I think growers would be recompensed by adopting the treatment suggested by the Board of Agriculture of mixing seed potatoes with sulphur after they have been thoroughly dried. This hinders the fungi considerably, and is also of great service if incorporated with suspected soil, being far preferable to lime, though the latter appears to be essential to react against undue sourness.

I fear that I shall tax the readers' credulity if, as concluding remarks, I narrate the belief expressed

Fig. 5.—Magnified slice of potato showing the cells containing the granules of starch. The lower cells have only a few grains.

a few years ago by M. Noel Bernard, a botanist in France, to the effect that the potato is itself the product of a fungus named *Fusarium solani*. As a cautionary note I must say that "*Fusariums*" are generally most dangerous parasites. I must here quote:—

"M. Bernard took sixteen tubercles of the variety called in France Marjohn, and planted them in flower-pots filled with fine silicious sand. Eight flower-pots were put aside under a glass frame. The other eight pots, in the soil of which a few chips of potato had been sown bearing *fusarium* fungus were placed in another frame house. Every one of the latter lot brought forth potatoes after a couple of months, while the eight flower-pots of the first lot were found to contain long, slender roots. . . . It is suggested that early potatoes might be obtained by sowing the soil with cultures of *Fusarium solani*."

I am not learned enough to say much on these sentences; but inasmuch that the dreadful sleepy disease of tomatoes is a *fusarium — Fusarium lycopersici*—I think it would be best to continue growing potatoes without trifling with fungi, although the above results certainly do sound interesting, and are scientifically important.

J. Scott.

We would remind Polo pony breeders that the entries for the Polo and Riding Pony Society's Supplement for 1907, open to colts and fillies—yearlings, two-year-olds, and three-year olds, close on Tuesday, October 1. Forms and full particulars can be had of the secretary, Mr. A. B. Charlton, 12, Hanover Square, London, W.

CORRESPONDENCE.

The Future of Horse Breeding.

Sir,—In an issue of the *Live Stock Journal* of March 13, 1903, Sir Walter Gilbey deals most ably with the subject of the serious decline of horse breeding in England. One would have thought that the facts and convincing figures contained in his letter must have before now borne some fruit—either that the Government through its Board of Agriculture, or a body of English gentlemen anxious to help the tenant farmer of England in the first instance and the country generally in the second, would have made some movement in the four years and a half which have elapsed since the valuable letter I quote was published.

As far as I know, nothing practical has been done, which is most astonishing when we consider that some 30,000 horses more are required in England than we can produce, representing an outlay of something like £1,000,000 a year, which sum finds its way into the pocket of the foreigner, and that these horses could easily and profitably be bred at home, given that the Government made a practical move aided by a few such philanthropic landowners as Sir Walter Gilbey and more I could mention, surely it is high time a remedy was prescribed by some influential body.

To quote the figures Sir Walter Gilbey gives, and so refresh the memories of your readers, 373,021 horses were imported in ten years—1893 to 1902 inclusive—valued at £9,698,831, or about £26 each, Sir Walter suggesting that £35 apiece would be much nearer the mark, as a large proportion of this number were high-class carriage-horses from Normandy and Germany, worth no doubt from 50 to 100 guineas each; and as no one could possibly take exception to such valuation, the cash paid would represent £13,055,735 for ten years' purchases! We are, however, bound to look at our export side of the question. From the figures given by Sir Walter we see that, from 1893 to 1902, 271,916 horses were exported, valued at £6,485,727, clearly a fictitious value, bearing in mind that many thousands of these horses were exported to be slaughtered, and therefore possibly not worth more than £3 each.

As the figures are most clearly given, I strongly recommend all persons who are interested to peruse the article, and note what Sir Walter says, especially paragraphs from 14 to 23 inclusive. Such stallions as the Government should find ought not to be entirely Thoroughbreds, but include fine-actioned, bay or brown, Hackneys, and bloodlike Yorkshire Coach horses.

The sum now given for King's Premium horses is not enough, and many of the prize horses are not calculated to do good, being light of bone, with very indifferent action. Action is strength, and unless a horse really moves, he does harm rather than good in a district. Let us consider what they are and from whence some of these Premium horses come.

They are horses which, from their incapability to carry weight or stay, were sent to the stud early in life. Some are winners of good races, and some are horses which started stud life with good racing credentials, and, having failed to get winners, are sent to compete for the Premiums, and so find their way, if successful, to country districts, to probably fail again on the country mare. I fancy owners and breeders of race-horses consider they do good to the country by propagating and encouraging the breeding of race-horses, but no greater mistake can be made. From the national supply point of view the whole system of breeding horses for the turf is wrong. The turf should be the means of supplying the greatly needed, strong, fine-actioned Thoroughbred sire, but, alas! this is not the case. The best and most desirable sires always start stud life at a fee far beyond the reach of ordinary breeders, and the worst and least desirable sires are not at all calculated to produce the useful half-bred horse now so much in demand; besides, if bloodstock breeding (and training) was carried on under common-sense rules, what an enormous improvement there would soon be effected in our racehorses, and therefore ultimately in our travelling sires. What end is served if racehorses are bred who win short races in some seconds less time than their former compeers?

When the future racehorse is dropped early in January, and kept for the first three months of its life in a hot box together with his dam before there is any opportunity of picking a blade of grass, it is easy to see how handicapped he must be, when compared with other breeds, from the very first. The after-management is quite as absurd; he is crammed with corn as soon as he can eat it, and is kept like a hothouse plant till the July or September twelve months following his birth, when he is sent to Newmarket or Doncaster as fat as a pig and as sleek as a mole.

When purchased by a trainer he is immediately taken in hand with a view of winning a race in the following spring, when he is two years and three months old. This fat—which has cost so

much to put on—has now, at the expense of his legs, to be galloped off, and this treatment, together with the fact of his spending the whole winter in a hot stable, must at this tender age be most trying to a good constitution, and most disastrous to a bad one. If he fails to win races, and if he has no weight and size (very common complaints), he is sold for whatever he will fetch, and if good enough finds his way into a hansom cab, but many are not equal to this.

Now surely, if breeders of racehorses for one moment considered what benefit they might do to the country, they would adopt a plan of breeding which, whilst producing good racehorses, would also fill the country with good sires. It is perfectly clear to my mind that until two-year-old racing over short courses with light-weights is put a stop to, our blood sires cannot possibly improve. No one who understands anything about horse breeding can dispute the facts that all young stock should be dropped at the proper time of the year—viz., from March 1 to middle or end of April—that they should have no corn, given that their dams are reasonably good mothers until weaning time, which should be early in September, and that they should spend their first winter and summer out at grass with, of course, a good open shed to run into, and not be broken and trained until rising three (instead of two as heretofore), and that all races be one mile and over, and that no horses should ever under any circumstances carry less than 7 stone.

If the Jockey Club made some such rules as these, in a few years' time the English turf would be adorned with good, strong-constitutioned animals, and the country filled with sires worthy of the name. Breeders tell you that they could not afford to keep the yearlings for another year before offering them for sale, forgetting that the natural treatment I suggest is very much more economical than their own as at present adopted; and surely if a breeder cannot afford this extra year's keep, he is not in a sufficiently strong financial position to attempt the game. Great efforts have been made by English gentlemen to foster and encourage the breeding of Hunters, but in very exceptional cases only is this industry profitable to the farmer.

How many farmers on any large estate are able to breed, break, and make a Hunter, and keep him until he is four off? I venture to say not 10 per cent. of any nobleman's tenantry are fitted for the job. Then to breed a Hunter for profit he should make at least £150 when he is four years old—*i.e.*, taking the risk attending his production, and the fact that one out of every three is a misfit. Governments have voted some miserable sums towards premiums for often very miserable animals to compete for, and many of these sires are not very welcome or meet with great support in the district they travel.

I contend that if Government aided a movement in support of supplying to breeders very high-class Yorkshire Coach horses and the highest class possible Hackney stallions, whole-coloured bays and browns, free from all white, they would be doing a great service to the country.

Take, for instance, the best class of American trotters, such horses as George Hummer or Red Cloud, being good hacks, good trappers, good sires, and great travellers. It would be interesting to see the result of a cross betwixt a fine-actioned Yorkshire Coach horse, and an equally high-class, whole-coloured Hackney mare, and also *vice versâ*. Now I am of the opinion that should such produce not turn out as high-class carriage horses, worth £500 the pair, they would become what Sir Walter Gilbey speaks of in his letter, paragraph 2, as "a useful horse." He would carry a man (at ordinary work) or an officer in a cavalry regiment, or, failing this, he would pull a ton of coals and become an excellent farm horse, whereas the product of an ordinary premium stallion on the ordinary farmer's mare—if he should not turn out as a Hunter, or from any infirmity is unable to draw a dog-cart or a doctor's gig—is too light to work in draughts, and ends his days as he began them, in an unprofitable manner.

In short, it has been admitted that the result of premium horses travelling districts has not been so beneficial as was expected, therefore it would appear to be fitting and proper that the present Government should take steps in other directions to aid in the production of some other than the Hunter horse, and so to some degree encourage the English farmer to breed horses of a class suitable for sale or use at home. Hunter breeding has enriched very few tenant farmers, and to my knowledge has made scores poor. In a leading article of March 13, 1903, in the *Live Stock Journal*, the following paragraph occurs:—

"The War Office have apparently decided to maintain the old system, with certain necessary modifications of details, and they have announced to the Hunters' Improvement Society that they do not intend to buy young horses. The only plan therefore is to keep the subject constantly before the public, and ultimately some action may be forced upon the authorities by the nation."

It is now four years and six months since these lines were written, and the same time since Sir Walter's letter appeared in print, and as far as I know the authorities have not been forced into action, and there is no appearance of their being moved. But whilst we are muddling through, it is regrettable that some English noblemen do not bring this urgent matter before the House in a forcible manner.

The Royal Commission on Horse Breeding has issued its eleventh annual report, and therein you find that nothing more can be done until the Government think fit to find more money to augment the miserable amount now provided, wherby some twenty-eight stallions are subsidised to travel various districts.

It is reasonable to say that these twenty-eight sires cannot get more than thirty-five or forty foals each, so that under the most liberal calculations only 1,120 can be bred in the year, and this when Sir Walter affirms that we require 30,000 more horses annually than we now breed. A conference called by the Board of Agriculture was held, I believe, on October 31, 1906, when the Commissioners pointed out the paucity of stallions and their inability to do more without a further subsidy. I am afraid that in eleven months no more has been done by the Government.

Despite the efforts of the Hunters' Improvement Society, I fear Hunters are not more easily found in, say, East Yorkshire, Lincolnshire, Westmorland, Shropshire, or other districts, or even in Ireland—at least, all big dealers tell you how difficult it is to supply their customers now as compared with thirty years ago. No doubt many breeders felt unable to refuse tempting offers from foreigners for their best mares. If, even with the help of the Hunters' Improvement Society, their Stud Book, and their approved half-bred Hunter sires, Hunter breeding is not remunerative, surely the time has arrived when Government might step in and supply, free of all cost for approved mares, sires of great weight and size with really good action, for use of tenant farmers.

A misfit, rather light Hunter is next door to worthless, but a very common gelding of good colour, with fine action, can be turned into cash any moment.

Since writing this letter I see that Lord Carrington, in a speech the other day, said that 10,000 fewer foals were dropped this year than the year previous. Surely, then, the Government should require no further evidence as to the necessity of making a national move in the matter of horse breeding.—Yours, &c.,

R. L. Angas.

Estate Office, Blenheim Palace, Woodstock,

The Abortion Ravages.

Sir,—The letter which appeared under this heading on p. 307 of the issue for September 9 from Mr. Wilton Allsebrook, deals with a subject of great interest and importance to dairymen and cowkeepers, and all readers of this journal will appreciate the motive which prompted him to write it, but somehow his remarks are not very convincing as to the cure of this "insidious disease," as Mr. Allsebrook calls it, being due to the treatment adopted; and what is most apparent is the advertisement for some preparation said to be the "discovery" of a veterinary surgeon, and to "contain ingredients of which he alone knows."

This "discovery" is said to be "the result of a long and painstaking series of experiments," and the "latest preparation," which Mr. Allsebrook used, is mentioned as having been "successful wherever tried," but the question is to what extent has it been tried? Although striving to keep abreast of the times, and reading with avidity every item bearing upon the subject of epizootic or contagious abortion appearing in agricultural or veterinary journals, we have never come across any reference to this preparation or its employment, and so far as Mr. Allsebrook's own case is concerned, the fortunate result may or may not have been due to the treatment adopted.

It is noted that Mr. Allsebrook's troubles commenced in 1904, or about three years ago. Well, many observers have noted the fact that abortion may be present in a herd for a period of three years, and may then disappear, although no preventive treatment has been used. Professor Cave, who conducted experiments on behalf of the Board of Agriculture, and whose report is embodied in the Leaflet (No. 108) on "Contagious Abortion in Cattle," issued by the Board, makes reference to the spontaneous disappearance of the disease through lapse of time, and there is not the least doubt but that many of the so-called remedies owe their reputation to having been tried at a time when, if the expression may be permitted, the disease had worn itself out. Unless a remedy for any disease has proved effective over a wide area, and for a long period under varying conditions, it cannot be accepted as a certain cure, and those most apt to publicly vaunt the thing as "sure," because within their limited experience there has been apparently beneficial results, are generally those who are least able to appreciate the importance of the long arm of coincidence where the treatment of animal diseases is concerned. As before remarked, we appreciate Mr. Allsebrook's motives, and his desire to help his fellows by describing his experience, but we have heard much the same thing before about abortion remedies, and it is a pity that the one in question consists of a preparation containing ingredients of which the discoverer alone knows the secret. The strange thing about this is that veterinary surgeons, like their medical confrères, are not supposed to dabble in secret remedies, and that every "discovery" is to be disclosed for the benefit of the profession and suffering humanity, which in this case would include the unfortunate farmer and dairyman losing by the aborting of his cows.

The veterinary surgeon in question may not, perhaps, thank Mr. Allsebrook for the use of his name or the recommendation of his "preparation" or "discovery" under such circumstances as those under notice, and might be somewhat more modest with reference to its certainty.—Yours, &c., M.R.C.V.S.

September 18, 1907.

Why is the Labourer's Vote Antagonistic to the Farmer?

Sir,—Will you allow me to make a suggestion *re* a matter that is coming to be regarded as of the first importance to the future success of British agriculture—viz., the formation of an agricultural Party in the House of Commons? The great difficulty in the way of the whole thing is the attitude the labourers might adopt towards it.

What I have to suggest is that any opposition on their part could easily be removed if farmers would adopt the co-operative system of selling their produce. Almost the whole of what a labourer's family consumes as food is produced on the farm where he works, and under the co-operative system these commodities could be supplied to him at a little over the cost of production.

The root cause of the labourer's political opposition to the farming class lies in the fact that with the small spending power of their wages they are entirely exposed to the vagaries of the market. What I have suggested would remove all that.

Bread is a considerable item of consumption in a labourer's household, and will serve as an illustration of what I mean. Instead of selling it to merchants, farmers should send their wheat to co-operative mills to be ground. Then when a man went to the factory for flour or bread, he would only have to show that he was a *bona-fide* labourer in order to obtain it at 50 per cent. less than he now is compelled to give.

And if he could obtain oats, barley, beef, mutton, bacon, butter, cheese, milk, eggs, poultry, fruit on more or less the same scale, the position he would be placed in is obvious.

I expect I shall be told that what I am suggesting is a large order. I do not think it is so "large" as some people may imagine. Farmers already everywhere are talking of putting down oil engines for the purpose of grinding their own barley and for similar purposes. This seems to point to the fact that they are getting a little tired of being bled by the middleman.

But why not do the thing properly? Why not do it on co-operative lines, which is the only method that has been found really successful? And why not in so doing it make an attempt to consolidate the agricultural interests?

Every thoughtful man knows that the relation between master and man is a subject that will have to be tackled in the near future.

Why should not agriculturists show the way?—Yours, &c., Joseph Clark.

Sunday Labour During Harvest.

Sir,—Being much interested in the "Lincolnshire Notes" in the Mark Lane Express, I could not help feeling indignant at the gentleman who talks about turning the "one day of rest" into a working day.

If he had seen the tired men and horses night after night as I have done, I think he would say: "Thank God for the Sunday." Perhaps he does not make hay when the sun shines.—Yours, &c., Farmer's Wife.

September 19, 1907.

Carrots Gone to Seed.

Sir,—Of two acres of carrots that I drilled the middle of May nine-tenths have gone to seed (White Belgium sort). Query, is it the season or the seed? A. B.

Masham Cattle Fair was held on Wednesday, when the show of stock was about an average but trade was very slow throughout the day owing to the scarcity of buyers, and prices ruled in buyers' favour. The best milch cows were quoted from £16 10s. to £20 per head; and secondary cows from £14 to £16. Calving heifers fetched from £11 to £13 per head. Grazing stock in good supply, but trade was almost stagnant, farmers being too busy harvesting. Yearling bullocks, £5 10s. to £6 5s. per head; two-year-olds, £8 10s. to £11; and three-year-olds forward in condition from £11 10s. to £13 a piece. A good show of young bulls, which were quoted from £10 to £12 per head.

The 1907 Hop Crops.

England.

There is now no reasonable room for doubt that our previous optimism with regard to the yield of our plantations must be entirely set aside. One of our most skilful and successful growers writes saying:—

"In this district we shall not grow as many as last year. My Bramblings do not average 6½ cwt. per acre, and I have the best crop of any round here. No pains or expense has been spared to get a crop, and I have every facility for washing, &c., in the best up-to-date manner. It is the climate that has beaten us. One of my neighbours will not pick his hops at all. Last year my average was 14 cwt., this year I doubt if it will be 8 cwt., and I don't believe this district will average over 4 to 5 cwts.

This letter only echoes many reports I have received from other districts both in the South and the Midlands. It was stated freely at Worcester Fair last week that the average for Worcestershire and Herefordshire is not likely to exceed 6 cwt, and the details to hand from Kent, Sussex, Surrey, and Hants uniformly show that earlier estimates are quite beside the mark, as the yield is everywhere, with very few exceptions, disappointing. My friend hits the blot when he says "the climate has beaten us," for although it is a popular desire that "September may blow soft till the fruit is in the loft," the genial weather has arrived too late for the hops.

My hope that the bine, which has been inured to climatic changes during the past few months, would still stand the trials of recent cold misty nights and warm days, has faded away as regards the fruiting, for although appearances were favourable up to the commencement of picking, it is clear that the absence of sunshine in the earlier months has hindered the condition of the cones, which in most cases are very small and spongy, and wanting in the weight that is necessary for a heavy yield.

There is, however, some comfort to be gleaned from the fact that we cannot anticipate a heavier harvest than 350,000 to 360,000 cwt. Consumers will be conscious that they must lay in stocks if they wish to provide for their requirements, and we may hope that they will soon commence to operate, and that the dulness which has depressed our market for so long a period will speedily disappear, and an active demand, with marked improvement in values, will be established.

America.

The information referred to in my last report as to the reduced estimates of the yield in the U.S.A. is confirmed by letters received this week. My correspondent in California writes under date September 1:—

"We have finished harvesting, our green weight is 30 per cent. less than 1906. We are 2,600 bales short, and all California is equally deficient, say 75,000 to 80,000 bales as against 107,000 last year. Until a few days ago it was claimed that Oregon would produce 150,000 to 170,000 bales. But early rains came and mould is very general. I hear by wire that half the hops will not be picked owing to mould. Pickers are scarce and wages are high; money is tight, and many renters cannot get money owing to the low prices ruling. Dealers want contracts at 7 to 8 cents, which means heavy loss to growers. We now calculate that the U.S.A. crop this year will not exceed 245,000 bales, and our home consumption is from 275,000 to 300,000 bales. Our yield this year, with the stocks of yearlings on hand, will therefore just about satisfy our requirements."

Another friend writes from Washington State:—"At the present moment it is impossible for us to estimate the crops in Oregon and Washington. There are a great many growers who state positively that they will not harvest their hops owing to the unfavourable market outlook, and also on account of the prevalence of mould in Oregon. The Washington crop is in fair condition at present, but it is impossible to predict how many hops will be picked in these two States. We believe, however, that when it is all over a large part will be safely harvested. While the crop of the United States will certainly be smaller than it was last year, it will, nevertheless be large enough for all purposes."

There is another important feature in this connection that must not be overlooked—the production and consumption of beer in the United States is largely increasing.

According to the official returns for the year ending last June 58,546,111 barrels of beer were brewed in the preceding twelve months, showing an increase upon the preceding year of 3,894,474 barrels. Taking an average of only one pound of hops per barrel, which I understand is generally accepted as correct, it means that 34,772 cwt. more hops are now required by American brewers than was formerly the case, and English growers may reasonably congratulate themselves thereupon.

How are the Markets?

London.

The Borough traders are disappointed by the results of business thus far. The samples hitherto offered for sale are generally unattractive in quality, being short of colour and condition. Some of them have evidently been picked "to save their lives," being immature, rough, and muddy. Such samples are naturally of low value, and their presence on the boards has tended to depress demand and depreciate the tone of the market. Coloury samples are, however, eagerly sought after, and have been easily sold, but unfortunately prices have not been adequate to the shortness of the supply.

I have heard of some lots changing hands at 30s. to 40s., and although there are rumours of a choice lot or two being sold at 80s., I cannot produce evidence that more than 70s. has been realised. The chief business done has ranged from 50s. to 60s., and even at these low figures the volume of trade has been comparatively small. Within the last day or two there are indications that the diminution of the crop is being better understood, enquiries are now more frequent, and merchants seem to be coming out of their seclusion and interesting themselves in the course of the trade.

It is probable that during next week we shall recognise more favourable symptoms of renewed life, and, indeed, there are already to be observed the shadows that are cast before the "coming events" for which we are anxiously waiting. I have good hopes for the future. Brewers must be wanting new hops, their stocks must be pretty well exhausted, and now they are assured that neither from England, America, or the Continent will the supplies be over-abundant, they will certainly be induced to buy "early and often." Once the ball is set rolling it must continue on its way, gathering strength as it goes, I have therefore confidence that there are better times in front of our growers, who certainly need all the help they can get, to compensate them for the trying experience of the past year.

A Worcestershire Hop Farm.

It was my privilege last week to enjoy a rapid run from Paddington to the "faithful City" of Worcester. The journey under sunny skies and through smiling country which seemed to be revelling in the genial climate of our September summer, was most delightful. This being followed by a drive through the ancient city and the villages of Hallow, Grimley, and Holt, presenting so many and varied scenes of rural beauty, my pleasure was enhanced to such an extent that I was almost sorry when it came to an end. From the main road I was conducted through meadows shaded by lofty trees, and was eventually welcomed at Northingtown, the noted farm of Messrs. Jones Brothers.

It was fortunate that my arrival coincided with the advent of the great crowd of hop-pickers, who, to the number of about 1,500, had been brought down the river Severn in steamers specially chartered for their accommodation. They tramped past the homestead, men, women, and children from Birmingham, Wolverhampton, Dudley, and other towns in the so-called "Black Country," evidently full of anticipation of a pleasant holiday. Their quarters were ready for them; the more experienced rushed to take possession of the most comfortable positions, and although others, who might be visiting the plantations for the first time, opened their eyes when they realised that they would occupy lodgings that may truthfully be described as primitive, they were all speedily settled in their temporary homes, in barns and tents, furnished with an abundance of fresh rustling straw.

Good humour and fun were everywhere evident, and soon the orchards and adjoining fields were dotted with groups gathered round numerous wood fires, on each of which kettles, pots, and pans were set in preparation for their evening meals. When the moon rose and illuminated the scene, it presented a picture that would have attracted and delighted an artist's eye. They were all asleep early, and perfect calm reigned throughout the farm precincts till morning.

I was awakened about five o'clock by a noisy human chattering, mingled with the crowing of cocks, the remonstrative quacking of ducks, and other well-known sounds of country life. Looking out of my window, I saw the work of the harvest beginning, in the gathering of the pickers round the cribs or bins to which they were allotted, and a long procession of pickers, each party carrying their own bin, was seen trotting off through the morning mists down to the hop yards. When I followed them, about nine o'clock, they had made a visible mark on the work. The hops were plentiful, sound, and large, and several of the bins were already nearly filled with shining cones, which promised well for the weight and quality of the crop. It was very pleasant to move about amongst them, chatting with them as their hands were busily engaged in stripping the bine. Their histories were varied, and they had many grievances and troubles to tell about, but on the whole cheerfulness and comparative contentment seemed to prevail, and they sung and gossipped at their work as if life was after all not so devoid of enjoyment, and as if they were determined at least to make the best of their present happy surroundings. The first day was representative of those following, and I had full opportunity to realise the advantages offered to these townspeople by their annual outing for hop-picking.

My short sojourn at Northingtown was made even more interesting by an examination of the arrangements for drying the hops. The skill of Messrs. Jones as growers generally secures a bounteous yield. This is the case in the present season, when such experience is by no means general. Therefore it is the more necessary for them to make ample provision for dealing with their produce efficiently at the kilns. The apparatus for drying and curing hops by hot air without permitting the cones to be affected by direct contact with the products of combustion, of which they claim to be the pioneer inventors, was fully described in the MARK LANE EXPRESS, Sept. 30, 1901. They have since always used this system with uniform success, and have now enlarged their kilns and laid down another powerful engine for the driving of a fan, which is 15 ft. in diameter, and is, I understand, the largest that has yet been applied to this purpose. Having 120 acres of hops under cultivation, they are now prepared to dry 40 tons per week, and thus far their kilns have been fully engaged this season. But even this large output does not meet the requirements of their business, which is done personally with consumers, as Messrs. Jones have great faith in the advantages accruing to both sellers and buyers in direct communication between them. Finding that their trade is increased beyond their present capacity of supply of their own growths, they have taken two of the farms in the Harbledown Valley, near Canterbury, formerly occupied by the late Mr. H. D. Barnes, and having 180 acres of hop land.

My visit to Northingtown was most satisfactory, not only by reason of the fresh country air I inhaled and the recreation of mind and body I achieved, but in the observations I was able to make of the progress in the science of hop growing and curing, which is so essential to the maintenance and prosperity of this industry in England. Our planters must keep in the forefront of the world's competition, and praise is due to those amongst them who lead others in the direction of that success, which, although it cannot be commanded, is certainly deserved.

Hop Growers' Conference.

A hop conference will be held at the South-Eastern Agricultural College, Wye, Kent, on Wednesday, November 27, to which all hop growers are invited.

AGRICULTURAL LAW.

Advice of a Legal character is offered to Readers entirely free of charge. Particulars of cases should be addressed to the Editor, "MARK LANE EXPRESS," 3, Wellington Street, Strand, London, W.C.

Two Questions.

SIR,—1. Has an Act of Parliament been passed whereby a landlord is compelled to compensate a tenant to whom he has given notice to quit his farm for a frivolous cause? If so, when does this Act become law?

2. When an insured stack of hay is consumed by fire caused by over-heating, can the owner of it recover the amount of loss from the insurance company with whom he is insured against fire?

Q. Z.

*** 1. Such an Act has been passed, and is called the Agricultural Holdings Amendment Act, 1906; but it does not come into force till January, 1909. No doubt in due course its provisions will be fully explained in these columns. 2. I should think there is no doubt that he can, unless some exception is made by the policy. You have not informed me on this point, and I am ignorant of what the policy says on the matter.—BARRISTER-AT-LAW.

West Country Notes.

THE occurrence of a full week without rain in measureable quantity is quite an event in the present year, and it is wonderful how much has been accomplished by steady work in the period. The heat has not been so great as to afford any check upon industry, and the altogether favourable climatic conditions have been made the most of.

HARVEST festival promoters are not waiting for the harvest to be anything like over before they sing "All is safely gathered in." They still, if one may believe them, "plough the fertile meadows,"and do other extraordinary things which no agriculturist would dream of doing. But one is pleased to find that many of the more comic bits are gradually disappearing in the revision of hymns, and that the addresses on the subject of harvest and seed time are a little more suited to the facts of agriculture. In a good many places in the West the appropriate form of thanksgiving by which agriculturists in distress benefit is adopted.

I READ that thousands of people attended Newton Abbot Onion Fair, and that, except that a few horses were sold, the fair has lost all its business significance. Onions and horses have about as much in common, one would imagine, as agriculture and fishing, yet we have high authority for the two latter being associated.

NEARLY every show in the West is claiming to have a record in some way or other, and it is well that this is so, for it shows the hearty rivalry which is bound to have a good effect on the productions of crops or live stock.

IT is not always those connected with the shows who put forward the claim, and some of my friends were rather surprised to find that London dailies were setting up a claim on their behalf which they would not have thought of doing for themselves. This was in regard to the weight judging at Shepton Mallet Show for cattle. The results were certainly indicative of some of the farmers, auctioneers, dealers, and butchers knowing their business fairly well.

THE authentic return shows that three persons judged the dead weight of the steer correctly from their inspection of the living animal, six the sheep, and five the pig. One man was was only 4 lb. out on either, and had the aggregate correct. Another man was only 3 lb. out on either animal. There were two persons 1 lb. out on the aggregate weight, each animal being taken individually; four 1 lb. out on the steer, ten on the sheep, and eighteen on the pig. Those 2 lb. out in each case numbered 2, 3, 7, and 13 respectively; those 3 lb. wrong 2, 5, 5, and 22. Five were 4 lb. out on the steer, ten on the sheep, and sixteen on the pig; at 5 lb. out twenty persons were named, and at 6 to 10 lb. out eighty-eight. As about 45 per cent. of the estimates were within five points of correct it shows that the judgment was very keen.

ONE feature of the colt shows of the season is the far larger proportion of the animals than formerly which are eligible for the stud books. This indicates far more attention to breeding the best class, and to securing not only good sires but high class dams, than used to be the case. The profits are increasing accordingly, now that farmers and others are waking up to the fact that it costs no more to keep a good animal than a poor one. Even if the fees and prime cost are a little more, there is a better profit of making cent. per cent. on them.

WEST of England cider men are very well satisfied with the result of the first case to test their contention that cider is the fermented juice of the apple, and not a chemical compound. It is not a very promising year for the make, but there is ample cider in the cellars to supply the legitimate demand for the beverage for some time to come, and if the market can be secured by the rejection of the false stuff, so much the better for the genuine producer.

IF apples are out, plums are in; and it is astounding what great quantities there are in many places in the West. They are selling retail at 1d. per lb. after passing through two or three hands, so that the original price is lower than known for years. Yet they are a profitable line.

BLACKBERRIES are hardly a cultivated crop as yet, but they are of considerable value, and almost sufficiently important in some seasons to warrant the running of special trains. They are an important adjunct in such cases to the earnings of some of the cottagers. They are used not only for preserving, but also for dyeing and in the making of fruit syrups. This year the crop is abundant, but they are very late in ripening.

A LAUDABLE attempt is being made in Cornwall to start a County Dairy Show. The Hon. John Boscawen is at the head of the movement, which is meeting with a fair measure of support, and is deserving of every encouragement. The idea is to give instruction at the show of a higher type than the ordinary peripatetic lectures.

LOSTWITHIEL is one of the few places which can boast a record gate for its agricultural show on a wet day. Westerners care comparatively little about the weather on such occasions, but still a wet day does spell loss as a rule.

September 19, 1907.

Nottinghamshire Notes.

FARMERS and breeders from the lace county were present in strong force at the Loughborough show yesterday, which was a highly successful exhibition from every point of view. The society has now been established about seventy years, this being the sixty-ninth annual show. The weather was gloriously fine, the entries were good, and the society has a balance in hand of £218 16s. 4d. The sum given in prizes yesterday totalled £360, and the entries were as follows, the figures in brackets being the corresponding number last year:—Cattle 73 (72), sheep 62 (46), pigs 25 (17), horses (Shire) 52 (57), and Hunters, hacks, &c., 112 (96).

CATTLE were an exceptionally good lot, though the quality of the Shires was there scarcely up to the level of last year's lot. The Hunter classes had attracted some smart-looking animals, and the champion, owned by Mr. J. H. Stokes, of Nether House, Great Bowden, known by the name of Whisky, attracted a good deal of attention. Last year this horse won over £1,000 in prizes, and so far has this season netted over £750 for Mr. Stokes, having taken about ninety prizes.

POLICE-COURTS in Nottingham have this week had more than ordinary interest for honest farmers. At the Shire Hall on Wednesday a butcher named Watson, and a labourer named Gibbs, both of Beeston, about four miles to the west of the city, were charged with "depositing unsound meat in a slaughter-house for preparation for sale." The district council were the prosecutors, and in the course of his evidence a police constable said on visiting the slaughter-house he found the carcase of a sow dressed ready for sale. The animal had been about to litter, and was killed in a highly febrile condition. Not a particle of the flesh was fit for human consumption, as the kidneys were putrid, and the odour from the flesh was most objectionable. The Bench fined Gibbs (who was the owner of the pig) £3, or fourteen days in prison; and Watson, who had been previously convicted, was fined £10, or a month with hard labour.

WILLIAM BINGHAM, milk-seller, of Old Basford, a suburb of Nottingham, was today summoned for having sold a quantity of milk deficient in fat to the extent of 7 per cent., and containing 11 per cent. of added water. Naturally Bingham asserted that he had not adulterated the milk, and therefore the farmer who supplied it was blamed. As, however, he was convicted in 1894, the Bench did not believe his version, and the result was he had to pay a fine amounting with the costs to 40s.

AT the same Court Hannah Cockeram, of Bagthorpe Farm, was prosecuted for having sold milk deficient in fat to the extent of 6½ per cent., and containing 20 grains of boracic acid per gallon. Mr. Day, who was for the prosecution, said it had been legally decided that no addition of boracic acid to milk or cream was permissible, a Local Government Board inquiry into the matter having been held some time ago. The preservative had been proved to be injurious to health, and everybody should know that they were not allowed to put powerful chemicals such as boracic acid into human food. The defendant swore that she had not tampered with the milk in any way, having sold it just as received. Taking this view the Bench inflicted only a nominal penalty, defendant to pay 20s,. costs of the case.

IN a willow tree a short distance from the village of Sturton en-le-Steeple, in the north of the county, may be seen a cat and her kittens reposing in a pigeon's nest.

MEMBERS and friends of our local horticultural society yesterday paid a visit to Sandringham, and privileges not extended to the ordinary individual were granted. The party was not only conducted through the grounds, gardens, and plant-houses, but the Queen's pets in the kennels and stables were also pointed out.

IN the stables, which excited the greatest interest, was the Boer pony Black Prince which Lord Chesham used during the South African War, and afterwards presented to Queen Alexandra. Among the other animals pointed out was Tooting, which the King personally drives when in residence at Sandringham. Faithful Boy and Morgate Boy, the two horses specially reserved for the use of the Queen were pointed out; the Queen of Norway's horse Wasp, the late Duke of Clarence's horse Vivandière, and Stella, the horse used by the Queen of Spain prior to her marriage. The horses and ponies seen in the stables numbered twenty-three.

IDEAL weather has prevailed during the whole of the past week, and farmers have not had a single stoppage from this cause. "Harvest home," has already been shouted on many farms, and very little corn remains out in the fields. Here and there are odd fields of beans and late barleys, but 90 acres out of every 100 have been pulled together, and the thoughts of farmers are now turning in the direction of preparing the land for their wheat crops.

DURING the past few days I have made a special effort towards obtaining some authoritative opinions concerning the financial side of the present year from the farmer's standpoint, and I find that many are of the opinion that the year will prove to be one of the most prosperous since 1887. The corn is yielding well, and Mr. Henry Smith, of Screveton, near Bingham, reports a yield of six quarters of wheat to the acre. There are several other tenant-farmers who have had one day's threshing done where the yield of barley has been 6 and 7 qr., while one reports 7½ qr. of beans to the acre.

ON Wednesday evening a somewhat serious fire occurred at the Danethorpe Hill Farm, about five miles from Newark, resulting in about twenty tons of well-got hay being destroyed. The tenant of the farm, Mr. F. Blagg, was first to discover the outbreak, and the Newark Fire Brigade were summoned. They quickly arrived on the scene, and prevented the fire from spreading to the corn stacks in the yard, though damage was done to the extent of £60 or £70. How the fire originated has not been disclosed.

THE Sutton-in-Ashfield Urban Council go in for growing cabbages on a portion of their sewage farm, though, like the plums in isolated orchards, they have for some time been "going." A police constable, however, discovered a reason why they were becoming less in numbers, and the sequel was heard in Deansfield police court, when Edward Gascoigne was fined 21s. for stealing twenty-one cabbages, so that they were rather expensive vegetables—1s. each.

I HEAR that we are to be favoured with a visit by the King and Queen of Spain in November. It is highly probable that they will stay with the Duke and Duchess of Portland at Welbeck Abbey for two or three days.

COMING-OF-AGE festivities will play an important part in the lives of many local agriculturists in this district next week. On Tuesday the Duke and Duchess of Rutland will entertain to luncheon all their tenants, along with their wives and employees on the Ilkeston and Derbyshire estates, at Haddon Hall, in honour of the Marquis of Granby's twenty-first birthday. Presentation of addresses will follow, there being handsome presents from the tenants, the estate staff, the Corporation of Ilkeston, and the Longshaw Sheep Dog Trials Association. Similar festivities will take place at Belvoir Castle on Thursday next, when about 1,200 will be entertained, including the majority of the tenants and their wives, on the Duke's Leicestershire estates.

September 19, 1907. R. K.

Speaking at the Spalding Foal Show dinner, Mr. F. W. Griffin, of Borough Fen, Peterborough, the well-known breeder and exhibitor of Shire horses, said he did not think Shire horse breeding was ever on such a sound basis as to-day. There had never been a time when the foreigner was so much on the look out for good Shires. He himself had never had a better year. People now were coming from all countries and asking for Shires, and he believed there was a great future for Shire horse breeding. He was convinced that motor power was not going to hurt them.

At the Nantwich Cheese Fair on Thursday there was a pitch of 60 tons, and a large attendance of factors. The market opened with a brisk inquiry, which continued throughout, a clearance being effected at the following prices:—Finest, 61s. to 65s.; medium, from 55s. to 60s.; and lower grades, from 52s. per cwt.

SHOWS.

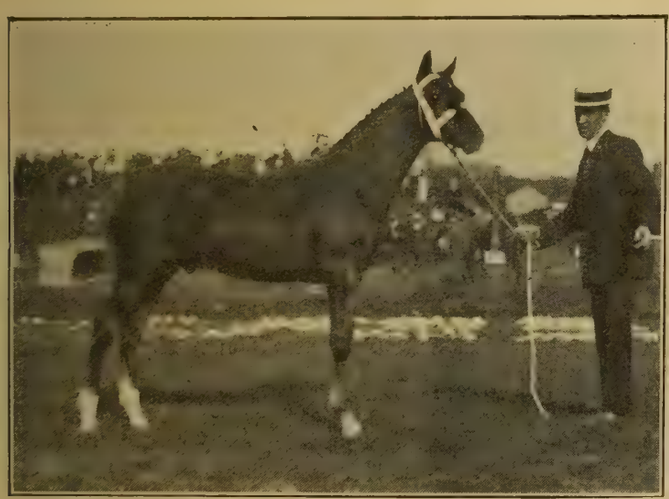
South Tyne.

The South Tyne Agricultural Society's Show at Bellister Parks, Haltwhistle, on the 14th inst., was favoured with beautiful weather, an almost record attendance, and very large entries—viz., 1,175, or an increase of 111 on those of 1906; the quality, too, was, if anything, better than ever, so that the show was an all-round success. The Shorthorn and Galloway cattle classes were exceptionally strong. In the former there was a capital show, Mr. T. Lancaster, Alston, carrying off premier honours in the aged bull class, while the Countess of Carlisle with Bruce of Naworth got the first ticket in the Galloway class. Leicester and half-bred sheep were large classes, but in the Black-faced Mr. John Robson, Newton, practically carried off all the premier honours. Agricultural horses, always the feature of past exhibitions, showed no falling off, some fine specimens being shown. Mr. E. Gibson carried off the special for the best mare or gelding in the confined classes. Light horses were not so numerous, but well-known prize winners were present. The poultry exhibition was a great attraction, some 550 exhibits being penned, while the classes for cats, an innovation, were quite a success.

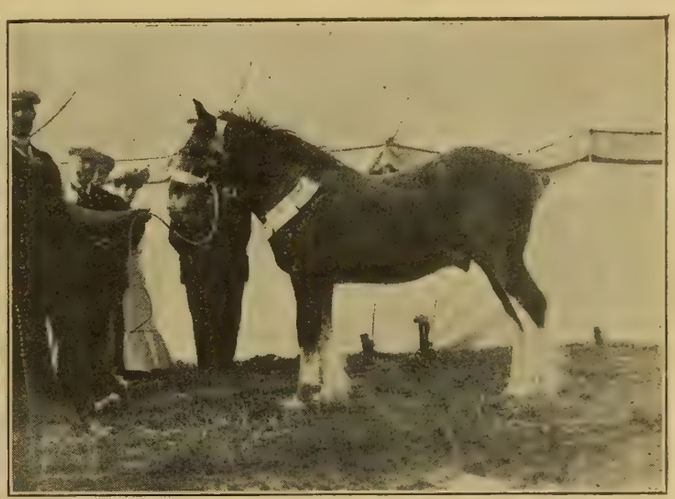
Dunster.

Being favoured with beautiful weather, the Dunster summer show of horses, cattle, and sheep attracted a very large number of visitors, and the show proved as great a success from a "gate" point of view as it was in regard to the entries, for the takings were the best on record, while the entries, though not the highest recorded by the society, were an advance on those of last year. Horses numbered 172, cattle fifty-two, and sheep twenty-two. In the cattle section, two classes for any breed were given up, the entry having been in the past usually very small, and the society confined itself this year to Devon cattle. The entries generally were very good and of a very useful description, the two cow classes being the strongest, especially that for cow and offspring. A champion prize was for the best beast in the show, and it was won by Mr. A. Bowerman, of Capton, with a two-year-old heifer in-calf, bred by the exhibitor, Mr. Robert Gooding, of Nunnington Park, being placed reserve with a young bull, full of flesh and constitution, but not quite up to the heifer in style and flesh. Sheep, which were a little more numerous than last year, consisted of Exmoors and Devon Longwools, and some good specimens were shown. Agricultural horses showed an improvement on recent years, and with increased attention the section should become a good feature. A champion prize was given by Lieutenant-Colonel Boles, and was taken by Mr. Merson's fine cart mare, Doniford Smart, which has distinguished itself in so many showyards and has never been beaten in this part of the country. Hunters were undoubtedly the feature of the show, and they certainly attracted most attention. Messrs. Withycombe and Watts, Carhampton, carried off the special prize offered by Lieutenant-Colonel Boles, M.F.H., for the best Hunter, the property of and bred by the exhibitor, a *bona fide* tenant-farmer following agriculture solely for a livelihood, and living within fifteen miles radius from Dunster, with Actor, the first prize yearling colt. A stag's head, presented by Mr. E. A. V. Stanley, M.F.H., for the best light-weight Hunter, the property of and bred by the exhibitor, a *bona fide* tenant-farmer, following agriculture solely for a livelihood, and living within fifteen miles from Dunster, fell to Mr. James Ridler, Blackford, Minehead, for Acrobat, a five-year-old.

Bedfordshire Foal Show.



The eleventh annual foal show of the Beds. Shire Horse Society, held at Bedford, was, as regards quality, entirely satisfactory, and proved that the society is doing good work in improving the breed of horses in the district. As regards numbers, however, there was a big falling off when compared with last year, for the total was but sixty-eight as against ninety-three in 1906. The falling off was due in a great measure to the late harvest, and, given favourable circumstances, we have no doubt but that the entries will be more numerous next year. A silver cup was given for the best foal shown by a resident in the Cambridgeshire and Hertfordshire countries, and this fell to Mr. Robert Long for a fine bay colt by Hitchin Cœur de Lion, dam Childwick Pink, which was first in the open class, and another bay colt by the same sire held the reserve number for the cup and in the class. The leading distinction in the county classes again fell to Mr. George Street, whose brown filly, 4 months 10 days old, by Bay Thumper, dam Maulden Lady Bedford III., was first in its class, also winner of the society's prize for the best foal by the society's horse of last season, and of the silver cup given by the masters of the Oakley and Harriers for the best foal in the first six classes belonging to a resident in the Oakley country.



Shap.

Beautiful summer weather was associated with the forty-fifth annual show of the Shap Agricultural Society held on Wednesday, and with a very large entry—only 64 short of the record number 474—the event attracted a large attendance from the wide area it covers, namely, the whole of north Westmorland and the adjoining district of Cumberland. The entries of stock and butter reached 404, about 70 less than last year, but this was chiefly due to a fall in duplicate entries, so that the display of stock was quite equal to previous years Crop entries were also smaller, owing to the backward state of swedes and turnips. The judges who spent three days in visiting the farms reported that after the cold backward season they found many of the exhibits far exceeded expectations, and as most of the competitors occupied very high-lying farms their crops were very creditable. In the horse classes, which were highly creditable, many of the exhibits had come together last Saturday at Appleby, and so the judging was watched with unusual interest, but the awards were generally the same. The majority of the cattle were rich roans, and good hairy sorts, the females with excellent milking properties, and the males with plenty of power, good shape, and character. The best of the males was a shapely, good-lined roan bull from Mr. J. D. Taylor's herd at Crosby Lodge, and there were some valuable females from the Earl of Lonsdale's home farm at Lowther, which figured prominently in the prize schedule. Sheep were very well represented indeed. The white-faced classes were exceptionally well filled, and there was rather keen competition, but with Scots Black-shaped sheep the Lowther flock practically swept the deck, the Earl of Lonsdale securing first and second for aged tups, ewes or gimmers, shearlings and tup lambs, and first with gimmer lambs; Mr. E. de Vere Irving, of Shap Abbey, being the only other competitor to take a prize, and that a second premium.

Easingwold.

As in the case of other shows held last week, that of the Easingwold Agricultural Society, held on Wednesday, was favoured with delightful weather, and the result was a large attendance of visitors, amongst whom were Sir George Wombwell, Bart., who has taken great interest in the society since its formation, and he brought with him a distinguished party, which included the Marquess of Londonderry and Viscount Helmsley, M.P., who delivered speeches at the luncheon. The exhibition holds a high place amongst the shows of the district, and that of last week formed no exception to the rule; but if harvest operations had not been so late, the entries might have been larger. The total number in all sections was upwards of 600, this being about twenty less than last year. Among the horses the Hunters formed the best section. The York and Ainsty Hunt prize for the best mare or gelding not exceeding six years old was gained by Mr. F. A. Rickaby's four-year-old bay gelding Rapid and his five-year-old black gelding

TWO WINNERS AT THE ILKESTON SHOW.

Hackney Colt, Adbolton Performer (aged four months), sire Copper King 7764, dam 17075 Grand Lady; the property of Mr. A. W. Hickling, Adbolton; winner of Cup and Champion at Ilkeston and First Prize at Peterborough.

Shire Colt by Birdsall Gallant 32116 out of Smiler by Rock's Hero; the property of Mr. W. Smith, Wilsthorpe, who has won with it First and Cup for Champion at Ilkeston, two Firsts at Kingston, two Firsts at Heanor, First at Derby, and three Firsts at Moorgreen.

Loughborough.

The Loughborough and District Agricultural Association were fortunate enough to have glorious weather for their sixty-ninth anniversary show, held on Wednesday in Southfield Park, and the result should be an increase to the nice balance they already have in hand. The show was a good one all round, the entries showing a slight increase on previous years. Cattle were a record entry, while sheep and pigs were both greater than last year. There were, however, fewer draught horses, but the entries for Hackneys and Hunters were sixteen in excess. The tradesmen's turnouts were above the average, the winner Rocket secured the second honour in the same class. The Roadsters were small classes, and of the nine prizes awarded, Mr. Stephen Cliff's exhibits carried off seven. Mr. G. Brown, of Brantingham, was successful in the open class for gentlemen's Hackneys with a five-year old brown mare, and Mr. Edward Harrison's (Easingwold) chesnut mare Hermia was the winner in the open class for lady's Hackneys. The three-year-old Coaching geldings or fillies were a good class, and the winners of the first and second prizes, Mr. C. H. Hart's Factor and Benefactor, were sold to Mr. Wymbush, of London. In the cattle section the classes were well filled. The principal exhibitor was Mr. J. M. Strickland, who had entries in all the classes, and who secured twelve of the awards. Mr. Strickland was also successful in several classes in the sheep and pig sections.

being Mr. W. Starbuck, whose mare Queen of Diamonds was awarded the Hackney Society's silver medal. The really only disappointing section was that of the horticultural exhibits, which did not receive the support it deserved.

Westmoreland.

The annual show of the Westmoreland County and Kendal District Agricultural Society was held at Longlands on Thursday, and proved in every way successful. Since the centenary show of the society five years ago, when there was a record entry and a magnificent display of cattle, sheep, and horses, a very high standard of excellence has been maintained, and there was no falling away. In point of numbers the show was ahead of last year, the total number of entries being 944, against 861 a year ago. Cattle numbered 153, against 151; sheep 195, against 186; light horses, 141, against 163; heavy horses, 147, an increase of 43; and in the eggs, butter, cheese, bread, and sundry sections, there were 201 entries, or nearly forty more than a year ago. The exhibition of cheese, which was accountable for this rise, was a new feature of the show, intended to encourage cheese-making locally, and it was a successful feature that is estimated to have a good effect in a district which has somewhat neglected this profitable branch of dairy work.

It was fitting that in such an exclusively farming district as South Westmoreland the pride of place among the horses should have been given to the Shire type. Here we found the tenant-farmer competing with such well-known breeders as Lord Henry Cavendish Bentinck, of Underley, and Mr. Victor Cavendish, M.P., of Holker. Both these landlords place some of their best horses at the disposal of their tenantry for breeding purposes. Mr. Victor Cavendish's chesnut brood mare, Holwell Spot, came out best in a strong company of nine. She is a fine quadruped, of the true type, and was awarded the Shire Horse Society's medal. Mr. Cavendish carried off a number of other notable triumphs with his Shires, including the society's silver medal for the best heavy horse. His bay filly foal, daughter of the winning mare, was easily the pick of the dozen youngsters which faced the judges. Holker Kismet, a bay one-year-old filly, and Holker Belle, a two-year-old, both, of course, from the same well-known stud, were the top of their respective classes, the latter making such a good show that she was placed reserve for the medal.

The Clydesdales were not so good a lot as have been seen at this show, but there were some good specimens forward, notably those of Mr. W. Griffiths, who was the chief owner. His bay brood mare, Daisy, proved to be the best of the ten shown, and his three-year-old gelding and his one-year-old colt also took part first prizes. The one-year-old filly shown by Mr. Wm. Graham had almost a walk-over in its class, but was so promising an animal that she was given the Clydesdale Society's medal.

Hunters made a brave display, and included some excellent weight-carriers across country. Most of the classes filled well, and the quality was good. Mr. Robinson's chesnut gelding, Major, was awarded the Improvement Society's medal. Farm horses, shown in gear, open to tenant farmers only, yielded some keen local competition, no fewer than fourteen horses and carts appearing in the ring at one time. Mr. Richard Wright earned the prize offered by Sir Maurice Bromley-Wilson, and Mr. W. Griffiths that of the Earl of Derby.

Among the Shorthorn cattle were some very good stock, especially of cows for breeding purposes. Mr. William Atkinson's white bull Wallace was declared to be the best on the ground. It is a powerful beast, and has fine shoulders and breast, but is rather short in the legs. Among the cows for breeding stock, Lord H. Cavendish Bentinck's roan Muriel Lorn was placed before Mr. A. Cleasby's Bright Eye, which has won a lot of prizes. The first showed, perhaps, better breeding, but some experts thought Mr. Cleasby's exhibit was the more level-fleshed. Lord Brougham showed a beautifully shaped heifer, which gained the society's medal, and Mr. Atkinson's powerful bull won the medal for the best bull shown, while Mr. John Handley's Lord Palatine obtained the special prize of £10 for the best Shorthorn bull calved in 1906, and Mr. T. Hunter another special for the best pedigree dairy cow, Mr. J. Morton being a good second to him.

The sheep were thoroughly representative of the county, and, as became the district, included a large number of fell sheep. Lord H. Cavendish Bentinck, Mr. Victor Cavendish, M.P., Mr. J. Crossley, M.P., Mr. J. Dobson, Messrs. R. Parker and Sons, and Mr. J. Drague were among the principal prizewinners.

Stokesley.

The forty ninth annual show of the Stokesley Agricultural Society took place on Thursday in beautifully fine weather, and was very largely attended. Unfortunately the entries showed a diminution of no less than 154 as compared with last year, the falling off being mainly in cattle, sheep, and horses, while there were a few less entries in poultry, pigeons, rabbits, and farm produce; in fact, the entry was the lowest since 1899. Among the cattle the Shorthorns formed an excellent section, and included several winners at the Royal, the Yorkshire, and the Highland Society's Shows. The Leicester or Lincoln sheep were a good section, especially the tup lambs, of which there were more than two dozen entries. The Wensleydales also made a good show, especially the shearling gimmers and the gimmer lambs, whilst among the cross-breds also there were some very good exhibits. The entries of horses were only one less than last year, and among them were a number of animals of good quality.

Market Harborough.

Market Harborough Horse Show, held on Thursday, was robbed of two of its attractive features—viz., the sheep dog trials and foxhound puppies, neither of these being included this year. The horses, however, were a very fine lot, and well worth a visit to the show. In the Hunter section most interest centred in the open classes. In the light-weights premier honours went to the Countess of Warwick's Rockfeller, a very smart bay gelding, Mr. J. Stokes's brown gelding Lyons Mail being second, but in the heavy-weights Mr. Stokes's well-known Whiskey was an easy winner, thus making his record to date eighty-three first prizes at various shows. Biscuit, also belonging to Mr. Stokes, was second, and the Countess of Warwick's Wrangler reserve. Brood mares were good, and here first honours went to Empress III., belonging to Mr. H. R. Roe, of Cranoe. Mr. C. H. Dixon's prize for the best Hunter in the tenant farmers' classes, drew a big entry. The winner was Mr. R. J. Ward's Cherry Ripe, which was second in the same class last year. This animal also won the Hunters' Improvement Society's silver medal.

SHOW SECRETARIES.

Mr. G. FLETCHER,
Bishops Castle District Agricultural and Horticultural Society.

Competition was very keen in the open driving class, the first place going to Mr. Jack Mayor, of York, whose handsome brown beat Mr. Raynor's (Mansfield) Gay Boy. In the opening jumping Mr. Foster, of Brailsford, Derby, was first, and Mr. Johnson, of Melton, second.

Shires were the best lot seen at the show for some time. In the open class for colt or filly first honours went to Mr. F. Farmsworth, of Hinckley, and second to Mr. R. Crawford, of Lowesby. Mr. Houghton's Daphne won the Shire Horse Society's silver medal and also the challenge cup for the best Shire mare or filly in the show, the property of a tenant farmer.

Hunter Stud Book. — The Hunters' Improvement Society wish to draw the attention of Hunter breeders to the fact that entries for the Hunter Stud Book, Vol. 3, close on Tuesday, October 1. Entry forms and full particulars as to re-entry, registration (on pedigree, &c.) or entry (by prizes or inspection) can be obtained from the secretary, Mr. A. B. Charlton, 12, Hanover Square, London, W.

South-Eastern Agricultural College. — In connection with the Garden Produce, Poultry, and Honey Competitions of the Kent County Council, and of the National Potato Society, at the South-Eastern Agricultural College, Wye, Kent, on Wednesday, October 2, a conference will be held, when an address will be given by the principal, Mr. M. J. R. Dunstan, to be followed by discussion. Those wishing to attend should send their names to the principal of the college.

For 1907.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

CORRUGATED IRON SHEETS.
SPECIAL OFFER of 400 Tons of Seconds at bargain prices for immediate deliveries only; suitable for Sheds and Fences. Full details free. NEW HAY BARNS from £22 each. Full Catalogues. Dept. 3, JOHN A. REEVE, Stony Stratford.

SHOW GOSSIP.

The thirty-third annual show of the Shropshire and West Midland Agricultural Society has been fixed to take place at Shrewsbury on Thursday and Friday, June 25 and 26, 1908, the entries to close as follows:—Trade Stands, May 11; Live Stock, May 18; Farm Produce, May 25; Dairy Competitions, June 1; Poultry, June 8; Dogs, June 15; Sheep Dog Trials, June 20; Ring Competitions, June 20.

At a meeting of the Durham County Agricultural Society held last week, an abstract of the accounts in connection with the recent Wynyard show was submitted, showing a loss of over £400, which the council considered was inevitable, considering the weather on the show day. At the same meeting a letter was read from Sir Gilbert Greenall, the honorary director of the Royal Agricultural Society, stating that he would be in Newcastle on October 11, and would be glad to meet a committee from the society to discuss in what way the two county societies would co-operate with the Royal next year. A committee was appointed to meet Sir Gilbert and the finance committee was asked to consider the question of financial assistance. A letter was also read from the Town Clerk of West Hartlepool inviting the society to hold their show next year within that borough, and it was agreed to thank the Mayor and Corporation for their invitation, but to suggest that the invitation be extended to some future time, as no show will be held next year.

The fashionable show of the Frome District Agricultural Society, which is acknowledged to be the largest cheese show in England, is fixed for Wednesday next. The cheese entries are above the usual average. The large cheese tent, 240 ft. long and 42 ft. wide, will contain nearly 400 entries of the finest Chedder that can be produced in the world. The butter classes are patronised by the best makers. In the working dairy, the actual making of butter by competitors may be witnessed, many of the competitors being crack hands. Table poultry and eggs are a large entry. In the jumping and driving competitions, of which there is a large entry, most of the best horses are competing, and some fine jumping and driving is anticipated. There is a capital entry of car horses and colts, Shorthorn and Jersey cattle, and sheep and pigs. There is also a large entry of roots, and a capital display of table decoration and herbaceous flowers. Mr. Jennings' steam galloping horses, roundabouts, &c., will also be in attendance. The band of the Volunteer 3rd Battalion P.A.S.L.I. (Frome detachment) will be

in attendance throughout the day. The usual excursion trains will run from all parts. Refreshments on the show grounds are to be supplied by Mr. John Salter, of Salisbury. The Frome Fanciers' Association will hold a great show of dogs, poultry, pigeons on the ground on the same and following days. The annual dinner will be held on the 24th inst., when C. N. P. Phipps, Esq., will take the chair.

Gloucestershire and the Royal Show of 1909.

A meeting convened by the Lord-Lieutenant of the County (the Earl of Ducie) and the Mayor of Gloucester (Mr. Sam Aitken) was held at the Shire Hall, Gloucester, on Monday afternoon to receive a statement as to the subscriptions promised towards the expenses of the 1909 show of the Royal Agricultural Society, which will be held at Gloucester, and to elect a committee to carry out the necessary arrangements. The Earl of Ducie, who presided, said they were all very much indebted to the Mayor of Gloucester for having initiated the negotiations for holding the show of the Royal Agricultural Society for 1906 at Gloucester. Those negotiations had now been brought to a point at which they could act. He thought that what they ought first to do would be to receive the Mayor's statement as to the total promised towards the £6,000 required, and then to appoint a committee to carry out the arrangements.

The Mayor stated that the total subscriptions amounted to £1,908, which he did not think at all bad for a start. They had to remember that during the week in which this had been got together people had been greatly occupied with the festival. The Lord-Lieutenant had subscribed £200 to the fund; Mr. Vassar-Smith, Messrs. Bruton, Knowles, and Co., and Mr. H. Dent-Brocklehurst, 100 guineas each; Lord Fitzhardinge, Lieut.-Colonel Fairfax Rhodes, and Mr. James Horlick, £100 each; Mr. C. G. Clark and Mr. Russell J. Kerr, £52 10s each; and the Right Hon. Sir John Dorington, Mr. F. E. Fox, and Mr. Colin McIvor, £50 each. Some of the large works had not yet sent replies as the amounts they would subscribe, as the matter had to be considered by the directors; but there was ground for the belief that several very substantial sums would come from this source. It was necessary that the whole of the amount required should be made up without delay, because the contract with the society would have to be entered into in about two months' time.

Sir Lionel Darell asked to be put down for 25 guineas, and the Mayor announced that the Bishop of the diocese had handed him a cheque for £25 as his subscription towards the fund.

The Earl of Druce moved a resolution, which was carried unanimously, to the effect that the meeting cordially approved of what had been done.

Mr. St. John Ackers, who seconded, said he was old enough to remember when the Royal Society visited Gloucester before. The old city had had many interesting gatherings, but none, he thought, more worthy of the city and neighbourhood than the meeting of the Royal Agricultural Society.

The Right Hon. Sir John Dorington proposed a long list of gentlemen as the General Committee, pointing out that it was most important that the support of gentlemen in all parts of the county should be enlisted, and that it should be made a big county affair. This proposition having received the support of the meeting, Sir John Dorington proposed that the following should be appointed as the Executive Committee with power to add to their number, and an instruction to do so:—The Mayor of Gloucester, Sir Lionel Darell, the Mayor of Cheltenham, Messrs. R. V. Vassar-Smith, W. F. Hicks Beach, W. Priday, J. Peter, M. G. Lloyd Baker, R. Anderson, J. Horlick, R. G. Foster, and E. T. Gardom.

This proposition was unanimously adopted, after Sir John Dorington and Colonel Curtis Hayward had been added to the list; the Earl of Ducie explaining that it would be the duty of the Executive Committee to arrange all details, and to delegate any or all of its powers to sub-committees of not fewer than five. Mr. G. Sheffield Blakeway, Town Clerk of Gloucester, was appointed secretary.

The Mayor of Gloucester said they had received a letter from the Duke of Beaufort promising what it was believed would be a liberal subscription.

The Earl of Ducie, in acknowledging a vote of thanks, said he hoped and believed the show of 1909 would be a great success. The county offered a good many advantageous points. There was, first, the convergence of the railways; and the county was made up of hills, valleys, and forests. They used to pride themselves on the cheese manufactured in the county; but he was afraid comparatively little was manufactured now that foreign competition sent so much. Their cider left a good deal to be desired, and there were other matters with reference to which hints and advice might be obtained from exhibitions and displays such as they got at the Royal Show.

Fertilisers and Feeding Stuffs.

The Profitable Use of Artificial Manure.

An interesting lecture on the relative values of artificial manures, as applied to different soils, and the correct balance between such manures, so as to ensure their being used most profitably and economically, was given recently by Mr. R. S. Forbes, Dorset County Instructor in Agriculture. The question of profitable manuring, said Mr. Forbes, is one of great interest to all farmers. Every crop removes a greater or less amount of fertilising matter from the soil. Milk and beef also deplete the soil, and should these be sold off the farm its fertility ultimately sinks, unless it is replaced by some sort of natural or artificial manure. A plant requires about ten separate constituents, all essential, before it can grow; but by far the greatest part of all plants is built up of consolidated water and carbonic acid gas drawn from the atmosphere—sources which are practically inexhaustible. The soil is responsible only for a small portion, but, as the strength of a chain depends upon its weakest link, so also the ingredient obtained by the plant with the greatest difficulty regulates the crop. Of all the elements in ordinary cultivated soils only four are likely to run short—*i.e.*, nitrogen, phosphates, potash, and lime, and it is these we aim at supplying in the several manures. Abundance of any one ingredient in a soil will not make up for the deficiency of another. Some soil may only require one fertilising substance to be added before it can produce a full crop. Poor soils would naturally require a complete manure, which supplies all that is likely to be wanted, but it must be remembered that every manure is not complete. Some supply only one or may be two of these fertilising elements, and in consequence we have nitrogenous, phosphatic, and potassic manures. The most important point to a farmer is to know which particular class gives him the best results, or how to blend them for the same end. A knowledge of each group and simple trials on the farm, leaving unmanured parts for comparison, will often be the means of forming a paying investment to the farmer. Vendors of manures are bound to supply the purchaser with a guarantee stipulating the percentage of nitrogen, phosphates (soluble or insoluble), and potash they contain, as the case may be. The condition of a manure, as well as the kind and quality of the plant food it contains, has also to be taken into account when putting a value on it. Good cultivation is essential if the full effect of manure is desired. Not only does it help to make the dormant plant food in the soil soluble, but also gives more vigorous and robust plants. As to lime in the general average of soils this is found in sufficient quantities. It has a many-sided action. Not only is it a plant food, but it has also a physical effect, helping to open heavy soils, it binds together loose soils, helps to liberate other plant foods, combines with the acid in a sour soil and sweetens it, besides being one of the best curative agents to employ in combating club root in turnips. A usual dressing would be about two tons per acre. Too much lime in a soil is about as bad as too little; it has a tendency to sink downwards.

Manuring of Swedes.

This subject is out of season at present, but on the principle announced by Captain Cuttle of "when found make a note of," it may be worth while to make a note of the following instructive recommendations of the Midland Agricultural College as the result of a series of field experiments made by them. The results are summarised as follows:—

1. There is very little difference in the profit per acre resulting from the following dressings: 15 tons farmyard manure, 10 tons farmyard manure, 10 tons of farmyard with a small dressing of artificials.

2. Nitrate of soda proved a better source of nitrogen for the swede crop than sulphate of ammonia, when both were applied at the time of seeding.

3. When the nitrogen portion of the dressing is given at twice, half at seeding and half at singling it is better to give the half at seeding in the form of sulphate of ammonia.

4. When nitrate of soda is the only source of nitrogen given, better results accrue in a dry season, when all is applied at seeding.

5. Superphosphate proved the best source of phosphate, basic slag coming next in order of merit.

6. Of the three sources of potash (sulphate of potash, kainit, and muriate of potash), sulphate of potash was the most profitable; the other two, however, ran it very closely.

7. The following dressing gave the largest profit per acre: 191 lb. nitrate of soda per acre, 2 3 lb. of superphosphate, and 1 62 lb. sulphate of potash.

Nitrogen-Fixing Bacteria and their Work.

Scientific men are still plodding away at their investigations into the mysterious processes which underlie the operations of germ life, and how far their activity can be brought into play for the benefit of agriculture. The writer of the science notes of the *Globe* makes some interesting observations on the subject. He points out that the work of certain species of bacteria in fixing the nitrogen of the atmosphere in a form available for the higher forms of plant life is at present attracting much attention. The possibility of enriching the soil, and obtaining heavier crops through the agency of these bacteria, is being tested by many cultivators. The soil being inoculated with artificial cultures of the nitrogen-fixing organisms, a crop of leguminous plants—beans, peas, &c.—is grown. The bacteria associate themselves with the roots of these plants in what biologists call symbiosis—that is, a living together for mutual advantage. If a bean plant be pulled up, the nature of the association is clearly seen. In the roots there are found a number of little tuber like excrescences. These appear to be of the nature of gall growths, and are caused by colonies of bacteria. The bacteria elaborate nitrogenous products from the free nitrogen of the atmosphere, and of these the bean obtains a share. On the other hand, the bacteria absorb a part of the saline and sugar constituents of the sap of the bean. During the present season a number of cultivators have inoculated their soil with cultures of nitrogen fixing bacteria, and in many cases they have found a marked improvement in the crop.

New Investigations.

Side by side with this practical testing of their value, the scientific study of these bacteria is being further pursued. From nodules on the roots of the blue lupin, for example, Mr. R. Greig Smith isolated a nitrogen-producing colony. It was found on cultivation to be a mixture of different species, the chief of which was an Azotobacter. The mixed culture was found to fix the nitrogen more quickly and regularly than the pure-culture of the Azotobacter. The same experimenter found that the production of slime by bacteria coincides with, and is proportional to, the fixation of nitrogen.

It was also found that conditions which prevent the formation of slime prevent also the fixation of nitrogen. And the presence in the culture of another slime-forming bacterium assists the fixation. The same investigator also finds that all bacterial slimes are nitrogenous. As regards the mutual benefits of plant and bacterium, the former supplies saline and saccharine matters to the latter. The saccharine matter is converted by the bacteria into gum, and this mixed with elaborated nitrogen appears as the so-called "slime." From this the plant absorbs the nitrogenous and carbohydrate constituents.

New Species of Nitrifying Bacteria.

The number of species of bacteria known to possess these remarkable powers is increasing. Three new ones have been recently described by H. Kaserer. The conditions under which the fixation of nitrogen occurs are interesting. One of them is found to convert ammonia directly into nitrates. It forms dense white colonies, and does not liquefy gelatin. Another decomposes ammonium formate into nitrogen and formic acid, and then uses the latter. In the absence of combined nitrogen it produces ammonium carbonate from formic acid and atmospheric nitrogen. A third species decomposes cyanides with the production of carbonic acid gas and nitrogen. In the presence of sugar, however, it also fixes free nitrogen.

Where Inoculation May do Harm.

In testing the practical value of the nitrogen-fixing bacteria it has been found that there is no advantage in inoculating a soil already rich in nitrogenous matter. It would appear that in such a soil they do not exert their nitrogen fixing powers. The above interesting experiments seem to indicate that they may be actually injurious, that they may, in fact, set free the nitrogen already fixed and available as manure. For one of the above-mentioned species in presence of fixed nitrogen, in the form of ammonium formate, sets this element free. In the absence of combined nitrogen, however, it fixes that of the atmosphere. Another of them, we have seen, sets free nitrogen from cyanides. In the presence of sugar, however, it was found to fix the nitrogen of the air. Obviously the farmer and gardener will need to use the bacterial cultures with judgment. For while a soil poor in nitrogenous matter might greatly benefit, a rich soil might be deteriorated.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

An Interesting Experimental Union.

The Experimental Union of Canada is an organisation of young men at the agricultural colleges and institutions and of practical farmers. It has proved a great agent in the dissemination of information in experimental work. During last year 4,050 farmers in the province of Ontario conducted experiments on their own farms on lines laid down by the union for the better production of grasses and cereals, forage crops and roots; they report on the results once a year to the Agricultural College, co-operating heartily with the Experimental department, and in that way great progress has been made.

"One experimentalist in 1889, among other things, brought out from Manchuria a double handful of barley, which is known to a great many of you as common Mandscheuri barley. That was the only seed that was ever brought to this country direct from the country from which it came. It was planted on a small plot the first year, and then the largest seeds selected for the next year and sown. Then," according to the report, "we began to send it out to the different farms, and this year that barley produced from 4 to 5 bushels more per acre than the average barley raised throughout the Province of Ontario. It has been planted on our ordinary farms to the extent of half a million acres; and if you take half a million of acres of grain this year, each acre growing four bushels of barley per acre more than they would have grown had we not brought out those two handfuls some years ago, you can realise that at 50c. a bushel the Ontario Experimental Farm and College and the Ontario Department of Agriculture itself, and all the expenses connected with these three great institutions, would have been paid by that product alone. Hence we feel justified in calling attention to facts of that kind as bearing upon our work. We do the same with wheat, oats, rye, peas, mangels, sugar beets, &c., and we are getting results of a similar nature all along the line."

Soils Benefited by Lime.

1. Soils deficient in lime.

2. Sour soils, on which it acts as a sweetening agent, neutralising the soil-acidity. On land which is newly opened up, or land which is being reclaimed from swamps, the addition of lime is an essential.

3. On stiff clay soils. The action of lime on this class of soils is to lighten them and render them more friable and amenable to tillage operations.

4. On sandy soils, lime acts in an opposite manner, consolidating them and increasing the cohesive and capillary power of the soil.

5. On land which is destined for leguminous crops, or such crops as are specially benefited by the presence of lime. Where a green crop is shown to be ploughed under "green manuring," the previous application of lime to the soil is of the greatest benefit in promoting the growth of the green crop.

Imports of Fertilising Material During Last Month.

	Tons.		Value. £
Bones, whether burnt or not...	2,498	...	12,046
Guano	393	...	1,989
Nitrate of soda (cubic nitre)...	7,355	...	81,669
Phosphate of lime, and rock phosphate	50,780	...	85,809

Russian Mineral Fertiliser Difficulties.

The *Xosiastvo* publishes a long article on the dearness of mineral fertilisers in Russia, which is mainly caused by the immense distances between the sources of supply and the points of consumption In Russia there is only one factory producing Thomas slag; this is near the town of Taganrog, and the carriage of the fertiliser to where it is most in demand—the Baltic provinces and Poland—is so expensive that the farmers of the areas named prefer to get their supplies from abroad. The whole quantity of Thomas slag produced, amounting to 700,000 poods (13,000 tons) a year, is used up in sixteen governments. A somewhat similar state of affairs exists as to superphosphates, to produce which there are several factories, but they are all concentrated in Western Russia, and whilst such a state of the producing industry continues, the writer of the article urges a great reduction in railway carriage.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in the first issue of each month.

When Should Farmyard Manure be Applied?

When the harvest is over, farmers will be turning their attention to the cartage of their manure heaps. As regards the time of year when dung should be applied much depends, as remarked in a Board of Agriculture leaflet, in the circumstances of the particular case. By far the greater quantity of dung goes on to meadows and green crops, and it may be said that in the former case autumn or early winter is the best time to make the application. The complete stocking of the ground with plants obviates much loss of soluble matters by washing. On farms entirely under grass there is no choice but to employ the dung on meadows or pastures, and on such farms it would be bad practice not to cart out all available dung in autumn. Of course, the dungstead will again fill up during winter, and, on the whole it is probably better to distribute this additional supply in spring than to leave it in the heap, subject to waste and yielding no return, till the following autumn. Late spring dressings, however, unless the dung is very "short"—*e.g.*, dung made with moss litter—interfere with the work of the mowing-machine, though this can be avoided by chain harrowing and raking the roughness off two or three months after dressing.

In the case of green crops, part of the dung may with advantage be ploughed in during autumn, but only on clean strong land in a dry district. But if foul and especially strong land has to be cleaned in spring it will be found that autumn dung, by holding moisture, retards the getting of the land into condition in spring. In any case the work of the cultivator brings much of the dung to the surface, and this, being collected with the weeds, is carted off the land again, or possibly wasted by burning. Farmyard manure ploughed in during autumn will decay more rapidly—and especially so in a mild winter—than if left in the dung-heap, so that a relatively larger proportion will be available for the use of the first crop. But just on this account the succeeding crops will not get so much benefit, and this fact has to be borne in mind in estimating the respective advantages of autumn and spring dressings.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

THE SHORTAGE OF HORSES.

The announcement made by Lord Carrington a few days ago, that there was a shortage of 10,000 foals this year, is a serious one, and likely to be far-reaching in its results. It would have an important effect on our horse supply even if there were any chance of the shortage being rectified next season.

No doubt the introduction of the motor omnibus, which has to a certain extent done away with the market for moderate horses, has a great deal to do with the falling off, but the drop is a very big one, and can perhaps scarcely be accounted for altogether by this. The market for third-rate horses is, however, apparently becoming more restricted every day, and it is sure to have its effect on horse-breeding, for we all know that the percentage of moderate horses is a heavy one, however careful the breeder may be. But such a falling off in the number of horses bred is a serious national loss, and moreover, in spite of what may be said to the contrary, horses are likely to be wanted for many a long year yet.

A motor-car is all very well on a good road, but it needs a good road—and a very good road, if we are to judge from the howls of motorists about our roads. But in case of war it will not take the place of cavalry; and if we had a war on our hands, where would our remounts come from?

DEAR BACON AND SOME OF THE CAUSES.

The man in the street is grumbling at the price he has to pay across the counter for his morning rasher of bacon, and he certainly has just cause for the complaint. The morning rasher at breakfast time is a national British commodity; yet bacon is about the dearest food that people buy who are not in a position to cure their own.

Still further, where would the man in the street be for his morning rasher if it were not for the foreigner? Of course he would have to go without, unless conditions changed very considerably at home, for about sixteen millions per annum are being paid for foreign bacon and hams. There is something wrong; of course there is. What is it? Some say the middleman is getting all the profits; but he says not, and blames the producer — or the person who should be the producer is the British farmer—for his backwardness. And the latter, what of him, hampered as he is with grandmotherly restrictions that would be less irksome if they succeeded in stamping-out swine fever? We hear complaints that the regulations are doing as much to stamp out pigs as fever, and there appears to be something in it.

The increase of the milk traffic is also responsible for the shortage of pigs, for in the old cheesemaking days piggy was essential to consume the by-products of the dairy, than which there is nothing better for pig feeding. Kitchen waste is now the only waste available for young pigs, and, having grown tired of putting his hand in his pocket to provide a substitute for the by-product of the dairy, many a milk-selling farmer has given up pig keeping, and his styes are empty. Speaking for the future, perhaps things will be better, because, if reports be true, pig-keeping is on the increase again now, and, with the present demand for bacon, there is certainly room for considerable development.

CHEDDAR CHEESE PROSPECTS.

A sudden fall in the price of cheese has startled the sellers of Somerset, so considerable a drop as 10s. a cwt. in the course of a week not having been at all anticipated. Makers cannot find anything to account for it, though

the dealers say that it is due to the large amount of cheese of indifferent quality offered. It is probable that the heavy make, not only in the West but in the Midlands, is the real cause, and there will probably be some recovery in the price next week. The drop is not in the best dairies.

Half the information which cheese makers have been anticipating has been forthcoming in regard to cheese-school results. The price at which cheese has sold is now officially confirmed, and although this was for May and June, only the details relating to the May make have been announced.

These show that 5,027 lb. of green cheese were made in May, and the shrinkage to the date of sale was nearly 5¼ per cent. The temperature of rennetting was 84 deg.; first and second scalds, 88 and 92; acidity of milk when rennetted, 0·195; of whey at the end of the second scald, 0·17; when vatted, 0 85. The average time when vatted was 3.24 p.m.

Now these particulars could be made much more interesting and instructive to cheese makers. As the information is not intended to be for only those who attend it, but for others, it ought to be easily possible to publish at the end of the season a day by day record of these results, which any cheese maker desiring it could obtain. The comparisons with the ordinary farmhouse records—many of which are now being very fairly kept—would prove instructive.

The additional details might be added of temperature and rainfall. They are kept in the neighbourhood, and would be of value for a scientific study of the conditions. The great aim should be to get the fullest advantage possible out of these movements.

The itinerant instructress in cheese-making in Somerset follows a somewhat different method to that of Miss Cannon at the school, and it is only fair to say that a great many makers have improved by the adoption of the "starter" system, which she teaches. There may be some good records in existence of the details of temperature, climatic conditions, times of vatting, and so forth, where this second system is in force. The comparison between the two would be of extreme value.

Notes of the Week.

This is decidedly a "plum" year. According to an old proverb—

"A 'plum' year is a 'dumb' year,"

though what is meant is not clear.

"The harvest truly is plenteous, but the labourers are few," is the cry of many farmers at present.

In some places the "town crier" is calling for men to work at harvesting.

Remarks about the weather get monotonous, but it may be noted that the present spell of sunshine is a record for this year.

The glorious harvest moon looks down on harvest operations in full swing throughout the country.

Afforestation is an awkward word, but it expresses a very good movement—the conversion of barren land into forests.

An historic example of turning lands—but in that case good land—into forests was the action of William the Conqueror in making the New Forest in Hampshire for hunting purposes.

Continental experts have shown how it can be done - leguminous crops nourished with plenty of mineral food; then the crop ploughed under and the trees planted.

"Give fools their gold and knaves their power,
Let fortune's bubbles rise and fall,
Who sows a field or trains a flower,
Or *plants a tree* is more than all."
(Old Song)

To strike or not to strike? that is the question at present agitating the minds of many men.

Numbers of men in different trades seem to have been inoculated with strike germs; railwaymen, boiler-makers, coal porters, and even hop pickers are feeling the influence of the germ.

Everyone in England considers himself a judge of horses, and apparently also of mushrooms, with the sad result that in the first case, many buyers of horses get taken in every year, and in the second case consumers of mushrooms get taken into the cemetery.

Mr. Haldane, it is said, carries a cane made of cordite. This seems unnecessary, as he has recently been so much blown up about the horse-shoes.

If he suffers from nightmare, he probably dreams that he is being kicked by an animal with enormous American hoofs.

When Queen Victoria ascended the throne we imported into this country only 400,000 qr. of wheat a year. Now we import over 26,000,000 qr. annually.

We then grew about 12,000,000 qr., now just about half as much. This is a topsy-turvy example of the usual law of supply and demand.

There is evidence that mankind has made use of horses for more than 5,000 years, and we shall not be able to do without them.

Some people try to make a distinction between "cyder" and "cider." The former, it is claimed, may be a concoction of chemicals, but the latter must be apple juice.

The public know no such distinction. When a man asks for a drink of cider he doesn't bother about the spelling of the word, but expects something made from the juice of apples and not chemicals.

The English chicken must look to its laurels. The manager of a large London hotel, using thousands of chickens a year, says the English chicken is inferior to the French bird.

"Its breast is not so full and meaty, nor its skin so good." The English breeders must buck-up and not be chicken-hearted.

Agricultural industries in France occupy 18,000,000 people, or 45 per cent. of the whole population.

Happy France, said a German statesman; it can produce sufficient to feed all its inhabitants without being obliged to buy from outside sources.

There seems to be some special affinity between music and farming. Paderewsky breeds prize pigs, and Madame Calvé, the great singer, has a model farm, and has just won a gold medal at an agricultural show.

Mr. Ailwyn E. Fellows offers the perfection of counsel to farmers when he recommends them not to press new wheat on the market.

Unfortunately, in most cases, necessity is the dominent factor of the situation.

Stranger: "That's a splendid pair of pigs. What are they worth now?"

Farmer: "When they have been killed by a motor car they will be worth at least £20 to me."

A lady, intent on raising some chickens, purchased some eggs for the purpose. She inquired of a friend how long the eggs should remain under the hen, and the friend replied:—"Three weeks for chickens, and four weeks for ducks."

Some time after, they met again, and the friend asked how the chickens had turned out

"After three weeks," the lady replied, "I looked and there were no chickens, so I took the hen away, as I didn't want ducks."

The Gloucestershire Agricultural Society have decided to hold their 1908 show at Cirencester, on May 13 and 14.

THE FARMERS' DIARY.

TUESDAY, SEPTEMBER 24.—Banbury Association's Annual Show—Great Gransden Agricultural Show—Rugby Foal Show and Sale.—Ayr Ram Show—Sale of Mr Bruce Ward's Jerseys at Droitwich—Special Sale of Suffolk Rams, Ipswich—Shalden Manor Sale, near Alton, Hampshire—Great Agricultural Sale at Sowerby, near Garstang.

WEDNESDAY, SEPTEMBER 25.—Ayr Ram Sale—Altrincham Show—Byfield Foal Show and Sale—Frome Show and Sale—Sending-in Day for the Market Rasen Show—Summercourt Fair—Winscombe Fair—Newark Cheese Fair—Newark Sheep Sale—Newark Special Sale of Shearling Rams.

THURSDAY, SEPTEMBER 26.—Ashbourne Shire Horse Society's Show—Lampeter Show—Witheridge Great Fair—Shorthorn Sale at Drayton House Farm, Thrapston—Ampfield Estate Sale, near Romsey, Hampshire—Ewenham Manor Sale, near Louth, Lincoln—Great Horse Sale at Doncaster.

FRIDAY, SEPTEMBER 27.—Ashford Ram Show and Sale—Dorchester Annual Show—Bridgwater Fair—Shorthorn Sale at Brigstock—Sale of Shorthorns at Waterbrook, near Kendal—Kent Marsh Sheep, Great Sale at Ashford—Great Sale of Pigs at Weedon, Northamptonshire—Shrewsbury Cattle Sale.

SATURDAY, SEPTEMBER 28.—Michaelmas Day falling on the Sunday this year, the many Michaelmas Fairs will be held this day—Marazion Great Fair—Wincanton Great Fair—Great Sale of Blackfaced and Cheviot Ewes at Thornhill, Dumfries—Horse Sale at Yeovil.

MONDAY, SEPTEMBER 30.—Wainhouse-corner Agricultural Fair—Louth Shire Horse Society's Show—Sale of Milking Cattle at Poynings Sussex—Fairs at Stamford and Sleaford.

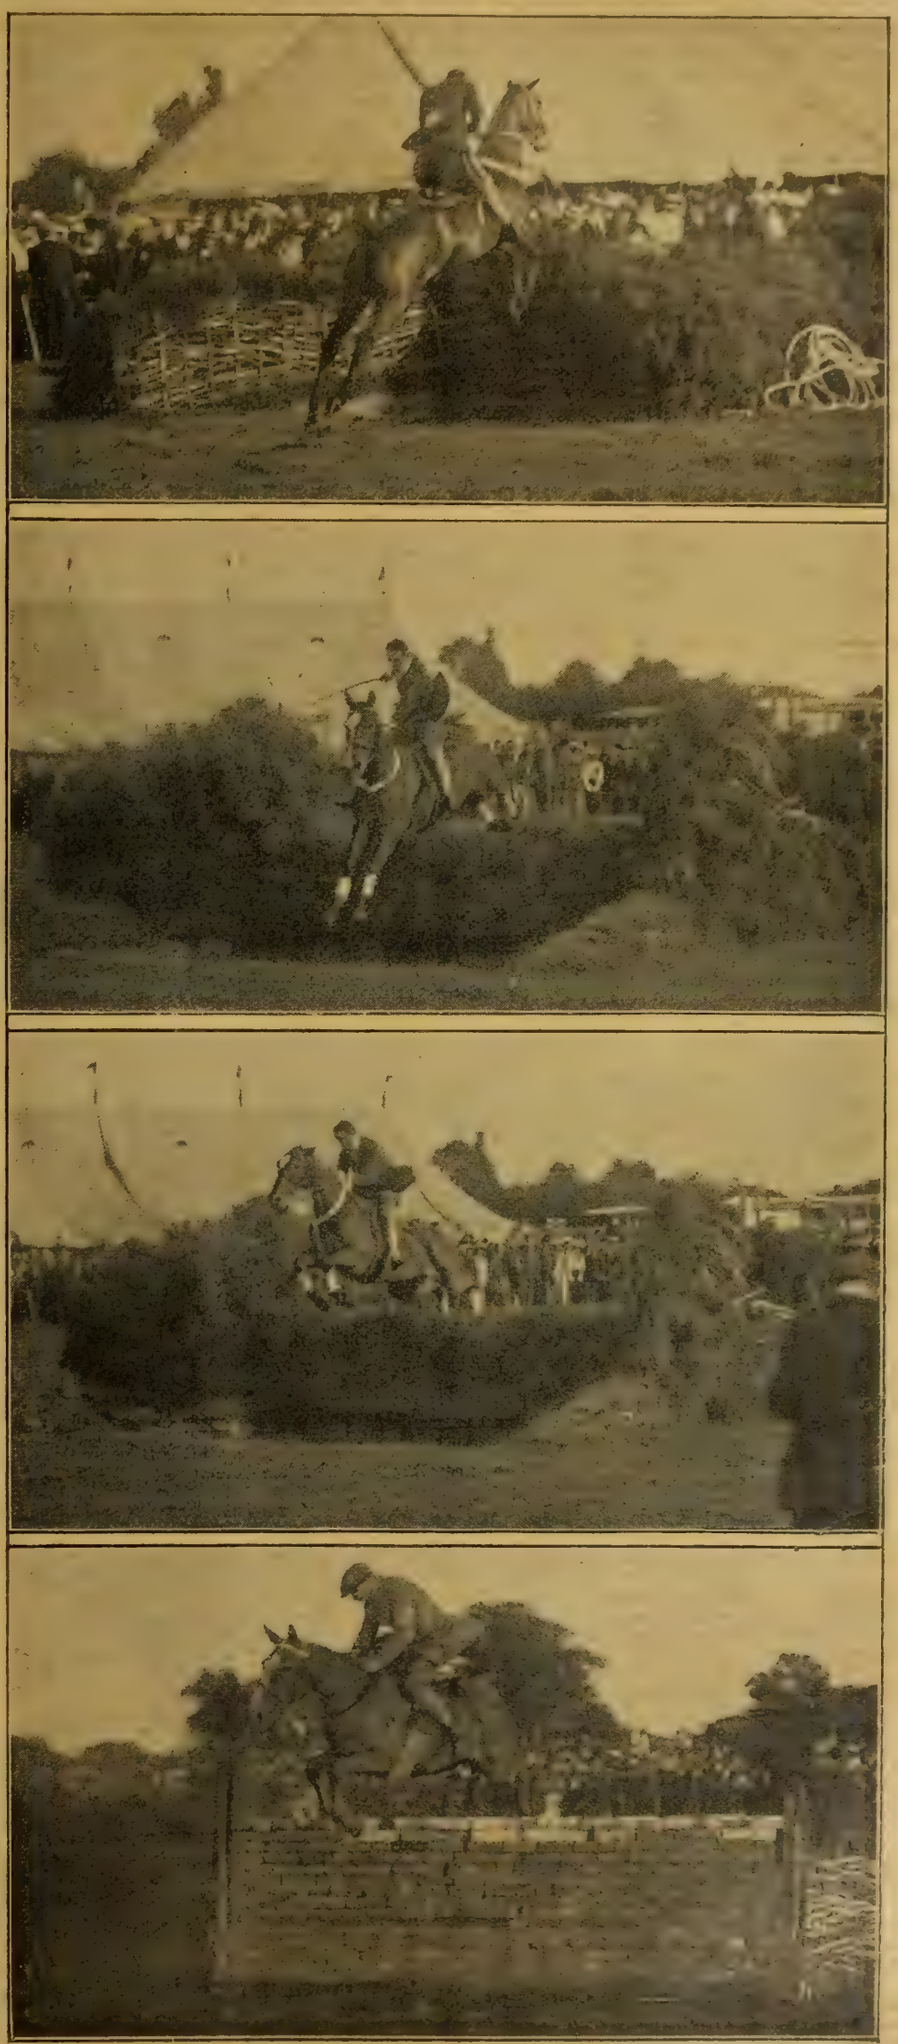
Forthcoming Sales.

For the Kent and Romney Marsh Sheep Breeders' Association's eleventh annual show and sale which takes place on Friday next, the 27th inst., at the Cattle Market, Ashford, an entry of 500 rams has been received, all the well-known flocks being represented, as the following list of consignors will show:—Earl Sondes, Earl Verulam, Lord Harris, Major Powell Cotton, Captain Somerset Webb, and Messrs. E. Ascherson, A. Amos, J. P. Barnes, J. B. Blake, G. Buley, F. de B. Collard, Exors. of the late W. Elvy, G. Farmer, Chas. File, John File, T. File, Arthur Finn, L. H. and G. W. Finn, O. E. d'Avigdor Goldsmid, G. M. Goodson, E. Hambrook, L. Hardy, M.P., J. H. Harvey, W. R. Harvey, G. E. Hawkins, A. J. Hickman, S. Kingsnorth, W. E. Long, J. D. Maxted, W. Millen, F. Neame, J. P. Palmer, J. E. Quested, H. Rigden, G. C. Swindells, H. Walters, and T. Wotton.

The society as usual offers several prizes, and there should be some keen competition for these. The sale will commence at 11 o'clock precisely, and will be conducted by no fewer than nine auctioneers. Catalogues, &c., can be had of the secretary, Mr. W. W. Chapman, Room 4, Mowbray House, Norfolk Street, Strand, W.C.

In connection with Newark Cheese Fair on Wednesday next, Messrs. Edward Bailey and Son will hold their annual sale of Lincoln Longwool sheep. The animals entered are from the flocks of several well-known breeders, including Mr. J. Abraham, Mr Joseph Brocklebank, Mr. John Brocklebank, Mr. W. E. Brocklebank, Captain J. S. Thorpe, Mr. E. J. Storm, Mr. T. S Cullen, Mr. E. J. Bullen, Mr. W. H. Pate, Mr. R. B. Burrows, &c. The sale will commence at 9.30 a.m.

Mr. Gavin Low will hold a special sale on Thursday next of 1,000 head of Irish store cattle, including bullocks and heifers of the different breeds. The sale will take place at his mart, 50, Prussia Street, Dublin.



Mr. Ailwyn E. Fellowes, late President of the Board of Agriculture, speaking at the Mutford and Lothingland Agricultural Association's Show at Lowestoft on Tuesday, congratulated the farmers on having what appeared to be a fairly average harvest. They could not tell for certain until the threshing took place, but he hoped the quality would be better than they at present anticipated. He thought they would agree with him that such of them as were not pressed for money would do well not to thresh in a hurry this year. A year or so ago an enormous amount of grain was thrown on the market, and prices immediately went down. He had never been against small holdings, but he believed that they could not generalise; they might answer in one part of the country and absolutely fail in another. Where, however, they got suitable land and men who knew their job, small holdings might be a success in many districts. If the new Agricultural Commissioners were men who knew their business, and were not Party politicians, the Act would be a success. He hoped that it would be given a fair trial in the agricultural districts.

HORSES.

Four Good Jumpers.

One of the most popular features of gatherings of agriculturists, particularly in the hunting districts, is the jumping; and many of the best jumpers are known up and down the length and breadth of the land. Particularly is this the case with the horses of Messrs. Glencross Brothers, of Frome, and therefore our illustrations of some of these will be of interest of our readers.

The first represents Mr. James Glencross on his mare Kitty, taking off at a jump, which came as a surprise to man and horse, a ditch in front of a furzed hurdle. The obstacle was very successfully negotiated. The second represents the same rider on Nomination clearing the ordinary water jump of a show ring, whilst the third is a view of Mr. J. Glencross clearing the same jump on Bampton. A remarkably good jumper from the Duke of Beaufort's country, Mr. F. J. Smale's Compton Bassett, has recently distinguished itself in the West, and we give a snap shot of this animal giving one of the best performances ever seen over a wall 4 ft. high.

FOUR GOOD JUMPERS.

(See the Letterpress.)

NOTES AND JOTTINGS.

"He doth nothing but talk of his horse.'
—"Merchant of Venice."

Death of a Well-known Farmer.

A YORKSHIRE farmer, whose name was well known out of his own county, passed away on Monday, the 16th, at the residence of his son, Perssick House, Marton-in-Cleveland. This was Mr. Robert Brunton, who for upwards of half a century was closely identified with the agricultural, public, and social life of the village of his adoption, Marton-in-Cleveland. It was late in the forties or early in the fifties—I cannot say to a year—that Mr. Brunton went to Marton, which was then one of the most sporting little places in the whole of Yorkshire. Mr. Brunton's natural taste for sport was here fostered and directed in an excellent school, and he soon became a regular attendant at the meets of the Cleveland Hounds, and one of the hardest riders of his day. His stud was never a very large one, but he was a fair judge, and probably had fewer bad horses than fall to the lot of most men through his hands.

Mr. Brunton as an Exhibitor.

MR. BRUNTON was contemporary with the great development, in showing which took place last century, and he took an active part in it. When he first came to Marton there was but the Cleveland Agricultural Society, then under the able secretaryship of his neighbour, Mr. Thomas Parrington, and the Whitby Agricultural Society between the Esk and the Tees, if we may accept one or two village shows which have afterwards developed. It was in the later fifties that shows began to increase rapidly all over the country, and it was in the later fifties that Mr. Brunton first became an exhibitor.

His First Show Horse.

HIS first show horse of any great merit was the Hunter mare Lady Bennett by St. Bennett, a famous horse who sired many good Hunters in his day, dam by Lord Collingwood. What was the next cross I do not know, but it is not unlikely that her granddam was a Cleveland Bay mare. I do not remember the name of her breeder, if indeed I ever knew it, but in her young days she was the property of Mr. William Vaughan, of Middlesborough Lodge. She was a bit of a handful, and proved too much for him, and she was purchased by Mr. Brunton, who was not very particular in those days about what a horse did so long as he galloped and jumped. So Lady Bennett became his property at a very reasonable figure, and his friends got a fright now and then, for she was very resolute and he let her go, and she jumped some remarkable places. Doubtless they had many narrow escapes, but they had no mishaps, and eventually she became a very useful and handy Hunter. He showed her at the Durham County Show at Stockton-on-Tees in 1859, when she was eight years old. Jumping was then quite a new feature at shows, and there were no jumping prizes, the Hunters shown in saddle having to jump the fences to the satisfaction of the judges. These fences were a thorn fence and posts and rails. At Stockton the posts and rails were 5 ft. high and fast, and Lady Bennett was the only one in a class of some fifteen or sixteen that would face them. Ridden by her owner she cleared them gallantly and, of course, won. She then became the property of Mr. Thomas Parrington, for whom she won in the class for the best Hunter mare at the great show at Middlesbrough in 1860, where she had seven of the best mares of the day behind her. Mr. Parrington won other prizes with her, and hunted her some seasons, and then he sold her to Mr. Smart Atkinson for a brood mare.

Then and Now.

IT is worth while pausing a moment to consider the difference there was in the conditions of Hunter showing then to what there was within a few years, and to what there is in the present day. Then secretaries of shows went into the hunting field to find the horses to fill the classes, and they found them. Lady Bennett was nine years old when she won at Middlesbrough and she had been hunted hard since she was five years old—probably since she was four. Within a very few years the show Hunter had never been hunted at all unless letting him see hounds a few times in the cub hunting season can be called hunting. During the last few years there has been an improvement in this direction, though I dare say there is room for more. However, the trend of present day show Hunter management is a marked improvement on what prevailed a few years ago. A well-known exhibitor took me to see one of his horses at the commencement of the show season, and remarked that he would make a better appearance later on, as he had been hard hunted.

Joe Bennett.

TO return to Mr. Brunton's horses. Good as Lady Bennett was, her son Joe Bennett was a better, and he certainly earned for himself the position of one of the great show Hunters of the nineteenth century. A big, upstanding bay, with the best of shoulders and beautifully turned, he had plenty of bone, and was perhaps one of the best gallopers for a big horse I ever saw. His weak point was his feet, which were rather brittle. There was not much fault to find, but they certainly might have been better with regard to the toughness of the horn, but so far as I know, there never was any trouble with them. Joe Bennett was by Hark Forward, and was foaled in 1867 when his dam was sixteen years old. Mr. Brunton purchased him in the latter part of the summer of 1868, and he won a few prizes for him as a yearling. In the following year he made a pretty clean sweep of the two-year-old prizes, and Mr. Bruton refused 200 guineas for him, a handsome profit, indeed, on the 30 guineas he had cost only a year previously. His name soon became known all over the country, and he travelled far and wide, picking up prizes at most of the shows he visited. He made his first great mark at the Yorkshire Show in 1871, when he won in the four-year-old class with fifty-three horses behind him. Mr. Brunton used to say this was the best class of Hunters he ever saw in a ring, and I have heard other good judges say the same. Joe Bennett continued his winning career, and a rare lot of victories to his credit in 1872 and 1873. In the latter year he won at the Royal at Hull, and also took the champion prize of 100 guineas for the best Hunters in the show. At this show after he had won he was objected to for his wind by the owner of a horse he had beaten all over the country from the days that he was four years old, a piece of very questionable taste to say the least of it. He was put through a very severe trial, and he came through the ordeal with flying colours, but unfortunately he happened on an accident. The going was very deep owing to some heavy thunder showers, and in turning the corner of the ring he got a very bad over-reach, cutting himself badly. The injury was so serious that permission was given to miss the parade, and it also prevented his sale to the late Mr. Hall, of Scarborough, who offered 600 guineas for him. Joe Bennett holds the unique record of having won at Darlington seven years in succession.

Mr. Brunton as a Horseman.

MR. BRUNTON could certainly not be called an elegant horseman, nor were his hands of the best; and horses that he had ridden a great deal always had a carriage of the head of their own. But if they were not interfered with they carried you, and as is not infrequent with men whose seat and hands do not appear right in the eyes of the critics, he was a much better horseman than he seemed. He had consummate judgment, and he could get to the end of a very good run on a very bad horse, which is a good test of ability in the saddle. He was one of the best men to hounds I ever knew, seeming to know intuitively the way they were bending in the big woods where they could not be ridden up to. His rule for riding to hounds was a simple one. "It is the easiest thing in the world," said he to me once; "it's only knowing when to open a gate and when to jump one." Mr. Brunton, who was in the seventy-sixth year of his age, leaves a wide circle of friends to mourn his loss.

THE LOOKER-ON.

The Earl of Durham's Clydesdales.

The Earl of Durham's well-known stud of Clydesdale horses having once again outgrown its accommodation, a choice selection was on Thursday brought under the hammer at Bowes House, near Fence Houses. This was the fifth similar sale here, the last having been about five years ago. Last week the catalogue consisted of forty animals, all of them well bred, and including several who have had a distinguished career in the showyard. They included seven mares, thirteen foals, three three-year-old fillies, four two-year-old fillies, four yearling fillies, two yearling colts, four yearling geldings, two two-year-old colts, and one three-year-old gelding.

There was a large company of buyers present, and one or two fairly high prices were realised, but they did not on the whole come up to expectation. The top price was given by Mr. Brydon for the Seaham Harbour Stud, who paid 110 guineas for Lambton Maud, a fine bay mare who has had a distinguished career in the showyard, her prizes including firsts at the Northumberland and Durham County Shows this year, and twelve other awards. Seventy guineas was the next highest price, and this was given by Mr. Mountford, of Cooper's House, for Lambton Chance, another mare by the same sire—viz., Lord Stewart, whilst a similar sum was given by Mr. Trotter for the three-year-old filly Lambton Darkie by Sir Andrew. The best of the two-year-old fillies—viz., Lambton Queen, with four prizes to her credit—was secured by Mr. Marshall, of Stranraer, for 68 guineas. A pair of two-year old colts brought 85 guineas, and 65 guineas was paid by Mr. Jones, of Fence Houses, for a handsome three-year-old gelding, second in his class at the recent Durham Show at Wynyard.

The total of the sale was £1,512 10s., the averages being as follows:—Seven mares, £394 5s.; thirteen foals, £322 7s.; three three-year-old fillies, £174 6s.; four two-year-old fillies, £169 11s.; four yearling fillies, £162 15s.; two yearling colts, £58 16s.; four yearling geldings, £72 19s.; two two-year-old colts, £89 5s.; one three-year-old gelding, £68 5s. Appended is a list of the chief sales:—

Sale at the Seaham Harbour Stud.

The annual sale of Clydesdale horses, Hackney and Hackney ponies, and store cattle, belonging to the Seaham Harbour Stud, Ltd., took place on Wednesday at Seaham Harbour and attracted a large company of buyers from all parts. The whole of the stock was offered without reserve, and comprised fifty-six Clydesdales, three Hackneys, and sixty-nine head of cattle. The Clydesdales, the feature of the sale, consisted of seven filly foals, eleven colt foals, two one-year-old fillies, one one-year-old colt, one two-year-old colt, five two-year-old fillies, six three-year-old fillies, eighteen brood mares, and six two-year-old geldings, all of which maintained the high reputation of the stud. Most of them were by the principal stud horse Silver Cup, sire Baron's Pride, dam Balmedie Vesta, which has won the highest honours in the national showyards of the United Kingdom, and year by year his reputation as a breeder is enhanced. The foals were a splendid lot, seven of them having each won one or more first prizes.

The sale commenced with the cattle, which were well bred and forward in condition, some of them being quite fit for the butcher. The sixty-nine head were quickly disposed of at fairly satisfactory prices, the average working out at £13 each; the top price was £16 5s.

The prices obtained for the Clydesdales were in many instances disappointing, and many of the buyers certainly got big bargains. The filly foals were first offered, and the best price for these was 63 guineas, given by Mr. Taylor, of Renfrew, for Noontide, by Silver Cup, first prize winner in the open class at the Durham County Show, the only time exhibited. Junket, another of Silver Cup's produce, which won the open special at the N.E. Durham Show, and first at the Northumberland Show at Tynemouth, was bought by Mr. Walter Aitkenhead, of Polmont, for 50 guineas, whilst at 60 guineas Mr. W. R. Trotter, of North Acomb, was the purchaser of Mimosa, by Silver Cup, winner of two firsts at the N.E. Durham Show, first at Durham County Show, first at Beamish and Pontop Show, and first at Lambton. The others made up to 45 guineas, the average for the seven being £47 2s. Colt foals did not sell so well, for the average for eleven was about 32 guineas, top price being 47 guineas, paid by Mr. Taylor, Renfrew, for Silver Coin, by Silver Cup, winner of two seconds at N.E. Durham Show, second at Greatham, first and second at Durham County, and first and second at Easington.

Two yearling fillies sold at 28 guineas and 25 guineas, whilst the best figure for the two-year-olds was 44 guineas, realised by Nectary by Silver Cup, purchased for the Cramlington Coal Co., who obtained a number of choice animals. Other two-year-old fillies made 33 guineas, 27½ guineas, &c., whilst Silver Pearl, a grey two-year-old colt, made 50 guineas, Mr. J. T. Cox, Sunderland, being the purchaser. The six three year-old fillies averaged £47 3s., three going at 30 guineas or over, and the top price was 58½ guineas, paid by Mr. M'Clement Irvin for Cambric, a lovely black, whose dam won first at the Tyneside Show and second at Brampton, the only times exhibited.

Eighteen brood mares were offered, and they were typical of the highest class of animals bred by the stud, but prices on the whole were disappointing, one being sold for as low as 10½ guineas, whilst the highest was only 57 guineas. This latter sum was got by Necklet by Holyrood, which has won fifteen first prizes, two seconds, and one championship. She was secured by Mr. Lewis, Penrith, whilst Mr. T. Oswald, of Durham, paid 56 guineas for Gratitude, which won first prizes at Yarm and the Durham County show, both as a yearling and a two-year-old. The brood mares altogether realised £727 13s., an average of £40 8s. each. The six geldings ranged in price from 12½ guineas to 51 guineas, the latter sum being given by Mr. Marshall for a two-year-old bay, which has already won fourteen first prizes. The three Hackneys were the last to be disposed of, but only reached moderate prices, two going at 20 guineas each, and the other at 18 guineas.

The amounts realised by the various lots were as follows:—7 filly foals, £329 14s.; 11 colt foals, £350 14s.; 2 yearling fillies, £55 13s.; 1 yearling colt, £28 7s.; 1 two-year-old colt, £52 10s.; 5 two-year old fillies, £159 12s.; 6 three-year-old fillies, £282 19s.; 18 mares, £727 2s.; 6 geldings, £183 15s.; 3 Hackneys, £60 18s.; total, £2,231 5s. Cattle, £897 12s. Grand total of sale, £3,128 17s.

Sale of Shetland Ponies.

An interesting sale of Shetland Ponies took place at Earlshall, Leuchars, N.B., on the 14th inst, when there came under the hammer a number of this picturesque breed from the studs of Mr. R. W. R. Mackenzie, Earlshall; the Seaham Harbour Stud Company; Mr. Gavin Hadden, Earls Croome, Worcester; Mr. George A. Miller, Lawmuir; Dr. Charles Douglas, Auchlochan; Mr. Francis N. M. Gourlay, Moniaive, Dumfriesshire; Colonel Smythe, Methven Castle; Mrs. Fawcett, Old Branhope Grange, Leeds; Mr. Wm. Matthewson, Comrie Castle, Fife; Mr. David Dow, Balmanno; Messrs. J. and D. Beveridge, Aberdalgie; and Mr. John Kidd, Rhynd, Leuchars.

The attendance was the largest seen at these sales—this was the fourth of the series—and trade was brisk throughout at prices which showed an improvement on former sales. There was an active demand from America, and an average of £22 14s. 9d. for eighty-four ponies, with 120 guineas paid in two instances, was regarded as very gratifying. The purchaser at this price was Mr. Taylor, of Pitlivie, who was purchasing for the Argentine, and the animals he bought were:—Mr. Mackenzie's Merryman, a compactly-built four-year old, standing 35 in. high, sired by Tiffor, and winner of the first prize at the Highland Society's Show last year; and Mr. G. A. Miller's Steinar, a handsome nine-year-old black stallion, and a son of Duncan, and whose pedigree on both sides goes back to Jack and Dandy. Mr. Mackenzie got 60 guineas from Miss Broughton for a three-year-old filly, and sold several at 30 guineas each, whilst Mr. Miller's second best price was 45 guineas given by Dr. Douglas for Barbara, a five-year-old mare. Mr. W. Matthewson sold at prices up to 37 guineas, Mrs. Fawcett's lot made up to 36 guineas, whilst

other consignments made up to 30 guineas. The averages were as follows:—

Mr. G. A. Miller (6), £42 6s. 8d.; Mr. R. W. R. Mackenzie (30), £26 9s. 10d.; Mrs. Fawcett (11), £25 11s. 7d.; Messrs. Beveridge (1), £21; Mr. F. N. M. Gourlay (8), £19 12s. 6d; Mr. W. Matthewson (5), £19 6s. 10d.; Mr. G. Hadden (9), £16 0s. 10d.: Mr. D. Dow (2), £12 1s. 6d.; Dr. Chas. Douglas (2), £11 5s. 9d.; Colonel Smythe (8), £11 1s. 7d.; Mr. John Kidd (2), £11 0s. 6d.

Sale of Clydesdales at Perth.

Some capital prices for pedigree Clydesdales were obtained at the sale held at Perth Auction Mart on Tuesday. The catalogue consisted of selections from various well-known studs, and many first-class animals came under the hammer. Mr. Kerr, of Harvestoun, had the honour of securing the top price of the sale and also the best average, for his fifteen made the excellent average of £149 10s. 6d., whilst the top price was 345 guineas paid by Mr. Scott Wyllie, Milton, for the famous prize-winner, the four-year-old Veronique. Queen of the Ochills, also from Mr. Kerr's stud, realised 300 guineas, from Mr. Wighton, Durham, Budding Rose went at 220 guinea to Mr. Lamb, Heaton House, Carlisle, whilst seven others of Mr. Kerr's lot made three figure prices. Lord Polwarth sold twelve at an average per head of £66 15s. 4d., the best prices being 165 guineas given by Mr. Dawson, Pollockshields, for the three-year-old Heather Bell, and 140 guineas by Mr. Scott, Kinpurney, for a filly; Mr. Robertson, Bullion, Invergowrie, sold three at an average of £103 15s. 4d., top price 150 guineas; Mr. Wilkie, Pitlaudie, Redgorton, sold Barney, foaled in 1905, for 190 guineas to Messrs. Dalgetty Bros., Dundee; whilst the last animal to be sold, a yearling colt sent by Messrs. Stirling and Son, Darlingfield, Kero, realised 320 guineas, Mr. Dunlop, Dunmuir, Ayr, being the purchaser.

PIGS.

Sale of Mr. F. A. Holman's Berkshires.

The sale of the herd of pure bred Berkshire pigs belonging to Mr. F. A. Holman, at Whitchurch, Hants, was well attended, and some satisfactory prices were obtained. Boars made up to 21 guineas, which sum was paid by the Reading Corporation for Dunley Lad. Other boars were bought by Captain Henderson at 14 guineas; Mr. Barnes, Birmingham, 11 guineas; Earl Carnarvon, 9 guineas; and Messrs. A. Brown, Ltd., at 8½ guineas, the average per head working out at £8 3s. 6d. Sows and their litters realised up to £21, given by Mr. Buckley for Dunley Fairy and her litter of five, whilst he also gave £18 7s. 6d. for Welmore Orchard Pride and her litter of nine, a similar price being given for Dunley Choice and her litter of six by Mr. A. Hiscock. Sows and gelts averaged £7 2s. 3d. each, the best prices being 17 guineas, Mr. A. Hiscock; £16 5s. 6d., Lord Calthorpe; 9 guineas, Dr. Macdonald; and 8 guineas, Mr. Cannings.

During a fair at Keady, co. Armagh, two cows, frightened at a passing traction engine, dashed into a dwelling house, and rushing into the parlour, created great havoc among the furniture, breaking almost every article in the room before they were driven out. On leaving the parlour they rushed upstairs, where they again wrought destruction on everything in their way, and it was with great difficulty that they were once more driven into the street.

SHEEP SALES AND FAIRS.

Bourne.

At a sale held at Bourne on Tuesday close upon 2,000 animals were penned, the quality being considerably above the average. Theaves and ewes sold well, the former making as high as 66s, and the latter up to 64s. There was a smaller show of lambs than usual, but they sold well, making up to 40s. There was a good sale for rams, prices ranging up to 6½ guineas.

Driffield.

The second of the lamb fairs at Little Driffield took place on Thursday, when some thousands of lambs were offered and met purchasers at prices varying from 38s. to 42s. per head. The principal feature of the fair, however, was the ram sales, which, year by year, have so increased in number, until the auctioneers found much difficulty in getting through with the number of lots they had to dispose of, and in finding purchasers. Rams, in some classes, made good prices, but a good many failed to find purchasers.

Messrs. G. W. Clark and Sons, of Driffield, submitted several lots of rams. The first to be put into the ring were thirty from the well-known flock of Leicesters, the property of Mr. E. F. Jordan, of Eastburn, and they made some good prices, £15 10s. being given for one by Mr. Stamper, of Highfield, Nunnington, whilst others made £11 (Mr. Bearpark, Sewerby, and Mr. R. Featherstone, Cayton), £10 5s. (Mr. Stephenson, Skelton), £10 (Mr. Consitt, Cranswick), £9 5s., and £9. Twelve Lincoln shearlings were offered from Mr. Jackson, of North Dale, and made up to £8 5s., paid by Mr. J. C. Stubbins. The top figure in the Buckton Hall lot of Lincoln shearling rams, from Mr. Joseph Jackson, fifteen of which were offered and sold, was £8 10s., Mr. D. Stubbins and Mr. E. Banks, Carnaby, being purchasers at that figure. The lot averaged about 6 guineas. Twelve Lincoln shearling rams from Mr. T. A. Jackson, Bridlington Grange, averaged close up to £11, the highest-priced ram going to Mr. Triffit, of Flixton, for £18, whilst other top prices were:—W. Wright, Lissett, £15 5s.; J. Buttle, Newbald, £15; W. Wright, £12; Mr. Walker, Scarborough, £11 5s.; and Mr. Walmsley, £10 10s.

Messrs. Hornby and Wilberfoss offered several several consignments from leading local breeders. Twenty Oxford Down ram lambs, the property of Mr. A. J. Coulson, Watton Abbey, were first offered, and made up to £7, the ten sold averaging about £5 10s; twenty Oxford Down ram lambs from Mr. W. Wilson, Speeton, were put into the ring, and made up to £12 10s; the lot averaging £6 6s.; thirty Lincoln shearling rams, the property of Mr. T. Crompton, Nafferton, made up to 15 guineas, which sum Mr. F. Buttle, Kirkburn, gave for a grand animal, the next best price being paid by Mr. C. Goodlass, Skerne—viz, £9 12s. 6d. Fifteen shearling Leicester rams from the flock of Mr. Stamper, Nunnington, made good prices at the beginning. Mr. Grundon, Neswick, paid £10 10s. and £14 3s. 6d. for Lots 1 and 2 respectively, but prices were not maintained, and declined to about 6 guineas for the remainder sold. The best price for the thirty Lincoln shearling rams from Mr. H. F. Duggleby, Nafferton, was 4 guineas given by Mr. H. Brumby, South Dalton, for Lot 1, others paying up to £9 9s., whilst shearling Leicester rams, the property of Mr. T. Barker, Potter Brompton, Sherburn, made 5½ guineas.

Messrs. Sugdon and Pearce-Brown disposed of the Leconfield Lincoln rams (fourteen in number) the property of Mr. Robert Fisher. The whole realised a total of £116 0s. 6d., or an average of £8 5s. 9d. per head. Mr. White, West Lutton, paid the highest price, viz, £13 2s. 6d., and Mr. Kirkham, on behalf of the county council farm at Garforth, purchased a couple at £8 8s. and £7 17s. 6d., whilst Mr. Wressle, North Dalton, and Mr. Brumby, South Dalton, paid 9 guineas. Only eight of the ten rams sent up from East Heslerton by Mr. T. Campion found purchasers, the average being £7 5s. 8d. per head.

Messrs. Cranswick and Cranswick's consignments included Leicesters belonging to Messrs. J. E. and C. H. Simpson, Hunmanby, and these made an average of close upon £7 per head, the highest prices being £11 10s paid by Mr. W. D. Megginson, and £10 by Mr. Crowe, Speeton. The Field House, Hunmanby, lot averaged about £7 6s. each, the highest-priced ones being Mr. Rookes, Flotmanby, £13; Mr. E. F. Jordan, Eastburn, £12; Mr. E. Holtby, Haywold, £10; the other prices ranging down to £5 5s. each. Mr. Spink's Lincolns made an average of £10 7s. per head, and the individual prices, which include £20 9s. 6d., 16 guineas, and 15 guineas were amongst the best of the year.

Mr. Hy. Jackson had for disposal twelve rams from Mr. John Jackson, Etton Westwood, and of these Mr. Heward and Mr. R. Jackson took one each at 10 guineas, the other prices ranging from £8 8s. to £5 15s. 6d. The average was over £7 per head. A number of gimmer shearlings belonging to Mr. Beachill, Beswick, made up to 52s. 6d. each.

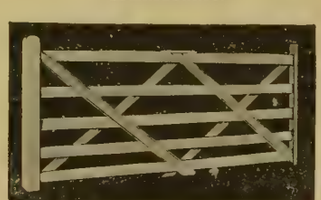
Scenes at Little Driffield Ram Fair, held on Thursday, when a large number of Leicester Sheep, the property of Members of the Leicester Sheep Breeders' Association, were sold by auction.

Alford.

Alford ram fair was held on Tuesday, when the entries were more numerous than in previous years, and with a good attendance of buyers some satisfactory prices were realised.

Prizes offered by the Alford Bull Fair Committee were won as follow:—Best shearling ram: Messrs. J. W. Farrow and Sons, Strubby. Pen of twenty Lincoln breeding ewes: 1, Mr. R. Kemp, Thurlby; 2, Mr. W. R. Mountain. Mr. T. J. Parker, of Markby, was the judge. Among the sales effected were:—Messrs. Dales, of Earlesthorpe, half-bred lambs at 41s. 6d. and 31s.; Mr. Parnell Chapman, rams at 59s.; Mr. White, Markby, ewes at 39s. 6d. and 58s.; Mr. Charles Kirkham, ewes at 44s. 6d., 43s, and 45s., half-bred lambs at 33s. 6d., and Lincoln lambs at 31s., 38s., and 30s. 6d.; Mr. E. A. Young, Beesby, rams at 68s, and lambs at 32s. and 53s.; Mr. W. R. Mountain, ewes at 50s. 6d.; Mr. Kemp, of Thurlby, ewes at 57s. 6d.; Mr. H. Smith, Well, Lincoln he lambs at 34s., and rams at 2½ guineas and 2¾ guineas; Mr. J. Ranby, Bilsby, Lincoln he lambs at 39s. 6d.; Mr. G. J. Brown, Tothby, Lincoln lambs at 33s., and half-bred lambs at 37s. 6d.; Mr. W. Hildred, Sloothby, half-bred lambs at 39s.; Mr. T. Kirman, Habertoft, half-bred lambs at 41s., and Lincoln lambs at 39s. 6d.; Mr. W. Baker, Mawthorpe, Lincoln lambs at 31s.; Mr. J. Robinson, Bilsby, Lincoln ewes at 41s., and Lincoln lambs at 33s. 6d.; Messrs. J. W. Farrow and Sons, Strubby, shearling rams up to 8 guineas.

Findon.



This famous Sussex lamb fair took place on Findon Downs, near Worthing, on the 14th inst., when considerably over 5,000 animals were brought under the hammer, and met an excellent trade at prices slightly in advance of last year; in fact, the executors of the late Mr. Robert Lee, of Cokeham Manor, Sompting, who sent one of the biggest drafts, over 300, obtained a higher average than in any previous year. The draft ewes, sold in one batch of a hundred, realised 45s. each, 10s. more

than last year, and 31s. was paid for a draft of fifty mixed lambs. The top price of 50s., however, was paid for a hundred draft ewes from the flock of Mr. Hugh R. P. Wyatt, of Cissbury. Mr. T. Gatley, of Pulborough, also got good prices, 47s. being paid for a pen of ewes; while 270 ewes, sent from Goring by Mr. G. E. Harrison, averaged 43s., the draft ewes being run up to 46s. Two pens of ram lambs, sent from Angmering Park by Mr. T. Peacock, and from Highden by General R. T. Godman, averaged close upon 105s. each, the Duke of Wellington being among the buyers. The entire flock of Mr. Batchelor, of Greatham, aggregated £463 10s., an average of 51s. 6d. per head.

Hawick.

The annual sale of rams at Hawick by Messrs. A. Oliver and Son took place on Wednesday, when there were sold about 900 Cheviot, Leicester, Oxford, half-bred, and black-faced rams. This is the principal market in Scotland for the sale of Cheviots, and about 650 rams of this class were disposed of, drafts being forward from all the crack breeders. Mr. John Elliot, Hindhope, sent thirty Cheviots, one of which was sold for £90. This was a fine two-year-old, Peebles Dandy, sired by Dandy Sandy. Others sent by this breeder made £65, £34, and £30. Dinmonts sold at £76 and £33, and from the Newton Bellingham lot one was sold for £51, whilst other consignments made up to 35 guineas. There was a ready sale throughout, and while several of the averages show a fall there is an advance on others. Leicesters ranged up to £18, obtained for a Sandyknowle animal, the next best being 10 guineas for one from Ashybank. Oxford Downs made up to £9, and Blackfaces to £4.

Hull.

A large number of rams were offered for sale at the Hull cattle market on Wednesday. Prices for Lincolns ruled rather low, in consequence of the very large supply. A good many were not sold. Mr. J. W. Fisher sold some pure-bred Hampshires, which brought an average of 4 guineas each. By order of the executors of the late Mr. R. Taylor, of Withernwick, about a score of Lincoln long-wool shearling rams were offered by Messrs. George Tanton and Son, and realised up to £6 15s. each. Messrs. Tanton got through a number of rams belonging to Mr. R. Richardson, of Arnold, up to 18 guineas being paid. Messrs. Sugdon and Pearce-Brown sold a number of Lincoln long-wool shearling rams, the property of Mr. Wm. Maw, of Barton, which made up to 5½ guineas each.

Ilkley.

Close on 2,500 sheep were offered at Ilkley Fair on Wednesday, and they met a slow trade at the following prices:—Half-bred lambs, 20s. to 26s.; half-bred ewes, 40s. to 52s.; half-bred shearlings, 35s. to 45s.; lonks, 30s. to 35s.; Scotch ewes, 20s. per head.

Lord Leconfield's Southdowns.

Included in a sale of live and dead farming stock belonging to Lord Leconfield, which took place at Sutton Court Farm, Petworth, on Thursday, was the Sutton Court Southdown Hill Flock of 400 odd sheep, and the prices obtained proved very satisfactory. Mr. Marsh, who was buying for Mr. H. A. Daniell, Warlingham, gave 62s. a head for ten shearling ewes, the lowest price being 61s. One hundred and twenty shearling ewes were offered, and the average price secured was £2 15s. 9d. Mr. J. Taylor, of Midhurst, gave 65s. a head for ten four-tooth ewes, and, with the exception of one lot, the prices varied from 58s. upwards. The average for the seventy head was £2 19s. 8d. One hundred and seventy-two full-mouthed ewes were sold at an average price of £2 7s. 8d., the top price being 51s., whilst lambs made from 29s. 6d. to 36s., and rams up to £3 13s. 6d.

Masham.

The old-established sheep fair at Masham, which usually rules the prices for the various fairs held in this part of the north of England, was held on Tuesday. There were between 15,000 and 16,000 sheep shown, or 1,000 more than last year, but the attendance of buyers was somewhat poor, and the price of sheep and lambs decreased in consequence to the extent of from 3s to 4s. per head in buyers' favour, with the result that considerably more than half the sheep shown were left unsold at the close of the day. Prices ruled as follows:—Half-bred Masham lambs, of which there was the largest show, were quoted from 20s. to 28s. per head; twice crossed lambs, 34s. to 38s. per head; Scotch lambs, 10s. to 13s. 6d. apiece; half-bred ewes, 35s to 42s. per head; half-bred shearling sheep, 35s. to 55s. apiece; and half-bred shearling gimmers, 40s. to 50s. per head; pure bred Wensleydale shearling rams £6 to £12 10s. apiece, and ram lambs pure bred £4 to £6 apiece, with a very slow demand.

Newton St. Boswells.

The annual sale of half-bred draft ewes at Newton St. Boswells took place on Monday, when Messrs. John Swan and Sons, Ltd., had on offer fully 11,800 draft ewes, which number was greatly in excess of last year's entry. There was a full attendance of buyers, and a good steady trade was experienced at prices showing an average rise of about 1s. per head compared with last year's currencies. The demand hardened towards the finish of the sale, and a satisfactory clearance was effected. The top price of the day was 59s. per head, obtained by a very superior lot of tupped ewes consigned by Mr. Murray, Bettyfield, Kelso. The purchaser was Mr. Grinsdale, Newbigging, who bought last year's draft from the same flock. A small selected lot from Nettlingflat also sold to Mr. Grinsdale at 57s. The seconds from Bettyfield made 55s. apiece, the buyer being Mr. Clark, Newton, Markinch, and 55s. was also realised for the Hillhouse consignments. Various other lots sold from 50s. to 54s. 6d., but the sensation of the sale was the disposal in one lot of a consignment of 348 ewes from Cessford. They were bought by Mr. Ronaldson, Kilduff, at 53s. per head.

On Thursday Messrs. Swan and Sons had on offer fully 4,500 half-bred gimmers, 300 Cheviot gimmers, a few lots of feeding sheep and rams, and touching 6,000 rams of all classes, making in all a total of over 10,800 head. A start was made with the lambs, for which a fair trade was experienced, and, quality considered, the resultant prices were about equal to those of the previous sale. The top price was 38s. 6d. per head, given by Mr. W. C. Bowe, Thornton Law, for a superior consignment of cross Oxfords from Wester Ulston. Another good lot from West Mains sold at 36s. 9d. apiece to Mr. A. Boazman, Kelso; and Mr. Scott, Fenton Barns, got the Roxburgh Newton consignment, also a good lot of cross Oxfords, at 33s. The gimmers constituted a large and good show, but they met with a very unequal trade, the fall from the high prices ruling last year being in some instances as much as from 4s. to 6s. per head, particularly in the case of secondary class sheep. The top figure of 60s. was obtained for a small, selected lot of beautiful gimmers from Pinnacle, which were bought by Mrs. Scott, Mersington; whilst various other better-class consignments of half-breds sold at from 50s. up to 57s. A very good lot of Cheviot gimmers from Little Dean were bought at 49s. 6d. by Mr. Inch, Quickswood. The few feeding sheep on offer and the Oxford Down rams realised fair prices; 58s. per head was realised for a choice lot of half-bred gimmers consigned by Mr. Todd, jun., The Inch.

Partney.

There was a fairly good supply at Partney Sheep Fair on Wednesday, especially of breeding ewes, but these sold at from 4s. to 5s. per head lower than at the previous fair; lambs, too, were down fully 2s. per head, and generally speaking trade was not good. Stock ewes made up to 42s., gimmers 70s.; Lincoln lambs, 42s. 6d., and half-breds 44s. There was only a small show of Lincoln shearling rams, but the supply more than exceeded the demand. More interest was centred in the sales of Hampshire Down ram lambs, which sold at 5 guineas to 8½ guineas each. The following were the details of the Lincolnshire shearling rams:—Captain E. M. Grantham, West Keal, total, £49 17s. 6d., average £5 4s. 5d.; Mr. L. W. Stephenson, South Thoresby, total £86 2s.; average £7 16s. 5d.; Mr. W. Stovins, Dexthorpe, total £132 6s., average £6 19s. 3d.; Messrs. W. Crowder and Sons, Thornton, total £120 4s. 6d., average £12 0s. 5d; Messrs. J. T. and A. W. Needham, Hutton Grange, total £203 2s. 6d., average £7 5s. 1d.

Scunthorpe.

At Scunthorpe September Ram Fair, held on Tuesday, there were more rams than required, and only the best lots were sold. Mr. W. C. Brown's Appleby flock averaged 7¾ guineas, one fetching 13½ guineas, and Mr. George Spilman's averaged 7½ guineas, the highest price of the fair being 14½ guineas. There was a very large show of sheep, both for the butcher and for breeding purposes, and a capital sale. Gimmers made from 50s. to 66s., breeding ewes from 44s. to 54s., and lambs up to 38s. each; fat sheep, wethers 9d., ewes 6d. to 7d.

Sleaford.

The eighteenth annual sale of Lincoln rams and registered Long Wool theaves, ewes, and lambs at Sleaford took place on Thursday, when Messrs. Earl and Lawrence offered nearly 4,000. Buyers and dealers mustered in force, and trade ruled brisk. Rams made 5 guineas to 45 guineas; theaves, 55s. to 76s.; ewes, 36s. to 68s.; lambs, 32s. to 43s.; and pedigree Hampshire Down rams, 5 guineas to 8 guineas each. Valuable prizes were offered, the awards being as follows:—Shearling rams—1, Mr. H. Goodyear, Ansterby; 2, Mr. F. Money, Silk Willoughby. Twenty breeding theaves—1, Messrs. S. E. Dean and J. M. Dean, Threekingham; 2, Mr. F. Ward, Quarrington; reserve, Mr. R. B. Burrows, Leadenham. Thirty lambs—1, Mr. A. Leedale, Dorrington Grange; 2, Mr. S. Wright, Ruskington.

Wilton.

Something like 33,000 sheep were on offer at the Wilton September Sheep Fair, and with a large attendance of buyers and good keep prospects, trade was brisk at quite 4s. per head better than at Britford, after taking into consideration that the sheep have been kept another month. The general run of prices in the fair was:—Regular and draft ewes, 45s. to 56s.; two-teeth ewes, 46s. to 60s.; grazing ewes, 35s. to 43s.; ewes of mixed

ages, 47s. to 53s. ; fat wether lambs, 38s. to 56s. ; medium wether lambs, 43s. 6d. to 50s. ; smaller wether lambs, 35s. 6d. to 43s. ; mixed lambs, 36s. to 46s. 6d. ; chilver lambs, 38s. to 48s. The Earl of Pembroke offered a prize for the best pen of 100 wether lambs, and it was secured by Mr. W. J. K. Waters, of Bishopstone, with a splendid pen of lambs, afterwards sold in two lots of fifty at 62s. 6d. and 62s. a head.

Messrs. Waters and Rawlence held their accustomed sale, the entry comprising 14,100 head, which met a good trade at the following rates :— Regular draft ewes, 47s. 6d. to 59s. ; draft ewes, 45s. 6d. to 47s. 6d. ; grazing ewes, 35s. to 43s. ; ewes of mixed ages, 47s. to 53s. ; two and four-teeth ewes, 45s. to 60s. ; ewe lambs, 41s. to 50s. ; fat wether lambs, 50s. to 62s. 6d. ; medium ditto, 43s. 6d. to 49s. ; smaller ewer or wether lambs, 35s. 6d. to 43s. ; mixed lambs, 36s. to 46s. ; small cull lambs, 23s. to 33s. Messrs. Waters and Rawlence also submitted to auction about 250 ram lambs and rams, Mr. J. Flower's making 3 to 9 guineas ; Mr. Drake's, 3 to 10 guineas ; Mr. Dibben's, 5 to 8 guineas ; Mr. C. Coles', 4½ to 6½ guineas ; and Mr. Hulse's, 3 to 4 guineas.

At Messrs. John T. Woolley and Wallis' sale of ewes and lambs there were on offer 8,352 in 176 lots, all of which, with the exception of one lot, were sold at extremely satisfactory figures, higher prices being realised than for many years past. Over-aged draft ewes, good on tooth and udder, made from 57s. to 40s ; six-teeth ewes, 62s. 6d. ; four-teeth ewes, 57s. 6d. ; two-teeth ewes, from 64s. to 49s. Best wether lambs, 53s. to 43s. 6d. ; other wether lambs, 42s. to 38s. ; best chilver lambs, 47s. 6d. to 40s. ; other chilver lambs, 39s. to 34s. ; mixed lambs, 45s. downwards ; two-teeth wethers, 52s. 6d. to 51s. The same firm also disposed of 6,343, as against 5,651 last year. Generally speaking, trade was slow, a circumstance due mainly, if not entirely, to the large supplies on hand. The highest price paid for a ram sold by auction was 10 guineas, given by Mr. E. A. Milligan, Raunds, for one of the animals consigned by Mr. George Roberts, of Stowe, Weedon. For a ram lamb, the best price paid up to the same time was 13½ guineas, obtained for one of the animals sent in by Mr. A. S. Bowlby, J.P., Gilston Park, Harlow, Essex. The best average obtained for rams was the £8 1s. 9d. realised for the Oxford Down shearlings consigned by Mr. George Roberts, Stowe Manor House ; whilst for lambs the top average was £7 6s. 7d. for the Oxford Downs from the flock of Mr. H. Akers, Black Bourton, Cranfield, Oxon.

Messrs. R. W. Hobbs and Sons, Kelmscott, Lechlade, made an average of £8 1s. with thirty-two Oxford Down shearlings. Mr. G. Childs, Grandborough, paid the highest price, 12 guineas, and also bought at 8 guineas. Others of these rams went to Mr J. P. Toone, High Cross, Rugby, Mr. J. L. Humphrey, 11 guineas ; Mr. R. Deacon, Mr. J. S. Stanhope, Claybrooke, 10 guineas ; Sir A. Brooke, Great Oakley Hall, 9½ guineas, 8½ guineas, and 6½ guineas ; Mr. A. Reeve, Crick, 9 guineas ; and others up to 8½ guineas. Messrs. Hobbs' lambs, twenty-two in number, averaged about 6 guineas, the top prices being Mr. J. S. Stanhope, 10 guineas, and Mr. T. Clarke, Clipston, 9 guineas.

Hereford.

The third of the special annual ewe and ram sales held under the hammer of Messrs. A. and D. Edwards took place in Hereford Cattle Market on Wednesday. There was a large number of buyers, and satisfactory prices were obtained. Shropshire

The animal shown above is the Welsh Mountain Shearling Ram with which Mr. O. Price, Nantyrhan, Cray, Brecon, won a First Prize at this year's Show of the Bath and West and Southern Counties Society.

about seventy ram lambs at from 65 guineas to 3 guineas.

Messrs. John Jeffery and Son's sale comprised 6,003 sheep and lambs, and 35 ram lambs and rams. Regular draft and draft ewes made 45s. 6d. to 57s. 6d. ; four-teeth and six-teeth ewes, 52s. to 64s. ; two-teeth ewes, 46s. 6d. to 60s. ; grazing ewes, 32s. to 44s. ; wether sheep, 44s. to 51s ; working wether lambs, 38s. to 50s. ; ewe lambs, 37s. 6d. to 47s. ; mixed lambs, 35s. to 42s. Ram lambs, 3 guineas to 6 guineas ; shearling rams, 4½ guineas each.

The Earl of Chichester's Southdowns.

The Earl of Chichester having let Hoddern Farm, Newhaven, the whole of the pure-bred Southdown flock of 481 ewes in regular ages, 174 full-mouth and draft ewes, 160 stock ewe lambs, 100 wether lambs and rams was disposed of by auction. On Thursday in the presence of a large company of breeders, and with bidding brisk, the animals were quickly disposed of at satisfactory prices. The average per head for the ewes and lambs worked out as follows :—39 over age ewes, 39s. ; 138 full-mouth ewes, 47s. 4d. ; 151 six-tooth ewes, 50s. 8d. ; 170 four-tooth ewes, 54s. 10d. ; 168 two tooth ewes, 59s. 8d. ; 161 ewe lambs, 33s. 8d., and 103 wether lambs, 30s. 7d. Shearling rams made up to 4 guineas, six-tooth rams to 3½ guineas, and ram lambs from 1½ to 3 guineas each.

Northampton.

Northampton Ram Fair was held at the Cattle Market on Thursday. The weather was brilliant, and there was a large attendance of farmers and dealers. The supply of stock was the largest for several years, there being a heavy increase in the returns in each department, sheep numbering ewes made up to 54s., which sum Mr. F. Hawkins got for fifteen one and two-year-old ewes, the purchaser being Mr. Jones, Warlow. Other sheep sales were :—Mr. J. Davies, Stoke Prior, twenty two and three-year-old ewes at 50s. 6d., Mr. W. Probert, Llangarren Court ; Mr. B. C. Ridgely, Eyton, thirty one, two, and three-year-old ewes at 53s., Mr. Goode, Tenbury ; Mr. H. S. Williams, Stockton Bury, twenty two and three-year old ewes, 53s. 6d., Mr. Eakim, Tamworth ; twenty-five registered ewes, 50s. 6d., Mr. Andrews, Bullingham ; and Mr. E. T. Cave, Kimbolton, 9 two-year-old Shropshire ewes, 53s. 6d., Mr. Meredith, Worcester. Radnor and cross bred ewes realised from 37s. to 48s., whilst the chief transactions in Shropshire rams were as follows :—

Shearling rams : Mr. A. P. Turner, 11 guineas ; Mr. Matthews, Hollow Farm, Dinedor ; 7½ guineas, Messrs. Riley Bros., Marston ; 6½ guineas, Mr. Sherratt, Ocle Pychard, and Mr. T. Jones, Skynlas, Glasbury ; 7 guineas, Mr. J. E. Powell, Warham ; and others up to 6 guineas, Mr. H. R. Evans, Court of Noke ; 7½ guineas, Mr. Medlicott, Peterchurch ; 9½ guineas, Mr. Harris, Abergavennny, Mr. J. W. Dee, Wollas Hill ; 8½ guineas, Mr. Matthews, Holme Lacy ; 10 guineas, Mr. Andrews, Stretton Sugwas ; 9 guineas, Mr. Murch, Huntingdon ; 8 guineas, Mr. Wood, Thruxton ; and others to 7 guineas, Mr. T. Morris, Weston Court. Three-shear ram : 6½ guineas, Mr. Harris, The Sheriff, Kington.

Ram Lambs.—Mr. Thomas Abercrombie, Castle Farm, Madley : — Hampshire-Oxford ram : 4 guineas, Mr. W. Wiltshire, The Grove ; 3 guineas, Mr. Wiltshire ; and others at 2¾ guineas. Mr. H. Moore, Shucknall Court : Mr. Williams, Sutton, and others at 2 and 2¼ guineas ; and Mr. T. Morris, Weston Court : 3 guineas, Mr. Millichip, The Venn, and Mr. Baker, Kinley, Letton.

The Aghavoe Shropshires.

The sale of the flock of Shropshire sheep belonging to Mr. R. F. H. White, Aghavoe, Ballacolla, Queen's County, which took place on Monday, proved quite the event of the season to Irish sheepbreeders, the attendance being a very large one, and included several English and Scotch buyers. There was a keen demand, and some capital prices were realised. Mr. Bibby paid the two highest prices of the day—viz, 62 guineas for a fine shearling ram by Aghavoe Eclipse, and 40 guineas for a ram lamb, the second prize winner at Belfast and Dublin, by Ulster Councillor. Mr. Alfred Tanner paid 30 guineas for the first prize ram lamb at Belfast and Dublin, by Downton Count, whilst Lord Barrymore and Mr. R. Hamilton Stubber paid 22 guineas and 21 guineas respectively for ram lambs by Downton Count. To return to the shearling rams, the next best price to that paid by Mr. Bibby was 34 guineas, given by Captain Napier for the first prize-winner at Belfast, and second at Dublin this year. Major Lambart gave 30 guineas for the fourth prize-winner at Dublin, Mr. P. Cullinan gave 25 guineas for a shearling by Starling, and 18 guineas for another by Aghavoe, other purchasers paying up to 15 guineas. The two stock rams, Cornstalk and Ulster Councillor, both made 25 guineas each, the former going to Mr. Jackson, Kilkea, Castledermot, and the latter to Mr. T. Bullar, Coupar Angus. The shearling ewes made up to 7 guineas, two shears to 6½ guineas, and the young breeding ewes, sold in pens of five, realised from 3½ to 10 guineas, whilst for ewe lambs the range was 2½ to 5 guineas. The whole flock of 298 head, including ninety-seven lambs of this year, made the splendid average of £5 19s. 6d. each.

The twenty-seven shearling rams and stock rams averaged £15 5s ; fifty shearling ewes £4 12s. each ; forty five two-shear ewes, £4 9s. ; seventy-five young breeding ewes, £5 5s. 9d. ; thirty-three ram lambs, £7 9s. ; and sixty five ewe lambs, £3 12s. each.

Ashford.

At Ashford on Tuesday, Messrs. W. and B. Hobbs disposed of several lots of rams. A consignment of Southdown ram tegs from the flock of Lord Northbourne was bought by Messrs. C. Player, Heritage, Ashley-Dodd and Hann, at from £5 5s. to £6 16s. 6d., and averaged over £6 per head. Ten of Mr. G. Scott's Southdown ram tegs averaged £7 14s. per head, the range of values being from £5 5s. to £8 18s 6d., and the buyers—Messrs. W. Johnson, A. E. Dadds, F. Finn-Kelcey, T. H. Pearson, Ashley Dodd and E. Marshland. For nine of Mr. Vickers' Southdown ram tegs from £4 4s. to £6 16s. 6d. was given by Major Knight Bruce, Messrs. J. Kingsmill, Ashley-Dodd, J. Luckhurst, Davison, E. Marsland, and R. Hogben, and the average came out at a bit over £5 15s. 6d. per head. A consignment of Hampshire Down ram tegs from the flock of Mr. F. Rawlins, of Salisbury, made from £4 14s 6d to £7 7s.

Barnstaple.

At Barnstaple Fair—one of the oldest in the Kingdom—held on Wednesday, the supply of sheep exceeded that of previous years, over 3,000 being penned, mostly breeding ewes, which sold well. The general prices were :—Notts breeding ewes, 40s. to 48s. ; mongrels, 35s. to 45s ; horn ditto, 36s. to 42s. ; fat lambs, 28s. to 34s. ; fat ewes, £2 each ; Notts rams, £2 to 12 guineas ; other rams, £4 to £5 ; keeping lambs, 28s. to 32s ; store wethers, 40s to 44s. ; Exmoor breeding ewes, 35s. to 40s. As regards the rams, the chief sales were as follows :—Seven Hampshire Down lambs from Mr. J. Joyce, of Milverton, 3¾ to 4½ guineas ; six rams belonging to Mr. Turner, of Parkham, 10, 6½, 4½, and 5 guineas ; and two from Mr. Yeo made 8 and 5 guineas, the former price being paid by Sir Redvers Buller.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Rathkeale Fair, co. Limerick, held on September 18. Moderate-sized fair ; demand good for conditioned cattle, but slow for thin animals. Calves, 2nd class, £3 10s. to £4 10s. ; third class, £2 15s. to £3 5s. ; yearlings, 1st class, £8 10s. to £9 ; 2nd class, £6 10s. to £8 5s. ; third class, £5 to £5 10s. ; two year-olds, 1st class, £12 to £13 10ss. ; 2nd class, £9 to £11 10s. ; 3rd class, £7 to £7 15s. ; three-year-olds, 1st class, £15 to £16 15s. ; 2nd class, £14 10s. ; springers, 1st class, £16 to £18 ; 2nd class, £12 10s. to £15 10s. Very small supply of lambs ; demand fair. Lambs, 1st class, 32s. to 35s. ; 2nd class, 28s. to 31s. Young pigs, eight to ten weeks old, 20s. to 25s. each.

At Naas Fair, co. Kildare, held on September 18, there was an average supply of cattle ; demand very slow, and a clearance not effected. Yearlings, 2nd class, £5 10s. to £7 7s. 6d. ; two-year-olds, 1st class, £11 to £13 15s. ; 2nd class, £8 15s. to £10 15s.

GAVIN LOW.

By KENT SHEEP BREEDERS' ASSOCIATION.

REGISTERED KENT OR ROMNEY MARSH SHEEP.

THE Eleventh Annual SHOW and SALE of the Kent or Romney Marsh Sheep-Breeders' Association will take place at the Cattle Market, Ashford, Kent, on FRIDAY, SEPTEMBER 27, 1907, at 11 a.m. prompt.

The prizes offered for competition at this Sale include a Challenge Cup, presented by the Vice-President (Lord Harris), for the best Ram other than a Yearling; the L. Hardy Challenge Cup, presented by L. Hardy, Esq., M.P. (the President); the Cooper Challenge Cup for the best five Yearling Rams, presented by Sir R. P. Cooper, Bart.; and cash prizes presented by Capt. Somerset Webb (the President Elect) and Messrs. C. E. Gunther, J. Howard and F. Neame, and in addition to these there is also offered a Special Prize for the best Woolled Ram.

In consequence of the offering of these valuable prizes the entry this year is comprised of a large selection, numbering 500, representative of the best strains of blood, and it includes many of the leading Rams of the year, and represents the pick of thirty-seven Registered Flocks, owned by the undermentioned flock-owners:—

The Right Hon. Earl Sondes (12), the Right Hon. Earl of Verulam (16), the Hon. Lord Harris (25), Major Powell Cotton (4), Capt. Somerset Webb (10), Mr. E. Ascharson (8), Mr. A. Amos (28), Mr. J. P. Barnes (12), Mr. J. B. Blake (4), Mr. G. Buley (8), Mr. F. de B. Collard (9), the Exors. of the late W. Elvy (10), Mr. G. Farmer (21), Mr. Chas. File (17), Mr. J. File (13), Mr. T. File (6), Mr. Arthur Finn (20), Messrs. L. H. and G. W. Finn (11), Mr. O. E. d'Avigdor Goldsmid (2), G. M. Goodson (6), Mr. E. Hambrook (5), Mr. L. Hardy, M.P. (9), Mr. J. H. Harvey (4), Mr. W. R. Harvey (9), Mr. G. E. Hawkins (7), Mr. A. J. Hickman (6), Mr. S Kingsnorth (9), Mr. W. E. Long (11), Mr. J. D. Maxted (15), Mr. W. Millen (30), Mr. F. Neame (24), Mr. J. B. Palmer (7), Mr. J. E. Quested (34), H. Rigden (50), Mr. G. C. Swindells (25), Mr. H. Walters (3), and Mr. T. Wotton (10).

The judging for the prizes will commence at 8.30 a.m. sharp, the first prize to be awarded being that for the best pen of five Yearling Rams, and the Sale will commence at 11 a.m. sharp, and proceed without intermission to its close.

Lunch and refreshments will be obtainable on the Show-ground, as usual.

Catalogues, when ready, can be obtained from Mr. W. W. CHAPMAN, the Secretary, Kent or Romney Marsh Sheep-Breeders' Association, 4, Mowbray House, Norfolk Street, Strand, London, W.C., to whom all enquiries in respect to this Show and Sale are to be addressed.

Auctioneers will favour us by sending in their advertisements as early in the week as possible. | *Charges for announcements under this heading Six Shillings an inch.*

By Messrs. AMBROSE & FOSTER.

THE LEEDS CASTLE FLOCK OF REGISTERED KENT SHEEP.

MESSRS. AMBROSE & FOSTER beg to announce that they are favoured with instructions from C. P. Wykeham-Martin, Esq., J.P., to SELL by AUCTION, at Greenway Forstal Farm, Hollingbourne, Kent, on

WEDNESDAY, the 25th DAY of SEPTEMBER, 1907,

At 11.30 o'clock a.m. (in consequence of the death of the late Mr. Thos. Powell),
The Whole of the

CELEBRATED LEEDS CASTLE FLOCK OF REGISTERED KENT SHEEP,

Comprising 584 Head, as follows:—

102 EWE TEGS,
55 ONE-LAMB EWES,
45 TWO-LAMB EWES,
62 THREE-LAMB EWES,
40 FOUR-LAMB EWES,
126 EWE LAMBS,
40 SHEARLING RAMS,
3 STUD RAMS,
35 RAM LAMBS,
76 WETHER LAMBS.

This Flock (Registered No. 32 in the Flock Book) will be found to possess to the full that excellence and uniformity for which it has always been noted. It represents one of the oldest flocks in the county, a large number of the late Mr. T. Powell's well-known flock having been purchased in 1894.

The place of sale is about one mile from Harrietsham Station (S.E. and C. Railway), and conveyances will meet trains.

Catalogues (when ready) may be obtained at the Place of Sale; the principal Inns in the neighbourhood; and of the AUCTIONEERS, 3, Market Buildings, Maidstone.

By Messrs. SPEEDIE BROS.

50 PEDIGREE BERKSHIRE PIGS,
the large collection of AGRICULTURAL DEAD STOCK off a 700-acre Farm, together with
13 RICKS of PRIME OLD HAY.

Catalogues may be obtained of the AUCTIONEERS, Henley-on-Thames, Reading, and Basingstoke.

CATTLE.

Sale of Mr. W. Kidner's Devon Cattle.

In consequence of the farm being given up the well-known herd of Devon cattle belonging to Mr. W. Kidner was disposed of at Fennington Farm, near Kingston. The herd comprised sixty young cows, heifers and heifer calves, nineteen young bulls and calves, and one steer. As was expected, there was a large attendance and a good demand. Dorothy Lass, a splendid cow calved March, 1902, fetched 61 guineas, Mr. Marcus Kidner, who has taken over the farm, being the purchaser. He also bought amongst others Auntie 2nd, calved December 21, 1900, for 50 guineas, Dorothy 3rd at 45 guineas, her heifer calf at 25½ guineas, Dumpty's Darling 2nd at 41 guineas, Darkey 3rd at 36 guineas, and Alicia 2nd at 41 guineas. The last named animal had a magnificent bull calf, which came in for keen competition, and it was not until 62 guineas had been bid that it was finally knocked down to Mr. Ingham Baker. The best of the bulls was Bickley Opal, for whom Mr. H. C. Hancock gave 60 guineas. The following is a list of the chief sales:—

COWS, HEIFERS, AND CALVES.		Gs.

Relic, c Dec 13, 1905	Mr B C Shepherd	29

Sale of Shorthorns at Chipping Norton.

The sale of over 100 head of pure-bred Shorthorns from various well-known herds held at Chipping Norton was well attended, but with one or two exceptions prices were not high, the average for eighty-five head sold being £29 3s. 3d. Mr. H. C. Lewis entered four splendid cows, one of which—Glad Tidings 4th—made 115 guineas, the purchaser being Mr. W. M. Scott (Nether Swell Manor, Stow-on-the-Wold). Her bull calf fetched 60 guineas. Another, Catherina 7th, was bought by Mr. E. H. Cartwright, of Louth, for 100 guineas. Lord Calthorpe bought another for 62 guineas, and the fourth went to Mr. Gallent, of Windsor, at 51 guineas. Two one-year-old heifers and two one-year-old bulls were entered by the King; Elaine, a red roan heifer by Romulus, was purchased by Mr. Tindall, of Wainfleet, for 43 guineas, whilst Fascination, a descendant of the Fairy strain, a red bull by Enchanter, was purchased for 73 guineas by Mr. F. W. Matthews, Fyfield. Mr. F. Ames' Charming Duchess 84th, a red cow, sold for 62 guineas to Mr. A. Turner, Worcester; Sir H. Scott Murray, Henley-on-Thames, purchased Lord Moreton's Fortuna 11th, a year and a-half old red heifer, for 30 guineas, while Hawford Marquis, a red bull eleven months old, sent by Mr. F. Ames, sold for 70 guineas to Mr. Oswald, of Oswestry.

The contributors to the sale were as follows:—H.M. the King, Royal Farms, Windsor; Mr. Frederick Ames, Hawford Lodge, Worcester; Mr. Hugh Baker, Chedglow Manor, Malmesbury, Wilts; Mr. J. A. Bloss, Bourton-on-the-Water; Mr. J. A. K. Falconer, Long Sutton House, Winchfield; Mr. John Garne, Fulbrook, Burford, Oxon; Mr. A. C. Hall, Great Rollright, Chipping Norton; Mr. G. L. Foster Harter, Salperton Park, Haselton, Glos.; Mr. R. Hartley, Grove Farm, Shipton under-Wychwood; Mr. J. Horlick, Cowley Manor, Cheltenham; Mr. H. C. Lewis, Hean Castle, Saundersfoot, Pembrokeshire; Lord Moreton, Sarsden, Chipping Norton; Mr. Herbert Page, Hertford; Mr. Charles Pinnell, Kidlington, Oxford; Colonel Spence, Biddlesden Park, Brackley; Mr. William Toy, Chipping Norton; Colonel Turnor, Pinkney Park, Malmesbury; Mr. G. W. Tyser, Oakfield, Mortimer, Berks; Mr. John Wakefield, Langley, Ascott-under-Wychwood.

Sale of Mr. J. Harris's Shorthorns at Carlisle.

In consequence of the herd having overgrown its accommodation, Mr. J. Harris, of Brackenburgh Tower, Carlisle, decided to dispose of the greater portion of his well known Shorthorns, and consequently on Friday nearly fifty, which included a grand lot of heifers and young stock, were brought under the hammer at The Farm, Brackenburgh Tower. The herd has a widespread reputation, and as it was expected would be the case, the sale attracted a large company of buyers, including colonial and foreign purchasers, with the result that some capital prices were realised, no fewer than thirteen animals fetching three figure prices, whilst the average for the forty females was the good one of £99 18s. 8d., the nine bulls averaging £50 19s. 8d. Mr. H. Lewis, Pembrokeshire gave the top figure of the sale—namely, 285 guineas for Duchess 139th, a typical specimen of the breed, Mr. T. Holford, however, ran him very closely for he paid 270 guineas for another cow, Duchess of Armathwaite 6th and also 265 guineas for Duchess 141st. As will be seen from the following list of the chief lots sold, other females made up to 200 guineas, whilst this amount was also realised for a bull, Duke of Cumberland 21st, which was secured by Mr. J. Hobbs. The total realised by the sale was no less than £4,456 for forty-nine animals.

COWS AND HEIFERS.		Gs.
Duchess 135th	Mr Gunter	150
Oxford Duchess of Calthwaite 34th	Mr T Holford	70

Sale of Lincolnshire Shorthorns and Curly-Coated Pigs.

The pedigree herd of Lincoln Red Shorthorns and Lincolnshire Curly-Coated pigs, bred by Mr. George Freir, were sold by auction at Deeping, St. Nicholas, on Friday in the presence of a good company of buyers. There was brisk bidding for the sixty-one head of cattle offered, and prices ranged up to £50, which was given by Mr. Turner, a Leicestershire buyer, for a yearling heifer. Six cows in calf averaged £28 6s. 9d., ten in-calf heifers £27 1s. 9d., ten yearling heifers and seven bulls £21 each, and twenty-eight cows and calves £19 15s.. The cattle realised £1,293, or an average of £21 4s. There was also a good demand for the Curly-Coated pigs, and thirty-five lots made £319, or an average of £9 per head.

Sale of Shorthorns in Dublin.

The recently-formed Irish Shorthorn Association held a sale of Shorthorns at Dublin on Thursday, when 169 animals of various ages from the herds of members of the association were offered. There was a somewhat poor demand, many of the animals failing to find purchasers, but one or two good prices were realised, notably 68 guineas given by Mr. C. H. Fleming, Keith, N.B., for Mr. R. Bruce's Princess Dolly, whilst for Mr. Bruce's Scottish Rosie 55½ guineas was paid by Mr. Bourke, co. Antrim. Other prices ranged up to 34 guineas, given by Mr. Sanday for Lord Barrymore's Rose of Belweely 3rd.

Sale from the Honingham Herd of Red Polled Cattle.

The Right Hon. A. E. Fellowes, of Honingham Hall, has of late sold several animals from his well-known herd of Red Polls to both home and foreign buyers. The most important animal, amongst others sold, was the bull Alake 9438, the champion bull at the Royal show at Lincoln, who has been bought by Captain Charley, of New South Wales, at a high figure. Accompanying him is a very promising yearling bull, Archbishop 9702 – dam Ardent 14469. Captain Charley took two bulls from Honingham five years ago, from which he has had some good stock.

Messrs. John Thornton and Co., who bought Alake for Captain Charley, also secured for the Spanish Government a very promising young bull, one cow, and a heifer Amongst others, Mr. A. Scorer has secured for the New Zealand Loan and Mercantile Agency Company, Ltd., two two-year-old heifers, one yearling heifer, and the cow Angelus 1950, which took several first prizes at the Royal and other shows.

Mr. J. Cobbold, of Ipswich, has bought a yearling bull, cow, and two heifers; and a two year old bull, Author 9592, has gone to Mr. W. Champion, of Riddlesworth Hall, Norfolk, whilst a yearling bull, Auster 9704, has been sold to Lady Heytesbury through Mr. Herbert Blofield. Both Mr. Champion's and Lady Heytesbury's bulls are from the cow Avon, which is also the dam of Alba, another champion cow, still in the Honningham herd. All the animals chosen for exportation were tested, and passed.

Sale of Auchorachan Aberdeen-Angus.

The autumnal series of Aberdeen-Angus sales in Scotland commenced on Tuesday with the dispersal of a select draft of cows and heifers from the well-known herd of Colonel Smith-Grant, Auchorachan. It is five years since Colonel Smith-Grant held his last draft sale, and this year's selection was quite equal in merit to that of 1902, including, as it did, a fine lot of Ericas of the best possible pedigrees, which will enrich the herds to which they have gone.

There was a good attendance of buyers and a fairly brisk demand, but no fancy prices were obtained, the best being 85 guineas for the two-year-old heifer, Erica Fairy 5th, which was secured by Sir G. Macpherson Grant; Pride of Morlich 7th, another two-year-old heifer, was bought by Mr. Stewart; Carse of Strowan at 65 guineas; 60 guineas was given by Mr. W. S. Ferguson for Pride B. 7th of Auchorachan, also a two-year old heifer; whilst 60 guineas was obtained twice for cows, Mr. Stewart, Nether Blairoch, paying that sum for Eleonora, and Mr. W. S. Ferguson for Eriphyle of Auchorachan. The yearling heifers realised up to 40 guineas. The total proceeds of the sale amounted to £11,638 8s., being an average of £40 2s. 4d. for twenty-nine head; fourteen cows averaged £37 10s; nine two-year-old heifers, £51 18s. 4d.; and six one-year old heifers, £28 10s. 6d.

Mr. W. Arkell's Shorthorns.

A portion of the well-known dairy herd of Shorthorns belonging to Mr. W. Arkell, of Kempsford, Fairford, Glos, was sold by auction on Wednesday, and the sale attracted a large company of buyers from all parts. The herd was founded in 1870 with the Janette family, descended from two cows bought at Mr. W. Hewer's sale at Seven Hampton, to which was added the Ursulians and also the Frost family, a famous dairy strain that has been in the hands of the Arkells since 1818, and go back to a famous cow called Queen, bought at Darlington in 1790.

There was a good demand for the cows and heifers, but the bulls met a rather dragging sale. The top price of the day was 72 guineas, for Ursulina, one of the fine old Ursuline family, and it was bought by Mr. W. M. Cazalet, of Tonbridge.

Professor H. Arkell gave 46 guineas for Milker 7th, a four-year-old cow by Florentias Prince, and she is to go to Canada. Mr. G. Taylor, of Hounslow, paid 44 guineas for Red Vale 4th, a six-year-old cow by Challenge, whilst Ursulina 33rd, six years old, made 47 guineas to Mr. J. A. Preece, of Thrapstone. The Janettes sold well, Janette 45th, a prize-winner, making 43 guineas to Mr. Cazalet; and Janette 49th, 48 guineas to Mr. J. T. Nickels, of Shrewsbury. Duchess of Barrington 53rd, a nine-year-old cow of excellent breeding, was sold at 40 guineas to Mr. S. Sanday, of Cheshire. Several of the calves by Freetrades, bred by Mr. George Freeman, sold well, Mr. J. T. Hobbs giving 20 guineas for one, Mr. Cazalet 24 for another out of his 43-guinea Janette, and Sir A. Brown 16 guineas for a third. Of the nineteen bulls, one made 32 guins. and two 30 guins. each.

The total realised by the sale was £1,518 16s. 6d., or an average per head of £29 4s. 1d. for fifty-two animals. The thirty-three cows and heifers made £1,188 12s., being an average of £36 0s. 4d.; the sixteen pedigree bulls realised £301 7s., an average of £18 16s. 8d.; and when the three bulls not eligible for the herd book were added, the total for the bulls was £330 4s. 6d., making the average £17 7s. 7d.

The Morlich Aberdeen Angus.

On Wednesday a sale of fifty Aberdeen Angus, from Mr. G. Cran's herd at Morlich, Glenkindie, N.B., took place at Morlich. The stock were presented in a healthy, natural condition, and as the farm lies at an altitude of nearly 1,000 ft. above sea level, a characteristic of the animals was their sound constitution and hardness. There was a large and representative gathering of breeders, most of those present at the Auchorachan sale the previous day being again in attendance. Prices, however, did not rule quite so high, for the top figure was 71 guineas, made by Erlis of Morlich, the only Trojan Erica exposed. She is a three-year-old of fine breeding, sired by Jeshurun, and was bought by Lord Allendale, who gave the next best price—viz, 61 guineas for Jemima 63rd, Another cow, the Nuggett 13th made 60 guineas. Mr. Henderson, New Morlich, being the purchaser; whilst other prices averaged up to 52 guineas. The total realised for fifty one head was £1,556 2s, and the following were the averages:—Fourteen cows £38 5s., ten two-year-old heifers £36 19s.

Seasonable Topics.

Mushrooms. EVERY year when the bathing season commences drowning fatalities provide local newspapers with copy, and just in the same way whenever the weather is favourable for the growth of mushrooms we hear of people being poisoned through eating what they supposed to be the edible fungi. Several cases of so-called mushroom poisoning have come before our notice of late, and they all point to the desirability of exercising the greatest care when buying or picking mushrooms to see that one has got the right thing. One can hardly understand a countryman making any mistake, but he does at times, though more generally it is people who know very little about mushrooms, but scour the fields in search of them for the sake of making a bit of money, who are the most liable to pick up poisonous fungi in mistake. There is hardly any mistaking the genuine mushroom which grows quickly out in the open field, and which is so delicious on the breakfast table, but it is not wise to go mushrooming under trees or to put anything in the basket that one is at all suspicious about.

THE REAPING MACHINE AT WORK.

Ventilation of Fodder Stacks. IT is not uncommon for stacks formed of oats and beans, with perhaps some clover in, that are put together for the purpose of providing fodder for horses to get warm, even in cases to the point of firing. Stacks of this character, put together as they are in September when dews hang on late in the morning and there is difficulty in getting the moisture in green herbage dried, may be a source of danger in a stackyard, and in such case it is wise to adopt some simple means of ventilation. A short time ago we saw a stack of the above character being put together, and the farmer being a little anxious and suspicious adopted the simple device of putting a row of stick faggots right through the stack, about halfway up, one in the centre and one between the middle and each end. The faggots, of course, prevented the fodder from going down close and provided an outlet for the heat, which could be easily felt by placing the hand where the ends of the rows of faggots protruded through the sides of the rick.

Blackberrying. TO what extent wild blackberries affect the sale of fruits that are grown under cultivation is a debateable point, but at this time of the year it is no uncommon sight to observe strings of women emerging in the mornings from towns and villages with baskets on their arms and youngsters hanging on to their skirts, starting out on blackberrying excursions. They return at eventide with baskets full, and the stains on the youngsters' cheeks indicate the way in which they disposed of some of their pickings. Blackberry pickers are free lances, and go just where inclination or the presence of fruit leads them. They recognise no law of trespass, but wander in places where they would never think of going under any other pretext. As a rule farmers tolerate them, and do not grudge the bit of money that cottage folk make out of blackberrying, but we often hear grumbles, and it is the old story of give a foot and take a yard, as blackberry pickers, not being satisfied with the privileges extended to them, do not respect the farmer's hedges, as one would think they would, but are often responsible for wilful damage to fences. Indeed, this has got to be such a nuisance in some districts that farmers cut the blackberry brambles out of their hedges as a means of thwarting the pickers.

The End of Hopping. PASSING through Kent at the end of September the traveller observes what a change has come over the scene in the past few weeks. No golden hops now hang from the poles, but the latter are strewn about in careless contusion, and heaps of dried bine are scattered here and there awaiting removal. There is no sign of animation in the hop garden, the huts are empty, the itinerant population of pickers has returned townward, the arduous work of the drier is ended, and the hop harvest of 1907 is over. Whether figures prove it to be profitable or otherwise, the hop grower can congratulate himself on a good picking time, and for this he has reason to be thankful. When the weather is unfavourable and hop picking drags along it is an expensive operation, to say nothing of the risk of hops spoiling, and this year growers have been saved this worry. As for the pickers, they have never had a better time so far as weather is concerned, and if some have returned to town not much better off in pocket, they have a healthy glow of colour on their cheeks which the sojourn in the hop garden has painted there. With the hop grower, however, the end of one year is the beginning of the next, and the close of the picking is quickly followed by a general clearing up and putting shipshape with the ultimate view of another season's picking.

The Advent of Hunting. JUST now that section of the community who can afford to ride to hounds and enjoy the sport of kings, are impatiently awaiting the commencement of the hunting season. In a way, of course, it has begun, for in the mists of these autumn mornings the hounds are out cubbing, and the most enthusiastic of the horsemen attend these preliminary proceedings. From the conversation we hear in a hunting country the supply of foxes is plentiful, and though this may sound joyful in the ears of the hunting man, it suggests to the farmer and poultry-keeper that they must be on the alert. Reynard will be Reynard as long as hunting exists, and raids on poultry yards are part of his very nature. Farmers know this, and not being averse to hunting (though it is questionable whether they profit as much by it as speakers at hunt dinners would have us imagine) they will look after the fastenings of the poultry pens. But do what they will, Reynard is sometimes too much for them, and it is then for the hunt to maintain a spirit of good feeling by not splitting straws when the question of compensation is raised.

The Potato Harvest. TEMPTED by the beautiful dry weather we have enjoyed of late, many people have set about digging main crop potatoes rather earlier than they would have done otherwise, and so far as our own experience and observation goes, the results are fairly satisfactory. We feared when the tops were struck down by disease in the summer that the evil would descend with force to the tubers, but it is gratifying now we come to dig to find only a small

proportion of bad potatoes. We hope this is the experience of growers generally, as here, of course, we only speak for one locality. Crops, we find, vary very considerably. In some parts where the bine was struck with disease at the end of July and went down quickly potatoes are fairly plentiful, but they are very small, and the crops consequently light, which shows that the check to the growth affected the development of the tubers. In other places the disease did not affect the tops so badly, and in spite of brown patches on the leaves the plants continued to grow and the tubers to swell. In these cases the crop is heavier by several tons to the acre, than in the instances where the bine was cut down early. Up to the present prices are satisfactory, and the outlook for the potato trade is better than it promised to be before the advent of the fine weather.

Agricultural Politics.

BY A LOBBYIST.

Lord Rosebery and Future Land Legislation.

What will be the effect of Lord Rosebery's wonderful personality and influence on the future of land legislation? There can be no doubt that the force of events is removing him farther and farther from the sympathies and anxieties of his erstwhile political associates; and this divergence is rapidly developing. I should say that at this moment the chasm separating the position of the two is almost unbridgable. It is true, of course, that Lord Rosebery supported the Small Holdings Act; but it was a lay, a tepid, and an inarticulate support, and had behind it none of the rattling vivacity, scornful contempt, and derisive superciliousness which marked his utterance on the Scottish Bill. Since that, too, his temper has become more definitely crystallised. He refuses—this he has made plainly apparent—to regard the landlord as a creature whose one purpose in the commonwealth is to be coerced by the State either in the interest of classes of lesser social moment or for the purpose of conciliating extreme visionary politicians. His lordship has long been suspect by his old Radical associates on the question of taxation of land values—he has never uttered a single definite benediction of the principle; and the future land policy of Liberalism will inevitably be on its lines. It is to this method of taxation and its financial fruits that the ordinary Radical looks for the provision of the means of realising his fervid purposes for the advantage of the protelariat. This assured antagonism to the future Radicalism is thus bound to throw Lord Rosebery into association with men to whom he was assumed to be in inevitable conflict. Will he carry with him a serious following? Well, the fate which befell Mr. Monro Fergusson's crusade in the House of Commons against the Scottish Bill revealed that Whiggism has there but few representatives, and that those representatives include man of no great moment. It may be different in the country. Hence a Rosebery-party opposed to the Radical land-policy is more than a possibility. It may be said that such a party would inevitably be swallowed up in the Conservative party. This assertion reveals no prescient conception of its probable character. The Conservative rank-and-file is inalienably pledged to tariff-reform. Of this Whiggism, Cobdenite Free Trade is the sheet-anchor, and Tariff-reform spells *anathema maranatha!*

* * *

A Seductive Phrase—"True Economic Value."

Frankly, I can understand the real motive which possesses the opponents of the principle of hiring in connection with the new land legislation. What doth this principle portend? Doth it mean land nationalisation? Listen to this from the *Daily News*, the confessed journalistic spokesman of the Government:—"The present legislation," quoths my contemporary, "may pave the way to ultimate purchase by the community, but we must first have established through the operation of the Land Valuation Bill and other means the true economic basis of purchase." "Purchase by the community" does not in itself commend itself altogether to the territorial and anti-Socialistic prejudices of British landlordism—it evokes a whole army of grizzly fears. These ill-omened quakings assume a more dramatic character when we hear that the purchase is to be accomplished on the "true economic basis of purchase." "How far,' the anti-land-nationalising landlord asks himself, "is the 'true economic basis of purchase' removed from prairie value?" At once visions are evoked of a purchase-policy which would permit of no recompense for compulsory expropriation, which would regard the rooting-up of family traditions as a cause for scoffing rather than for solace, and which would not hesitate to regard the local rateable value accepted by local rating authorities—on which in other times landlords had a supreme voice—as providing a satisfactory basis of purchase. Many a Radical reformer regards this last prospect with supreme delight. To him it partakes of the nature of the relishing pastime of hoisting the landlord with his own petard! How far, however, will these, perhaps too romantic, fears go to swell the army of Liberal dissidents who will fight under the standard of Lord Rosebery? After all, the answer to this question provides the best measure of how the Policy of land-nationalisation based on the true economic basis of purchase may be thwarted? May we not, however, be affrightening ourselves by an unnecessary, phantasmic hobgoblin? Would the English people be seduced into a policy of flagrant injustice by a mere cant phrase?

* * *

Has Lord Londonderry been Misreported?

I pray the Marquis of Londonderry has been misreported. "If," he is averred to have declared, "there is a real land hunger in this country, it is more likely to be satisfied in Western Canada where land is cheap." This is perilous advice. The men who are possessed of this land hunger are often the most stalwart of the rural community. Land is going increasingly out of cultivation in this country to our inevitable hurt, and the arrest of the process of the depopulation of our countryside has hitherto been beyond the capacity of our statecraft. At this juncture a great nobleman proposes—that is, if Lord Londonderry has not been misreported, and the only practical deduction from that report is permitted—that a sedulous system of exportation of this desirable cultivating element should be initiated. "Go to Western Canada" is this advice, "rather than remain pursuing your land-holding ambitions in your own country, which has need of you, but where your anxieties offend the nostrils of great territorialists and run counter to the prejudices of a policy which may have been partially responsible for the failure to maintain the country-side at its true standard of productivity." My lord, this is not statesmanship, it is petulance. We may have all our fears as to the new agrarian policy—fears naturally deepened by the arrogant spirit which too often has accompanied it; but we cannot in our exasperation afford to expropriate our best and most necessary bone, muscle, and intelligence.

* * *

Has Lord Carrington Made a Mistake?

No man will refuse the quality of courage to Earl Carrington. He is the breezy embodiment of confidence and faith. Were his native manner not tempered by the sagacity of his years he might even be guilty of rashness. His very *savoir faire* is the child of a spirited temperament. Hence it was not his fear of the consequences to himself or the nervelessness of a timorous soul that persuaded him to refuse to meet the Scottish agriculturists in conference. All the same, I would the Earl had consented to meet them—I regret his refusal, despite the undeniable antipathy of the *personnel* of that conference to the Government's Scottish land policy. It may be said by the Government's supporters—nay, is being said—that the promoters of this conference are possessed by partisan prejudices, and that they invited the Minister simply in order to make him the butt of a raking fire of querulous criticism. On the other hand, let it not be forgotten that Earl Carrington, in refusing to attend this conference, has interrupted a wholesome practice of annual consultation with the Scottish agriculturists which has been followed since the Board of Agriculture came into existence. Will it not now, with some show of truth, be said that Earl Carrington, and, of course, his fellow-Ministers, have revealed themselves to be possessed by a double dose of invincible obstinacy in their agrarian purpose, and to be indifferent to the lessons suggested by experience and of personal interest, if those lessons run counter to their sacrosanct resolves Verily, Earl Carrington—the most painstaking of Ministers, the most estimable of peers, and a man whose personal generosity is of the chivalrous texture—has made a mistake in this instance. He might have been well-buffeted at the conference—his serene temper would not have been seriously affected by it; but by his present policy he has given into the hands of the enemy the ability to say that the meditated law is a flagrant defiance of the suggestions of direct knowledge and of scientific acquaintance.

* * *

Westminster Honours an Agrarian.

I heartily congratulate Mr. J. W. Dennis on his prospective election to the mayoralty of the city of Westminster, the most distinctive of the metropolitan mayoralties, outside, of course, that of the City. The honour has an added significance in view of the fact that Mr. Dennis's fellow-councillors determined upon him as a meet and fitting occupant of a position they had once designed for the Duke of Westminster. Mr. Dennis is a *rus in urbe*. In a word, his interests are so largely allied to the land and to its vital concerns that one was not surprised that the leaders of the tariff-reform movement besought him to accept membership of the practical sub-commission which inquired into the condition of agriculture. On that commission Mr. Dennis's attitude was that of an intelligent and practical elucidator. His questions were ever clear, pertinent, and pregnant with personal knowledge. He is a Conservative and a tariff-reformer, but in both capacities his faith is something very different to hide-bound prejudice and invincible partisanism. He has views in connection with the fnture of the railways and the question of railway charges, and even on the tenure of land, which would be, I ween, a little repellent to some politicians who array themselves in his own party garb; and he is abreast of the intelligent apprehension of many wise men who are anxious to revive the usefulness of our canal and river system. Mr. Dennis's election to this position should be a direct pride to Lincolnshire. If he has close and intimate associations with Covent Garden, it is to Lincolnshire that we must trace the practical application of his ideas and principles of culture. "The Most Worshipful the Mayor of Westminster" is a resounding title. It will never serve to divert Mr. Dennis from his practical agricultural schemes. I doff my cap to you, sir.

* * *

Is this Advice Wise?

I pray it be not thought that, in Keats' famous line, I am a man with whom

> "But to think is to be full of sorrow
> And leaden-ey'd despair."

All the same, I ask those strong-viewed landlords who advise the holding aloof from the County Associations, the chief feature of Mr. Haldane's military scheme, whether they are altogether wise in their generation? "Why," they ask, "should we seek to facilitate the schemes of a Government whose only purpose is to despoil us?" Well, we need not inquire into the exactitude of this description of the Government's anxiety. Does not, however, this suggested refusal of an allotted part in the patriotic defence of the nation because of the Government's agrarian policy provide the enemies of landlordism with an instrument which might be used with most malevolent effect? Fortunately, the lords-lieutenant themselves show a disposition to disregard the invitation. And they are wise. As a fact, the State recognition of the influence of the lords-lieutenants and the landlords in a scheme of national defence is a concession to the principle of territorialism which some of us probably did not altogether expect from this Government.

At Market Rasen Foal Fair on Wednesday business rather dragged at first, but eventually nearly all were disposed of at prices from 9 guineas to £19. A number of Welsh cart colts fetched from £18. Cobs sold at £20, harness horses £16, and cart horses £15 10s.

DAIRY.

The Starter and its Use.

Even the most provincial dairyman of to day is becoming convinced at last that, after all, there is something in bacteriology, and that the science can throw some light on the principles to be followed in dairying and lead to valuable improvements in practice.

It has been clearly demonstrated that in milk and its products there are bacteria which can roughly be divided into three groups—those whose action is beneficial to the milk, those whose pre ence and activity is injurious, and a third which have neither the one nor the other of these qualities, and hence are called and considered as neutral. The deeper the knowledge possessed by the dairyman of these bacteria and their action under varying circumstances, the less is he at their mercy, and the more are the results of their activity under his control, and hence the more capable is he of dealing with the various fermentations which they produce, and the more successful he becomes in preventing, as far as possible, the entrance into the milk of those germs which injure it, and also the products which he obtains from it.

Even the beneficial germs are only so with limitations, for their good work, if allowed to become uncontinued, becomes harmful and injurious.

This is well exemplified in the normal ripening of cream. Present in the cream are some bacteria whose special work is the production under proper conditions of the ripeness, or sourness, or acidity which is necessary before churning takes place in the ordinary manufacture of sour cream butter.

If, however, the souring process is allowed to go too far too much acid results, and this excess is found to result in the production of strong and undesirable flavours in the butter obtained.

A further evil results from the over-acidity causing the firm coagulation of the casein present in the milk or cream; this is broken into minute grains in churning, and instead of passing into the buttermilk and out of the butter, its presence is found there in the specks or flakes of casein, which are one of the indications of inferior butter.

It would seem almost, however, that Nature desires directly to assist the dairyman in the prevention of over-ripening, for it is found that a limit is automatically set to the degree of acidity produced by the lactic acid bacteria. The result is that when a certain stage is reached in their acid-producing work, the acid which they themselves have produced puts a stop to their work—the acidity becomes such that they cannot continue the production of more acid.

This is usually explained by regarding the acid produced as excrementitious matter given off by the bacteria, and then as the medium becomes too obnoxious for their further growth, an end is thus put to their own existence. A parallel case is of daily occurrence in the fact that the foul air breathed out from the lungs of human beings and animals is unfavourable to the life of its producers if breathed again, and in an enclosed area the final result would be a cessation of the life of the producers unless a removal of the foul air and a substitution of fresh air were effected.

It is interesting to note further that, though the acid producers cease their activity at a certain stage, the character of the milk or cream is not such as to put an end to the growth of all bacteria. Another set of germs—which must have been present during the acid producing stage, but in a state of inactivity either because of the character of the medium, or because they were crowded out or overwhelmed in numbers by the acid producers—recommence their action, and if they are allowed to continue the milk develops a bitter flavour, which is the natural result of their life, as an acid flavour was of the others.

The manifest result is the production of the unpleasant butyric flavour and taste which are a well-known mark of inferior products.

Benefits of a Starter.

It will be now quite a simple matter to realise the benefit of using a starter. Seeing that the variety of bacteria which may usually be present in cream is very numerous, it is a matter of little wonder that the ripening should occasionally not be as successful as could be desired. Under good circumstances there is present a sufficient number of the lactic acid bacteria for them to be able by rapid development to oust or overwhelm the other germs, and the normal and successful progress of the ripening is thus enabled to go on. But if by reason of dirty handling of the milk or dirty utensils—and these are the great cause of the process being at fault—the other organisms gain the upper hand, then it is the work of the acid-forming germs which is suppressed, with the consequent deleterious effect upon the product obtained. The result simply depends upon which set gains the upper hand. One of the conditions which modifies the result is the temperature, which may be more suitable to one set of germs, and hence that set will be favoured while the other is handicapped at the same time.

This is frequently the case in winter, when, owing to less frequent churning, the cream has to be kept for a longer period than usual. During this waiting it must be kept at a temperature which is not suitable for the development of the acid-making germs, so that souring may be retarded; but this is a suitable temperature for the development of other less desirable germs, and other deleterious fermentations take place, with a consequent harmful effect on the quality of the butter obtained.

In a starter we have a more or less pure culture of lactic acid bacteria. A pure culture consists essentially of only one class of germs, which have been artificially prepared under such conditions as rendered the entry of others impossible. If then milk can be so treated as to remove all the germs it contains—and this is first what pasteurising or heating to a temperature of about 158 deg. will do—and then the pure culture be added, all the conditions of safe ripening are ensured. The culture is purchased in the form of a dry white powder. The earliest form was liquid, but the powder form is much superior in several points, most of all in its keeping properties. The powder contains the bacteria in a more or less dormant condition, and the stimulation of temperature and a suitable liquid medium are all that is necessary to rouse them into activity again. The process followed is well known to practical users of the pure culture starters. A suitable quantity of milk, preferably separator skim milk, is taken and heated to a temperature of about 158 deg. Fahr., in accordance with the principles stated earlier. This destroys practically all the germs it contains. It is then cooled down to a temperature of 75 or 80 deg., which is the one most suitable for the development of the bacteria contained in the culture, which is then added to the milk. Careful stirring ensures uniformity in the resulting acidity, and after standing for 20 to 24 hours at the above temperature a liquid is obtained which has been soured by the activity of practically only one set of bacilli, and hence it is unhampered by any of the undesirably flavoured decompositions which are otherwise too often present. So effective is this method upon the quality of the butter obtained that however serious may have been the previous taints or odours in the butter, and whatever may have been their causes, the use of a pure starter thus obtained in pasteurised milk will, with reasonable cleanliness, render the removal of the faults from future butter absolutely certain.

LACTISSIMA.

THE CHEESE TENT AT THE FROME AGRICULTURAL SOCIETY'S SHOW LAST WEEK

Sir J. Crichton-Browne on the Adulteration of Milk and Butter.

In the course of his presidential address at the annual conference of the Sanitary Inspectors' Association at Llandudno, Sir James Crichton-Browne, M.D., LL.D., F.R.S., made some pointed remarks on food adulteration. In commending the Public Health (Regulations as to Food) Act passed last session, he said that a maritime cordon of food safety would now be drawn round the country. That, however, was not enough, for it was suicide as well as assassination that had to be prevented, and home-made food as well as that from foreign parts must be kept under the strictest surveillance. We were constantly attempting to poison ourselves, or at any rate one another, and we were becoming gradually more sly and subtle in our nefarious practices. The aid of science was invoked to shelter dishonesty, and adulteration was converted into a fine art. By providing legislative authority for the control of food supplies, which though it need do no injury to any legitimate trader either in fresh or tinned food would put a stop to the vending of pernicious filth, Mr. John Burns had rendered an eminent public service.

Continuing, Sir Crichton-Browne said that the primary and paramount food question was the protection of milk, which entered in a greater or less degree into the diet of a vast majority of the population, and formed the almost exclusive food of a large proportion of its most susceptible units. If we would reduce infant mortality, diminish sickness and debility, prevent occasional outbreaks of infectious disease, and improve the race, we must see to our milk supply. And it seemed to him that a complete reorganisation of the whole milk trade throughout the country was inevitable, and happily the Government had definitely promised legislation on the subject.

We had it on the authority of the Local Government Board that 10 per cent. of the country's milk supply was adulterated, and that a much larger proportion had been so carefully manipulated that it was just above the required standard. They must have a guarantee that the cows that yielded the milk were healthy, properly fed, and were housed and milked under conditions of scrupulous cleanliness. They must have a guarantee that the milk was collected, treated, and dispensed with technical skill, and that it was conveyed to its destination with promptitude and intact. They must have a guarantee that it is up to a certain and sufficient standard, which would not allow of any attenuation by separated milk or water, and that it was not loaded with chemical preservatives.

The great point was the avoidance of dirt, and the restriction within proper bounds of the micro-organisms which milk must always to some extent contain, and for the development and multiplication of which it was a favourable medium; and to that end the farmer, veterinary surgeon, dairyman, sanitary inspector, medical officer of health, analyst, consumer, and, from time to time, the police magistrate, must all co operate.

Butter lent itself to fraudulent admixture quite

as readily as milk, and it was satisfactory that the Legislature had now been moved to take steps for its protection, on the lines indicated in the paper he read to them at Blackpool last year.

Commenting on the fact that imported butters containing 5 per cent. or less of moisture might by reworking have the quantity of water increased to 16 per cent., Dr. Crichton-Browne asserted that worse than water remained behind, for there were on the market cheap substances, invented by ingenious chemists abroad, which, when judiciously mixed with genuine butter, could not be definitely detected by any process of chemical analysis hitherto employed.

Margarine had many friends, and had been well bolstered up, and the prejudice against it was dying out. Made from pure animal fat and carefully manufactured, it was an excellent and inexpensive food, probably equal to butter, weight for weight, in nutritive value. But it was not the very best either from a gustatory, or digestive, or æsthetical point of view, and it now appeared that margarine is itself subject to adulteration. It was hinted in a celebrated case the other day that the increase in the price of soap was in some degree due to the increasing popularity of margarine, and, at any rate, it was certain that some margarine was faked up out of still more questionable substances.

A noteworthy suggestion was afterwards made by Mr. John T. Quinton, of Liverpool, vice-chairman of the Central Executive Committee of the Association. It was to the effect that the clause in the Fertilisers and Food Stuffs Act, making an invoice a warranty by the seller, should be applied by law to invoices of all food substances for human as well as for animal consumption, and his remark met with general applause.

Impressions of the Third International Dairy Conference.

The International Dairy Conference, which was officially closed at the end of last week, but which is still going on during the present week, impressed one as being capable of exerting immense influence in connection with dairy and agricultural matters.

The conference was the third of its kind, the first having been inaugurated by the National Dairy Society of Belgium in 1902, the second was held in Paris in 1905, and the conference which has just concluded was held at Scheveningen, near the Hague.

In so far as attendance was concerned, it was a record one, there being altogether 982 members, representing eighteen different countries. All the distinguished leaders of the dairy world assembled at the Hague to take part in the deliberations, and the only country which seemed not to have realised the importance of the occasion was the United Kingdom. The British committee was composed of from fifty to sixty gentlemen, but can hardly be described as being at all representative of the British dairy farmers of the United Kingdom, and the part which they took in the deliberations, which were looked upon by other countries as being of an extremely serious character, was fragmentary in the extreme. One could hardly help comparing the enthusiasm which was exhibited by other countries, such as France and Belgium, with the apparent indifference of the United Kingdom; and it is to be hoped that before another congress is held other arrangements will be made, so that a proper organisation may be got together, and that not only proper representatives should be invited from the societies representing dairying in the United Kingdom, but also that arrangements should be made that at the conference itself there should be some show of organisation.

In so far as local arrangements were concerned, the English visitors had to thank Dr. J. J. L. van Rijn for coming to the rescue quite unexpectedly, and making matters more agreeable for them.

It would be perhaps advisable that a permanent committee should be at once appointed in London, which would consider what would be the proper arrangements necessary in connection with the next congress, which is to be held at Budapest, in Hungary, two years hence. Such arrangements take a considerable time to make, and the sooner a permanent committee of the character indicated is appointed, the better.

With regard to the programme drawn up, this was of a very comprehensive character, and the discussions took place in three sections—namely, one dealing with legislation and regulations, in which the unification of chemical methods with the examination of milk, butter, and cheese, and uniformity of methods of control of milk and dairy produce were considered. The second was devoted to hygiene, and dealt with the conditions under which milk should be sold, its pasteurisation, sanitary conditions, and how to deal with tuberculous bacteria. In the third section the questions considered were more from the point of view of industry, and such matters as pure cultures, the proportion of water in butter, and the preservation and refrigeration of dairy produce were considered. In all three sections there were many papers from the various countries, and the general impression left by the examination of these papers, and listening to the discussion, was that there was a universal desire for local control of milk and butter, and also a strong wish that the dairy industry should be placed upon a thoroughly scientific basis, and that the examination of dairy products should be undertaken by qualified men.

In connection with the congress there was a magnificent agricultural exhibition held at the Hague, which might be suitably described as one of the best dairy exhibitions that has ever been held. Unfortunately cattle were absent owing to foot-and-mouth disease in the country, but the other exhibits could not be surpassed. The Government exhibit illustrating the work which is carried on at the technical schools, control stations and dairy institutes, was by far the best that has ever been shown in Europe.

The absence of the representatives of the agricultural press was very much commented upon, and it would perhaps be to the advantage of everybody if better arrangements in this respect were made in the future.

Conference of Dairymen and Cowkeepers.

The annual conference of the Ferderation of Dairymen and Cowkeepers' Associations of the United Kingdom was held in Nottingham, on Thursday afternoon, when delegates attended from Nottingham, Derby, Manchester, Hudders-field, Loughborough, Wakefield, and Liverpool, Councillor A. Hailwood, of Salford, the president of the federation, was in the chair, being supported by Mr. G. Cooke, Liverpool, the vice-president; Mr. J. Garner, Manchester, treasurer, and Mr. George Ashworth, Manchester, secretary.

Councillor E. N. Elborne, president of the Nottingham branch, welcomed the delegates to the city, and briefly alluded to the importance of their calling in relation to the health and well-being of the country at large.

One of the chief aims of the federation as set out in the half-yearly report reads as follows:—"To assist by all legitimate means the dairymen and cowkeepers to maintain their lawful rights as traders, and to resist all unfair legislation, whether local or imperial. To prevent further undue encroachments, and to obtain redress of any trade grievances."

In the course of the committee's report, they say: "We desire to draw your attention to the report recently issued by the Royal Commission on tuberculosis (human and bovine), in which it is clearly set forth that the tubercle-bacillus of the human being and that of the ox are one and the same. They say 'cows' milk containing bovine tubercle bacilli is a cause of tuberculosis, and of fatal tuberculosis in man. No doubt legislation will follow on this report, and should the proposals be of too drastic or too restrictive a nature, it will be the duty of the federation to endeavour to get them modified. We may rest assured that an attempt will be made to bring about a change in the conditions under which milk is produced, carried, and delivered to the people, for no Government can afford to ignore a report of this kind, dealing as it does with the health of the subject. The federation, while ever ready to assist local and other authorities in placing our trade on the best possible sanitary conditions, will strenuously oppose all harassing and needless restrictions put forward by these bodies."

The adoption of the report was moved by Mr. G. Cooke, seconded by Mr. Oates (Sheffield), and carried unanimously. Mr. S. R. Trotman, the city analyst, subsequently read an instructive paper on the "Scientific Aspect of a pure milk supply."

At the annual sale of cart mares, foals, and suckers, at Devizes, the entry comprised 170 animals, a large number of which did not change hands. The best prices were as follows:—Cart suckers, 20 guineas, 18 guineas, 17½ guineas, 16 guineas, and 15 guineas; yearling fillies and colts, 14 guineas, 13½ guineas, &c.; cart mares and geldings, between two and four years of age, 37 guineas, 34 guineas, 31 guineas, and 30 guineas; and mares and geldings, over four years of age, 45 guineas, 36 guineas, 32 guineas, &c.

Spalding September Fair took place on Wednesday, when there was a good show and a large attendance of farmers and dealers. In the cattle fair nearly 400 beasts were on offer, all the leading breeders of the district being represented. For stores there was a good trade at £10 to £12 per head for young stock, and up to £16 and £17 for grazing bullocks. Best fat beef realised 7s. 9d. and cow beef 6s. 6d. per stone. In-calvers were in demand at £18 each. A small show of sheep, and the best fat mutton realised up to 8½d. per lb., and stores 50s. each. In the horse fair there was a good show of both mares and foals. The best foals made £10 to £20, with a little more for a few which were the pick of the fair. Colts realised £30 and £40, and geldings sold well. Useful agricultural horses were in demand, and realised satisfactory prices.

SHOWS.

Frome.

The outstanding feature of the Frome Agricultural Society's Show, held under the most favourable circumstances on Wednesday, was the great display of Cheddar cheese, for good as have been previous year's shows, and notably that of 1906, last week's was better than ever. There were close upon 400 entries—not all Cheddars—and the quality was good all round. The much coveted championship prize this year went to the old cheese class, where Mr. Crocker, of Cattistock, had a lovely bit of toothsome Cheddar, for which five of the seven judges voted. The others favoured a lot by Messrs. Cary and Porch, which won the £20 prize, and was very similar to that with which they carried off the Shepton Mallet championship. The champion cheese was a very fat one, of delicious flavour, and we do not think any mistake was made in giving it the award against the younger cheese, though when the latter matures, and it should be a capital keeper, it will leave nothing to be desired. An old cheese from Mr. Theodore Candy was another delicious morsel, and ran his neighbour's very close. Mr. Crocker also took a £15 prize, headed his rennet class, and topped the cheese fair class, so that he had no cause to regret Frome Show. Mr. E. E. Hoddinott, of Upton Noble, was a successful winner in the limited classes with a very good make of cheese. The judges' opinion of the cheese may be gathered from the remarks made by them at the luncheon. Mr. Oakley said the cheese they had examined that day had been well up to the standard, if not above the standard, of former years. Class 2 (four cheese of not less than 56 lb. each) was one of the best classes he had ever judged at Frome, but in the class for those who had not taken a prize for four years only twelve out of forty-four lots merited approval. The prices this year could not be expected to be so high as last year. Mr. Mackie, the other judge, said in Class 1 (four cheese of not less than 60 lb. each of any system or make) there were a number of entries which would do credit to any show in any season and anywhere.

It may be added here that the usual cheese fair held in connection with the show took place in the adjoining market house, and the pitch was nearly double that of last year. There was a large attendance of buyers, and the whole of the pitch was cleared. Cheddars ranged from 52s. to 58s. per cwt. A few better lots realised 63s., whilst some of the prize dairies changed hands at several shillings more. There was only a small supply of Somersets, and they sold at from 52s. to 57s.; half skims, 47s. to 51s.; loaf cheese, 52s. to 60s., some of the prize lots making rather more.

To return to the show. Horses showed a slight falling off as regards numbers when compared with last year, but quality was quite up to the average. Nag mares and foals made a fairly good class, the best being shown by Mr. A. L. Kelly, of North Cadbury, Bath, with a foal by Yard Avon. Mr. Kelly also won in the nag class, Mr. G. E. Churchill, West Harptree, being second. In the yearling nags, first prize went to Mr. J. Clare, Tennis Court Farm, Hallatrow. Lord Winterstoke won somewhat easily in the class for two-year-old cart colts, and was also awarded first prize for the best cart mare or gelding. The Hunting classes on the whole were not so well filled as they should be; but, nevertheless, there were several entries of really high class. The weight-carrying Hunters' first premium fell to that well-known exhibitor, Mr. J. H. Stokes, of Market Harborough, with an unnamed entry, which later won the championship class. Up to thirteen stone, Mr. W. H. Munckton, West Mudford House, Yeovil, captured leading position with an entry named Middleman. One of the most interesting of the saddle events was for jumpers ridden by ladies, which resulted in a win for Mr. W. Singer, Woodcock Farm, Frome. The jumping was watched with the customary attention, the crowd following anything like good work and horsemanship with real enthusiasm.

Cattle, too, were not so numerous as last year, there being an unaccountable falling off in the Channel Island classes. In these Mr. Arthur Pocock, Calne, Wilts, and Mr. J. H. Smith, Barry, were practically the only exhibitors, Mr. J. H. Shore, Whatley House, Frome, being only represented by one entry (heifer calf under 12 months), which took second prize. Shorthorns showed to advantage, there being several well-filled classes.

In the sheep classes Hampshire Downs were the best, and with this breed Mr. G. W. Haine, Fair Oak Farm, Berkeley, Frome, had matters all his own way. In pigs, the ten-mile radius classes were cancelled. Mr. Dainton was awarded first for his pair of elts, and Mr. Percy Bush, Highcroft Farm, Frome, took first in the class for pens of five suitable for the bacon trade.

A pretty feature of the butter tent was the display of cut flowers, and the table decorations

introduced for the first time, which were probably the best seen this season in the West.

Kington.

The twenty-seventh annual horse show was held at Kington, and the exhibition was a very successful one. The weather being fine, the attendance was large, though perhaps scarcely as good as that of some previous years, but the entries in the various classes were thirty-one in excess of last year, and the quality of the exhibits was fully up to the usual high standard attained at this show. It is satisfactory to find that each year the exhibition is becoming more popular, and on this occasion there were present several winners from Olympia, Dublin, Cardiff, Richmond, and others. The society is giving every encouragement to the tenant farmers of the district to breed good stock, and this year three new classes were introduced for their benefit; they were for heavy horses, and should become quite a feature of the show. Agricultural horses made perhaps the best display, there being a large number of well-filled classes, but the Hunters and Hackneys also made a creditable show. The challenge cup for local cart foal fell to Mr. C. C. Nott, and a champion prize went to Mr. Coates's Clifford Belle, whilst the Shire Horse Society's silver medal was awarded to Finstall Marigold, shown by Mr. Brooks. The Hunters' Improvement Society's silver medals were taken by Sir H. W. Ripley, Bart., with Reine, and Mr. Arthur Masters's Angela, whilst the Hackney Horse Society's silver medal went to Strange Harmony, shown by Mr. C. C. Rogers, Brampton Brian.

Warwickshire Hunt.

The Warwickshire Hunt Horse Show was held at Kineton in most favourable weather, and was very largely attended. The entries showed an increase of 17 on last year, the total being 323, and consisted of 116 Shires, 188 Hunters, and 19 foals. There was an extremely nice lot of young Hunters, especially the yearlings and two-year-olds, and some creditable three-year-olds, doing great credit to the tenant farmers of Warwickshire. A leading feature of the show was the introduction of a prize of £10 for the best mare between the age of four and eight likely to breed a Hunter, and this was won by Mr. J. G. Spencer with his four-year-old bay Svengali. The Hunters' Improvement Society's gold medal was won by Mr. W. J. Lees, of Warwick, with the winner in a large class for the best mare and foal adapted for hunting purposes. Mr. Marlow Hincks, of Broadwell, was reserve with a winner in the small farmers' class. There was a large entry of two-year-olds, and here Mr. W. Canning, of Debden, won with a filly which secured the reserve ribbon for the silver medal of the Hunters' Improvement Society, which was carried off by Mr. J. G. Spencer, of Radway, who won first prize with a three-year-old filly. The Shires were certainly in advance of anything seen at Kineton before. Mr. Herbert Lees, of Warwick, won the silver medal of the Shire Horse Society, and Mr. Bruce Fry won a silver cup given by Mr. E. B. Wynn for the best animal in the cart horse classes with Mollington Manners, which won in the three-year-old class.

FROME AGRICULTURAL SOCIETY'S SHOW: THE CATTLE STALLS.

Ashbourne.

The Ashbourne Shire Horse Society's twenty-seventh annual show took place on Thursday, when the entries were not quite so strong in numbers as we have seen here, but the quality was well maintained, most of the well-known Shire breeders being represented. The Duke of Westminster's Eaton Drayman headed a numerous lot of colt foals, and the same animal carried off the challenge cup for the best foal in the show. Second to Eaton Drayman in his own class was Sir Albert Muntz's bay colt by Dunsmore Jameson, and Catterall Pope, bred and exhibited by Mr. C. P. Yates, of Garstang, Lancashire, was third. Some surprise was evinced at the failure of Mr. Egerton Orme's colt foal by Dunsmore Jameson, which has won so many prizes this season. On this occasion it was no more than fourth, but Mr. Orme was the winner in a strong class of filly foals, a smart youngster by Sterling Jameson maintaining her winning sequence. She was also reserve for the foal challenge cup.

The Wainwright Challenge Cup, for the best mare or filly, one year old and upwards, was won by Mr. F. E. Muntz, of Hockley Heath, with Aldeby Lady Jameson, a three-year-old bay well known in the show yard, his kinsman, Sir Albert Muntz, M.P., being reserve for the trophy with a grand yearling filly, which, like the winner, is one of Dunsmore Jameson's famous progeny. Mr. Egerton Orme's Combermere Abbess was first in the two-year-old filly class, whilst in the class for mares with foal at foot Mr. J. B. Brooks, of Bromsgrove, was awarded premier honours with Raby Violet, eight years. First in the class for yearling colts was Mr. James Gould's Lymn Grey, which has won at the Royal and several other shows, Sir Albert Muntz being second and third with two of Dunsmore Jameson's sons, which, by the way, were both Derbyshire bred. Mr. Victor Cavendish, M.P., who usually carries off some prizes at Ashbourne, had entered several animals, but the death of his aunt, Lady Louisa Egerton, prevented their competing.

Hay.

Hay Horse Show was held in beautiful weather, and attracted a record attendance, whilst the entries were also better than in any previous year, so that the show was a complete success. The entries numbered 545, and comprised classes for cart horses, Hunters, hacks, ponies, whilst there were classes for horse-leaping and harness trials.

The average entry for each class was eleven. There was a grand entry in the cart horse section, and the foals were the best exhibited at this show, where there is always keen competition in Shires. The pony classes were well filled, and some of the best bred animals came under the notice of the judges. For the Welsh Pony and Cob Society's medal the judges had no easy task in allocating their awards, as also in other important classes. The medal went to Mr. Francis Brecon. In the Hunter section several very fine horses were shown, whilst the hacks included several highly creditable animals. A new, and what proved an interesting feature was the judging competition, for which six prizes were offered, open to persons interested in agriculture and not exceeding thirty years of age. Competitors were supplied with a judging book, and required to judge each class upon the horses entering the collecting ring. Ten minutes were allowed for judging each class, competitors being required to judge all classes for Shire horses, or any class might be withdrawn at the discretion of the stewards. The judging slips, properly signed by each competitor, were to be handed to the steward appointed to collect the same before the horses in each class passed into the judging ring. The slips so handed were afterwards compared with the slips of the official judges, and the prizes awarded accordingly.

West Staffs.

The West Staffordshire Shire Horse Society's fourth annual show took place at Stafford under the presidency of Sir Alex. Henderson, Bart. There was a capital entry of sixty-one mares, foals, yearlings, and two-year-olds, as compared with fifty-one last year, and the show was the best on record, a feature being the fine collection of mares. The filly foals were a good lot, but the yearling fillies, with the exception of the first prize winner, lacked weight, although good in quality. The Shire Horse Society's silver medal for the best female in the show was awarded to Mr. Idiens's Famous Flower, Mr. Harvey's Delamere Ringlet being reserve. The premium stallions who had travelled the district were Buscot Harold, the property of the president, and Hendre Champion, from the stud of Mr. Leopold Salomons, of Norbury Park, Dorking.

Otley Foal.

The Wharfedale Agricultural Society's annual foal show took place on the 21st inst., when, in addition to a good show of foals, there was a useful collection of agricultural and garden produce, a tent for poultry and pigeons, and, from the popular point of view the most attractive feature of all, sheep-dog trials. The entries of foals were well up in every class. Especially was this so with the heavy brood mares, no fewer than nineteen being entered. The first prize was taken by a very stylish and, at the same time, serviceable mare shown by Mr. J. Harper, of Kirkby Overblow, and the foal took first in its class. Two mares from Mr. Charles Robinson's stud at Arthington took first and second in the open class for light brood mares, and Mr. Thomas Burton's exhibits came out strongly in two successive classes for heavy foals. The Arthington stud again figured prominently in the open Hackney foal class, and in the Hunter section Mr. T. Mallorie, also of Arthington, took an excellent first with a beautiful specimen of Sirdar's strain.

Market Drayton.

Ideal weather favoured the eighth annual exhibition of the Market Drayton and District Agricultural Society, and both the entries and the attendance established a record, a success the society well deserved. The Shire horse classes were exceptionally strong, as were also those devoted to Hunters and hacks. In the sections for dairy cattle, bulls, &c., there was a fine show, while sheep were fully up to the average. Pigs, too, formed a big section, and the divisions set apart for live and dressed poultry, cheese, butter, eggs, honey, pigeons, and dogs were all capitally filled. In fact, the show was highly creditable to both the society and the exhibitors.

Winslow Shire Horse.

The 20th annual show of the Winslow Shire Horse Society (of which Mr. H. J. Chinnery, of Frinkford Hall, Bicester, is president for the year) was held in the old Flower Show Field, kindly lent by Mr. J. Buckingham, on Wednesday, and was favoured with a splendid day. The show was about an average one, a little bit short in the colt classes, but with a fair number of fillies and yearlings and a very fine lot of mares. The Shire Horse Society's silver medal was carried off by Mr. F. W. Lester, of Botolph Claydon's, Botolph Fashion, a very pretty chesnut filly, which had previously taken honours at nearly every show in the district, and which was sired by Thrupp Rival, one of the Society's horses. Mr. Lester also won for the second time the Winslow Town Challenge Cup, value 20 guineas, and has only to win it once more to claim it outright. He also took the champion prize of £10 given by Mr. Wm. Selby Loundes, jun., M.F.H., for the best Shire mare with Botolph Nancy (by Waresley Albert), a fine bay mare bred by himself. The judges were Mr. J. Bradley, of Halsted House, Filton, Leicester, and Mr. R. J. Rigby, of Souldern Banbury, and their awards gave general satisfaction.

Altrincham.

The show of the Altrincham Agricultural Society, held on Wednesday in delightful weather, was a striking testimony to the ever increasing popularity of this fixture—the largest one day show held in this country. There was a falling off in the entries to the extent of 316, but the classes affected were either those interfered with by the late harvest such as roots, grain, and horticultural produce, or the fancy classes of rabbits and cats. Light horse entries are still dwindling—they have dwindled every year for fourteen years, and the number of 148 is the lowest for the whole of that period. On the other hand, heavy horses were more numerous than they have been since 1903, and were well above the

average of the past ten years. All told, including implements, the show comprised 5,862 entries, a truly formidable list.

The horses are always the feature of the show, and so they proved again last week, and the heavy horses made one of the finest displays seen here, the entries including the best of Mr. James Gould's stud of Lord Egerton's and latterly of Mr. Sam Raingill's, whilst Mr. A. C. Sparkes showed his famous pair of shire geldings that have been the champions at the Shire Horse, the Royal, and the Olympia shows. Mr. Gould's famous young grey stallion had an easy win, and is one of the champion horses of the year. In numbers the mare or gelding class was one of the strongest, and the quality of the exhibits was shown by the fact that Mr. Raingill's mare could only get third. The district classes were not very big ones, but there were some good sturdy short-legged mares in the class under sixteen hands. In the open brood mare class it was a keen fight between Captain Heywood Lonsdale's well-known mare by Sir Alex. Henderson's Burcot Harold and the Duke of Sutherland's slightly lighter mare that has won a lot of prizes. They were placed in the order named, and the class was quite one of the smartest seen at the Altrincham Show. Lord Egerton was unlucky in that his colt foal was so young. This is a June colt by Tatton Friar, and had not much chance against the Duke of Westminster's March foal by that sturdy horse Lymm Champion. The Duke of Sutherland won easily in fillies. There were some very famous fillies in the yearling and two-year-old classes, and there was some surprise when Mr. Raingill's three-year-old was put behind Mr. Kearns's aristocratic looking filly by Lockinge Forest King.

The classes of Hunters were not strong in numbers, but the young entry was promising, and so were the mares. Three-year-olds were good both in saddle and harness, and the display all through the day in the large ring was one of the best Altrincham has seen. The open roadster class in saddle brought out several of the best horses in England. Mr. Tennant's famous East Riding gelding Authority won, and was shown very fit. He met some very good ones, and notably Miss Schintz's Morocco, a brown gelding with very handsome action. The light weight Hunters were not nearly as good as the heavy weights. In the turnout classes there were seen all the same horses that had been in saddle.

In both the open and district classes for cattle some first-class animals were forward, but competition was not so keen as it might have been. There were 159 entries, and the general improvement in quality was patent throughout. In the open classes Mr. Proctor, of Mobberley, Mr. Atkinson (Bury), Mr. G. Harrison (Darlington), and Mr. Rothewell (Preston) practically divided the prizes amongst them. In the dairy cattle classes Mr. Raingill and Earl Egerton had matters pretty much their own way. The open Channel Islands cattle competition saw Mr. Jersey de Knoop, of Tarporley, winner with his Inspector, Mr. J. Lewis, of Oakmere, being placed second with Oakmere Lad. Mr. De Knoop's Lady Lightfoot was second in a very big class for cow or heifer, and his Fancetta 3rd was good winner in the two-year-olds.

Sheep were but a small though nice show, and the same might be said of the pigs. Other sections, which all had their attractions, included goats, agricultural and horticultural produce, grain, honey, butter, eggs, cheese, poultry, and a big display of dogs.

Gransden.

The annual show of the Gransden and District Agricultural Society was held at Great Gransden on Tuesday in gloriously fine weather. The fixture is always a popular one, and this year it proved even more popular than usual, for no fewer than 1,500 people passed the gates, and altogether the attendance constituted a record. The entries numbered 568, or fifty-four more than last year, but in 1905 the total was 647. Last week horses, which included Shires, Hackneys, Hunters and ponies, numbered 141, the smallest for several years; but cattle were more numerous than usual, the total being 67, as compared with 34 last year, 59 in 1905, and 42 in 1904. They made a nice display, several first-class animals being forward. Sheep were about an average, whilst interesting displays of corn, roots, butter, eggs, &c., made up an altogether attractive and successful show.

Market Drayton Cheese Fair.

At this fair, held on Thursday, there was a larger pitch than at any fair since the market was inaugurated, the quantity representing about thirty-five tons. The quality throughout was excellently good; and as there was a brisk call from the commencement, the produce was speedily and satisfactorily cleared at the following rates. First qualities, 60s. to 65s.; medium grades, 55s. to 60s. per cwt.

Nottinghamshire Notes.

THERE was a large attendance on Wednesday at the Earl of Harrington's foal show at Borrowash, between Nottingham and Derby. A new feature was this year introduced, which took the form of a class for groups of four Hunter foals by one sire, having for its object the finding out of the best sire, and, at the same time, encouraging farmers to breed from them. The prize-money given at the show was subscribed by the Meynell, Quorn, Belvoir, Mr. Fernie's, Rufford, Blankney, Harrington, and Cottesmore Hunts. The conditions were that foals shown were bred by persons resident within the limits of the country hunted by his lordship, or within three miles of Elvaston Castle.

THE entries for the Hunter foal classes totalled thirty-three, and foals of the Shire type numbered twenty-nine. The weather was delightful, and among those present were the Earl and Countess of Harrington and Lord Manvers. The judges of the Hunters were Messrs. R. Fort, Wade (Leicester), and J. Drage (Northampton). For Shire foals the decisions rested on the judgment of Messrs. H. Smith (Cropwell Butler) and W. Machin (Edwalton). The competition was keen, and many small farmers have been induced to go in for breeding through the holding of this show, which is yearly increasing in popularity.

ONE of the judges at the Tattershall (near Horncastle) Foal Show on Wednesday hailed from this district, in the person of Mr. T. A. Oliver, of Claypole, near Newark.

LOUGHBOROUGH sheep sale was held on Wednesday, when over 1,100 animals were disposed of. There is a decided scarcity of breeding sheep in this district, and prices throughout ruled high. Five Lincoln theaves, sent by Sir Ernest Paget, of Kegworth, made 67s. apiece, and the same price was made of another consignment from Mr. J. Burrows, of Wymeswold. Ewes made up to 60s. 6d. each, and lambs fetched from 40s. to 47s. per head. Rams did not make big prices, 6 guineas being top figure.

WHAT is known as Newark Cheese Fair was held on Wednesday, and about 3,500 sheep were penned. There was a large attendance, and trade throughout for breeding sheep was brisk. Lambs from the flocks of Col. Fane made up to 55s. 6d.; W. Richardson (Ossington), 48s. 6d.; W. E. Denison (Ossington Hall), 44s. 6d. For gimmers the prices paid were from 62s. to 75s. apiece. Rams only made moderate prices, one animal sent in by Mr. J. Brocklebank (Carlton) making 15 guineas, and another from the flock of Mr. Storm (Muskham) 18½ guineas, which was top price of the fair. Trade for cattle was only moderate, young animals selling well. Messrs. E. Bailey and Son sold over 3,000 sheep, their sale realising about £8,200.

SOUTHWELL September fair was held on Monday, but the number of cattle on offer was extremely small. Yearlings and up to two years old fetched £6 to £13 apiece. The sheep trade was good, lambs making from 35s. to 53s. apiece. Breeding ewes realised from 55s. to 65s. apiece, Messrs. Bradwell's sale alone including over 1,200 sheep and 100 head of cattle.

THOUGH sporting scarcely comes within my province, I have this week had several chats with gentlemen owning estates, farmers, and also Earl Carnarvon's head gamekeeper at Bingham. The latter informed me that the present outlook for both pheasants and partridges in this portion of the country is the worst he has known for twenty years. There were a fair number of pheasants hatched, but they were either drowned or succumbed from cold. Hares, however, are plentiful. This opinion coincides with what others interested in game shooting have told me, and though very few guns have yet been out in the county, shot will be heard on all sides next week, for harvest is practically a thing of the past, so far as the year 1907 is concerned.

ONE of Earl Manvers' herdsmen has this week met with a shocking death at Cotgrave, about two miles from Holme Pierrepont. The man, whose name is Charles Hallam, and his age twenty-five, was cycling from Cotgrave to his work along with four others, and while descending a rather nasty hill applied the brakes to his cycle so that the machine stopped dead, and he was pitched over the handle bars on to his head. He was picked up unconscious, and died two hours later.

THE Melton Mowbray branch of the Midland Farmers' Association (Nottingham) have elected Mr. J. Longwill, of Pickwell, as chairman and also as their representative on the executive committee of the association. Mr. J. Barker, Ragdale, is the hon. secretary of the branch, and the following well-known farmers form the local committee:—Mr. A. Reid (Thrussington), Mr. Braithwaite (Stathern), Mr. Ensor (Long Clawson), Mr. R. Crawford (Lowesby), Mr. T. H. Stevenson (Hose), Mr. Lovett (Nether Broughton), Mr. T. Wilson (Freeby), and Mr. Fisher (Great Dalby).

THERE were many prominent agriculturists of the lace county present on Saturday afternoon last at the funeral of Mrs. Hildyard, wife of Mr. T. B. Hildyard, J.P., of Flintham Hall, who owns several thousand acres in that district, and farms one large holding himself. Mr. Hildyard was deeply attached to his wife, and the shock has been a severe one, though the deceased lady had been far from well for some time. She was highly esteemed by the tenants on the estate, and will be greatly missed by the villagers of Flintham, Screveton, and Car Colston. Mr. Hildyard, I might add, is brother to the famous general of that name, and as there is no family of the marriage, the estates in the ordinary course of things will revert to the general's eldest son, who is at present a clergyman holding a living in the south.

COMING-OF-AGE festivities have marked the present week as one long to be remembered in this district. On Tuesday the Duke of Rutland entertained about 1,300 tenants and their wives to luncheon at Haddon Hall to celebrate the twenty-first birthday of the Marquis of Granby, his eldest son. Several presentations were made to the Marquis, and each guest was handed a souvenir of the occasion, which took the form of a signed photograph of the future lord and master, and a booklet descriptive of the famous hall about which so much has been written.

THE festivities were continued at Belvoir Castle on Thursday, when the guests numbered 1,250. The Duke of Rutland again presided at the luncheon, accompanied by the Duchess, the Marquis of Granby, and other members of the family. The tenants on the Leicestershire estates made a presentation, as did also the tradesmen of Grantham.

RESPONDING to the toast of his health, proposed by Mr. A. Shipman, of Thorpe Arnold, the marquis said he was very proud of Belvoir and its associations with so many generations of his family. He should do his utmost to foster the good feeling at present existing among the tenants on the estates.

THE Duke of Rutland also spoke, remarking that it was not quite yesterday that his forbears and ancestors came into the Belvoir country. They had lived in Leicestershire for a great many hundred years, but he doubted whether any had been received by his friends and neighbours more heartily or in a more touching way than his son had been. He was greatly touched to have received such proof of the continued confidence in his family, not only from those in Leicestershire, but in Lincolnshire, Nottinghamshire, and Derbyshire. A gathering such as that to-day carried with it a great deal more of moral influence than it would have done 100 years ago. Many of them knew as well as he the reasons which had prevented him from being at Belvoir along with his family, as much as they could have wished.

"I CAN tell you," said his Grace, "I left Belvoir Castle for the purpose of doing financial good to the country. I cannot put it more delicately than that, but the country in general has rendered it impossible for me to spend the time here that I should have liked to have done, and it is not my fault. That is a question for the Chancellor of the Exchequer, who is a bigger man than I. Therefore I have had for the present to knock under. But I hope that that may be remedied before long. (Cheers.) At any rate, believe me that any absence that there may have been from Belvoir, on my part and on the part of my family, has been simply and solely for the cause which I have given you."

MR. C. H. HICKSON gave the toast of "The Duchess," and Mr. D. R. Daybell (Bottesford) proposed "The Rest of the Family," to which Lord Robert Manners replied.

AT dusk there was a display of fireworks, and the festivities were brought to a close shortly after six o'clock by the Duchess lighting a huge bonfire on Devon Hill, near the Kennels of the Belvoir Hounds, which could be seen for many miles around. R. K

September 27, 1907.

Chester Cheese Fair.
